for his journalistic activity. Nor did he neglect the periodical press of England. Throughout his Canadian career he supplied comments on urgent political issues to 'The Times,' the 'Daily News,' the 'Manchester Guardian,' the 'Pall Mall Gazette,' the 'St. James's Gazette' among daily papers; to the 'Spectator' among weekly papers; and to 'Macmillan's Magazine,' the 'Contemporary Review,' the 'Fortnightly Review,' and the 'Nineteenth Century' among monthly magazines.

Smith's political propaganda in Canada aimed consistently at the emancipation of the colony from the British connection. The Dominion during his early settlement was passing through a period of depression which contrasted greatly with the growing prosperity of the United States, and Smith prophesied disaster unless the existing constitution underwent a thorough change. At first he urged complete independence, and he engaged in a movement started in 1871 by a Toronto barrister, named William Alexander Foster, which was known as 'Canada First,' and sought to create a self-sufficing sentiment of Canadian nationality. He joined the Canadian National Association and became president of the National Club; both institutions were formed in 1874 to promote the new cause independently of the recognised political parties. In 1890 Smith wrote an appreciative introduction to 'Canada First,' a volume issued to commemorate the founder of the movement.

But the cry of 'Canada First' made little headway, and Smith next flung himself into the movement for a commercial union with the United States. He had come to the new conclusion that annexation with the United States was the destiny appointed to Canada by nature, and that the removal of the tariff barrier was the first step to that amalgamation of the two countries, which could alone be safely effected by peaceful means. In spite of his free trade principles, he condoned the tariff against the mother country and Europe, when it appeared to him to be of twofold use, as a unifying instrument within the continent, and as a valuable source of revenue. In 1888 he published an introduction to 'Commercial Union'—a collection of papers in favour of unrestricted reciprocity with the United States. Over the policy of commercial union he came into conflict with almost all the political chieftains, including Sir John Macdonald and Edward Blake, the liberal leader, much of whose policy he had approved. But he was undaunted by

opposition, and denounced every measure which seemed to imperil the prospects of continental union. He bitterly attacked the formation of the Canadian Pacific railway as a 'politico-military' project. As the imperialist spirit spread in the dominion, his persistence in his separatist argument exposed him to storms of abuse from the Canadian press and public. He was denounced as a 'champion of annexation, republicanism and treason.' A motion for his expulsion from the St. George's Society, a social organisation of Englishmen in Toronto, in March 1893, was narrowly defeated, and a proposal on the part of the University of Toronto to grant him the hon. LL.D. in 1896 was so stoutly opposed that he announced that he would not accept it, if it were offered him. For a time he was subjected to a social boycott. His political following in Canada steadily declined in numbers and influence. But to the end his position knew no change. Of the colonial conferences in London which aimed in his later years at solidifying the British empire he wrote and spoke with bitter scorn. Meanwhile in America his plea for a complete union 'of the English-speaking race on this continent' could always reckon on sympathetic hearing. Writing at the end of his life to the editor of the 'New York Sun' (4 March 1909), Smith recapitulated his faith in the coming fulfilment of his hopes.

Smith kept alive his interest in English affairs not only by correspondence with his friends there and by his controversies in the English press but by active intervention in public movements on his visits to the country. In 1874 he aided his friend G. C. Brodricke when standing for Woodstock against Lord Randolph Churchill. A speech on England's material prosperity which he delivered when opening an institute to promote intellectual recreation at his native town of Reading (June 1877) brought on him the censure of Ruskin; in 'Fors Clavigera' Ruskin ridiculed him as 'a goose' who identified wealth with progress (*Ruskin's Works*, ed. COOK and WEDDERBURN, xvii. 479; xxix. passim). Smith retorted in kind, and Ruskin was provoked into condemning Smith's 'bad English' and 'blunder in thought' (*ibid.* xxv. 429). In Oct. 1881 Smith presided over the economic section of the Social Science Congress at Dublin and delivered an address on 'Economy and Trade' (published independently as 'Economical Questions and Events in America'); there he attacked protection. In 1884 he was the chief speaker at the dinner of the Palmerston Club at Oxford.

There was always a strong wish among his English friends and political allies that he should abandon his Canadian domicile. But he was deaf to all entreaty, owing partly to a wish to watch the development of Canada and partly to his wife's reluctance to leave the American continent. Matthew Arnold often argued in vain that the national welfare required his presence in the House of Commons. In 1873 he was vainly invited to become a liberal candidate for Manchester. In 1878 he was sounded without result, by some liberals of Leeds, whether he would stand for the party at the next general election. In 1881 he was invited to become Master of his old college (University) at Oxford. Next year he was gratified by the bestowal on him of the honorary degree of D.C.L. by his university, but neither academic nor political baits could alter his purpose of Canadian residence.

The course of politics in England in subsequent years caused Smith many misgivings. To Gladstone's support of home rule in 1886 he offered a strenuous opposition. His attitude was that of John Bright, to whom he always acknowledged discipleship. With the Irish race he had no sympathy, and although he admired Gladstone's exalted faith in liberal institutions he credited him with an excess of party spirit and ambition and a strain of casuistry and a vanity which ruined his moral fibre. During the summer of 1886 he took as a liberal unionist an active part in the general election in England, and he wrote a pamphlet, 'Dismemberment no Remedy,' which had a wide circulation, and was translated into Welsh. In Toronto he soon became president of the Canadian branch of the loyal and patriotic union, which was formed to fan the agitation against home rule. To his views on the Irish union he was faithful to the end. He repeated them in 'Irish History and the Irish Question' as late as 1906. He complacently ignored the apparent discrepancy between his Irish convictions and his hopes of Canadian 'emancipation.'

The subsequent predominance in Great Britain of the unionist party between 1886 and 1906 greatly encouraged the imperial sentiment, and Smith's disquietude consequently grew. On Mr. Joseph Chamberlain, who became colonial secretary in 1895 and whom he regarded as the chief promoter of the imperial spirit, he bestowed in his latest years all his gift of vituperation. The South African war he regarded as an inhuman crime, and he

defended the cause of the Boers with vigour in the American as well as in the Canadian press. In a volume entitled 'In the Court of History, the South African War' (1902) he pushed to the utmost the pacifist argument against the war. He saw almost a satanic influence in Cecil Rhodes, and he viewed with suspicion Rhodes's benefaction to Oxford. Nor in the development of American politics did he find much consolation. The success of the policy of protection, the war with Spain and the annexation of the Philippine Islands (1900) profoundly dissatisfied him. In 'Commonwealth and Empire' (New York, 1902) he raised his voice once more against the moral perils of imperialism as exemplified in the recent history of the United States.

Smith welcomed the liberal triumph in England at the polls in 1906, and he was until the close indefatigable in English political controversy. On the reconstitution of the House of Lords, the last great question which engaged public attention in England in his lifetime, he urged in letters to the 'Spectator' the need of a strong upper chamber on wholly elective principles. To a single chamber he was strongly opposed. The socialistic trend of English political opinion found no favour with him. Although as a courtesy to J. S. Mill he signed in 1867 the first petition to the House of Commons for woman's suffrage, he came to regard the movement as a menace to the state.

But amid his political exertions, which had small effect beyond stirring ill-feeling, Smith was active in many causes which either excited no angry passion or invited general sympathy. He never forsook his historical or literary studies. In monographs on 'Cowper' ('English Men of Letters' series, 1880) and 'A Life of Jane Austen' ('Great Writers' series, 1892) he showed his gentler intellectual affinities, if to no great literary advantage. In 'Bay Leaves,' translations from the Latin poets (1892), and in 'Specimens of Greek Tragedy,' translations from Æschylus, Sophocles, and Euripides (2 vols. 1893), he proved the permanence of his classical predilections, although the clumsiness of his English renderings hardly fulfilled his early promise as a classical scholar. But in 'A Trip to England' (reprinted from the 'Week,' Toronto, 1888, reissued in 1895) he gave a pleasant description of the country for Transatlantic visitors, and in 'Oxford and her Colleges' (1894) he sketched attractively the history of the university for the same class of readers.

Many slight pamphlets of his later years embodied reminiscences of earlier days. 'My Memory of Gladstone' (1904; new edit. 1909) gives a brief appreciation from personal observation of Gladstone's character and career. More ambitious were his historical treatises: 'The United States: an Outline of Political History, 1492-1871' (published in 1893; 4th edit. 1899), and 'The United Kingdom: a Political History' (2 vols. 1899). Both works are mere sketches of history slenderly authenticated. But they present the main facts agreeably, and although Smith's prejudices are unconcealed they are not displayed obtrusively. In 'The United Kingdom' he claimed to have written 'in the light of recent research and discussion.' The record ends with the accession of Queen Victoria; a few concluding remarks on the Empire—the history of Canada, India, and the West Indies—are on the familiar anti-imperialist lines.

In a number of small speculative treatises he explained his reasons for rejecting faith in supernatural religion. Such were 'Guesses at the Riddle of Existence' (New York, 1897); 'The Founder of Christendom' (Toronto, 1903); 'Lines of Religious Inquiry' (1904); 'In Quest of Light' (1906); and 'No Refuge but in Truth' (Toronto, 1908). Smith declared the Old Testament to be 'Christianity's millstone,' and there was much in his agnostic argument to scandalise the orthodox. Yet his attitude was reverent, and it was his habit at Toronto to attend church.

While Smith's political theories continued to offend Canadian opinion, his labours in other than the political sphere, his obvious sincerity, his intellectual eminence, and his growing years ultimately won him almost universal respect in Toronto and indeed throughout Canada. In matters of education, social reform, and public benevolence the value of his work, despite occasional friction with colleagues, could not be seriously questioned. In 1874 he was elected by the teachers of Ontario their representative on the council of public instruction, and he was afterwards president of the Provincial Teachers' Association. He never lost an opportunity of pleading with effect for higher education. He was a senator of the University of Toronto at an early date, and powerfully urged the federation of local sectarian colleges with the university. In 1908 he was a useful member of a royal commission appointed for the reorganisation of

Toronto University, and he was granted at length the degree of LL.D. In the controversies over the place of religion in state education, and the claims of the Roman Catholics to control the state system, Smith consistently opposed the sectarian claim without aggravating religious animosities. The purity of political and municipal administration was another cause which evoked his enthusiasm to the satisfaction of the general public, and he became chairman of a citizen's committee at Toronto which made war on municipal corruption. He was also in sympathy with youthful effort. He actively helped in 1892 to organise the Toronto Athletic Club, to which he contributed \$12,000, and although the club failed financially and was closed in 1896, its formation under Smith's direct auspices bore witness to his faith in well-regulated physical exercise. In 1895 he intervened in the discussions over the Canada copyright bill, which was designed in the interests of foreign authors. Smith sought to eliminate 'the manufacturing clause' which restricted foreign writers' copyright to books actually printed in Canada. This protective condition was rejected by the legislature, but the bill did not become law. Smith was liberal in private charity. He urged on the city council of Toronto the appointment of a relief officer to receive applications from persons in distress, to make inquiries about them, and to supply information as to suitable philanthropic agencies. The city council rejected his proposal: whereupon he appointed a charity officer at his own expense, with such good results that after two years the council adopted his plan.

Many attentions which pleased him were paid him in his last years. In Nov. 1903, in recognition of his eightieth birthday, surviving friends in Oxford sent him a congratulatory address. The fifteen signatures were headed by that of the vice-chancellor, D. B. Monro. In America, too, he received many honours. The University of Princeton made him LL.D. in 1892, and he was chosen president of the American Historical Association in 1904. On 19 Oct. 1904 he accepted the invitation to lay at Cornell University the corner stone of a new hall, 'the home of the humanities,' which was named after him 'Goldwin Smith Hall.' A copy of his 'United States' was placed in the box deposited in the stone. The imposing building, which cost 71,000*l.*, was dedicated on 19 June 1906. At the ceremonies of both 1904 and 1906

he gave addresses, and he placed in 'Goldwin Smith Hall' a copy of Bacon's bust of Alfred the Great, which adorned the common room of University College, Oxford.

Goldwin Smith's wife died at The Grange on 9 Sept. 1909. He continued writing letters to the press on current politics, but a mellowing tolerance for opponents seemed to be at length accompanied by some diminution of vigour. In March 1910 he accidentally broke his thigh, and after some three months of enforced inactivity he died at The Grange on 7 June 1910. He was buried in St. James's cemetery, Toronto.

Smith held The Grange, his wife's residence, for life under her will; in accordance with her direction it passed on his death to the city of Toronto to form an art museum there. Smith inherited none of his wife's property, which mainly consisted of real estate in the United States, stocks, and valuable mortgages, and was all distributed among members of her own family. But by prudent investments in Canada and the United States Smith greatly increased his comparatively small inheritance of some 20,000*l.* from his father, and he left an estate valued at \$832,859, of which he disposed by a will dated 5 May 1910. His pictures and statuary went to the art museum at Toronto; \$5000 was left to a nursing mission in the city, and \$1000 each to the labour temple and a baptist church, in both of which he had been interested in his lifetime. Although Toronto University only inherited under the will Smith's library, the succession duty, amounting to \$83,285, passed to the university by the law of the state. Save for modest sums to members of his household and to a few relatives and friends, the residue of Smith's fortune, amounting to \$689,074, passed to Cornell University. The money was to be applied at Cornell to the promotion of liberal studies, languages ancient and modern, literature, philosophy, history, and political science. The bequest marked (Smith wrote) his devotion to the university in the foundation of which he took part, his respect for Ezra Cornell's memory, and his 'attachment as an Englishman to the union of the two branches of our race on this continent with each other and with their common mother' (*Ann. Report of the President and Treasurer, Cornell Univ.*, 1909-10, pp. 43-5. For full text of wills of both Smith and his wife see the *Evening Telegram*, Toronto, 13 Sept. 1910).

Smith's tracts and pamphlets, some privately printed, are very numerous. The

chief of his scattered writings are collected in the volumes 'Lectures and Essays' (New York, 1881), and in 'Essays on Questions of the Day: Political and Social' (New York, 1893). There he embodied his dominant convictions.

Smith was a masterly interpreter of the liberal principles of the Manchester school and of the philosophical radicalism which embodied what seemed to him to be the highest political enlightenment of his youth. His views never developed. He claimed with pride in his latest years to be 'the very last survivor of the Manchester school and circle.' The evils of slavery, of war, and of clerical domination were the main articles of his creed through life, and he looked to a free growth of democracy for their lasting cure. The spread, despite his warnings, of the imperialist sentiment in his later years, not only in Great Britain but in Canada and the United States, was a bitter disappointment. But he stood by his doctrine without flinching, and faced with indifference the unpopularity in which it involved him. A burning hatred of injustice and cruelty lay at the root of his faith, and he followed stoically wherever it led. With his keen intellect there went a puritanic fervour and exaltation of spirit which tended to fanaticism and to the fostering of some unreasoning and ungenerous prejudices. But his intellectual strength combined with his moral earnestness gave a telling force to all expression of his views. His incisive style, which Conington in undergraduate days likened to that of Burke, owed, according to his own account, much to David Hume. The depth of his convictions and his melancholy and sensitive temper made controversy habitual to him, and as a disputant he had in his day few rivals. He devoted most of his energies to polemics, and poured forth with amazing rapidity controversial pamphlets of rare distinction. That detachment of mind which is essential to great history or philosophy was denied him. His historical work is little more than first-rate pamphleteering. For original research he had no aptitude, and he failed to make any addition to historical knowledge. The abandonment of his English career in the full tide of its prosperity, which is the most striking feature of his biography, is very partially explained by the change in his private circumstances due to his father's illness and death. Although he shared his progressive views with many Englishmen of his generation, he was exasperated by the

strength of the reactionary forces in his native land, and believed that his aspirations had no genuine chance of being realised save in a new world. His hope was far from verified. His cry for Canada's annexation to America misinterpreted Canadian feeling. His prophecy that Canada's persistence in the British connection would stunt her growth was falsified. To all appearance the sentiment of empire, his main abhorrence, flourished at his death as vigorously in the new world as in the old. But Smith stubbornly declined to acknowledge defeat and never abated his enthusiasm for what his conscience taught him to be right.

A portrait by E. Wylie Grier, R.C.A., at the Bodleian Library, was presented by Oxford friends in 1894. Another portrait by the same artist is in the office of the 'Evening Telegram' at Toronto. At The Grange, Toronto, there is a bust executed at Oxford in 1866 by Alexander Munro, together with a portrait by another Canadian artist, J. W. G. Forster, who also painted portraits for the Toronto Art Museum and for Cornell University. A final portrait, painted in 1907 at Toronto by John Russell, R.C.A., remains in the artist's studio at Paris, but a replica was presented to the corporation of Reading on 1 Feb. 1912 by Dr. Jameson B. Hurry. A crayon sketch by Frederick Sandys was exhibited at the Royal Academy in 1882.

[Valuable assistance has been rendered in the preparation of this article by Mr. Arnold Haultain, who was for eighteen years Goldwin Smith's private secretary. In the last fifteen years of his life Goldwin Smith wrote out his reminiscences, but did not live to revise the manuscript. They were prepared for the press by Mr. Arnold Haultain in 1911. In spite of disjointed repetitions and inequalities the book offers useful material for biography. Mr. Arnold Haultain has also in preparation 'Goldwin Smith as I knew him' (chiefly records of conversations), together with a collection of Goldwin Smith's letters, and an edition in 10 vols. of the chief pamphlets and publications which are now out of print. Mr. Charles Hersey has supplied genealogical particulars in which he has made exhaustive research. The sons of John Bright and Thomas Bayley Potter have kindly lent the letters of Goldwin Smith in their possession, and Dr. T. H. Warren, the president of Magdalen College, Oxford, has generously placed at the writer's disposal the letters which Goldwin Smith addressed to him. A bibliography of Goldwin Smith's writings, including more than 1500 titles, by Waterman Thomas Hewett, M.A., P.L.D., of Cornell University, is in preparation. See Goldwin Smith's Early Days of Cornell, 1904; J. J. Cooper, Goldwin Smith:

a Brief Account of his Life and Writings, Reading, 1912; The Times, 8 June 1910; The Nation, 9 July 1910; Oxford Magazine, 16 June 1910; The News, Toronto, 7 June 1910 (memoir by Martin J. Griffin); Lord Selborne's Memorials, two series; Frederic Harrison's Autobiographic Memoirs; Lives of Jowett, Stanley, Lord Coleridge, and E. A. Freeman; Lewis Campbell's Nationalisation of the Older Universities.] S. L.

SMITH, HENRY SPENCER (1812-1901), surgeon, born in London on 12 Sept. 1812, was younger son of George Spencer Smith, an estate agent, by Martha his wife. After education at Enfield he entered St. Bartholomew's Hospital in 1832, being apprenticed to Frederick Carpenter Skey [q. v.], with whom he lived, and whose house surgeon he afterwards became. He was admitted M.R.C.S. in 1837, and in 1843 he was chosen one of the 150 persons upon whom the newly established degree of F.R.C.S. England, was conferred without examination; of this band he was the last survivor.

He proceeded to Paris in 1837, studying medicine there for six months, and from 1839-41 he studied science in Berlin. On his return to England he was appointed surgeon to the Royal General Dispensary in Aldersgate Street, and he also lectured on surgery at Samuel Lane's school of medicine in Grosvenor Place. When St. Mary's Hospital was founded in 1851 Spencer Smith became senior assistant surgeon. Three years later, when the medical school of St. Mary's Hospital was instituted, he was chosen dean, and filled the office until 1860; for seventeen years he lectured on systematic surgery. He received from both colleagues and students valuable presentations on his resignation. He was member of the council of the Royal College of Surgeons of England (1867-75), and of the court of examiners (1872-7). He was secretary of the Royal Medical and Chirurgical Society of London (1855-88).

Caring little for private practice, Smith gave both time and thought to the welfare of the newly founded St. Mary's Hospital and its medical school. He died at his house, 92 Oxford Terrace, W., on 29 Nov. 1901. His library, rich in medical works of the sixteenth and seventeenth centuries as well as in editions of Thomas à Kempis and of Walton's 'Angler,' was sold by Messrs. Sotheby, Wilkinson, and Hodge on 14, 15, and 16 Nov. 1878, and on 17 and 18 June 1897. He married (1) Elizabeth Mortlock, daughter of John Sturges, by whom he had a son and a daughter; and

(2) Louisa Theophila, daughter of the Rev. Gibson Lucas.

Smith translated from the German, for the Sydenham Society, Dr. H. Schwann's 'Microscopical Researches into the Accordance in the Structure and Growth of Animals and Plants' (1847) and Dr. M. J. Schleiden's 'Contributions to Phyto-genesis' (in the same volume). These translations gave an impetus in this country to the microscopic study of the tissues.

D'A. P.

SMITH, JAMES HAMBLIN (1829–1901), mathematician, born on 2 Dec. 1829 at Rickingham, Suffolk, was only surviving child of James Hamblin Smith by his wife Mary Finch. He was cousin of Barnard Smith, fellow of Peterhouse, Cambridge (B.A. 1839, M.A. 1842), rector of Glaston, Rutland, and a writer of popular mathematical text-books. After school education at Botesdale, Suffolk, he entered as a 'pensioner' at Gonville and Caius College, Cambridge, in July 1846. On Lady Day 1847 he was elected to a scholarship. At the quinqucentenary of the foundation of the college, in 1848, he was selected to write the 'Latin Commemoration Ode,' a copy of which is preserved in the 'University Registry' (lxxxvi. 27). In 1850 he graduated B.A. as thirty-second wrangler in the mathematical tripos and in the second class of the classical tripos. He proceeded M.A. in 1853. After graduating, Hamblin Smith became a private tutor at Cambridge in mathematics, classics and theology. He was lecturer in classics at Peterhouse from 1868 to 1872. The career of private 'coach' he pursued with success till near his death. He had the power of simplifying mathematical reasoning, and produced to that end the unitary method in arithmetic and a simple and ingenious plan for the conversion into *l.s.d.* of money expressed in decimals, a development of which simplifies the process of long division in a large class of cases (*Brit. Assoc. Report*, 1902, p. 529; *Caius College Magazine*, Michs. Term, 1902).

He published many handbooks for his pupils' use in preparing for examination in mathematics, classics and theology. He also published 'Rudiments of English Grammar' (1876; 2nd edit. 1882), as well as a Latin and a Greek grammar. His elementary mathematical treatises enjoyed a wide circulation.

Hamblin Smith found time for public work at Cambridge, in which his strong yet conciliatory personality gave him

much influence. He was one of the Cambridge improvement commissioners from 1875 until the Local Government Act abolished that body in 1889. He was a member of the council of the senate from 1876 to 1880, and for many years chairman of the Board of Examinations (Cambridge). He was one of the earliest members of the London Mathematical Society.

He died at Cambridge on 10 July 1901, and was buried at Mill Road cemetery. He married on 16 April 1857 Ellen Hales (*d.* June 1912), daughter of Samuel Chilton Gross of Alderton, Suffolk, and sister of Edward John Gross, M.A., Cambridge secretary of the Oxford and Cambridge schools examinations board. Three sons and one daughter (wife of John Clay, M.A., of the Cambridge University Press) survived him. A process portrait hangs in the combination room of Gonville and Caius College, Cambridge.

Hamblin Smith's mathematical handbooks are: 1. 'Elementary Statics,' 1868; 10th edit. 1890. 2. 'Elementary Hydrostatics,' 1868; new edit. 1887. 3. 'Elementary Trigonometry,' 1868; 8th edit. 1890. 4. 'Elementary Algebra,' part i. 1869; 13th edit. 1894 (pt. ii. by E. J. Gross). 5. 'Elements of Geometry,' 1872; 7th edit. 1890. 6. 'A Treatise on Arithmetic,' 1872; 15th edit. 1898; adapted to Canadian schools by William Scott and R. Fletcher, revised edit. 1907. 7. 'An Introduction to the Study of Heat,' 4th edit. 1877; 9th edit. 1890. 8. 'An Introduction to the Study of Geometrical Conic Sections,' 1887; 2nd edit. 1889.

[Private information.]

J. D. H. D.

SMITH, LUCY TOULMIN (1838–1911), scholar, born at Boston, Massachusetts, U.S.A., on 21 Nov. 1838, was eldest child of a family of two sons and three daughters of Joshua Toulmin Smith (1816–1869) [q. v.] by his wife Martha, daughter of William Jones Kendall. About 1842 her parents returned to England and settled at Highgate, London, where she resided for more than fifty years. Lucy was educated at home, and early became her father's amanuensis, actively aiding him in the compilation of his periodical, the 'Parliamentary Remembrancer' (1857–65). In 1870 she began original research, completing for the Early English Text Society the volume on 'English Gilds' begun by her father and left unfinished at his death. In 1872 she edited for the Camden Society 'The Maire of Bristowe's Kalendar,' by R. Ricart, and for the New Shakspeare Society,

in 1879, C. M. Ingleby's 'Shakespeare's Centurie of Prayse,' to which she made many additions.

Miss Toulmin Smith's most important contributions to research and scholarship were her editions of the 'York Plays' (1885); of the 'Expeditions to Prussia and the Holy Land by Henry, Earl of Derby (afterwards Henry IV) in 1390-1 and 1392-3,' issued by the Camden Society in 1894, a mine of information upon continental travel in the fourteenth century; and of Leland's 'Itinerary,' the preparation of which occupied her leisure for many years. The 'Itinerary in Wales' was issued in 1906, and the 'Itinerary in England' in 4 vols. 1907-10.

In November 1894 Miss Toulmin Smith left Highgate on being elected librarian of Manchester College, Oxford; she was the first woman in England to be appointed head of a public library, and held the post until her death. Her house at Oxford became the meeting-place of British and foreign scholars, at whose disposal she always placed her aid and advice and even her labour. At the same time she was an accomplished gardener and housewife. She died at 1 Park Terrace, Oxford, on 18 Dec. 1911, and was buried in Wolvercote cemetery. A memorial is to be placed in the library of Manchester College.

Besides the works already mentioned Miss Toulmin Smith edited 'Gorboduc' for Vollmoeller's 'Englische Sprach- und Literaturdenkmale' (1883) and 'A Companion Book of the Fifteenth Century' (1886). She translated Jusserand's 'La Vie Nomade et les routes d'Angleterre' under the title of 'English Wayfaring Life' (1889). Her 'Manual of the English Grammar and Language for Self-help' (1886) is a clear and practical work on historical lines. She assisted Paul Meyer in editing 'Les Contes moralisés de Nicole Bozon' for the Société des anciens Textes français (1889), and took some part in the editing of the medieval chronicle 'Cursor Mundi' (1893) and of the Registers of the Knights Hospitaller of Malta, which she examined during a six months' visit to Malta (1880-1).

[The Times, 21 Dec. 1911; The Inquirer, 23 Dec. 1911 (notice by C. H. Herford); Brit. Mus. Cat.; private information.]

E. L.

SMITH, REGINALD BOSWORTH (1839-1908), schoolmaster and author, born on 28 June 1839 at West Stafford Rectory, was second son in the family of four sons and six daughters of Reginald Southwell

Smith (1809-1896), who graduated M.A. from Balliol College, Oxford, in 1834, was rector of West Stafford, Dorset, from 1836, and canon of Salisbury from 1875. His grandfather was Sir John Wyldbore Smith (1770-1852), second baronet, of Sydling and the Down House, Blandford, Dorset. His mother was Emily Geneviève, daughter of Henry Hanson Simpson of Bitterne Manor House, Hampshire, and 12 Camden Place, Bath. From Milton Abbas school, Blandford, Bosworth Smith passed in August 1855 to Marlborough College, where he was head boy under two headmasters—George Edward Lynch Cotton [q. v.], afterwards bishop of Calcutta, and George Granville Bradley [q. v. Suppl. II], subsequently dean of Westminster. At Michaelmas 1858 he matriculated at Oxford, with an open classical scholarship at Corpus Christi College, and he graduated B.A. in 1862 with first-class honours both in classical moderations and in the final classical school. In the same year he was president of the union. In 1863 he was elected to a classical fellowship at Trinity College, Oxford, and was appointed tutor of that college, and lecturer both there and at Corpus Christi. In the same year he published 'Birds of Marlborough,' a first testimony to his native love of birds, which he cherished from boyhood. He proceeded M.A. in 1865.

On 16 Sept. 1864 he began work as a classical master at Harrow School, on the nomination of the headmaster, Dr. H. Montagu Butler. He married next year, and in 1870 he opened a new 'Large House,' The Knoll, which he built at his own expense, and where he designed an attractive garden. For more than thirty years Bosworth Smith mainly devoted his life to his duties at Harrow. His house was always one of the most distinguished in the school. His firm, but tolerant, government, his enthusiasm and simplicity, his wide interests, and his ready sympathy bound his pupils to him in ties of affection, which lasted long after they had left school. In his form teaching, which never lost its early freshness, he qualified the classical tradition by diverting much of his energy to history, scripture, geography, and English literature, especially Milton.

Bosworth Smith, who travelled frequently in his vacations and was keenly alive to the historical associations of foreign scenes, cherished many interests outside his school work, and was soon widely known as an author. In 1874 he delivered before the Royal Institution in London four lectures

on Mohammed and Mohammedanism, originally prepared for an essay society at Harrow. They were published in the same year (3rd edit. 1889). While maintaining the infinite superiority of Christianity as a religion, Bosworth Smith ably defended the character and teaching of the Prophet. The book excited controversy, but its fairness was acknowledged by Asiatic scholars, and the volume ranks with the best accounts of Islam in English. It was translated into Arabic, and its author was for many years prayed for in the mosques of Western Africa.

'Carthage and the Carthaginians' (abridged edit. 1881, 'Rome and Carthage'), which followed in 1878, collected seven lectures also delivered before the Royal Institution. Here Bosworth Smith gave a graphic description of Carthage as 'Queen of the Mediterranean,' and defended the character of Hannibal. In 1879 he accepted the invitation of the family of the first Lord Lawrence [q. v.] to write his life. He had met Lord Lawrence, and in two letters in 'The Times' in 1878 had defended his Afghan policy. Three years were spent on the accumulated documents and in intercourse with Indian authorities, and the book was published in two volumes on 12 Feb. 1883. Its reception was enthusiastic. Within five days the first edition of 1000 copies (at a high price) was exhausted; a fourth edition was called for in April, and a sixth in 1885 (7th edit. 1901). The American government placed a copy in every great public library and on every ship in the U.S. navy. It was also translated into Urdu, and widely read among the natives of India. Although Bosworth Smith never visited India, critics were agreed as to both the accuracy of his portraiture and the charm of his style. The assertion of his own views on disputed questions like the Afghan frontier, and his condemnation of Hodson of Hodson's horse provoked remonstrance, but the book took a high place among English biographies. Owing to fear of the strain on his health, Bosworth Smith declined other work of similar kind, such as biographies of the first Earl Russell, of the seventh earl of Shaftesbury, of Lord Stratford de Redcliffe, and the duke of Wellington. At the same time Bosworth Smith constantly and effectively intervened in current political, religious, and educational controversies, chiefly through letters to 'The Times' or articles in the reviews. During the Turco-Russian conflict (1876-8) he defended the Turkish character, and insisted

on the danger to India of Russia's aggressive policy (*The Times*, 21 July 1877; *Contemp. Review*, December 1876, 'Turkey and Russia'). In 1885 he urged the permanent occupation of the Soudan by England (*The Times*, 13 Feb. 1885), and in 1892 he protested against the threat of evacuating Uganda which was not carried out (*ib.* 18, 25 Oct. 13 Dec. 1892; cf. also *Contemp. Rev.* January 1891, 'Englishmen in Africa'). On 20 Oct. 1892, speaking on the subject for a deputation of the British and Foreign Anti-Slavery Society to Lord Rosebery, then secretary of state for foreign affairs, he pleaded for 'the continuity of the moral policy of England.' His letters were reprinted as a pamphlet and had a wide circulation. In the autumn of 1885 he in like manner defended the Church of England against Gladstone's and Mr. Chamberlain's menaces of disestablishment (*The Times*, 13, 20, 31 Oct.). To an early evangelical training he added a wide tolerance, but his loyalty to the church was intense. Gladstone vaguely replied to his appeal for some reassuring message to liberal churchmen (*ibid.* 31 Oct. 1885). Smith's letters were published by the Church Defence Institution as a pamphlet entitled 'Reasons of a Layman and a Liberal for opposing Disestablishment' (cf. also arts. by Bosworth Smith, *Nineteenth Century*, 1889, 'The Crisis in the Church'; *National Review*, July 1907, 'Sunday').

In 1895 Bosworth Smith purchased an old manor house at Bingham's Melcombe, Dorset, and there he resided on his retirement from Harrow in 1901.

He was J.P. for Dorsetshire, a member of the education committee of the county council, vice-president of the Dorset Field Club, to which he lectured more than once, a member of the Salisbury Diocesan Synod, and a member of the house of laymen in the representative church council at Westminster. At Harrow he had steadily pursued his lifelong study of birds, making annual expeditions with chosen pupils to neighbouring woods, and occasionally to the Norfolk Broads and other places, to observe, but not to rob, birds' nests. In his holidays, too, he had been a keen but humane sportsman. At Bingham's Melcombe he enjoyed full scope for his predilections. To the 'Nineteenth Century' (November 1902-February 1904) he contributed six articles on birds, which were published with other chapters descriptive of Dorset life, as 'Bird Life and Bird Lore,' in 1905 (new edit. 1909). After many months'

illness he died at Bingham's Melcombe on 18 Oct. 1908, and was buried beside his parents and brothers in the churchyard of West Stafford, his birthplace.

On 9 Aug. 1865 he married Flora, fourth daughter of the Rev. Edward Dawe Wickham, rector of Holmwood, Surrey (1851-1893), whose fifth daughter, Alice Bertha, was wife of Bosworth's elder brother, Henry John (1838-1879). Bosworth Smith's own handwriting was all but illegible, and his wife, who fully shared all his interests, copied and recopied every line he wrote for publication and most of his important private letters. She survived him with five sons and four daughters; the second son, Alan Wyldbore Bosworth, lieutenant R.N., lost his life at sea when in command of H.M.S. Cobra (18 Sept. 1901).

A portrait of Bosworth Smith, painted by Hugh G. Riviere, presented by old pupils at Harrow and engraved by the Fine Arts Society, is now in the possession of his widow at Bingham's Melcombe. He is commemorated by tablets in Harrow school chapel and in the church at Bingham's Melcombe, and in his memory were erected a portion of the reredos in the church at West Stafford and (by friends and pupils) a stone balustrade in the terrace gardens at Harrow.

[Reginald Bosworth Smith, a Memoir, by his eldest daughter, Ellinor Flora, wife of Major Sir Edward Ian Grogan, 2nd bart., 1909; Harrovian, 27 July 1901 and 14 Nov. 1908; The Times, 20 Oct. 1908; Salisbury Gazette, Nov. 1908; Marlburian, Dec. 1908; Dorset County Chronicle, 22 Oct. 1908.]

E. G-M.

SMITH, SAMUEL (1836-1906), politician and philanthropist, born on 11 Jan. 1836 at Robertson, in the parish of Borgue, Kirkcudbrightshire, was eldest of the seven children of James Smith, a large farmer of Borgue, who also farmed land of his own in South Carleton and other places. His grandfather and an uncle, both named Samuel Smith, were each parish minister of Borgue. The former (*d.* 1816) wrote 'A General View of the Agriculture of Galloway' (1806); the latter seceded at the disruption of the Scottish church in 1843.

Smith, after being educated at the Borgue parish school and at Kirkcudbright, entered Edinburgh University before he was sixteen, and spent three sessions there. In spite of his literary tastes, he was apprenticed to a cotton-broker in Liverpool in 1853. There he spent his leisure in study, frequenting the Liverpool literary societies and speaking

at the Philomathic Society, of which he became president, and forming close friendships with (Sir) Donald Currie [q. v. Suppl. II], W. B. Barbour, and William Sproston Caine [q. v. Suppl. II]. In 1857 Smith became manager of the cotton sale-room and began to write with authority on the cotton market in the 'Liverpool Daily Post,' under the signature 'Mercator' (cf. THOMAS ELLISON, *The Cotton Trade of Great Britain*). In 1860 he visited New Orleans and the cotton-growing districts of North America, of which he published a description. On his return, having made a tour of the leading Lancashire manufacturing centres, he started in business as a cotton-broker in Chapel Street, Liverpool, and he established the first monthly cotton circular, conducting it till his entrance into parliament. In the winter of 1862-3 he went to India on behalf of the Manchester Chamber of Commerce to test the cotton-growing possibilities of the country, in view of the depletion of the English market owing to the American civil war. In a communication to the 'Times of India' (embodied in a pamphlet published in England) Smith questioned India's fitness to grow cotton. The visit generated in him a lifelong interest in India and its people. He travelled back slowly by way of the Levant, Constantinople, and the Danube, and greatly improved his business prospects. Toward the close of his career he recommended the growing of cotton in British Africa, Egypt, the Soudan, and Scinde. On 1 Jan. 1864 the firm of Smith, Edwards & Co., cotton-brokers, was launched, and three months later Samuel Smith also became head of the Liverpool branch of James Finlay & Co. of Glasgow and Bombay. Cotton-spinning and manufacturing were subsequently added to his activities by the purchase of Millbrook mills, Stalybridge.

From an early period Smith was active as a philanthropist. At Liverpool he interested himself in efforts for prevention of cruelty to children, for establishing scholarships to connect primary and secondary schools (1874), and for improving public-houses; he entered the town council in 1879 as an ardent temperance reformer. A zealous presbyterian of liberal views, he joined in inviting Messrs. Moody and Sankey to Liverpool in 1875; presided at a meeting of 4000 held at Hengler's Circus in aid of 'General' Booth's 'Darkest England' scheme in 1890; and received 14,000 American delegates of the Christian Endeavour Society in 1897. In 1876 Smith

became president of the Liverpool chamber of commerce.

At a bye-election at Liverpool in Dec. 1882, caused by Lord Sandon's succession to his father's earldom of Harrowby, Smith was elected in the liberal interest by a majority of 309, winning a seat for his party in what was regarded as a conservative stronghold. In 1885 he was defeated in the Abercromby division of Liverpool, but in March 1886 was returned for Flintshire during his absence in India. That seat he retained till 1905. Gladstone's residence, Hawarden Castle, was in his constituency, and Smith was often there, exchanging views with the statesman. Smith, who seconded the address to the crown at the opening of the session of 1884, constantly spoke in the House of Commons on moral, social, religious, currency, and Indian questions. Critics likened him to Jeremiah, but he was sincere and well-informed. He pressed untiringly for compulsory evening continuation schools for children leaving school at thirteen, and for the abrogation of payment by results and of overstrain in elementary schools. He zealously promoted the Criminal Law Amendment Act of 1885, and by his efforts made legal the evidence of young children. The Prevention of Cruelty to Children Act of 1889 embodied reforms which he had advocated in Liverpool. He lamented that his attacks on the opium trade between India and China were not very effectual.

Gradually adopting bimetallic views, on which he gave addresses in many parts of the country, he several times raised the question in parliament. On 18 April 1890 he initiated a parliamentary debate in which Mr. Balfour, Sir Edward Clarke, and Sir Richard Webster supported, and Sir W. Harcourt and Mr. W. H. Smith opposed his resolution (which was lost by 183 to 87). Smith contributed 'Three Letters on the Silver Question' to H. Cernuschi's 'Nomisma' (1877), and published 'The Bimetallic Question' (1887).

Smith revisited India in 1886, and his subsequent articles in the 'Contemporary Review' (reprinted as 'India Revisited; the Social and Political Problem,' 1886) were answered by Sir Mountstuart Grant Duff [q. v. Suppl. II], governor of Madras. Thenceforth the grievances of India were a main theme of his in the House of Commons. On 30 April 1889 Smith carried by a majority of ten against the government a motion condemning the liquor policy of the Indian government. The result was a reduction of licences in

India. In 1894 Smith's motion for a parliamentary inquiry into the condition of the Indian people was followed by a royal commission which recommended a reduction by 250,000*l.* of Indian liabilities. He encouraged the native claim to a larger share in the government. Other native races found in Smith a warm champion. In 1892-3 he called attention to the abuses of the Kanaka labour traffic from the New Hebrides to Queensland, and in March 1896 the motion of sympathy with the Armenians in consequence of the recent massacres was carried unanimously.

Religious questions chiefly occupied his closing years. He urged in parliament disestablishment both in Wales and England, and denounced ritualistic offences with sustained vehemence, publishing pamphlets on the subject which reached a circulation of a million. In the summer of 1901 his health failed, but he retained his seat in parliament till the end of 1905, when he was named a privy councillor on his retirement.

Smith, who was again in India in 1904-5, returned thither with Mr. William Jones, M.P., at the end of 1906 in apparently improved health, arriving on 25 Dec.; but after attending some sittings of the Indian National Congress he died rather suddenly on 28 Dec. at Calcutta. He was buried in the Scottish cemetery there. He bequeathed upwards of 50,000*l.* to various Liverpool institutions.

Smith married on 20 July 1864 Melville (d. 1893), daughter of the Rev. John Christison, D.D., of Biggar, Lanarkshire. In memory of a son, James Gordon Smith (1870-1900), who predeceased him, the Gordon Smith Institute for Seamen, in Paradise Street, Liverpool, was founded in 1900 and carried on by his father.

Smith was constantly engaged in controversy in the press. He met Henry George in debate at the National Liberal Club, each making four speeches (printed in the appendix to his 'My Life Work,' 1902).

His many publications include, besides those mentioned, 'The Credibility of the Christian Religion' (1872; last edit. 1889) and 'India and its Problems: Letters written from India in 1904-5' (1905). His 'Cotton Trade of India' (1863) was translated into French by F. Emion.

[Smith's *My Life Work*, 1902 (with portrait), contains, besides the narrative, copious extracts from his letters written in India and America and excerpts from speeches; *The Times*, and *Daily News*, 31 Dec. 1906; *Liverpool Daily Post*, 31 Dec. 1906 and 1 Jan.

1907 (with portrait); Hansard's Parl. Debates; Lucy's Diary of the Unionist Parlt. 1901, pp. 262-4; John Newton's W. S. Caine, 1907; Who's Who, 1906; Brit. Mus. Cat.]
G. Læ G. N.

SMITH, SARAH, writing under the pseudonym of 'HESBA STRETTON' (1832-1911), author, born on 27 July 1832, in New Street, Wellington, Shropshire, was third daughter and fourth child (in a family of eight) of Benjamin Smith, a bookseller and publisher, by his wife Ann Bakewell, a woman of strong evangelical views, who died when Sarah was eight years old. Sarah attended a large girls' day school at the Old Hall, Watling Street, Wellington, conducted by Mrs. Cranage. The school was continued by her son, Dr. Cranage, as a boys' school, and became well known. But Sarah's education was chiefly gained by reading the books in her father's shop. She early began to write little tales without thought of publication. In 1859, however, her sister Elizabeth (1830-1911), her life-long companion, sent, unknown to Sarah, one of these stories, 'The Lucky Leg,' to Charles Dickens, then editor of 'Household Words.' He accepted it, sending a cheque for 5*l.*, and published it on 19 March 1859, intimating he would be glad of further contributions. A friendship sprang up between Dickens and the young author, who contributed to nearly every Christmas number of 'All the Year Round' until 1866. Her most notable tale in that connection was 'The Travelling Post Office' in 'Mugby Junction,' Dec. 1866. Feeling that her name lacked distinction, she adopted in 1858 the pseudonym 'Hesba Stretton.' Hesba represented the initial letters of the names of her brothers and sisters then living in order of age, and 'Stretton' was taken from All Stretton (near Church Stretton, Shropshire), where by the bequest of an uncle her younger sister Ann (b. 1837) had property. Hesba, who adopted her new name in all relations of life, visited the place annually till near her death.

At the end of 1863 Hesba Stretton and her sister left Shropshire, and lived for some years in Manchester, and after a short sojourn abroad settled in 1870 in Bayswater, London. Her work attracted little notice until the appearance in the 'Sunday at Home' in 1866 of 'Jessica's First Prayer,' a touching story, simply written, of a girl wai*f*'s awakening to the meaning of religion. Issued in book form in 1867, it won an immediate and lasting popularity. Over a million and a half copies have been sold,

and it has been translated into every European language and into most Asiatic and African tongues. The tale shows accurate knowledge of the life of destitute children in large cities, and embodies personal investigations of slum conditions. The story was commended by the earl of Shaftesbury [q. v.]. The Tsar Alexander II ordered it to be placed in all Russian schools, but the decree was revoked by his successor, who had all the copies burnt. Similar stories followed, of which the most popular were 'Little Meg's Children' (1868) and 'Alone in London' (1869), which reached a combined circulation of three-quarters of a million copies. Between 1866 and 1906 Hesba Stretton published in all fifty volumes, mostly short religious and moral tales issued by the Religious Tract Society; a few, however, like 'The Clives of Burcot' (1866), 'David Lloyd's Last Will' (1869), and 'The Doctor's Dilemma' (1872) are long novels.

A woman of wide and varied sympathies, Hesba Stretton did not confine her energies to writing. She became acquainted with the Baroness Burdett-Coutts [q. v. Suppl. II] and assisted her in her works of charity. Hesba Stretton took a prominent part in the founding of the London Society for the Prevention of Cruelty to Children. She had for some years been associated with Benjamin Waugh [q. v. Suppl. II] in the 'Sunday Magazine,' and in consultation with him she published a letter in 'The Times' in Jan. 1884, directing attention to the need for such a society. She attended a meeting of twenty persons, including the Baroness Burdett-Coutts and the earl of Shaftesbury, at the Mansion House on 11 July 1884, when the foundations of the society were laid. A report which she drew up for an organising sub-committee was printed and circulated. Hesba Stretton continued an active member of the executive committee until 15 Dec. 1894, when she resigned. The Baroness Burdett-Coutts had resigned just before because she disapproved on financial grounds of the development of the London society into a national society.

During the Russian famine of 1892 Hesba Stretton collected 1000*l.* for the relief of the peasants, and took much trouble to ensure its proper distribution.

About 1890 Miss Stretton settled at Ivy Croft, Ham, near Richmond, where she died on 8 Oct. 1911, after having been confined to her room for four years. She was buried in the churchyard, Ham Common, Surrey.

Hesba Stretton, who led a retired, simple,

and hardworking life, and avoided publicity, wholly depended for her livelihood on her pen. She never went to a theatre, cared nothing for dress, and owned no jewellery. She found recreation in foreign travel and in the society of children and of friends, who included foreigners of distinction like J. H. Merle D'Aubigné, the French protestant historian, and Franz Delitzsch, the German theologian. The latter translated many of her stories into German.

E. L.

SMITH, THOMAS (1817-1906), missionary and mathematician, born at Symington manse on 8 July 1817, was eldest son in a family of ten children of John Smith, parish minister of Symington, Lanarkshire, by his wife Jean Stodart. After attending the parish school, he matriculated at thirteen at Edinburgh University, where he took the highest honours in mathematics and physics. Entering the divinity hall in 1834, he studied under Thomas Chalmers [q. v.], and in 1839 was licensed to preach. Coming under the influence of Dr. Alexander Duff [q. v.], he was ordained to the Scottish mission in Calcutta (7 March 1839). At the Church of Scotland's headquarters at Calcutta he quickly distinguished himself both as an intellectual preacher and as a teacher of mathematics and physical science. In 1843, on the disruption of the Church of Scotland, Smith and his colleagues in India joined the Free Church.

Thenceforth Smith was busily engaged in building up the Indian mission of the Free Church. Besides exercising much influence among the natives, he furthered the cause of education; was an active contributor to missionary literature and to Indian journalism, was a chief writer in the 'Calcutta Review' from its foundation, and was editor from 1851 to 1859.

When he went to India, it was impossible for male missionaries to reach the women, all of whom above the very lowest class were shut off from the society of men. Smith's proposal in the 'Christian Observer' in 1840 to send lady missionaries and governesses, both European and Indian, into the zenana bore fruit in the first Zenana mission, which was started in 1854 and was the crowning achievement of Smith's Indian career. On the outbreak of the Indian Mutiny in 1857 Smith acted as chaplain of the 42nd Highlanders (Black Watch) at Calcutta, and he accom-

panied the regiment on active service up country.

Smith finally returned to Scotland in 1859, and from that date until 1879 conducted a home mission charge in one of the poorest districts of Edinburgh. In 1880 he succeeded his friend, Alexander Duff [q. v.], in the chair of evangelistic theology in New College, Edinburgh, retiring in 1893 with the rank of emeritus professor and a seat in the senatus. In 1891 he was moderator of the general assembly of the Free Church of Scotland, and in March 1899 he celebrated his ministerial diamond jubilee.

In ecclesiastical politics Smith was a conservative, usually co-operating with Dr. James Begg [q. v.], whose biography he wrote (1885-8). He strongly opposed the first proposals for the union of the Free and United Presbyterian Churches (1863-73), but reluctantly accepted the change at the close of his life. From Edinburgh University Smith received three honorary degrees, M.A. in 1858, D.D. in 1867, and LL.D. in 1900.

Smith was also a brilliant mathematician, scholar, and linguist. Lord Kelvin said: 'Had [he] devoted himself to mathematical science . . . he would unquestionably have risen to the very highest eminence in that science. As it was, *teste* his logarithmic calculations (which were not completed), he was one of the foremost mathematical scholars of his day.' In 1857 Smith published 'An Elementary Treatise on Plane Geometry according to the Method of Rectilineal Co-ordinates,' and in 1902 'The Life of Euclid' in Oliphant Smeaton's series of 'World's Epoch-Makers.' Smith edited a noteworthy edition of the puritan divines (1860-6), and learned French in order to translate Vinet's 'Studies in Pascal,' and German to prepare English versions of Warneck's missionary writings. Besides publishing a short biography of Dr. Alexander Duff [q. v.] for the 'Men Worth Remembering' series (1883), and 'Mediaeval Missions' ('Duff Missionary Lectures,' 1880), he edited the 'Letters of Samuel Rutherford' (1881).

Smith died at Edinburgh on 26 May 1906, and was buried in the Grange cemetery. A presentation portrait, painted by J. H. Lorimer, R.S.A., in 1903, is now in the custody of the senatus of New College, Edinburgh. In 1839 Smith married Grace, daughter of D. K. Whyte, paymaster, R.N.; she died in 1886. His third son, the Rev. William Whyte Smith, B.D., minister

of Newington Free Church, Edinburgh, predeceased him. His only surviving son, David Whyte Ewart Smith, is a justice of the peace and honorary sheriff substitute for Haddingtonshire.

[Scotsman, 27 May 1906; Scottish Review, 31 May 1906 (memorial notice by George Smith, LL.D., C.I.E.); private information.]

W. F. G.

SMITH, SIR THOMAS, first baronet (1833-1909), surgeon, born at Blackheath on 23 March 1833, was sixth son of Benjamin Smith, a London goldsmith, by his wife Susannah, daughter of Apsley Pellatt, whose ancestor Thomas Pellatt was president of the Royal College of Physicians of London (1735-9). Two brothers became canons of Canterbury, and a third, Stephen, was prime warden in the Goldsmiths' Company in 1885-6.

Tom Smith was educated at Tonbridge school, which he entered in Lent term, 1844. His father, having suffered reverses in business, apprenticed his son to Sir James Paget [q. v. Suppl. I] in 1847. Smith was thus the last of the 'hospital apprentices' at St. Bartholomew's Hospital. He was admitted M.R.C.S. in 1854, and in August became house surgeon at the Children's Hospital in Great Ormond Street. This post he resigned from ill-health on 7 Dec., receiving a special minute of commendation from the committee of management. Taking rooms in Bedford Row, he coached pupils for examinations and at the same time assisted Paget in his private and hospital practice. From 1857 onwards for several years it was his custom to take a class of students to Paris in the Easter vacation, where, with the help of Brown-Séquard [q. v. Suppl. I], he taught them operative surgery. The outcome of this work was a 'Manual of Operative Surgery on the Dead Body,' published in 1859 (2nd edit. 1876). In 1858 he was admitted F.R.C.S. England, and in 1859 was appointed, jointly with George W. Callender, demonstrator of anatomy and operative surgery at St. Bartholomew's Hospital. He was elected assistant surgeon on 24 Feb. 1864 on the resignation of Frederick Carpenter Skey [q. v.], and for a time had charge of the aural department. He was appointed surgeon in 1873. In the medical school attached to the hospital he lectured on anatomy jointly with Callender from 1871. On resigning his hospital appointments on 10 March 1898 at the retiring age of sixty-five he was appointed a consulting surgeon.

From 1858 to 1861 Smith was assistant surgeon at the Great Northern Hospital,

then recently established in York Road, King's Cross. In September 1861 he was elected assistant surgeon at the Children's Hospital in Great Ormond Street, where he was surgeon from June 1868 to November 1883 and afterwards consulting surgeon. He was also surgeon to the Alexandra Hospital for hip disease in Queen Square.

Smith was surgical secretary of the Royal Medical and Chirurgical Society (1870-2), and he contributed to the 'Transactions' of this body (vol. 51, p. 79) his paper 'On the Cure of Cleft Palate by Operation in Children, with a Description of an Instrument for Facilitating the Operation.' The method recommended in this paper governed the technique of the operation for many years. He also took an important part in the commission appointed to report upon the administration of remedies by hypodermic injection.

At the Royal College of Surgeons of England Smith was elected a member of the council in 1880. He acted as a vice-president in 1887-8, and again in 1890-1, but he refused nomination for the office of president. He was chosen a trustee of the Hunterian collection in 1900. He was gazetted surgeon-extraordinary to Queen Victoria in 1895, in succession to Sir William Savory [q. v.], and was created a baronet in 1897. He actively aided the Misses Keyser in founding their home for officers wounded in the South African war, and was created K.C.V.O. in 1901. Becoming an honorary serjeant-surgeon to King Edward VII on his accession in 1901, he was in attendance when Sir Frederick Treves operated on the King on the day appointed for the Coronation (24 June 1902).

He lived at 7 Montagu Street, Russell Square, until 1868, when he removed to 5 Stratford Place, Oxford Street, where he died on 1 Oct. 1909. He was buried in the Finchley cemetery.

He married on 27 Aug. 1862 Ann Eliza, second daughter of Frederick Parbury, an Australian by birth. She died on 9 Feb. 1879 shortly after the birth of her ninth child, and in 1880 he instituted in her memory the Samaritan Maternity Fund at St. Bartholomew's Hospital. Through life Smith trusted more to his own observation and experience than to knowledge acquired from others. A dexterous operator, a sure guide in difficult questions of diagnosis, and a first-rate clinical teacher of surgery, he was popular with students, who appreciated his wit and humour.

A three-quarter length in oils—a good likeness—painted by the Hon. John Collier,

hangs in the great hall of St. Bartholomew's Hospital. It was presented by his colleagues and old pupils with a replica for himself on his retirement from the hospital in 1898.

[St. Bartholomew's Hosp. Reports, vol. xl, 1909; *Lancet*, 1909, ii. 1108; personal knowledge.] D'A. P.

SMITH, THOMAS ROGER (1830-1903), architect, born at Sheffield on 14 July 1830, was only son of the Rev. Thomas Smith of Sheffield by his wife Louisa Thomas of Chelsea. After private education he entered the office of Philip Hardwick [q. v.] and spent a year and a half in travel before beginning independent practice in 1855. Mr. A. S. Gale was in partnership with him until 1891, and from 1888 his son, Mr. Ravenscroft Elsey Smith, who co-operated in all his subsequent works.

Having been selected to prepare the design for the exhibition buildings in Bombay, Smith proceeded thither in 1864. The erection was abandoned after the contract was signed owing to the cotton famine, but several important buildings were erected in India from his designs, including the post office and British Hospital at Bombay, and the residency at Gurners Kind. In England his work included the Technical Schools (and Baths) of the Carpenters' Company at Stratford; the Ben Jonson schools at Stepney (1872), as well as other schools for the London school board; Emmanuel church and vicarage, South Croydon; the Sanatorium at Reedham (1883); the North London Hospital for Consumption at Hampstead (built 1880, enlarged 1892, completed 1903); laboratories at University College (opened 1892), forming part of an uncompleted scheme for the Gower Street front of the large quadrangle; many City warehouses; and, besides other domestic work, Armathwaite Hall, Cumberland; Brambletye House, East Grinstead; a house at Taplow for Mr. G. Hanbury, and Beechy Lees at Otford, Kent.

Smith, who devoted much of his energies to lecturing on architecture and to official duties external to actual professional practice, became in 1851 a member of the Architectural Association, a body to which he delivered an extensive series of lectures; he was president in 1860-1 and again in 1863-4. At the Royal Institute of British Architects he was elected an associate in 1856 and in 1863 a fellow. He took a prominent part in its debates and committees, was for

several sessions a member of its council, and became chairman in 1899 of the statutory board of examiners (under the London Building Acts) which the institute appoints. In 1874 he was made district surveyor under the Metropolitan Board of Works for Southwark and North Lambeth, and was transferred in 1882 to the more important district of West Wandsworth. Smith's other official appointments were numerous. At the Carpenters' Company, for which he acted as examiner in carpentry, &c., as a frequent lecturer, and as surveyor, he attained in 1901 the office of master. He was an examiner in architecture to the Science and Art Department, South Kensington, as well as to the City and Guilds Institute, and surveyor to the licensing justices of Wimbledon and Wandsworth; but the most important of his posts was the professorship of architecture at University College, London, which he held from 1880 to his death. His wide practical experience in questions of rights of light brought him frequent engagements as an expert and arbitrator, and in 1900 he served (as chairman) on a joint committee of the Royal Institute of British Architects and the Surveyors' Institution appointed to discuss the amendment of the law of ancient lights. Smith was often an architectural assessor in competitions.

Smith prepared many papers on professional and artistic subjects, but his only published books were the manual on 'Acoustics' in Weale's series (1861), and two handbooks, one on 'Architecture, Classic and Early Christian' (1882; new edit. 1898); the other on 'Gothic and Renaissance Architecture' (1888, 'Illustrated Handbooks of Art History'), of which Mr. John Slater was joint author. Though afflicted with serious lameness for many years, Smith continued his professional labours till within three months of his death on 11 March 1903 at his residence, Gordon Street, Gordon Square, London. His office was at Temple Chambers, Temple Avenue, E.C.

He married in 1858 Catherine, daughter of Joseph Elsey of Highgate, and was survived by his widow, one daughter, and three sons, one of whom, his partner, Mr. Ravenscroft Elsey Smith, became in 1899 professor of architecture at King's College, London.

[*R.I.B.A. Journal*, 3rd series, x. 276; *The Builder*, 1903, lxxxiv. 289; *Building News*, 1903, lxxxiv. 369; information from Professor R. Elsey Smith.] P. W.

SMITH, WALTER CHALMERS (1824-1908), poet and preacher, son of Walter Smith, builder, by his wife Barbara Milne, was born in Aberdeen on 5 Dec. 1824. He was educated at the grammar school, Aberdeen, and at Marischal College, which he entered at the age of thirteen, graduating M.A. in 1841. His original intention was to adopt law as his profession, but under the influence of Dr. Chalmers he entered the New College, Edinburgh, to study for the ministry of the Free Church of Scotland. In 1850 he was ordained pastor of the Free (Scottish) Church in Chadwell Street, Pentonville, London. The small congregation did not become larger under his ministry. In 1853 he resigned and was appointed to Milnathort, in the parish of Orwell, Kinross-shire; and in 1857 he removed to Roxburgh Free Church, Edinburgh. In 1862 he was chosen to succeed the Free Church leader, Dr. Robert Buchanan (1802-1875) [q. v.], in the Free Tron Church, Glasgow. Smith was a thoughtful preacher, catholic in his sympathies, and of rather advanced opinions for the Free Church of his time, though in the end his influence was felt in broadening its outlook. Two 'Discourses' that he published in 1866, advocating more liberal views in regard to Sunday observance than those then prevailing in Scotland, came under the ban of his Presbytery, and he was 'affectionately admonished' by the General Assembly in June 1867. In 1876 he was translated to the Free High Church, Edinburgh. During the prosecution of Professor Robertson Smith [see SMITH, WILLIAM ROBERTSON] his strong sympathy with the professor gave some offence to the orthodox church leaders; but in 1893 he had so won the confidence of the church that he was chosen moderator of the general assembly. The following year he retired from his charge, when he was presented with his portrait painted by Sir George Reid. He received the degrees of D.D. from the University of Glasgow (1869), and LL.D. from the universities of Aberdeen (1876) and Edinburgh (1893). He died on 20 Sept. 1908. He married Agnes Monteith and left a son and three daughters.

Under the pseudonym of 'Orwell,' Smith published, in 1861, a book of poems with the title 'The Bishop's Walk'; and in 1872, under the pseudonym of 'Hermann Knott,' 'Olrig Grange,' which reached in 1888 a fourth edition. His other volumes of verse are: 1. 'Borland Hall,' 1874. 2. 'Hilda amongst the Broken Gods,' 1878. 3. 'Raban

or Life Splinters,' 1880. 4. 'North Country Folk,' 1883. 5. 'Kildrostan, a dramatic Poem,' 1884. 6. 'Thoughts and Fancies for Sunday Evening,' 1887. 7. 'A Heretic,' 1890. A selection of his poems appeared in 1890, and a complete edition in 1902; a volume of sermons was published posthumously in 1909. Smith's verse is smooth and pleasant, touched with humour and full of sympathy, simple and unpretending in style. Several of his pieces are merely tales or character sketches in verse, shrewdly humorous, but rather too colloquial in manner to be termed poetry.

[Who's Who, 1908; Scotsman, and Glasgow Herald, 20 Sept. 1908; Miles's Poets and Poetry of the Nineteenth Century, xii. 109 seq.; information from his daughter, Mrs. Carlyle.] T. F. H.

SMITH, WILLIAM SAUMAREZ (1836-1909), archbishop of Sydney, born at St. Helier's, Jersey, on 14 Jan. 1836, was son of Richard Snowden Smith, prebendary of Chichester, by his wife Anne, daughter of Thomas Robin of Jersey. He entered Marlborough College in 1846, and obtained a scholarship at Trinity College, Cambridge, in 1855. In 1857 he won the Carus Greek Testament (undergraduate's) prize; in 1858 he graduated B.A. (first class, classical tripos); in 1859 was placed in the first class (middle bachelors) of the theological examination, won the Scholefield prize, the Carus Greek Testament (bachelor's) prize, and Crosse scholarship. In 1860 he won the Tyrwhitt Hebrew scholarship and was elected fellow of his college. He proceeded M.A. in 1862, and won the Seatonian prize for an English sacred poem in 1864 and 1866.

Ordained deacon in 1859, priest in 1860, he was curate of St. Paul's, Cambridge (1859-61). In 1861 he went out to India as chaplain to Frederick Gell, bishop of Madras, and remained there till 1865, learning Tamil, and associating himself with missionary work. Returning to Cambridge as curate of Trumpington (1866), he became vicar there in 1867, and was awarded the Maitland prize for an essay on 'Obstacles to Missionary Success.' In 1869 he accepted the principalship of St. Aidan's, Birkenhead, a theological college then at a low ebb. He raised it to prosperity, wiping out a heavy debt and creating an endowment fund. He also served from 1869 to 1890 as examining chaplain to the bishop of Norwich, and in 1880 was made hon. canon of Chester.

In 1889, on the retirement of Bishop Alfred Barry [q. v. Suppl. II] from the see of Sydney, Smith was elected his successor by the Australian bishops when nomination had been declined by Handley Carr Glyn Moule, afterwards bishop of Durham. He was consecrated at St. Paul's Cathedral on 24 June 1890. He was made D.D. at Cambridge in that year and at Oxford in 1897. As metropolitan of New South Wales and primate of Australia, Smith, with the approval of the Lambeth conference, assumed in 1897 the title of archbishop. His Australian rule was useful rather than eventful. An evangelical of wide sympathies, a hard worker, and a firm though kind administrator, he died at Sydney on 18 April 1909.

Smith married in 1870 Florence, daughter of Lewis Deedes, rector of Braintfield, Hertfordshire; she died in 1890, leaving one son and seven daughters.

Smith was a contributor of biblical articles to the 'Encyclopædia Britannica' (8th edit.) and published: 1. 'Obstacles to Missionary Success' (Maitland prize essay), 1868. 2. 'Christian Faith: Five Sermons preached before the University of Cambridge,' 1869. 3. 'Lessons on the Book of Genesis,' 1879. 4. 'The Blood of the Covenant,' 1889. A posthumous volume, 'Capernaum and other Poems,' appeared in 1911.

[Record, 23 and 30 April 1909; Guardian, 21 April 1909; Cambridge University Calendar; personal knowledge.] A. R. B.

SMYLY, SIR PHILIP CRAMPTON (1838-1904), surgeon and laryngologist, born at 8 Ely Place, Dublin, on 17 June 1838, was eldest son in a family of four sons and eight daughters of Josiah Smyly, M.D. (d. 1864), a Dublin surgeon of good position, by his wife Ellen (d. 1901), daughter of Matthew Franks, of Jerpoint Hill, Thomastown, co. Kilkenny. His mother devoted herself to philanthropic work in Dublin, founding and maintaining many schools for poor children. His grandfather, John Smyly, K.C., a member of the Irish bar, came of a family settled in the north of Ireland from the sixteenth century. Sir Philip Crampton [q. v.] was his grand-uncle. A younger brother, Sir William Josiah Smyly, is an obstetrician and gynaecologist of distinction in Dublin. A sister, Louisa Katharine, married Robert Stewart, a missionary to Hwa-Sang, China, where they were both murdered in 1892.

Philip after education at home was apprenticed at fifteen to his grand-uncle

Sir Philip Crampton, and after the latter's death in 1853 to William Henry Porter [q. v.]. During his apprenticeship he attended lectures in the schools of Trinity College, Dublin, and of the Royal College of Surgeons, and at the Meath Hospital. In 1854 he entered Trinity College, and in 1859 he graduated B.A., winning a junior moderatorship and silver medal in experimental and natural science. Next year he proceeded M.B., and obtained the licence of the Irish College of Physicians. After some months' study in Berlin he returned home, and in 1863 he proceeded M.D., and was admitted fellow of the Royal College of Surgeons of Ireland. In 1861 he succeeded Porter, his former master, as surgeon to the Meath Hospital, his father being one of his colleagues. This post he retained till his death. He was a member of the viceregal staff during successive viceroyalties from 1869 to 1892. He was president of the Royal College of Surgeons in Ireland in 1878-9, and from 1898 to 1900 he represented that college on the General Medical Council. In 1895 he was appointed surgeon-in-ordinary to Queen Victoria in Ireland, and in 1901, on her death, honorary surgeon to King Edward. He was president of the Laryngological Association of Great Britain in 1889, of the Irish Medical Association in 1900, and of the Irish Medical Schools and Graduates' Association in 1902. He was consulting surgeon to the Hospital for Diseases of the Throat and Ear, the Children's Hospital, Harcourt Street, and the Rotunda Hospital, all in Dublin.

Smyly, though he always practised general surgery, was specially interested in laryngology, a field almost untouched in his younger days. His example familiarised the profession in Ireland with the use of the laryngoscope, which he introduced to Ireland in 1860. He also took special interest in abdominal and urethral surgery. He published little except occasional lectures to his pupils, and notes read before surgical societies. His observations on the use of tobacco juice as an antidote in strychnin poisoning are of interest, and he was one of the first to make practical application of Professor Haughton's study of the chemistry of strychnin and nicotin (*Dublin Journal of Medical Science*, vol. 34).

Smyly enjoyed a large practice for many years and was knighted in 1892. Of courteous manners and striking appearance, he was generous in charitable gifts. He devoted his leisure to music, and was no mean violinist. At the time of his death

he was president of the Hibernian Catch Club. He obtained high rank in freemasonry. He died suddenly from cerebral hæmorrhage on 8 April 1904, at 4 Merrion Square, Dublin, and was buried in Mount Jerome Cemetery, Dublin. He married on 1 Feb. 1864 Selina Maria, sixth daughter of John Span Plunket, third Baron Plunket, sister of William Conyngham, fourth baron, archbishop of Dublin, and of David, first Baron Rathmore; by her he had three sons and six daughters. His eldest son, Sir Philip Crampton (knighted in 1905), became chief justice of Sierra Leone, and his second son, Gilbert Josiah, is professor of Latin in Trinity College, Dublin.

A portrait painted by Sir T. Jones, P.R.H.A., was presented to his wife by Smyth's brother freemasons in 1876; it is in her possession at 4 Merrion Square, Dublin.

[Brit. Med. Journal, 16 April 1904; Cameron's History of the Royal College of Surgeons in Ireland; Ormsby's Medical History of the Meath Hospital; Dublin Univ. Calendars; private information.] R. J. R.

SMYTH, SIR HENRY AUGUSTUS (1825-1906), general and colonel commandant royal artillery, born at St. James's Street, London, on 25 Nov. 1825, was third son in the family of three sons and six daughters of Admiral William Henry Smyth (1788-1865) [q. v.] by his wife Annarella, only daughter of Thomas Warington, British consul at Naples. His elder brothers were Sir Warington Wilkinson Smyth (1817-1890) [q. v.] and Charles Piazzi Smyth (1819-1900) [q. v. Suppl. I]. Of his six sisters, Henrietta married Prof. Baden-Powell [q. v.], and Rosetta married Sir William Henry Flower [q. v. Suppl. I].

Educated at Bedford grammar school from 1834 to 1840, Smyth entered the Royal Military Academy at Woolwich on 1 Feb. 1841. Receiving a commission as second lieutenant in the royal artillery on 20 Dec. 1843, and being promoted lieutenant on 5 April 1845, he was on foreign service in Bermuda from 1847 to 1851. Promoted second captain on 11 Aug. 1851, he was quartered at Halifax, Nova Scotia, till 1854, and at Corfu from February 1855. On becoming first captain on 1 April, he was sent in May to the Crimea to command a field battery of the second division of the army which supported the right attack on Sevastopol. Smyth and his battery did arduous work with the siege train in the trenches. He took part in the third bombardment, was present at the fall of Sevastopol, and

remained in the Crimea until July 1856. For his services he received the British war medal with clasp for Sevastopol and the Turkish medal.

After he had spent over five years at home stations, principally at Shorncliffe, hostilities threatened with the United States over the Trent affair, and Smyth took his field battery of the Crimea out to New Brunswick in December 1861, landing his horses fit for service after an exceptionally tempestuous voyage. While still in Canada Smyth obtained a brevet majority on 12 Feb. 1863, and on promotion to a regimental lieutenant-colonelcy on 31 Aug. 1865 he returned home. While on ordinary leave of absence in Canada he visited the scenes of the American civil war, saw the capture of Richmond, and was the only foreigner present in the subsequent pursuit of the southern army. At a later period he attended, while on leave from India, some of the operations of the Franco-German war. His observations in both cases were commended by the authorities and partly published in the 'Proceedings of the Royal Artillery Institution.'

From 1867 to 1874 Smyth served in India. He became a brevet colonel on 31 Aug. 1870. In 1872 he presided over a committee at Calcutta which condemned the bronze rifled guns then proposed for adoption for field service and conducted valuable researches into the explosive force of Indian gun-powders. His services were eulogised by the governor-general in council in May 1874. On 16 Jan. 1875 Smyth succeeded to a regimental colonelcy and was deputed to attend the German army manoeuvres in the autumn. He commanded the artillery at Sheerness in 1876, and from 1877 to 1880 the artillery in the southern district. He served on various professional inquiries, such as the revision of siege operations in view of the adoption of more powerful rifled guns and howitzers. In 1876 and 1887 he was awarded the gold medal of the Royal Artillery Institution for essays respectively on 'Field Artillery Tactics' and 'Training of Field Artillery.'

From 1881 to 1883 Smyth served on the ordnance committee at Woolwich. During that time steel was introduced into the service on the recommendation of the committee as the material for rifled guns. Promoted major-general on 1 Nov. 1882, Smyth was commandant of the Woolwich garrison and military district from 1882 to 1886. He became lieutenant-general on 1 Nov. 1886, and went out the next year to command the troops in South Africa.

Soon after his arrival at the Cape he rapidly crushed a rising in Zululand, which had been formally annexed in May 1887. The Zulus fled into the territories of the South African republic, where they dispersed. Dinizulu and his chiefs ultimately surrendered to the British, and were banished to St. Helena. For some eight months in 1889-90 Smyth acted as governor of Cape Colony between the departure of Sir Hercules Robinson, afterwards Lord Rosmead [q. v. Suppl. I.], and the arrival of Sir Henry Brougham Loch, afterwards Lord Loch [q. v. Suppl. I.]. Smyth was created C.M.G. in January 1889, and K.C.M.G. in 1890, when he was appointed governor of Malta. He was promoted general on 19 May 1891, and on 20 Dec. 1893 his jubilee in the Royal Artillery service was celebrated at Malta. He left the island at the end of the year on retirement, and settled at his father's house, which he had inherited, St. John's Lodge, Stone, Aylesbury, Buckinghamshire.

Smyth became a colonel commandant of the royal artillery on 17 Oct. 1894. He was honorary colonel of the royal Malta militia, a J.P. for Buckinghamshire, and fellow both of the Society of Antiquaries and of the Royal Geographical Society. He died on 18 Sept. 1906 at his own house, and was buried in Stone churchyard. He married at Lillington, near Leamington in Warwickshire, on 14 April 1874, Helen Constance, daughter of John Whitehead Greaves, of Berecote, near Leamington. His widow survives him without issue. A portrait painted by Lowes Dickinson is in Lady Smyth's possession. Memorial tablets have been erected in the garrison church at Woolwich and in the church at Stone.

[Royal Artillery Records; private information; The Times, 20 Sept. 1906; the Biographer.] R. H. V.

SNELUS, GEORGE JAMES (1837-1906), metallurgist, born on 25 June 1837 in Camden Town, London, N., was son of James and Susannah Snelus; his father, a master builder, died when George was about seven. He was trained at the St. John's College, Battersea, for the profession of a school teacher, but subsequently, whilst teaching in a school at Macclesfield, he attended lectures on science at the Owens College, Manchester (now the Victoria University, Manchester), where he came under the influence of Sir Henry Roscoe. In 1864, on winning a Royal Albert scholarship, he entered on a three years' course at the Royal School of Mines,

gaining at its conclusion the associateship in metallurgy and mining together with the De la Beche medal for mining. On the recommendation of Dr. John Percy [q. v.] he was appointed chemist to the Dowlais Ironworks, and he held the post for four years. In 1871 he was commissioned by the Iron and Steel Institute to proceed to the United States to investigate the chemistry of the Danks's rotary puddling process, and the report which he subsequently presented on the subject proved of the utmost value (*Journal of the Iron and Steel Institute*, vol. i. 1872).

It was during this investigation that Snelus conceived the possibility of completely eliminating phosphorus from molten pig iron by oxidation in a basic lined enclosure. In 1872 he took out a British patent for such a process, afterwards proving by actual trial the soundness of the underlying idea. In a Bessemer converter, lined with overburnt lime, he succeeded in almost entirely eliminating phosphorus from 3 to 4 ton charges of molten phosphoric pig iron; in these trials he made the first specimens of 'basic' steel by the pneumatic process. But certain practical difficulties attendant upon the prescribed use of lime he never fully overcame, and it was not until the 'basic' process was finally developed in 1879 by Messrs. Thomas and Gilchrist [see THOMAS, SIDNEY GILCHRIST] that it became commercially practicable. For the conspicuous part which he had played in regard to this invention he was awarded a gold medal at the Paris Exhibition of 1878, and the Iron and Steel Institute awarded him, jointly with Thomas, the Bessemer gold medal. He was elected a fellow of the Royal Society in 1887. Another conspicuous contribution to metallurgical chemistry was his proof of the true practical value of the molybdate method for the determination of phosphorus in steel, a process which is now universally employed in steel-works laboratories.

In 1872 he was appointed works manager (and subsequently general manager) of the West Cumberland Iron and Steel Company, Workington, where he remained until 1900. He also became director of several mining concerns in Cumberland. In 1902 he took out a patent for the manufacture of iron and steel in a basic lined rotary furnace, experiments upon which were being carried out at the time of his death by the Distington Iron Company, but were afterwards discontinued.

Snelus was an original member of the Iron and Steel Institute in 1869, and from 1889 onwards until his death he was a vice-president. His most important contributions to the 'Journal' of the Institute were those on 'The Removal of Phosphorus and Sulphur in Steel Manufacture' (1879) and on 'The Chemical Composition of Steel Rails' (1882).

He was an enthusiastic member of the volunteer force from 1859 till 1891, when he retired with the rank of hon. major and with the officer's long service medal. He was one of the best rifle shots in the country, being for twelve successive years, from 1866, a member of the English Twenty, and during that period gained a greater aggregate than any other member of the team. He carried off the first all-comers' small-bore prize at Wimbledon in 1868. He was also a keen horticulturist.

Snelus died at his residence, Ennerdale Hall, Frizington, Cumberland, on 18 June 1906, and was buried at the parish church, Arlecdon, Cumberland.

In 1867 he married Lavinia Whitfield, daughter of David Woodward, a silk manufacturer of Macclesfield, and had three sons and three daughters. Two of his sons (George James and John Ernest) became mining engineers, whilst the third (Percy Woodward) is an electrical engineer.

[Proceedings of the Royal Society, 1907, 78 A., and Journal of the Iron and Steel Institute, 1906, i. 273.] W. A. B.

SNOW. [See **KYNASTON** (formerly **SNOW**), **HERBERT** (1835-1910), canon of Durham and classical scholar.]

SOLOMON, SIMEON (1840-1905), painter and draughtsman, born at 3 Sandys Street, Bishopsgate Without, on 9 Oct. 1840, was the youngest son of Michael Solomon, a Leghorn hat manufacturer, by his wife Kate Levy. His father was a prominent member of the Jewish community in the City of London. His elder brother, Abraham Solomon [q. v.], and his elder sister, Rebecca (d. 1886), both made art their profession. The sister, who subsequently developed like Simeon an errant nature and came to disaster, schooled him in Hebraic history and ritual. After steady education he, while still a boy, was admitted to the Gower Street studio of his elder brother, Abraham Solomon, and there his talents quickly asserted themselves.

Before he was fifteen he entered the Royal Academy schools, and in 1858 he exhibited at the Academy 'Isaac offered.'

This was followed in 1860 by 'The Finding of Moses,' and by the 'Musician in the Temple' in 1861, 'The Child Jeremiah' in 1862, 'Juliett' and 'Isaac and Rebecca' in 1863, and 'A Deacon' in 1864. To the same period belong ten early drawings of Jewish festival ceremonies which prove the artist's devotion to his own faith and people. Eight designs for the 'Song of Solomon' and the same number for 'The Book of Ruth' (reproduced, like most of his work, by Mr. Hollyer) well attest his capacity and sentiment. Solomon also tried his hand at illustration for books and magazines. An etching in a 'Portfolio of Illustrations of Thomas Hood' (1858) and work in 'Once a Week' (1862) and for Dalziel's 'Bible Gallery' (1881) have importance.

Solomon's scriptural painting, which was marked by Pre-Raphaelite sincerity, poetic feeling, and beauty of colour and design, attracted attention. Thackeray credited the 'finely drawn and composed "Moses" with a great intention' (*Roundabout Papers*, 1860, 'Thorns in the Cushion'). The leaders of the Pre-Raphaelite school acknowledged his promise, and he early came to know D. G. Rossetti and Burne-Jones. The latter prophesied that his genius would soon prevail (cf. *Life of Burne-Jones*, i. 260). A charming humour, of which his art shows no sign, gave him abundant social fascination. Another early associate was Algernon Charles Swinburne, who became one of his warmest admirers and constant companions. Through Swinburne he made the acquaintance of Lord Houghton, and visited Fryston. Under such influences Solomon abandoned Hebraic themes for classical subjects, such as his 'Habet,' which was exhibited at the Royal Academy in 1865, and his 'Damon and Aglae,' in 1866. His delightful 'Bacchus' (exhibited in 1867, now in Lady Lewis's collection) brought enthusiastic laudations from Walter Pater. Other work of his evoked poetic elucidation. Swinburne's poems 'Erotion' and 'The End of the Month' were both inspired by Solomon's drawings, and three sonnets of John Payne owed their origin to the like source. His classical tastes were reinforced by visits to Italy. He was at Florence in 1866 and at Rome in 1869 with Mr. Oscar Browning. On the second occasion he wrote a mystical effusion, 'A Vision of Love revealed in Sleep' (privately printed, 1871; enlarged and published later in the same year). To the 'Dark Blue' in July 1871 Swinburne contributed 'Notes' of extreme praise

(never reprinted) on Solomon's 'Vision,' crediting the artist with exceptional spiritual insight. At the same time the artist was steadily adding to his fame, not only by his oil-pictures at the Academy—'Toilet of Roman Lady' (1869), 'Youth relating Tales to Ladies' (1870), and 'Love Bound and Wounded' (1870)—but by his pencil studies and water-colours, which were shown chiefly at the Dudley Gallery. In an article in the 'Portfolio' (March 1870) (Sir) Sidney Colvin, while praising Solomon's artistic gifts, protested against signs of sentimental weakness, which excess of eulogy was tending to aggravate. The warning had a tragic sequel. After sending 'Judith and her Attendant' to the Academy in 1872 Solomon ceased exhibiting, and his career collapsed. Through alcohol and other vicious indulgence he became 'famous for his falls.' Efforts of kinsmen and friends to help him proved of no avail. A waif of the streets, he refused commissions when they were offered him, though in an occasional drawing such as 'The Mystery of Faith,' akin to an earlier 'Rosa Mystica,' he showed that he still preserved some of his skill and cherished some of his earlier mystical predilections. To the 'Hobbyhorse' (1893) he contributed 'The Study of a Medusa Head stung by its own Snakes,' a favourite theme, with the legend—apt for his own case—'Corruptio optimi pessima.' He found some brief consolation in visits to the Carmelite church at Kensington, and painted a number of subjects connected with the Roman rite. His main source of income in the long years of his ruin were the occasional few shillings earned by hasty drawings of a futile but, in reproductions, popular sentimentality. He tried his hand without success as a pavement artist in Bayswater. At length he became an almost habitual inmate of St. Giles's workhouse. Found insensible in Great Turnstile in May 1903, he was carried to King's College Hospital and thence to the workhouse, where he died suddenly of heart failure in the dining hall on 14 Aug. following. He was buried in the Jewish cemetery at Willesden. He was unmarried.

Many of his more important paintings in oil and water-colour were exhibited at Burlington House in Jan.-Feb. 1906. The pictures included 'Love in Winter' (Florence, 1866); 'The Mother of Moses' (1860); 'Hosanna!' (1861); 'A Prelude by Bach' (1868); 'The Bride' and 'The Bridegroom' (1872). Solomon's work is chiefly in private collections, including

those of Miss Colman at Norwich, Mrs. Coltart, Mr. Fairfax Murray, Lady Battersea, and Mr. W. G. Rawlinson. In public collections he is represented by 'A Greek Acolyte' (1867-8) in the Birmingham Art Gallery; by several paintings in the Dublin Gallery of Modern Art; by a water-colour drawing, 'In the Temple of Venus' (1865), at the Victoria and Albert Museum, South Kensington; by 'Love dreaming by the Sea' at Aberystwyth, and by a beautiful drawing of a girl (1868) in the British Museum.

A portrait drawing by Solomon of himself (1859) is in the More-Adey collection.

SORBY, HENRY CLIFTON (1826-1908), geologist, was born on 10 May 1826 at Woodbourne near Sheffield. With cutlery, the staple industry of that town, his family had been connected since the sixteenth century. One ancestor, who died in 1620, was the first master cutler, and Sorby's grandfather filled the same office. His father, Henry Sorby, was a partner in the firm of John and Henry Sorby, edge-tool makers, and his mother, Amelia Lambert, a woman of much force of character, was a Londoner. Sorby received his early education at a private school in Harrogate and at the collegiate school, Sheffield. After leaving school he read mathematics at home with a tutor, who fostered his love of natural science. He also practised drawing in water-colour, of which in later life he made much use. Sorby, of independent means, determined to devote himself to a career of original investigation. Sheffield was always his home, and he lived with his widowed mother until her death in 1872. After that he purchased a small yacht, the *Glimpse*, on board which, for many years, he spent the summer in dredging and in making biological and physical investigations in the estuaries and inland waters of the east of England. The winter was passed in Sheffield, where he did much to stimulate the intellectual life of the place, taking an active part in its societies, helping to found Firth College, of which he was one of the vice-presidents, aiding the development of the college into a

university, and bequeathing to the latter ultimately his valuable collections and money to found a chair in geology. His health failed in the autumn of 1903, but he continued to write and work up his great stock of accumulated observations till within a few days of his death on 9 March 1908. He was unmarried.

Sorby's scientific work is distinguished by versatility and originality. His greatest advances were in geology, but 'scarcely any branch of knowledge or question of scientific interest escaped his attention: the use of the spectroscope in connection with the microscope; the nature of the colouring matter in blood, hair, foliage, flowers, birds' eggs, and minerals; meteorological problems of all kinds; improvements in blowpipe analysis and in the methods of detecting poisons.' Later, he collected marine plants and animals, preparing catalogues to show their distribution, devising methods for preserving them with their natural colours and exhibiting them as transparent objects, in which he was remarkably successful. But in addition to these he took up archaeological studies: the churches of East Anglia; the evolution of mythical forms of animals in ancient ecclesiastical architecture; Roman, Saxon, and Norman structures, and the characteristics of the materials employed in them; while as amusements he collected ancient books and maps, and studied Egyptian hieroglyphics.

To geology his contributions were as valuable as they were varied. He discussed the origins of slaty cleavage, demonstrating by experiment that Daniel Sharpe [q. v.] was right in attributing it to pressure, of cone-in-cone structure, of impressed pebbles, of the magnesian limestone, and of the Cleveland ironstone. He also dealt with the nature of coccoliths in the chalk, questions of rock denudation and deposition, the formation of river terraces; besides water supply, and the contamination of rivers by sewage. In working at the latter he spent about seven months in studying the lower Thames in connection with the royal commission on the drainage of London, and laid before that body a large amount of important evidence. But Sorby's most memorable work was in the field of petrology. William Crawford Williamson [q. v.] had already improved a process originated by William Nicol (the inventor of the Nicol polarising prism) of making thin slices of fossil wood for microscopic examination, and he applied it to some other organisms.

Sorby visited Williamson in Manchester prior to 1849 and learnt the art. It occurred to him to try it on rocks, and in that year he made his first thin slice. The first result of this method of investigation was a paper, published by the Geological Society in 1851, on the 'Calcareous Grit of Scarborough.' It however excited little attention, and one on 'Slaty Cleavage' (1853) met with such a chilling reception that he published it elsewhere. Even his great paper 'On the Microscopic Structure of Crystals, &c.,' published in 1858, was ridiculed by many. In another decade he had gathered a small but enthusiastic band of disciples, both in England and on the Continent, and before he died was justly hailed as the father of microscopic petrology. He published several other important papers on the microscopic structure of rocks, notably his presidential addresses in 1879 and 1880 to the Geological Society on the structure of stratified rocks; only three months before his death he communicated to that society a paper dealing with the quantitative study of rocks; and last, but not least, he studied the microscopic structure of irons and steels, with results of great industrial value. This study was begun to illustrate meteorites, and it proved the latter to be a mixture when molten which became a compound on cooling. He had a Yorkshireman's shrewdness, but his willingness to help fellow workers and freedom from all self-seeking won him many friends. He was elected F.G.S. in 1850, received the Wollaston medal in 1869 and was president in 1878-80. He was president of the geological section of the British Association in 1880, and also filled that office in the Microscopical and the Mineralogical Societies. He was elected F.R.S. in 1857, and was awarded a royal medal in 1874. He was an honorary member of many foreign societies, receiving from Holland the Boerhaave medal. In 1879 the University of Cambridge made him an honorary LL.D. In 1898 his fellow-townsmen presented him with his portrait (now in Sheffield university, together with a marble bust), and the Geological Society at its centenary in 1907 sent an address to 'The Father of Microscopical Petrology.'

SOTHEY, SIR EDWARD SOUTHWELL (1813-1902), admiral, born at Clifton on 14 May 1813, was second son in a family of two sons and three daughters of Admiral Thomas Sotheby (1759-1831) by his second wife, Lady Mary Anne (*d.* 1830), fourth daughter of Joseph Deane Bourke, third earl of Mayo and archbishop of Tuam. William Sotheby [q. v.] was his uncle. After going through the course at the Royal Naval College, Portsmouth, Edward went to sea in 1828. He passed his examination in 1832, was promoted to lieutenant on 3 Oct. 1835, and in Dec. was appointed to the *Caledonia*, of 120 guns, flagship in the Mediterranean. In April 1837 he joined the *Dido*, corvette, as first lieutenant, and in her served during the war on the coast of Syria in 1840, for which he received the medal and, on 30 Oct. 1841, his promotion to commander. In June 1846 he was appointed to command the sloop *Racehorse*, in which he took part in the later operations of the first New Zealand war and served in China till 1848. He commissioned the *Sealark* for the west coast of Africa in June 1850, and was employed cruising for the suppression of the slave trade. On 6 Sept. 1852 Sotheby was promoted to captain, and in Dec. 1855 was appointed to the *Pearl*, corvette, which he commanded on the East Indies and China station until 1858. In July 1857 the *Pearl*, with the frigate *Shannon*, Capt. William Peel [q. v.], was sent from Hong Kong to Calcutta on the receipt of news of the outbreak of the Indian Mutiny. Sotheby himself took command of the *Pearl's* brigade, which was landed on 12 Sept., and for the following fifteen months formed part of the Goruckpore field force during the operations in Oudh. Sotheby and his brigade were thirteen times mentioned in despatches, and received the thanks of both houses of parliament, of the governor-general of India, of the admiralty, and of the naval and military commander in India (cf. *FORRESTER'S Hist. of Indian Mutiny*, ii. 262). In addition to the medal Sotheby was made a C.B. and an extra aide-de-camp to Queen Victoria (1858-67). In 1863 he commanded the Portland coastguard division, after which he was not again actively employed. He reached flag rank on 1 Sept. 1867, and retired on 1 April 1870. He was advanced to vice-admiral on the retired list on 25 Aug. 1873, was awarded the K.C.B. in 1875, and became admiral on 15 June 1879. After leaving the sea Sotheby devoted himself to philanthropic work; in 1886 he was a

commissioner for investigating and reporting on the condition of the blind, and was for many years chairman of the Blind Institute in Tottenham Court Road.

Sotheby died at 26 Green Street, London, W., on 6 Jan. 1902, and was buried at Ecton, Northamptonshire. He married in 1864 Lucy Elizabeth, daughter of Henry John Adeane, of Babraham, Cambridgeshire, and granddaughter of John Thomas, first Baron Stanley of Alderley, by whom he had issue three sons.

SOUTAR, MRS. ROBERT. [See **FARREN, ELLEN** (1848-1904), actress.]

SOUTHESK, ninth EARL OF. [See **CARNEGIE, JAMES** (1827-1905), author.]

SOUTHEY, SIR RICHARD (1808-1901), Cape of Good Hope official, born at Culmstock, Devonshire, on 25 April 1808, was second son of George Southey of that place by his wife Joan, only daughter of J. Baker of Culmstock. Richard's grandfather was a first cousin of Robert Southey, the poet.

After being educated at Uffculme grammar school till the age of twelve, he went in 1820 with his father to South Africa. The family settled at Round Hill, between Bathurst and Grahamstown, and Richard joined in pioneer farming. In 1824 he was sent to Grahamstown as a clerk in the mercantile house of Hough and Fleming; but the life being distasteful to him he went in his twenty-first year on a trading and hunting expedition, which was not financially a success. On his return he married and settled down to farming and cattle dealing.

Already in 1828 he had responded to the call for volunteers to take charge of the military outposts of the frontier while the regular troops went on special service into Kafirland, and in the Kafir war of 1834-5, after acting as guide to the headquarters column, he was directed by Colonel (afterwards Sir) Harry Smith [q. v.] to form a corps of guides, of which he was appointed captain, and was frequently commended in general orders. At the close of the war he was appointed resident agent with certain of the Kafir tribes, and served until Sir Benjamin D'Urban's frontier policy was reversed by the home government at the close of 1836, when his office was abolished. He then removed with his brothers to

Graaffreinet, and from 1836 to 1846 was engaged in mercantile and farming pursuits.

On the return of Sir Harry Smith to South Africa in 1847 he made Southey, of whom he had formed a high opinion, secretary to the high commissioner. He accompanied his chief in the operations against the emigrant Boers, and was present at the hard-fought victory of Boomplaats. On the withdrawal of the troops Southey was left at Bloemfontein to collect the fines levied on the Boers who had been in arms against the government, which he did tactfully and with success. He remained in Bloemfontein until the country had quieted down and Major Warden was installed as British resident.

At the end of 1849 he was appointed civil commissioner and resident magistrate of Swellendam, one of the oldest and most important divisions of the colony, and although at times political feelings ran high he won the confidence of the inhabitants as well as the approbation of the government. During the Kafir war of this period he was active in enrolling and forwarding native levies, and on the termination of hostilities he received the thanks of the government for his services.

Southey was acting secretary to the Cape government from 1 May 1852 to 26 May 1854. A dispute with Lieutenant-Governor Darling led to his temporary suspension from office, to which however by order of the home authorities he was honourably restored. On 8 March 1858 he became secretary to the lieutenant-governor at Grahamstown (Lieut.-Gen. James Jackson). From January to April 1859 he was auditor-general of the colony, and on 22 Aug. 1860 he became acting colonial secretary. In the latter capacity he gave great satisfaction by his budget speech in the first session. The governor (Sir George Grey) in a despatch to the Duke of Newcastle, 14 Aug. 1861, warmly commended his tactful conduct of government business.

Southey was appointed treasurer and accountant-general on 6 Dec. 1861, and at the same time was made a member of the executive council, with a seat in both houses of the legislature. He was colonial secretary of the colony from 22 July 1864 until the advent of responsible government on 30 Nov. 1872, when he retired on a pension.

Southey was a consistent opponent of the grant of responsible government to the Cape, and on 26 April 1871 he, with three other members of the executive council, signed a minute adducing grave reasons

against its introduction into the colony at that moment. In October 1872 he declined the proposal of the governor (Sir Henry Barkly) that he should obtain a seat in parliament and form a responsible ministry.

In 1871 the long-standing dispute with the Orange Free State respecting the ownership of the diamond fields was terminated by their annexation to the Cape, and Southey at Sir Henry Barkly's request undertook the difficult task of administration. On 7 Feb. 1873 the territory was erected by letters patent into a province under the name of Griqualand West, and Southey received the Queen's commission as lieutenant-governor (29 March 1873). The difficulty of carrying on the government was great, and the opposition of a section of the diggers grew so formidable that troops were summoned from the Cape to preserve order. The secretary of state (Lord Carnarvon) decided that Southey's continuance in office was impossible, and that the financial condition of the province required a less expensive form of administration. Southey resigned in August 1875.

On 4 Dec. 1876 he was returned to the house of assembly as one of the members for Grahamstown, and joined the opposition to the Molteno ministry. He did not seek re-election on the dissolution in Sept. 1878, and took no further part in public affairs. Southey died at his residence, Southfields, Plumstead, on 22 July 1901, and was buried in St. John's cemetery, Wynberg.

He was created C.M.G. on 30 Nov. 1872, and K.C.M.G. on 30 May 1891.

He married twice: (1) in 1830 Isabella, daughter of John Shaw of Rockwood Vale, Albany, by whom he had six sons; (2) Susan Maria Hendrika, daughter of Anthony Krynauf of Cape Town, a member of one of the oldest Dutch families of the Cape of Good Hope; she died in 1890, leaving one son and one daughter.

A half-length portrait in oils of Southey by F. Wolf, a German artist, is in the Civil Service Club at Cape Town.

A.

SOUTHWARD, JOHN (1840–1902), writer on typography, born on 28 April 1840, was son of Jackson Southward, printer, of Liverpool, a native of Corney, Cumberland, by Margaret Proud of Enniscorthy, county Wexford. After education at the Liverpool Collegiate Institution (now Liverpool College), he gained a thorough practical knowledge of printing in his father's office, Pitt Street, Liverpool. At seventeen he became co-editor with the Rev. A. S. Hume of the 'Liverpool Philosophical Magazine,' and from November 1857 till its discontinuance in 1865 he conducted the 'Liverpool Observer,' the first penny weekly issued in the town, which was printed in Jackson Southward's office. On the failure of the paper John Southward came to London to increase his typographical knowledge, and was reader successively for Cox & Wyman (until 1868) and for Eyre & Spottiswoode.

In 1868 Southward travelled in Spain for a firm of English watchmakers, traversing all parts of the country, visiting every newspaper office, and securing copies of all serial publications. He embodied his experiences in four articles in the 'Printers' Register' in 1869. Many further contributions followed, and from February 1886 till June 1890 he edited the paper. He also contributed to other trade organs, and in 1891 took over from Mr. Andrew Tuer the 'Paper and Printing Trades Journal.' This he relinquished in 1893.

Southward soon became recognised as the leading authority on the history and processes of printing. His 'Dictionary of Typography and its Accessory Arts,' after being issued as monthly supplements to the 'Printers' Register,' was published in book form in 1872. It was printed simultaneously in the Philadelphia 'Printers' Circular,' and formed the basis of Ringwalt's American 'Encyclopædia of Printing.' A revised edition appeared in 1875.

'Practical Printing: a Handbook of the Art of Typography,' a much larger work, which also first appeared in the 'Printers' Register,' was first published independently in 1882, and became a standard text-book. Southward prepared revised editions in 1884 and 1887. The fourth and fifth editions (1892 and 1900) were edited by Mr. Arthur Powell. Southward's 'Progress in Printing and the Graphic Arts during the Victorian Era' (illustrated) appeared in 1897. 'Modern Printing,' which Southward edited in four profusely illustrated sections between 1898 and 1900, was designed to be at once a reference book

for the printing-office and a manual of instruction for class and home reading. The work, in which leading experts co-operated, was adopted as a text-book in the chief technological institutions. Among Southward's minor publications were: 'Authorship and Publication,' a technical guide for authors (1881), and 'Artistic Printing' (1892). He contributed the article 'Modern Typography' to the ninth edition of the 'Encyclopædia Britannica,' and also wrote technical articles for 'Chambers's Encyclopædia.' The 'Bibliography of Printing,' issued under the names of Edward Clements Bigmore and C. W. H. Wyman (3 vols. 1880–6), was to a large extent his work.

Southward was much interested in philanthropic work, and in 1888 founded and edited for a short time a monthly paper called 'Charity.' During his later years he resided at Streatham, but died in St. Thomas's Hospital, Westminster, after an operation, on 9 July 1902. He was buried in Norwood cemetery. Southward was twice married. His first wife, Rachel Clayton of Huddersfield, by whom he had three sons and four daughters, died in 1892. His second wife, Alice, widow of J. King, whom he married in 1894, survived him. An engraved portrait is in 'Modern Printing,' section 1.

[Private information; Printers' Register, 6 Aug. 1902 (with portrait); The Times, 11, 12, 17 July 1902; Streatham News, 19 July 1902; Southward's Works.] G. LE G. N.

SOUTHWELL, THOMAS (1831–1909), naturalist, born at King's Lynn on 15 June 1831, was son of Charles Elmer Southwell, chief cashier at the Lynn branch of Gurney's bank (now Barclay's), by his wife Jane Castell. After private education at Lynn, Southwell entered the service of Gurney & Co. there (14 Sept. 1846). In 1852 he was transferred to Fakenham, and in November 1867 to the headquarters of the bank at Norwich, from which he retired in 1896 after fifty years' service.

Almost all his life was spent in Norfolk and all his leisure was devoted to the natural history of the county. He was also an authority on the topography and archæology of the fen district adjacent to his birthplace. When the Norfolk and Norwich Naturalists' Society was founded in 1869 Southwell became an active member; he was president both in 1879 and 1893, and his contributions to the 'Transactions,' over one hundred in all, covered a wide range, and are mostly of permanent

value. From his earliest years he showed a keen interest in birds. 'I have myself,' he wrote, 'talked with men who have taken the eggs of the avocet and black-tailed godwit, and who have seen the bustard at large in its last stronghold. The bittern was so common in Feltwell Fen that a keeper there has shot five in one day, and his father used to have one roasted for dinner every Sunday. I have found the eggs of Montagu's harrier, and know those who remember the time when the hen harrier and short-eared owl bred regularly in Roydon Fen, and who have taken the eggs of the water-rail in what was once Whittlesea Mere.' He devoted much attention to the preservation of birds. For the educational series of the Society for the Protection of Birds he wrote papers on the swallow (No. 4), and the terns (No. 12). His most useful achievement was the completion of the 'Birds of Norfolk,' by Henry Stevenson, F.L.S., of which the earlier volumes had been published (1866-1870). Stevenson died on 18 Aug. 1888, and in 1890 Southwell brought out the third volume, thus completing 'a model county ornithology,' from letters and manuscripts left by the author, but largely supplemented by information supplied by himself.

In 1881 Southwell published 'The Seals and Whales of the British Seas' (sm. 4to), papers reprinted from 'Science Gossip.' From 1884 onwards he contributed annually to the 'Zoologist' a lucid report with authentic statistics on the seal and whale fisheries. He had been elected a fellow of the Zoological Society on 22 Feb. 1872, his proposer being Professor Alfred Newton [q. v. Supp. II]. He closely identified himself with the work of the Norwich museum, serving on the committee from 1893, when the old museum was transferred to Norwich castle. He compiled an admirable official guide in 1896, and contributed an article entitled 'An Eighteenth Century Museum' to the 'Museum Journal' in 1908.

Southwell died at 10 The Crescent, Norwich, on 5 Sept. 1909. He married, on 15 June 1868, Margaret Fyson of Great Yarmouth (d. 10 July 1903), and by her had two daughters, who survived him.

Besides the works mentioned and many other contributions to periodicals, Southwell published a revised edition of the Rev. Richard Lubbock's 'Fauna of Norfolk' (1879; first published in 1845), and 'Notes and Letters on the Natural History of Norfolk, more especially on the Birds and Fishes' (1902), from Sir Thomas Browne's

MSS. in the British Museum and the Bodleian Library.

[Eastern Daily Press, 6 Sept. 1909; Field, 11 Sept. 1909; Trans. Norfolk and Norwich Naturalists' Soc., ix. 134 (with portrait); Annals of an East Anglian Bank, 1900, p. 347; Ibis, 1910, p. 191; private information.] J. H.

SPENCER, HERBERT (1820-1903), philosopher, was born in Derby on 27 April 1820. The Spencer family had been settled for several centuries in the parish of Kirk Ireton in Derbyshire. All Spencer's four grandparents were among the early followers of John Wesley. His paternal grandfather, Matthew Spencer, settled in Derby as a schoolmaster; he had six sons, and on his death left his property in Kirk Ireton, consisting of a few cottages and two fields, to his eldest son, William George Spencer [q. v.], the father of Herbert Spencer. George Spencer, as he was commonly called to distinguish him from his youngest brother, who was also William, was a man of extremely strong individuality and advanced social and religious views. In 1819 he married Harriet Holmes, the only daughter of a plumber and glazier in Derby. On her mother's side a dash of Huguenot and Hussite blood was traceable. Of this, however, she showed little trace in her character, which was patient, gentle, and conforming. Neither in intellect nor in force of character was she able to cope with her somewhat overbearing husband, and the marriage was not a happy one. Herbert was eldest and only surviving child. Four brothers and four sisters succeeded him (DUNCAN), but all died within a few days of their birth, with the exception of one sister, Louisa, who lived for nearly three years. His father's energies were taken up with teaching, and Herbert's early education was somewhat neglected. Until the age of thirteen he lived at Derby, with an interlude of three years in the neighbourhood of Nottingham; he attended a day school, but was particularly backward in Latin, Greek, and the other usual subjects of instruction. On the other hand, in natural history, in physics, and in miscellaneous information of all kinds he was advanced for his age. He acquired some knowledge of science from the literature circulated by the Derby Philosophical Society, of which his father was honorary secretary. His father did everything to encourage him in the cultivation of his natural tastes for science and observation of nature. At thirteen he

was sent to Hinton Charterhouse, near Bath, to live with his uncle, Thomas Spencer [q. v.], who was an advanced radical and a leader of various social movements, such as temperance reform. From his strict régime the lad quickly ran away, walking to Derby in three days (48 miles the first day, 47 the next, and about 20 the third day), with little food and no sleep. He was sent back to his uncle, however, and for three years his education was carried on at Hinton Charterhouse with greater success.

At sixteen he returned to Derby, with his education completed. A year later he commenced his career as assistant to a schoolmaster at Derby. After some three months, however, his uncle William obtained for him a post under (Sir) Charles Fox [q. v.], resident engineer of part of the London and Birmingham railway. He was thus definitely launched in 1837 on the career of civil engineer, a profession which was recognised as well suited to him. Fox soon perceived his capacities, and in less than a year he was promoted to a better post on the Birmingham and Gloucester railway (now absorbed by the Midland railway), with headquarters at Worcester. Capt. Moorsom, the engineer-in-chief, appointed him his private secretary for a few months. Spencer continued to work on the construction of the line till its completion in 1841, when his services were no longer required and he was discharged. 'Got the sack—very glad' was the entry in his diary; and he refused a permanent appointment in the locomotive service, without asking what it was. During this period of a little over three years' engineering his interest had centred largely on geometrical problems, which fill his letters to his father. He also published a few short articles in a technical newspaper, and made one or two inventions of considerable ingenuity, such as a velocimeter for determining velocities in the trials of engines. Good-looking in appearance, but with brusque and unpolished manners, he was on the whole liked by his companions; but was probably somewhat hampered in promotion by his excessive self-assertiveness and tendency to argue with his chiefs.

After his discharge Spencer returned to Derby, and a period of miscellaneous speculation and activity commenced: natural history, mechanical inventions, phrenology, modelling all occupied his attention. The following year his first serious literary attempt took the form of a series of letters to the 'Nonconformist,'

an organ of the advanced dissenters. There he urged the limitations of the functions of the State and displayed the extreme individualism which characterised the whole of his social writings in after life. The same year he plunged into active politics, becoming associated with the 'complete suffrage movement,' which was closely connected with the chartist agitation, and was honorary secretary of the Derby branch. In 1843 he was sanguine enough to republish his letters to the 'Nonconformist' as a pamphlet entitled 'The Proper Sphere of Government'; but it attracted no attention, beyond a polite acknowledgment from Carlyle of a presentation copy. One or two articles sent to reviews were refused; but at last, in 1844, Spencer was selected as sub-editor to a newspaper called the 'Pilot,' which was at that time being established in Birmingham as organ of the complete suffrage movement. In the anti-corn-law agitation, the anti-slavery agitation, and that for the separation of church and state he took an active part, and was described by one of his friends as 'radical all over.'

The insecurity of the 'Pilot' and some of its promoters' dislike of his anti-religious views, which were becoming manifest, made him welcome an opportunity of returning to his old profession. For the next two years Spencer was engaged in one capacity or other in the work of railway construction. The railway mania was at its height. He continued to improve his position with his colleagues; but with the failure of some of his chief's schemes his appointment was again brought to an end—this time permanently—through no fault of his own. In 1846-7 he was occupied with various mechanical inventions and projects, including one for a sort of flying machine; but only on one of them did he succeed in making a little money—a binding-pin for binding together loose sheets of music or printed periodicals. At last the nomadic period of his life came to an end, when in 1848 he was appointed sub-editor of the 'Economist' at a salary of 100 guineas a year, with free lodgings and attendance. The 'Economist' was the property of James Wilson, M.P. (1805-60) [q. v.], who had under his own editorship brought it to a high degree of prosperity.

The years during which Spencer was at the 'Economist' were fruitful in laying the foundations of many of the friendships which profoundly affected his later life. John Chapman [q. v. Suppl. I] carried on a publishing business just opposite the

'Economist' office in the Strand, and through Chapman's soirées Spencer made many acquaintances. Among these was George Henry Lewes [q. v.], first met in the spring of 1850, who afterwards became one of his most intimate friends. Among them also was Miss Mary Ann or Marian Evans, then chiefly known as the translator of Strauss, and afterwards famous as 'George Eliot.' By Lewes, Spencer was introduced to Carlyle; but their temperaments were too much opposed to permit the acquaintanceship to endure. With 'George Eliot' Spencer's relations were so intimate as to excite gossip about the likelihood of their marriage. Though in the abstract he was very desirous of marrying, and regarded 'George Eliot' 'as the most admirable woman, mentally, I ever met,' yet he did not embark upon a suit which, in all probability, would have been successful. Apparently the absence of personal beauty restrained the growth of his affection (*Autobiog.* ii. 445). Another acquaintance, made in 1852, was that of Huxley, still quite unknown. By Huxley he was introduced the following year to Tyndall, the physicist; and with both Huxley and Tyndall there commenced friendships which ripened into close intimacy.

The comparative liberty which Spencer's duties at the 'Economist' office afforded gave him an opportunity of writing his first book, 'Social Statics: or the Conditions Essential to Human Happiness specified, and the first of them developed.' The main object of this work, which appeared at the beginning of 1851, was to set forth the doctrine that 'every man has freedom to do all that he wills, provided he infringes not the equal freedom of any other man.' From this general principle he deduced the public claims to freedom of speech, to property, &c. He went so far as to assert the right of the citizen to refuse to pay taxes, if he surrendered the advantages of protection by the state. The functions of the state were limited solely to the performance of police duties at home, and to protection against foreign aggression by the maintenance of an army and navy. National education, poor laws, sanitary supervision are all explicitly condemned, as well as every other branch of state activity that is not included in the above formula.

'Social Statics' was unexpectedly successful. The extreme individualism which characterised it fitted in well with the views of the philosophical radicals and the Manchester school, then reaching the

height of their influence. He was asked by Lewes, who was literary editor of a radical paper called the 'Leader,' to contribute articles; and wrote several anonymously which have since been republished in his essays. Most important of these was that on the 'Development Hypothesis' in March 1852, in which the theory of organic evolution was defended (seven years prior to the publication of the 'Origin of Species'). For the 'Westminster Review,' now in the hands of Chapman, he elaborated a 'Theory of Population' which adumbrated one of the doctrines subsequently embodied in 'The Principles of Biology.' Relations were also established with the 'British Quarterly Review' and the 'North British Review.' In 1853 his uncle Thomas Spencer died, leaving Herbert Spencer a little over 500*l.* With this sum in hand, and the literary connections he had formed, he felt he could safely sever his connection with the 'Economist,' and in July of that year he brought his engagement to an end.

Increased freedom enabled Spencer to cultivate friends, already made, who lived in the country. Mr. and Mrs. Richard Potter, of Standish House, on the Cotswold Hills, and Mr. Octavius Smith, of Ardtornish in Argyllshire, where Spencer paid a long series of visits, thenceforth furnished him with his chief pleasures and holidays. A visit to Switzerland at this time, involving physical over-exertion, produced cardiac disturbances of disastrous effect hereafter. Further articles were written for reviews on diverse subjects before Spencer again gathered his energies for another book—'The Principles of Psychology,' published in 1855. To this work Spencer gave astonishingly little preparation. He was never a large reader, and rarely read through a serious book. He had read one or two books, like Lewes's 'Biographical History of Philosophy,' which chanced to come his way; but neither then nor afterwards did he ever read the philosophical classics; and he was fond of relating how he had always thrown down Kant with disgust on finding he disagreed with the first two or three pages. 'The Principles of Psychology' exhibits the results of this habit; for it had little connection with previous psychological results, but was an independent excursion into an almost new line of inquiry. Later editions of this book formed an integral portion of Spencer's 'Philosophy,' which is described below. Naturally the sale was small. Richard Holt Hutton [q. v. Suppl. I.] attacked it in an article entitled

'Modern Atheism' in the 'National Review,' a quarterly organ of the unitarians, and the anti-religious tone of the book caused much adverse criticism.

During the writing of 'The Principles of Psychology' Spencer's health finally gave way. While engaged upon it, he stayed at various country places, and the continuous hard work, unrelieved by society, caused a nervous breakdown from which he never afterwards recovered. The disorder took the form of a peculiar sensation in the head, which came on when he tried to think, as a result of cerebral congestion, and led to inveterate insomnia. For eighteen months he travelled in various country places, avoiding all kinds of work and excitement, spending some of his time in fishing. At length it became necessary for him to earn money; and, though little improved, he returned to London at the end of 1856, and wrote the article on 'Progress: its Law and Cause' for the 'Westminster Review,' foreshadowing one of the doctrines of 'First Principles.' Other articles followed: and although his health remained disorganised, he was able with frequent breaks to carry on a certain amount of work.

It was in 1857 that the idea of writing a system of philosophy first occurred to Spencer. In that year he was engaged in revising his essays to be re-published in a single volume; and the successive reading of the scattered ideas embodied in them revealed to him a marked unity of principle. They all adopted a naturalistic interpretation of phenomena, they were nearly all founded upon the doctrine of evolution. In the early days of 1858 he drew up a plan for a system of philosophy in which these fundamental principles were to be set forth, and their applications traced. To obtain the necessary leisure, he endeavoured to obtain various official posts, with the help of strong testimonials from John Stuart Mill and others; but finding his efforts fruitless, he at length hit upon the plan of issuing the work by subscription. In 1860 the programme of the 'Philosophy' was published, and subscriptions invited at the rate of 10s. a year for four quarterly instalments. With the help of friends a strong backing of weighty names was secured, and over 400 subscribers were registered in England; while in America Professor E. L. Youmans helped to obtain about 200 more. With this arrangement Spencer commenced to write 'First Principles'; but he soon found difficulties in his way. A nervous break-down involved a delay of a month or two in the issue of the first instalment.

Repetition of these attacks before long caused him to abandon all attempt to keep regular intervals between the issues. Subscribers moreover did not pay up as well as was hoped; but the death of his uncle William Spencer, bringing a legacy, saved the situation. The book was at last completed in 1862. It was received with little attention; the few notices were mainly devoted to adverse criticism of the metaphysical portion. During the writing of 'First Principles' Spencer collected together four essays written for reviews, to form the four chapters of his book on 'Education,' of which the first edition appeared in 1861. This famous work, now translated into all the chief languages of the world and into many of the minor languages such as Arabic and Mohawk, strongly urged the claims of science, both as intrinsically the most useful knowledge, and as the best mental discipline. The method of education advocated resembles that of Pestalozzi in aiming at a natural development of the intelligence, and creating pleasurable interest. The child is to be trained, not by the commands and prohibitions of its parents, enforced by punishments, but by giving it the greatest possible amount of freedom, and allowing the natural consequences of wrong actions to be felt by it, without parental interference. The 'Education' has had an enormous influence, and is still recognised as a leading text-book.

The two years following the publication of 'First Principles' were devoted to the first volume of 'The Principles of Biology,' published in 1864. Since Spencer had not a specialist's knowledge of biology, he arranged with his friends Huxley and Sir Joseph Hooker [q. v. Suppl. II.] to read the proofs. The publication evoked little notice: a fate which likewise befell a second series of 'Essays,' which he re-published the previous year. Other occupations of 1864 were the essay on the 'Classification of the Sciences,' published as a separate *brochure*, to which was appended 'Reasons for dissenting from the Philosophy of M. Comte.' Spencer's branched classification undoubtedly represents a great advance on the linear classification of the older philosopher. The second volume of the 'Biology' was commenced immediately on the conclusion of the first, and published in 1867. But before it was completed, Spencer's financial position obliged him to give subscribers notice of cessation. The diminution in the number of subscribers, and the difficulty of collecting their sub-

scriptions, together with the fact that he had now to give support to his aged father, rendered the continuance of the issues impossible. In vain did John Stuart Mill offer to indemnify his publishers against possible future losses. A movement was set on foot by Mill, Huxley, Tyndall, Busk, and Lubbock (now Lord Avebury) for obtaining subscribers for a large number of extra copies; but the death of his father in 1866 greatly improved his position, and enabled him to continue the issues without the help of friends. Already, however, his vehement adherent Youmans had been active in America, with the result that Spencer's admirers in that continent presented him with a valuable gold watch, and invested 7000 dollars in his name in public securities, so as to deprive him of the option of refusal. The second volume of 'The Principles of Biology' was not sent round to the critical journals, and was therefore ignored by the press. But Spencer's name was by this time widely known. He was a member of the celebrated π club, to which Huxley, Tyndall and other of his friends belonged. In 1866 he was, in common with most of the other leading evolutionists, an active member of the Jamaica committee for the prosecution of Governor Eyre [q. v. Suppl. II]. The death of his father revived his inventive faculties; and he invented a new kind of invalid bed which obtained the approval of medical men. In 1866, for the first time, he fixed upon a settled abode at a boarding-house in Queen's Gardens, Lancaster Gate, with a room in the vicinity to serve as a study.

Henceforward Spencer's life becomes a mere record of the publication of his books. He was elected a member of the Athenæum Club by the committee in 1868, and went there regularly in the afternoons to play billiards and see his friends. Ill-health negated any extended social relationships, as well as every other mode of activity beyond that of completing the 'Synthetic Philosophy.' Every autumn there was a visit to Scotland. Once he made a tour in Italy, once in Switzerland, once in the Riviera, once in Egypt. Signs of public appreciation were soon manifest; the first in 1871 when he was offered the lord rectorship of St. Andrews University. But neither this nor any other honour could he be induced to accept. His works, which had hitherto been a dead loss, began to pay; and since he had adopted the principle of publishing on commission, he obtained the full benefit of their sale.

Spencer's first business on concluding

the 'Biology' was to re-cast 'First Principles,' in the first edition of which he now recognised sundry imperfections. He then turned his attention to 'The Principles of Psychology,' the next portion of the 'Philosophy.' By adding various divisions he brought his previously published work on 'Psychology' into line with the plan of the rest of the 'philosophy.' The first volume was published in 1870, and the second in 1872. The next step was to deal with 'The Principles of Sociology.' As early as 1867 Spencer had recognised that it would be necessary for him to collect large masses of facts on which to found his sociological generalisations. Accordingly, he secured the services of Mr. David Duncan (afterwards his biographer) to read books of travel and accounts of primitive peoples, selecting all statements of sociological significance, and classifying them according to a plan drawn up by Spencer. Two other gentlemen, Mr. James Collier and Dr. Richard Scheggip, were subsequently engaged for the same purpose; and Spencer, thinking the collections of facts might be useful to other social inquirers besides himself, decided to publish them. Financially the scheme was a complete failure; but he persisted, in spite of heavy losses, and by 1881 the 'Descriptive Sociology' had reached eight volumes, when its issue was suspended, not to be revived till after Spencer's death. One other work published in 1873 was the 'Study of Sociology.' Spencer had assisted his friend Youmans to found the 'International Scientific Series,' and found himself now compelled to yield to Youmans' pressure to contribute a volume to it himself. The 'Study of Sociology' was devoted to setting forth the difficulties, objective and subjective, that confront the student of the social science. The many varieties of bias which are likely to perturb his judgment were discussed in full. The book, being of a comparatively popular character, was immensely successful; and the preliminary publication of its chapters in the 'Contemporary Review' in England and the 'Popular Science Monthly' in America did much to assist the sale of Spencer's works. Spencer's next task was the preparation of the first volume of 'The Principles of Sociology,' published in 1877. Hitherto the serial method of publication had been adhered to, but with the conclusion of this volume Spencer sent to subscribers a notice of discontinuance, determining in future to publish the volumes as they were completed. He began the second

volume of 'The Principles of Sociology,' but finding his health still very precarious abandoned it to write 'The Data of Ethics.' Any form of continuous application brought on symptoms due to cerebral congestion, and many expedients were tried to prevent them. He would dictate to his secretary while rowing on the Serpentine or playing games of racquets. Dictating for twenty minutes or so at a time, he then broke off to row or play vigorously and relieve the brain. When able to do nothing else he would dictate his autobiography; and the bulkiness of that work is a concrete result of Spencer's efforts to kill time. 'The Data of Ethics,' which subsequently formed part I of 'The Principles of Ethics,' was published in 1879; and 'Ceremonial Institutions,' the first instalment of the second volume of 'The Principles of Sociology,' was published shortly afterwards. Having set forth the foundations of his views on ethics, Spencer felt at liberty to revert to the original order of his philosophy, and conclude the second volume of the 'Sociology'; and 'Political Institutions' was published in 1882. The foundation in the same year, in conjunction with Mr. Frederic Harrison, Mr. John Morley, and others less known, of an Anti-aggression League, in opposition to aggressive war, greatly over-taxed Spencer's energies. In 1882 he paid a visit to America, resisting the numerous attempts to fête him, save in one instance where a dinner in his honour was given in New York. Thenceforward the decline in health proceeded steadily. In 1884 appeared four articles from the 'Contemporary Review,' now bound together to form 'The Man versus The State.' Spencer had been watching with alarm the gradual encroachment of the state upon the liberty of the individual, and its ever-widening sphere of activity. The purpose of these essays was to propose a new creed for liberals—the limitation of state-functions to protection against foreign aggression and the maintenance of justice at home. He refused an invitation to become parliamentary candidate for Leicester in 1884. 'Ecclesiastical Institutions,' with which the third volume of 'The Principles of Sociology' opens, was published in 1885. Thereafter Spencer once again turned to 'The Principles of Ethics,' in order to elaborate his final beliefs on the functions of government in 'Justice.' From 'Justice' he passed on to the other divisions of 'The Principles of Ethics,' and published the whole of that work before reverting to the final volume of the 'Sociology.'

In 1889 he took a house in Avenue Road, St. John's Wood, in conjunction with three maiden ladies. For a few years the arrangement worked well; but, after a time, disputes arose; and in 1898 he moved to 5 Percival Terrace, Brighton, where he remained till his death. In 1896 the last volume of 'The Principles of Sociology' was published, and with it the 'Synthetic Philosophy' was completed. Congratulations poured in from all quarters; among others an influentially signed document, asking permission to employ an artist to take his portrait for presentation to one of the national collections. The portrait was ultimately painted by Sir Hubert von Herkomer. But Spencer could not rest, now that his work was completed. Two further books, entitled 'Various Fragments' and 'Facts and Comments' were issued before his death, each consisting of short essays on a great variety of subjects. The latter work attracted special attention on account of the vehement language with which Spencer denounced the policy of the Boer war. The increasing militarism which he believed he saw everywhere around him largely embittered his later years. Both this and the tendency to increase the functions of government were in close conflict with the social doctrines of his philosophy, which constituted Spencer's strongest sentiments. The chronicle of the last years of his life shows that his nervous system was shattered beyond repair. Everywhere he was trying to correct misrepresentations of his views, or to maintain his priority in some theory or idea. Death at Brighton at the age of eighty-three on 8 Dec. 1903 was a welcome relief from his sufferings. He was cremated at Golder's Green, an address by Mr. Leonard (afterwards Lord) Courtney taking the place of a religious ceremony. The ashes were subsequently buried in Highgate cemetery. In his will he left the bulk of his property in trust for carrying on the publication of the 'Descriptive Sociology.'

Several portraits of Spencer are in existence. That by Sir Hubert von Herkomer, painted when Spencer was seventy-seven and had just completed the 'Synthetic Philosophy,' is at Edinburgh in the Scottish National Portrait Gallery. The portrait by J. B. Burgess, painted in 1872, hangs in the National Portrait Gallery in London, while the copy of it made by J. Hanson Walker is in the Public Library of Derby. In the Derby Museum there is a plaster cast of his hands, and several relics. The marble bust made by Sir Edgar Boehm

in 1884 is in the National Portrait Gallery. A bronze bust by E. Onslow Ford was exhibited at the Royal Academy in 1897. Mrs. Meinertzhagen owns a portrait painted by Miss Alice Grant in the last year of Spencer's life, mainly from photographs taken in 1898. A cartoon portrait by 'C. G.' appeared in 'Vanity Fair' in 1879.

In appearance Spencer betokened nothing of his years of invalidism. He was 5 ft. 10 in. in height, of almost ruddy complexion, but thin and spare. His face with unwrinkled forehead showed no effects of his long life of thought, and his walk and general bearing were vigorous. Naturally of a robust constitution, he never lost a tooth, and his eyes were so strong throughout life that he never had to wear spectacles for reading. The damage to his nervous system was displayed by his irritability in later life, his morbid fear of misrepresentation, and various eccentricities which gave rise to many false and exaggerated stories. Among the peculiarities which nervous invalidism wrought in him was the use of ear-stoppers, with which he closed his ears when an exciting conversation to which he was listening threatened him with a sleepless night. The extreme originality of mind and contempt of authority, the habit of driving principles to their minutest applications, naturally gave rise to eccentricities, but these toned down in later life.

Although predominantly intellectual, he showed an emotional side, especially in his strong affection for his father. Throughout the greater part of his life he was obsessed by the execution of the 'Synthetic Philosophy,' which absorbed the main intellectual and emotional powers of his mind. One of his least pleasant traits was the tendency to assert his own priority in scientific and philosophic ideas. The claim was never made unjustly, but the animosity with which he defended it showed, as in the case of Newton, that the mere advancement of knowledge was not his sole end. He persistently declined all honours, academic or otherwise. The list of those offered is detailed in Duncan's 'Life' (App. D), but it would undoubtedly have been much longer had not his rule of refusing them become generally known.

Spencer's place in the history of thought must be ranked high. His influence in the latter half of the nineteenth century was immense: indeed it has so woven itself into our modern methods of thinking that its driving and revolutionary energy is nearly spent, and there is little likelihood of its being hereafter renewed. It was

the best synthesis of the knowledge of his times; and by that very fact was from the beginning destined to be replaced and to lose much of its utility when new branches of knowledge were opened up. The central doctrines of the philosophy were, in its social side, individualism and opposition to war; on its scientific side, evolution and the explanation of phenomena from the materialistic standpoint. It has been said that the advancement of knowledge depends mainly on interrogating nature in the right way. Spencer may be said to have nearly always *asked nature the right questions*; but not infrequently his answers to the questions were wrong. He concentrated the attention of mankind on the problems of fundamental importance. The main deficiency of his reasoning was a too free use of the deductive method, more especially in his biological and sociological writings, where this method is always attended by grave dangers. Huxley correctly singled out Spencer's weakness when he laughingly said that Spencer's definition of a tragedy was the spectacle of a deduction killed by a fact.

Spencer's fame extended far throughout the world. In France, Russia, and other European nations he was widely studied. In America his books had a very large circulation, and his fame was certainly not less than in England. During the awakening of Japan, he was one of the authors most studied by the young Japanese; and probably his opinion was held in higher esteem than that of any other foreign writer whatever. His works were also held in high esteem by the Indian nationalists; and, shortly after his death, one of them, Mr. Shyamaji Krishnavarma, founded a 'Herbert Spencer Lectureship' at Oxford University, by which a sum of not less than 20*l.* a year was to be paid to the annually appointed lecturer.

The following is a summary of his philosophical works:—

'First Principles' is divided into two parts, of which the first, or metaphysical part, is an attempt at a reconciliation between science and religion by postulating a belief in the 'Unknowable,' as the cause and origin of all phenomenal existence. The doctrine has found scarcely more favour on the side of science than it has on the side of religion, and may be regarded as the least important part of the philosophy. Part ii. sets forth the fundamental principles of the 'Synthetic Philosophy,' as Spencer has named his system. Defining the business of philosophy as the formulation

of truths which hold good for *all* orders of phenomena, as distinct from those of the special sciences, which hold good only for limited departments, he founds his system upon the physical principles of the indestructibility of matter, and the continuity of motion, unified under the general heading of the Persistence of Force. From this is deduced the Uniformity of Law. Spencer then proceeds, in his attempt at the unification of knowledge, to seek for a law of the continuous redistribution of matter and motion, as comprising every department of the 'Knowable.' He finally reaches his famous law:—*Evolution is an integration of matter and concomitant dissipation of motion; during which the matter passes from a relatively indefinite, incoherent homogeneity to a relatively definite, coherent heterogeneity; and during which the contained motion undergoes a parallel transformation.* Evolution is supplemented by the reverse process of Dissolution; and these formulas express the law of the entire cycle of changes passed through by every existence and at every instant, with no limitations of time or space. Evolution, however, tends ultimately to equilibrium, in which the incessant changes come to an end.

In 'The Principles of Biology' Spencer applied the law of evolution to animate existence. He defined life in the same manner as in his 'Principles of Psychology.' As factors of evolution he not only named natural selection, or (to use Spencer's own term) *survival of the fittest*, but he argued strongly in favour of the direct modification of organisms by the environmental action, and also in favour of the inheritance of functionally-produced modifications. In this latter belief he is at variance with the best, though not the unanimous, opinion of modern biologists. In the second volume he promulgated the interesting theory that the shapes of animals and plants are an expression of the environmental forces which act upon them. He sets forth also his well-known law of the antagonism between individuation and reproduction. His attempt to facilitate the comprehension of heredity by supposing the existence of 'constitutional units' (first named physiological units) has attracted wide attention, and is probably not very remote from the truth.

'The Principles of Psychology' was materialistic in its general point of view; for, although Spencer emphatically affirmed the existence of mind and its total distinction from matter, yet his efforts were

devoted to interpreting mental manifestations by reference to physical and chemical laws. He defined life as 'the continuous adjustment of internal relations to external relations' and argued that the degree of life was proportional to the degree of correspondence between these two sets of relations. The development of memory, instinct, &c., was explained on the very questionable hypothesis that the results upon an organism of the direct action of the environment could be transmitted to its descendants. But although this attempted explanation cannot stand, it is remarkable that an evolutionary basis is given to the whole work, of which the first edition had appeared four years before Darwin published his great book. In the analytical portions he attributes all acts of intelligence to the variously compounded consciousnesses of relations of likeness and unlikeness. Finally he sets forth his famous 'Universal Postulate' to the effect that the criterion of the truth of a proposition is the inconceivability of its negation. Opinion still differs as to the merits of many parts of this work. Doubtless much of the detail and some of the principles are erroneous; but much has become generally accepted; and in view of the state of knowledge at the time when it was written, it must be considered a masterpiece.

'The Principles of Sociology' begins by an exposition of the so-called 'Ghost Theory,' in which Spencer regards all primitive mythological beliefs as modified forms of ancestor-worship. In the part dealing with 'The Inductions of Sociology' he minutely draws the analogy between the social and physical organism. The remaining volumes of the work deal with ceremonial institutions, political institutions, ecclesiastical institutions, professional institutions, industrial institutions. The general result is to distinguish between two main types of society, the militant resting on a basis of *status*, and the industrial resting on a basis of *contract*.

'The Principles of Ethics' was considered by Spencer as the flower of the whole philosophy. His system is hedonistic, in so far as it regards happiness as the object to be attained; it is evolutionary, in so far as it represents that evolution is carrying us to a state in which happiness will far exceed what we now experience. The utilitarians are attacked on the ground that, in their enthusiasm for altruism, they attach insufficient importance to a rational egoism. In the second volume, part iv., 'Justice,' is Spencer's final and

most philosophic statement of the duties of the state. As in his earliest book, he limits state-functions to the maintenance of justice at home, and the repelling of aggression abroad. His formula of justice is stated by him in the words: 'Every man is free to do that which he wills, provided he infringes not the equal freedom of any other man.' Two further divisions indicate the duties of men towards one another, which are not, however, to be enforced by law.

The following is a list of the volumes published by Spencer: 1. 'Social Statics,' 1850; abridged and revised edition (together with 'The Man versus The State'), 1892. 2. 'The Principles of Psychology,' 1 vol. 1855; 2nd edit. vol. i. 1870, vol. ii. 1872; 4th edit. 1899. 3. 'Essays,' 1st series, 1857; 2nd series, 1863; 3rd series, 1874; American reprints of the first two series; final edit. (in three volumes) 1891. 4. 'Education,' 1861; cheap reprint, 1878. 5. 'First Principles,' 1862; 6th edit. 1900; 3rd impression, 1910. 'The Principles of Biology,' vol. i. 1864, vol. ii. 1867; revised and enlarged edit. vol. i. 1898, vol. ii. 1899. 7. 'The Study of Sociology' ('International Scientific Series'), 1873; library edit. 1880. 8. 'The Principles of Sociology,' vol. i. 1876; 3rd edit. 1885; part iv. 'Ceremonial Institutions,' 1879; part v. 'Political Institutions,' 1882; parts iv. and v. were subsequently bound together to form vol. ii. of 'The Principles of Sociology,' 1882; part vi. 'Ecclesiastical Institutions,' 1885; part vi. was subsequently bound up with two further divisions and issued as vol. iii. of 'The Principles of Sociology' in 1896. 9. 'The Principles of Ethics': part i. 'The Data of Ethics,' 1879; new edit. 1906; part i. was afterwards bound up with two more divisions to form vol. i. of 'The Principles of Ethics,' 1892; part iv. 'Justice,' 1891; part iv. was similarly bound up subsequently with two more divisions and issued as vol. ii. of 'The Principles of Ethics' in 1893. 10. 'The Man versus The State,' 1884; 2nd edit. (bound together with 'Social Statics') 1892. 11. 'The Nature and Reality of Religion,' 1885. This work, published in America, embodied a controversy on the Positivist religion that had taken place between Spencer and Mr. Frederic Harrison. Owing to copyright difficulties raised by Mr. Harrison, Spencer suppressed the book soon after its publication. It was however reissued the same year without his knowledge under the title 'The Insuppressible Book,' 12. 'Various Fragments,' 1897; en-

larged edit. 1900. One of these 'fragments,' entitled 'Against the Metric System' (1896), was reissued separately in 1904 with additions, under a provision in Spencer's will. 13. 'Facts and Comments,' 1902. 14. 'Autobiography,' 1904. Portions of various of these works are on sale separately. 'Education,' 'Man versus the State,' 'Social Statics,' and 'Selected Essays' have been issued in sixpenny editions by the Rationalist Press Association, while the trustees contemplate the issue of a complete popular edition of Spencer's 'Philosophy,' and have already published shilling editions of 'First Principles,' 2 vols., 'Education,' and 'The Data of Ethics.' In addition to the above list of works, Spencer issued during his lifetime eight instalments of the 'Descriptive Sociology,' viz.: No. 1, 'English,' 1873; No. 2, 'Ancient Mexicans, Central Americans, Chibchas, and Ancient Peruvians,' 1874; No. 3, 'Types of Lowest Races, Negritto Races, and Malayo-Polynesian Races,' 1874; No. 4, 'African Races,' 1875; No. 5, 'Asiatic Races,' 1876; No. 6, 'American Races,' 1878; No. 7, 'Hebrews and Phœnicians,' 1880; No. 8, 'French,' 1881. Since Spencer's death further instalments have been issued, and No. 9, 'Chinese,' and No. 10, 'Greeks: Hellenic Era,' appeared in 1910. The series is now in regular progress, the intention being to bring the number to some 24 parts.

Spencer reissued his father's 'Inventional Geometry' with a preface in 1892; and he also published his father's 'System of Lucid Shorthand' in 1893.

[Autobiography, 1904; Life and Letters, by D. Duncan, 1908 (with full bibliography); Personal Reminiscences, by Grant Allen, published in the Forum for April-June 1904; A Character Study, by W. H. Hudson (at one time Spencer's private secretary), in Fortnightly Review, January 1904; Herbert Spencer, in Edinburgh Review, July 1908; Josiah Royce, Herbert Spencer (with an interesting chapter of personal reminiscences by James Collier, New York, 1904; Home Life with Herbert Spencer, by Two, 1906, 1910; Hector Macpherson, Herbert Spencer, the Man and his Work, 1900; W. H. Hudson, Herbert Spencer, 1908; W. H. Hudson, An Introduction to the Philosophy of Herbert Spencer (containing a biographical sketch), 1895, 1897, 1904; J. Arthur Thomson, Herbert Spencer, 1906; Life and Letters of Charles Darwin, ii. 188, iii. 55, 120, 141, 165, 193; Life and Letters of T. H. Huxley, *passim*. There are innumerable less important works on Spencer or his philosophy. Among the latter, the most read (besides those already

enumerated) are J. Fiske, *Outlines of Cosmic Philosophy*, 1874; H. Sidgwick, *Lectures on the Ethics of T. H. Green*, Mr. Herbert Spencer, and J. Martineau, 1902; H. Sidgwick, *The Philosophy of Kant and other Lectures*, 1905; W. R. Sorley, *The Ethics of Naturalism*, 1904. The annual Herbert Spencer lectures are for the most part concerned very indirectly with Spencer's life: the 1910 lecture by Professor Raphael Meldola should be mentioned, however. A volume of Aphorisms from the Writings of Herbert Spencer was published by Miss J. R. Gingell in 1894. An Epitome of the Synthetical Philosophy, by F. Howard Collins (5th edit. 1901), is an excellent summary in one volume. Its formality and necessary brevity, however, render it unsuitable for reading, and its chief use is as an elaborate index to the Philosophy.]

H. S. R. E.

SPENCER, JOHN POYNTZ, fifth EARL SPENCER (1835–1910), statesman and viceroxy of Ireland, was only son, in a family of three children by his first wife, of Frederick, the fourth earl (1798–1857). His mother was Elizabeth Georgiana (*d.* 1851), second daughter of William Stephen Poyntz of Cowdray, Sussex. His father, who as a naval officer had commanded the *Talbot* at the battle of Navarino, was the third son of George John Spencer [q. v.], second earl, at one time first lord of the admiralty. John Charles [q. v.], third earl, best known in political history as Viscount Althorp, was the latter's eldest son and uncle of the fifth earl.

The fifth earl, born on 27 Oct. 1835, at Spencer House, St. James's, the town mansion of the family, was known in youth as Viscount Althorp. In June 1848 he entered Harrow school, and stayed there six years. He was in later life an active and influential governor of the school. In Michaelmas term 1854 he matriculated from Trinity College, Cambridge, and graduated M.A. (as a nobleman's son) in 1857. He received the honorary degree of LL.D. in 1864. He achieved no academical distinction. On 6 April 1857 he was elected to the House of Commons, in the liberal interest, as one of the two members for South Northamptonshire—a family seat. But the death of his father on 27 December following called him to the House of Lords.

A wealthy nobleman of manly character, commanding presence, and engaging manners, Spencer was soon a prominent and popular figure in society. At Spencer House in London and at Althorp Park, his Northamptonshire seat, he soon exercised magnificent hospitality. Devoted to sport, he was an admirable horseman. Through

life he rode about London on business or social errands, and he was thrice master of the Pytchley hounds. In shooting, too, he always took a lively interest, largely with an eye to national needs. In 1860 he was chairman of the committee which met at Spencer House to form the National Rifle Association, and with that body he was closely connected till death. For nearly fifty years he was a member of the council, of which he was chairman in 1867–8. He gave the Spencer cup to be competed for at the annual meetings by boys at the public schools, and frequently shot in the Lords' team in the Lords and Commons match. A large canvas by H. T. Wells, R.A., depicting Spencer and others at the camp at Wimbledon in 1868, belongs to the present Earl Spencer, and Spencer presented in 1909 a portrait of himself by the same artist to the council of the Rifle Association.

Spencer's first public employment was at court. He was appointed groom of the stole to the Prince Consort in 1859, and held that office until the prince's death on 14 Dec. 1861. In the following year he was appointed to the same position in the newly constituted household of the Prince of Wales, afterwards King Edward VII. He retained the office until 1867. But Spencer was ambitious of political service. On 14 Jan. 1865 Lord Palmerston had nominated him K.G., and the liberal party welcomed his co-operation. On 11 Dec. 1868, when Gladstone formed his first administration, Spencer became lord-lieutenant of Ireland, but without a seat in the cabinet. Chichester Fortescue, afterwards Lord Carlingford [q. v. Suppl. I], was made chief secretary for Ireland with a seat in the cabinet.

With the measures of conciliation for Ireland—the disestablishment of the Church of Ireland and the reform of the land laws—to which the government was pledged, Spencer was in full sympathy, but he had no direct responsibility for them. In regard to the third remedial measure of the government—the Irish University education bill of 1873, which the House of Commons ultimately rejected—Spencer sought in vain to win the support of Cardinal Cullen (25 Feb. 1873). His duties were executive and administrative rather than legislative. While he preferred keeping order by ordinary methods of peaceful suasion, he had no compunction in meeting persistent defiance of the law by 'coercion.' On his entry into office 'Fenianism' proper had been crushed, and he found himself justified

in releasing forty political prisoners. But within a year organised crime, chiefly in agrarian districts, developed anew. An increase of the military forces proved of little avail. Consequently early in 1870 Spencer obtained a Peace Preservation Act, with special clauses directed against sedition in the press. The Act received the royal assent on 4 April. The Land Act followed, and the consequent improvement in the country's tranquillity enabled Spencer at the end of the year to release the remaining Fenian prisoners subject to their banishment from the United Kingdom for life. A recrudescence of terrorism among the riband societies of Westmeath and neighbouring counties in 1871 called in Spencer's judgment for another coercive measure—the 'Westmeath Act' (16 June). He believed his task was greatly facilitated by that Act. In August 1871, when he entertained the Prince of Wales in Dublin, a riot in Phoenix Park showed continued need of vigilance. On the overthrow of Gladstone's government in 1874 Spencer left Ireland with a reputation for combining a firm with a conciliatory temper.

During the next six years, while his party was in opposition, he for the most part occupied himself privately. He had become lord-lieutenant of Northamptonshire (11 Aug. 1872), and was always attentive to county business. When Gladstone formed his second administration in 1880 Spencer joined the liberal cabinet as lord president of the council. The office constituted its occupant the chief of the education department. Spencer discharged his varied duties with discretion until the spring of 1882. Then he was suddenly reappointed to his former position in Dublin (3 May 1882). A grave crisis had arisen in Ireland, where at the instigation of the Land League disorder had raged for more than two years and coercive measures failed in their purpose. Gladstone and his government were now seeking some accommodation with the revolutionary leaders. But the Irish viceroy, Lord Cowper [q. v. Suppl. II], and the Irish secretary, W. E. Forster [q. v.], deprecated any reversal of policy, and both resigned. Spencer became viceroy, retaining his seat in the cabinet, and Lord Frederick Cavendish [q. v.] joined him as chief secretary. Their appointment was designed as a step towards conciliation. 'Suspects' imprisoned without trial were to be released. A new land bill was to be prepared. At the same time the cabinet felt that some exceptional powers were still needed by the Irish executive, and a measure for conferring

them was ready for drafting before Spencer and Cavendish left for Dublin on 5 May (LADY FREDERICK CAVENDISH in *The Times*, 18 Aug. 1910).

On the morning of 6 May Spencer was sworn in as lord-lieutenant at Dublin Castle and Cavendish as a member of the Irish privy council. At a council in the afternoon the provisions of the proposed 'coercion' measure were discussed. At the close of the meeting Spencer rode to the Viceregal Lodge in the Phoenix Park. Cavendish soon followed on foot, and was joined by the under-secretary, Thomas Henry Burke [q. v.]. A terrible outrage followed. Cavendish and Burke were murdered by a gang of ruffians known as the 'Invincibles' in the Phoenix Park in full view of Spencer's windows. The outrage completely changed for the time the character of Spencer's mission. Sir George Trevelyan succeeded Lord Frederick as chief secretary, and together they sought to bring the conspirators to justice. The crimes bill, which was already sanctioned in principle by the cabinet, received the royal assent (12 July) and was rigorously enforced. The murderers were discovered and punished, and disorder was gradually suppressed.

The resolution with which Spencer and Sir George Trevelyan faced the situation exposed them to 'daily even hourly danger of their lives' (*ibid.*) and to floods of obloquy and calumny from the mass of the Irish people. Spencer was credited with a 'cruel, narrow, and dogged nature,' and was popularly christened the 'Red Earl.' The colour of his long and bushy beard had long before suggested that sobriquet as a friendly nickname, but the words were now freely employed to imply his delight in blood. By the law-abiding population he was hailed as a saviour of society. Trinity College conferred on him the honorary degree of LL.D. in 1883 amid immense applause.

In the spring of 1885, when the Crimes Act was about to expire, acute differences arose in the cabinet both as to its renewal and as to the general Irish policy of the party. Spencer with the support of the whig element in the cabinet desired that certain provisions in the old Coercion Act should be renewed, and he suggested that a new land purchase bill should accompany the new Coercion Act. The radical leaders, Mr. Chamberlain and Sir Charles Dilke [q. v. Suppl. II], dissented, unless Spencer accepted in place of the land bill a large measure of local government. Before the dispute went further, the government were

defeated in the Commons on a different issue in regard to the budget, and Spencer with his colleagues resigned (8 June).

The new conservative administration, which enjoyed nationalist favour, not only declared against an immediate renewal of the Crimes Act but disclaimed 'responsibility for its practice in the past' (MORLEY, *Life of Gladstone*, iii. 213). When Parnell and his friends imputed to Spencer a wilful miscarriage of justice in the trial and conviction of persons charged with murder at Maamtrasna, the conservative leader of the house, Sir Michael Hicks-Beach (afterwards Lord St. Aldwyn), spoke with hesitating approval of Spencer's past action and promised inquiry (17 July). Spencer's friends held that the conservatives who had denounced him as being too lenient now threw him overboard as having been too severe. The debate brought home to many on both sides of the house the varied perils and temptations springing from a coercive policy. On 23 July 1885 Spencer was entertained at dinner at the Westminster Palace Hotel by 200 liberal members of parliament under the chairmanship of Lord Hartington, and he defended with spirit his administration of the Crimes Act.

When at the end of 1885 Gladstone adopted the policy of home rule, Spencer supported him. The change of view was partly due to Gladstone's commanding personal influence over him and to his sense of party loyalty. But another cause doubtless lay in his conviction that coercion was impracticable in view on the one hand of the impatience with it manifested by an important section of his own party, and on the other hand of the cynical readiness with which the tories had rejected the principle to gain a party advantage. In Spencer's belief the only alternative to effective repression was effective concession.

On 1 Feb. 1886 Gladstone resumed office, having committed himself to a measure of home rule as yet undefined. Spencer joined him as lord president of the council, and took an active part in the framing of the first home rule bill. The measure was rejected on the second reading by a majority of thirty owing to the opposition of the liberal unionists, who combined with the tories (7 June). Gladstone dissolved parliament at once, and was heavily defeated at the polls. During the six years of opposition which followed Spencer took from time to time a conspicuous share in the agitation for home rule. He met on the same platform many Irish members of parliament who had previously been prominent in

scurrilous denunciation of him. At the general election of 1892 Gladstone secured a small majority, and in his fourth and last administration Spencer accepted the office of first lord of the admiralty. His grandfather had held the post from 1794 to 1800.

Spencer administered the navy with great energy and efficiency and with a single-minded regard to the national security on the seas. He was the first to set the precedent, which has since been consistently followed, of retaining in office the professional members of the board who had been appointed by his predecessor (SIR WILLIAM WHITE in *The Times*, 20 Aug. 1910). The large ship-building programme embodied in the Naval Defence Act of 1889 was in course of prosecution, and continuity of administration was therefore of primary importance. Spencer handled firmly and judiciously the critical questions, personal, administrative, and constructive, which were raised in 1893, when the Victoria was rammed and sunk by the Camperdown with great loss of life. The ship-building policy included the introduction of the 'torpedo-boat destroyer,' a new and valuable type of warship. Above all he made with his professional colleagues an historic stand against the indifference of some members of the cabinet to the requirements of national security. In this regard he came into conflict with both Sir William Harcourt [q. v. Suppl. II] and Gladstone. At the end of 1893, when Lord George Hamilton, Spencer's predecessor at the admiralty, moved a resolution declaring the necessity for an immediate and considerable increase in the navy and called on the government to make a statement of their intentions, Sir William Harcourt, then chancellor of the exchequer, professing to represent the opinion of the sea lords, asserted that in their opinion as well as his own the existing condition of things in respect to the navy was satisfactory. Spencer at once privately protested that Harcourt's statement was unjustified, and Spencer's colleagues at the admiralty threatened resignation if it were not corrected. The correction was made. Then followed the 'Spencer programme' of shipbuilding, extending over several years. Gladstone's final resignation in March 1894 was determined by the increased expenditure which Spencer's navy estimates involved (see MORLEY, *Life of Gladstone*, iii. 507-8). There is excellent authority for recording that when these estimates were presented to the cabinet, Gladstone exclaimed

in an aside 'Bedlam ought to be enlarged at once.'

But Gladstone's high opinion of Spencer was not affected by such differences. On 2 March 1894, after Gladstone had forwarded his resignation to Queen Victoria, he remarked that should the queen consult him as to the selection of his successor he should advise her to send for Spencer. But his advice was not asked, and the queen chose Lord Rosebery, under whom Spencer agreed to continue at the admiralty. He steadily pursued his previous policy until Lord Rosebery's government fell in 1895.

Spencer did not return to office. But until his health failed he took a leading part in the counsels of the liberal party. In the House of Lords he acted as the lieutenant of the liberal leader, Lord Kimberley [q. v. Suppl. II], when the latter fell ill in 1901, and he succeeded him in the leadership on his death in 1902. Amid the anxieties caused to the party by the successive withdrawals of Lord Rosebery and Sir William Harcourt from its leadership and by the accession of Sir Henry Campbell-Bannerman to the leadership in the House of Commons, Spencer loyally did what was possible to preserve unity. Public opinion early in the twentieth century pointed to him as the probable prime minister when the liberals should return to power. But his withdrawal from public life was at hand. The death of his wife on 31 Oct. 1903, which greatly shook him, was followed in 1904 by a severe cardiac illness. Although he recovered and continued to lead his party in the House of Lords until the close of the session of 1905, a cerebral seizure in the autumn, while he was shooting on his estate in Norfolk, led to a gradual failure of his powers. In the new liberal government which was formed in December 1905 he could take no place. He resigned the lord-lieutenancy of Northamptonshire in 1908. He died at Althorp on 14 Aug. 1910, and was buried there beside his wife.

On 8 July 1858 Spencer married Charlotte Frances Frederica, fourth daughter of Frederick Charles William Seymour, a grandson of Francis, first marquis of Hertford. Lady Spencer was a woman of rare beauty and charm, and was known while she presided at Dublin Castle by the affectionate sobriquet of 'Spencer's Faery Queen.' She had no issue. Spencer was succeeded in the title by his half-brother, Charles Robert Spencer, who was created Viscount Althorp in 1905.

Spencer, whose family estates comprised

some 26,000 acres in the Midlands, was a considerable landlord and was interested in the progress of agriculture. In 1860 he joined the Royal Agricultural Society, of which his uncle was a founder and first president, and was himself president in 1898, when the annual show was held at Four Oaks Park, Sutton Coldfield. Spencer's income suffered much from the agricultural depression of 1879 and the following years. In 1892 he sold for 250,000*l.*, to Mrs. John Rylands, the great library of Althorp, which now forms a main part of the John Rylands library at Manchester. He afterwards disposed of his Oriental MSS. to the earl of Crawford. Spencer was chancellor of the Victoria University, Manchester, from 1892 till his death. He was from 1889 chairman of the Northamptonshire county council. In 1901 he became keeper of the privy seal of the duchy of Cornwall.

Spencer's lofty character, grace and dignity of manner, transparent sincerity, wide experience of affairs, and imperturbable fortitude in the midst of perils, lent weight to his utterances and opinions, but he was a hesitating and awkward speaker, and it is doubtful if his capacities were quite equal to the post of prime minister, for which at one time he seemed destined.

Besides the portraits already mentioned there are at Althorp portraits of Earl Spencer by Henry Tanworth Wells, R.A. (1867), and by Frank Holl (1888); the latter is admirable in every way. A third painting by Weigall is at Spencer House in London. A small statuette was done by Mellini in 1905. There is a good sketch, executed by Wells for Grillon's Club in 1881. Two cartoons appeared in 'Vanity Fair,' respectively by 'Ape' in 1870 and by 'Spy' in 1892.

[Personal reminiscences and private information; The Times, 15 Aug. 1910; Lord Morley's Life of Gladstone; B. Holland's The Duke of Devonshire; Lord Fitzmaurice's Lord Granville.] J. R. T.

SPRENGEL, HERMANN JOHANN PHILIPP (1834-1906), chemist, born at Schillerslage, near Hanover, on 29 Aug. 1834, was the second son of Georg Sprengel, a landed proprietor, of Schillerslage.

After early education at home and at a school in Hanover, he attended the universities of Göttingen and of Heidelberg, where he graduated Ph.D. in 1858. Next year he came to England and acted as an assistant in the chemical laboratory of Oxford University. Three years later he removed to London to engage in research

at the Royal College of Chemistry, and at Guy's and St. Bartholomew's hospitals. From 1865 to 1870 Sprengel held a post at the chemical works of Messrs. Thomas Farmer, Kennington, becoming a naturalised Englishman.

Sprengel was the first who described and patented in England a number of substances called safety explosives. They were of two kinds, liquid and solid. The liquid ones were, in general, solutions of nitrated hydrocarbons—chiefly nitrobenzene or picric acid in nitric acid, mixtures that could be exploded with considerable effect by a detonator. Sprengel allowed his patents to lapse, deriving no pecuniary benefit. Patents subsequently taken out by Hellhoff for the explosive 'Hellhoffite' and by Turpin for 'Panclastite' were essentially the mixtures suggested by Sprengel (O. GUTTMANN). In a paper read before the Chemical Society, 'On a New Class of Explosives which are Non-explosive during their Manufacture, Storage, and Transport' (*Journal Chem. Soc.* 1873), Sprengel described these substances and gave a list of combustible agents. The mixtures were to be exploded by fulminate detonators wrapped in dry guncotton, a method called by Sprengel 'cumulative detonation' (see *Presidential Address*, SIR F. ABEL, Soc. Chem. Industry, 1883).

Sprengel's most notable achievement was his invention of a mercurial air-pump for the production of vacua of high tenuity by the fall of water or mercury in narrow tubes. This he described in his paper on 'Researches on the Vacuum' before the Chemical Society in 1865. The invention proved of immense service. In the hands of Bunsen, Graham, and Crookes the apparatus opened up departments of physical research of supreme interest; in those of Swan and Edison an era in regard to the incandescent electric light. 'It would be difficult indeed to enumerate the investigations which have owed their success to the invention of the Sprengel mercury pump' (LORD RAYLEIGH, *Presidential Address*, Royal Society, 1906); for details of its practical applications, see *Chemical News*, 1870; *The Times*, 29 Dec. 1879 and 2 Jan. 1880; and S. P. THOMPSON'S *The Development of the Mercurial Air-Pump*, 1888).

Sprengel described to the Chemical Society other researches of practical bearing in 'On the Detection of Nitric Acid' (*Journal*, 1863); 'A Method of Determining the Specific Gravity of Liquids with Ease

and Great Exactness' (1873); 'An Air-bath of Constant Temperature between 100° and 200° C.' (1873). To the 'Chemical News' he contributed the papers on 'Use of the Atomiser or Spray-producer in the Manufacture of Sulphuric Acid' (1875); 'Use of Exhaust Steam in the Production of Sulphuric Acid' (1887); and 'An Improvement in the Production of Sulphuric Acid' (1887).

Sprengel was elected a fellow of the Chemical Society in 1864, and served on the council (1871-5). He became F.R.S. on 6 June 1878. In 1893 the German emperor conferred on Sprengel the honorary title of royal Prussian professor.

At the latter part of his life Sprengel alleged that his rights of priority with regard to certain inventions and discoveries had been infringed, and his caustic letters to the public press detailing his grievances were reprinted in book form, with notes, as: 'The Hell-Gate Explosion in New York and so-called "Rackarock," with a few words on so-called Panclastite' (1886); 'Origin of Melinite and Lyddite' (1890); and 'The Discovery of Picric Acid (Melinite, Lyddite) as a Powerful Explosive, and of Cumulative Detonation, with its Bearing on Wet Guncotton' (1902; 2nd edit. 1903).

Sprengel died unmarried at 54 Denbigh Street, London, S.W., on 14 Jan. 1906, and was buried in Brompton cemetery.

SPROTT, GEORGE WASHINGTON (1829-1909), Scottish divine and liturgical scholar, born at Musquodoboit, Nova Scotia, on 6 March 1829, was eldest of five children of John Sprott, presbyterian minister there, by his third wife, Jane Neilson. Both his parents came from Wigtownshire. After early education in the colony Sprott entered Glasgow College in 1845 (see his *John Macleod Memorial Lecture*, Edinburgh 1902).

One of his fellow students was (Sir) Henry Campbell-Bannerman [q. v. Suppl. II], who consulted him about studying for the ministry. Sprott, besides taking a good place in his classes, and graduating B.A.

in 1849, was prominent in the students' societies. He had introductions to the families of Dr. Norman Macleod the younger [q. v.], Dr. A. K. H. Boyd [q. v. Suppl. I], and Dr. Laurence Lockhart, brother of Scott's biographer. Both in Glasgow and in Galloway, where he spent his vacations, he gathered large stores of historical and genealogical information. His father, who had been born in the Church of Scotland, approved of his son's resolve to join that church. Ordained in 1852 by the presbytery of Dunoon, Sprott returned to his native colony to act as assistant at St. Matthew's, Halifax, Nova Scotia. There he served also as chaplain to the 72nd Highlanders, whom he was prevented from accompanying to the Crimea. After visits to Newfoundland and the United States, he returned to Scotland in 1856, and having served short periods as assistant minister at Greenock and Dumfries, he was gazetted to a chaplaincy to the Scottish troops at Kandy. He went out to Ceylon in 1857, and laboured there for seven years among the troops and coffee-planters, and to some extent among the natives. He studied Buddhism; he wrote a pamphlet on the Dutch Church in the island; he vigorously asserted the rights and defended the orders of the Church of Scotland as against Anglican claims, and he sought to stem the current drift of Scottish church people to episcopacy, which he attributed partly to the strifes of the disruption period, and partly to the slovenliness of her services. He kept in close touch, accordingly, with the movements beginning in Scotland to mend such defects. In a pamphlet which he wrote in Ceylon on 'The Worship, Rites and Ceremonies of the Church of Scotland,' he propounded the idea which resulted in the formation of the Church Service Society (1865).

In 1865 he left Ceylon and acted for a time as chaplain to the Scots troops at Portsmouth. Next year he was presented to the parish of Chapel of Garioch, Aberdeenshire. There he pursued his liturgical and historical studies, and soon became the most influential member of the editorial committee of the Church Service Society. In 1868 he published a critical edition of the 'Book of Common Order,' commonly called 'John Knox's Liturgy.' In 1871 there appeared Sprott's most learned and original work, 'Scottish Liturgies of James VI.'

Meanwhile Sprott, who opposed the movement for the abolition of patronage in the established church, carried through the Synod of Aberdeen an overture to the

general assembly in favour of that celebration of holy communion during the sitting of that body which has since been an established practice. Through a committee of assembly on aids to devotion he was able, with the help of Thomas Leishman [q. v. Suppl. II], to procure a recommendation to use the Apostles' Creed in baptism. As moderator of the Synod in 1873 he preached at its April meeting a sermon on 'The Necessity of a Valid Ordination,' which exercised a powerful influence on the Scottish clergy.

After an unsuccessful application for the chair of church history in Edinburgh University, Sprott, early in 1873, was presented to the parish of North Berwick. He was soon prominent in his new office in presbytery, synod, and assembly. In 1884 he was successful in procuring the erection of a new parish church after a nine years' struggle. In the summer of 1879 the assembly sent him to visit the presbyterian churches of Canada, and also appointed him to a lectureship in pastoral theology. In this capacity he delivered at the four Scottish universities a series of important prelections which appeared as 'Worship and Offices of the Church of Scotland' (1882). In recognition of the merit of those lectures the University of Glasgow conferred on him in 1880 the degree of D.D. But he was disappointed in two further applications for professorships of church history—at Glasgow in 1886 and at Aberdeen in 1889. At the assembly of 1882 Sprott successfully joined Dr. Leishman in the protest against the admission of congregational ministers without presbyterian ordination. He joined on its formation, in 1886, the Aberdeen (now the Scottish) Ecclesiological Society, and showed interest in its work till his death. In 1892 Sprott took a leading part in founding and conducting the Scottish Church Society for the assertion and defence of orthodox doctrine and sound church principles. Another useful society, the Church Law Society, owns him as its founder. Through life an advocate of Church reunion, he cordially welcomed the efforts both of Bishop Charles Wordsworth [q. v.] and Bishop George Howard Wilkinson [q. v. Suppl. II]; of the Scottish Christian Unity Association founded by the latter he became an active member. In 1902 he celebrated his ministerial jubilee, but owing to heart weakness he petitioned the presbytery next year for the appointment of an assistant and successor, and he retired to Edinburgh, where he was able to engage in literary and ecclesiastical work. To this

period of his life belong several notable literary productions—his John Macleod Memorial Lecture, 'The Doctrine of Schism in the Church of Scotland' (Edinburgh, 1902), a new edition of 'John Knox's Liturgy' (1901), an edition (1905) of 'The Liturgy of Compromise used in the English Congregation at Frankfort, 1557,' bound up with Mr. H.J. Wotherspoon's 'Second Prayer Book of Edward VI,' and a new edition (1905) of 'Euchologion, a Book of Common Order,' with historical introduction of great value to the student of Scottish worship—all issued by the Church Service Society. He also wrote a delightful account of his father and of Nova Scotian life 'Memorials of the Rev. John Sprott' (Edinburgh, 1906). Sprott died at Edinburgh of heart disease on 27 Oct. 1909, and was buried at North Berwick.

Sprott married in 1856 Mary (*d.* 1874), daughter of Charles Hill of Halifax, Nova Scotia. Four sons also predeceased their father; a son, Harold, a lawyer in Edinburgh, and four married daughters survived.

Stern in aspect, Sprott was full of warm and deeply religious feeling, and had much wit and humour. Memorials were erected to him in North Berwick church and in St. Oswald's parish church, Edinburgh, where he worshipped in his later years.

In addition to the works mentioned Sprott contributed many notices of Scottish divines to this Dictionary.

[Sprott's diaries and letters; private information from his son and daughters; personal knowledge; notices of his life in his own works; Scotsman, 28 Oct. 1909, and in The Gallovidian (Dumfries, Summer, 1911), written by his son (with portrait); a memoir by the present writer is in preparation.] J. C.

STABLES, WILLIAM [GORDON] (1840–1910), writer for boys, son of William Stables, vintner, of Marnock, and afterwards of Inverurie, was born at Aberchirder, Marnock, Banffshire, on 21 May 1840. He was educated at a school at Marnock and at Aberdeen grammar school. In 1854 he entered Aberdeen University, and was a member of the arts class until 1857. Refusing a commission in the army, he studied medicine, and took the degrees of M.D. and C.M. on 26 April 1862 (*Aberdeen University Calendar*, 1863, pp. 30, 33). While still a student, at the age of nineteen, he made a first voyage to the Arctic on a small Greenland whaler of 300 tons, an experience he subsequently repeated in a larger vessel. On 19 Jan. 1863 he obtained a commission as assistant surgeon in the

Royal Navy, and on 2 Feb. was appointed to H.M.S. Narcissus on the Cape of Good Hope station. Later his vessel, the Penguin, was sent in pursuit of slavers off the Mozambique coast (*Medical Life in the Navy*, 1868, by W. STABLES, pp. 67–9). On his return home he was commissioned, on 18 Feb. 1864, to the Princess Royal, at Devonport, and in the following year to the Meeanee, on the Mediterranean station. Stables was appointed to the Pembroke at Sheerness on 18 March 1870, and in the following year, after serving in the Wizard on the Mediterranean station, he retired on half-pay owing to ill-health. Subsequently Stables was for two years in the merchant service, cruising all round America to Africa, India, and the South Seas.

About 1875 Stables settled at Twyford, and henceforth occupied himself in writing boys' books, assuming the name of Gordon Stables. Personal experience formed the basis of his tales of adventure and exploration. His best-known volumes are: 'Wild Adventures in Wild Places' (1881); 'Wild Adventures round the Pole' (1883); 'The Hermit Hunter of the Wilds' (1889); 'Westward with Columbus' (1894); 'Kidnapped by Cannibals' (1899); 'In Regions of Perpetual Snow' (1904). Stables also wrote many historical novels, dealing mainly with naval history; these included: 'Twixt Daydawn and Light,' a tale of the times of Alfred the Great (1898), and 'On War's Red Tide,' a tale of the Boer War (1900). His literary output averaged over four books a year for thirty years, and his writings occupy seven pages of the British Museum catalogue. His stories, which inculcated manliness and self-reliance, were popular with more than one generation of boys.

In 1886 Stables started caravanning as a pastime, being one of the earliest pioneers. He described his first tour in the 'Cruise of the Land Yacht Wanderer' (1886), and thenceforth he made annual caravan expeditions. On the formation of the Caravan Club in 1907 he was elected vice-president. A lover of animals and an active supporter of the Sea Birds Protection Society and the Humanitarian League, he illustrated his devotion to domestic pets in 'Friends in Fur' (1877) and 'Our Friend the Dog' (1884). He was known as an expert authority on dogs, cats, and rabbits, both in England and America, frequently acting as judge at shows, and compiling some popular treatises on the medical treatment of children and dogs. He died at his

house, the Jungle, Twyford, on 10 May 1910.

In 1874 Stables married Theresa Elizabeth Williams, elder daughter of Captain Alexander McCormack of Solva, Pembrokeshire, and left four sons and two daughters.

[Records of the arts class, 1854-8, Marischal College, p. 51 (photograph, p. 48); Navy List, 1864-5, 1870-72; The Times, 12 May 1910; the World, 3 Dec. 1907 (report of interview); private information.] G. S. W.

STACKPOOLE, FREDERICK (1813-1907), engraver, born in 1813, was apparently son of Edmund Stackpoole, lieutenant R.N., whose death was reported in the 'Navy List' of January 1816, and whose widow subsequently married a naval captain named Jefferies. He received his general education in Ghent, and later became a student at the Academy schools, gaining two silver medals in 1839 for a drawing from the antique, and in 1841 for the best copy made in the painting school. Circumstances induced him to give up his original intention of becoming a portrait painter in favour of engraving, and he devoted the best part of his life to this art. Most of his plates are executed in a mixed mezzotint (i.e. mezzotint in conjunction with line and stipple). His work was exclusively reproductive, including a large number of prints after Briton Rivière (chiefly published by Messrs. Agnew), Thomas Faed (chiefly published by Messrs. H. Graves), and C. Burton Barber. He also engraved pictures by Lady Butler, G. D. Leslie, Reynolds, Holman Hunt, Richard Ansdell, Sir Francis Grant, Sir J. W. Gordon, Landseer, Thomas Brooks, Frederick Goodall, Robert Collinson, Jerry Barrett, Alice Havers, Frederick Tayler, A. Bouvier, Philip R. Morris, and J. Sant. One of his most successful engravings is the 'Shadow of Death,' after Holman Hunt (1877). It is stronger and less mechanical in its style than the majority of his plates. 'Pot Pourri: Rose Leaves and Lavender,' after G. D. Leslie (1881), may also be singled out for the simplicity and breadth of its treatment. Among his most popular subjects were the 'Palm Offering,' after Frederick Goodall (1868), and the 'Roll Call,' after Lady Butler (1874).

He was a regular exhibitor at the Royal Academy from 1842 to 1899. He was elected an associate in 1880, retiring from active membership in 1892 (being the last engraver made associate until the election of Frank Short and William Strang in 1906). His first Royal Academy exhibit

(1842) was an oil portrait, and he exhibited six other paintings (portrait, subject, and landscape) at the Academy between 1843 and 1869, but from 1858 to 1893 his regular contributions were engravings. He also exhibited paintings at the Society of British Artists between 1841 and 1845. Two of his earliest published engravings are after Sir Edwin Landseer, and both are done in collaboration with other engravers, i.e. 'Peace' with T. L. Atkinson (1848), and the 'Hunted Stag' (engraved under the title of the 'Mountain Torrent') with Thomas Landseer (1850) (both after pictures from the Vernon collection, now in the National Gallery of British Art). During the last ten years of his life he again took up painting, sending five small subject pictures to the Royal Academy between 1894 and 1899. He died in London on 19 Dec. 1907, and was buried in Brompton cemetery. In 1844 he married Susannah Atkinson, and had issue four daughters and one son.

[The Times, 21 Dec. 1907; Lists of the Printsellers' Association; A. Graves, Dict. of Artists, 1895, and Royal Acad. Exhibitors; Cat. of Soc. of Brit. Artists; information supplied by his daughter, Mrs. Arthur Bentley.] A. M. H.

STAFFORD, SIR EDWARD WILLIAM (1819-1901), prime minister of New Zealand, born on 23 April 1819 at Edinburgh, was eldest son of Berkeley Buckingham Stafford of Maine, co. Louth, and of Anne, third daughter of Lieutenant-colonel Duff Tytler. His mother's cousin was Patrick Fraser Tytler [q. v.], and on early visits to Edinburgh he joined a cultured circle which widened for life his intellectual interests. Educated at Trinity College, Dublin, he emigrated in January 1843 to Nelson, New Zealand, where he at once took part in public affairs. In 1853, when provincial councils were called into existence by Sir George Grey [q. v. Suppl. I], Stafford was chosen to be superintendent of Nelson. While he was on the council he carried through an education ordinance which was afterwards made the basis of an Education Act applying to the whole colony, and a road board ordinance. He retired from the council in 1856.

In the general election of 1855 he was elected to the House of Representatives, and on 2 June 1856 he formed, after the granting of representative institutions, the first government which was able to hold office for any length of time. On 4 Nov. he also assumed the office of colonial secretary. During his premiership, which

was distinguished by a resolve to respect the best parliamentary traditions of the mother country, he created three new provinces, Hawke's Bay in 1858, Marlborough in 1859, and Southland in 1861, though a few years later Southland, by its own wish, was reunited to its parent colony of Otago. He transferred the land revenue and part of the customs revenue to the provincial councils by Act of Parliament, and since the home government had refused to allow a bill to this effect, he made arrangements by which the councils were virtually placed in control of their own land. He also passed several bills permitting the provinces to raise loans. In 1858 he secured a bill allowing the governor to formulate bye-laws for native districts based on the expressed wishes of tribal assemblies, a second bill establishing itinerant courts of justice and native juries, and a third bill providing grants for Maori schools.

In 1859 he visited England in order to discuss plans for a Panama mail service and for establishing military settlements in the north island. He was unsuccessful in the latter project, but an agreement which he concluded for a Panama postal service was approved by the New Zealand government. When he returned in 1860, he found that his party had plunged the country into war with the Maoris. Although if he had been on the spot he might have prevented a conflict, he considered himself committed to the policy of his colleagues, and continued to support the continuance of the war until 1870, when peace was finally assured. In July 1861 Sir William Fox defeated the Stafford ministry by one vote on a general vote of confidence, and at the same time Governor Gore Browne was replaced by Sir George Grey. When Fox resigned in 1862 Stafford refused to form a ministry, and he remained out of office until 1865. On 16 Oct. of that year he defeated the Weld government, although Weld's followers had as a rule belonged to his old party. Himself a centralist, Stafford came into office at the head of the provincialists. In 1866 he reconstructed his cabinet, replacing the provincialists by those members of the Weld government with whom he was really in sympathy. Meanwhile he was holding the office of colonial secretary (16 Oct. 1865-28 June 1866), colonial treasurer (18 Oct. 1865-12 June 1866), and postmaster-general (31 Oct. 1865-8 May 1866, and 6 Feb.-28 June 1869). He remained in office for three years. In 1867 he took over the

provincial loans at par, and in the same year special representation was given to the native race.

In 1869 McLean and Fox together carried a vote of want of confidence in native affairs against him. An impression prevailed that he was inclined to press the war in circumstances where forbearance and compromise were more to the interests of the colonists. On 10 Sept. 1872 he again became premier on a motion condemning the administration of the Fox-Vogel public works policy, but his tenure of office only lasted for a month, and he resigned on 11 Oct. upon a no-confidence motion carried by Vogel.

In 1874 he returned to England, where he lived for the rest of his life. At various times he was offered but refused the governorship of Queensland and that of Madras. In 1886 he was commissioner for the colonial and Indian exhibition. He was created K.C.M.G. in 1879 and G.C.M.G. in 1887. He died at 27 Chester Square, London, W., on 14 Feb. 1901. He married (1) on 24 Sept. 1846 Emily Charlotte (*d.* 18 April 1857), only child of Colonel William Wakefield and Emily Elizabeth, daughter of Sir John Shelley Sidney, first baronet; (2) on 5 Dec. 1859 Mary, third daughter of Thomas Houghton Bartley, speaker of the legislative council, New Zealand. By her he had three sons and three daughters.

Biog.; Gisborne's New Zealand Rulers and Statesmen; Rusden's Hist. of New Zealand; Reeves's The Long White Cloud; New Zealand Herald, 2 March 1901; Canterbury Press, 2 March 1901; Christchurch Press; Lyttelton Times; Auckland Star; private information from Mr. E. Howard Stafford.] A. B. W.

STAINER, SIR JOHN (1840-1901), organist and composer, born on 6 June 1840, at 2 Broadway, Southwark, was younger son (in a family of six children) of William Stainer, schoolmaster of the parish school at St. Thomas's, Southwark, by his wife Ann Collier, who was descended from an old Huguenot family settled in Spitalfields. The father was much devoted to music, and possessed amongst other musical instruments a chamber organ. The elder son, Dr. William Stainer, died in 1898, after a life devoted to the care of the deaf and dumb. The eldest daughter, Anne Stainer (*b.* 1825), who was unmarried and is still living (1912), held from 1849 to 1899 the post of organist of the Magdalen Hospital Chapel, Streatham, and during all

the fifty years she never missed a single service.

John was indebted to his father for his first music lessons, and for his bias towards the organ. Although he was deprived of the sight of the left eye by an accident when he was five years old, his progress was unimpeded. At the age of seven he could play Bach's Fugue in E major. Early in 1848 he became a probationer in the choir of St. Paul's Cathedral, and on 24 June 1849 he was formally admitted as a full chorister. Under William Bayley, the choirmaster, he studied harmony from the book written by the cathedral organist, (Sir) John Goss [q. v.]. He sang at the funeral of J. M. W. Turner (1851) and of the Duke of Wellington (1852). He possessed a beautiful voice and exceptional ability as a singer, while his manner and personality endeared him to his associates.

In 1854 he was appointed organist of St. Benedict and St. Peter, Paul's Wharf. He had a remarkable facility in extemporising on the organ, in the manner of Bach. About this time he had lessons in organ playing from George Cooper, at St. Sepulchre's church. In 1856 Sir Frederick Gore Ouseley [q. v.] came to an afternoon service at St. Paul's and found Stainer deputising at the organ. He was so struck with the youth's ability that he offered him the post of organist at St. Michael's, Tenbury, then, as now, a centre for the study of ecclesiastical music. In 1857 Stainer was settled at Tenbury. He used to ascribe much of his ultimate success as a church musician to his two years' experience here under Ouseley.

Matriculating at Christ Church, Oxford, on 26 May 1859, he proceeded B.Mus. there on 10 June following, whilst he was still at Tenbury. In July 1860 he was appointed organist of Magdalen College, Oxford, and next year became organist to the university. He then went into residence at St. Edmund Hall, in order to read for an arts degree, and he graduated B.A. in 1864. On 9 Nov. 1865 he passed his examination for the degree of doctor of music, the oratorio 'Gideon' being his degree exercise. In 1866 he proceeded M.A., and was appointed a university examiner in music. In this capacity he examined (Sir) Hubert Parry for his bachelor of music degree. He founded the Oxford Philharmonic Society, and conducted its first concert on 8 June 1866.

The supreme opportunity of his life occurred when in 1872 he became organist at St. Paul's Cathedral. At this period

the service music at St. Paul's had drifted into an unsatisfactory condition. Stainer brought to its reform great tact in administration and exceptional musical ability, and the cathedral soon acquired a world-wide reputation for the beauty and reverence of its service music, and for Stainer's masterly organ playing. During his career at St. Paul's he found time for music composition and other exacting work. He was organist to the Royal Choral Society from 1873 until 1888. He was one of the chief founders of the Musical Association, which was established in 1874. In 1876 he became professor of the organ at the new National Training School for Music, and in 1881 he succeeded (Sir) Arthur Sullivan [q. v. Suppl. I.] as principal. He was a juror at the Paris Exhibition of 1878, and for his services was created a chevalier of the Legion of Honour in France. In 1882 he was appointed government inspector of music in the training colleges for elementary school teachers in Great Britain. In spite of the blindness of one eye, his sight long bore the strain of music reading and writing without any sign of weakness. But in 1888 he was warned that it was in danger, and he resigned the organistship of St. Paul's and other professional appointments. On 10 July he was knighted by Queen Victoria. In 1889 he succeeded Sir Frederick Ouseley as professor of music in the University of Oxford, and he retained this post until 1899. The last important position he occupied in the musical world was the mastership of the Musicians' Company, which he accepted in 1900.

Among Stainer's other distinctions were honorary fellowships of Magdalen College, Oxford, and of St. Michael's College, Tenbury. At Durham he was made hon. Mus.D. (1858) and hon. D.C.L. (1895). He was also member or officer of the chief musical societies, being vice-president of the Royal College of Organists; president of the Plain Song and Mediæval Music Society; president of the London Gregorian Association; president of the Musical Association.

He died suddenly at Verona on 31 March 1901, and was buried at Holywell cemetery, Oxford.

On 27 Dec. 1865 he married Eliza Cecil, only daughter of Alderman Randall of Oxford. She survived him with four sons and two daughters. His elder daughter, Miss E. C. Stainer, published a 'Dictionary of Violin Makers' in 1896, and she greatly assisted her father in his historical inquiries.

His chief compositions were the following oratorios and sacred cantatas: 'Gideon' (his exercise for the degree of doctor of music), 1865; 'The Daughter of Jairus' (Worcester Festival, 1878); 'St. Mary Magdalen' (Gloucester Festival, 1887); 'Crucifixion' (first performed at St. Marylebone church, 24 Feb. 1887); 'The Story of the Cross' (1893), and about forty anthems, the best known of which are: 'I am Alpha and Omega'; 'Lead, kindly Light'; 'What are these arrayed in white robes'; 'Ye shall dwell in the land'; 'Sing a song of praise'; 'O clap your hands.' Stainer himself considered 'I saw the Lord' (eight parts) his most important effort in this form.

Other contributions to ecclesiastical music were services: No. 1 in E flat, No. 2 in A and D, and No. 3 in B flat. A sevenfold Amen has been in constant use throughout the world in the service of the Church. It was used at the coronation of King Edward VII and King George V.

He composed over 150 hymn tunes, many of which were contributed to 'Hymns, Ancient and Modern,' and to other hymnals. The whole collection was published in one volume in 1900 (Novello & Co.). Compositions for the organ are contained in 'Twelve Pieces' (two books), a 'Jubilant March,' 'The Village Organist' (of which he was for some time joint editor), and five numbers of organ arrangements.

His chief works in the category of secular music were a few madrigals and part songs, a book of seven songs, and another book of six Italian songs.

Of his twenty-nine Oxford professorial lectures only one, 'Music in relation to the Intellect and Emotions,' was published (1892). He edited with Rev. H. R. Bramley 'Christmas Carols, New and Old' (1884), and he wrote numerous articles for the 'Dictionary of Musical Terms,' which he compiled with W. A. Barrett (1876). Six essays read before the Musical Association are published in their 'Proceedings' (1874-1901), the first 'On the Principles of Musical Notation,' and the last 'On the Musical Introductions found in Certain Musical Psalters.'

'A Theory of Harmony' (1871) attracted much attention, from the boldness and unconventionality of its treatment. 'Music of the Bible,' a book displaying much knowledge and research, was published in 1879.

His most important contribution to musical history is the volume entitled 'Dufay and his Contemporaries' (1899),

in which the evolution of harmony and counterpoint during a somewhat obscure period (the fifteenth century) is traced with great erudition. Another work devoted to early musical history was that on 'Early Bodleian Music' (2 vols. 1902). This was completed just before his death.

He was the first editor of Novello's 'Music Primers,' and for this series he wrote his primers on the 'Organ' and 'Harmony,' which have had an immense sale, and others on 'Counterpoint,' and 'Choral Society Vocalisation.' He also edited the 'Church Hymnary' for the united Scotch churches.

Stainer gathered a unique collection of old song books, especially of those published during the eighteenth century. In 1891 a catalogue enumerating about 750 volumes of this portion of his library was printed for private circulation. The whole collection of books is now (1912) in the possession of his eldest son.

A portrait of Stainer was painted by Sir Hubert von Herkomer, and is now in the possession of Lady Stainer, at her residence in Oxford. A replica is in the Music School, Oxford. A memorial window was placed in Holywell church in 1902 (reproduced in *Musical Times*, May 1902). A memorial marble panel was placed in St. Paul's Cathedral on the eastern wall of the north transept in December 1903. A mural tablet of brass is placed on the west wall of the ante-chapel of Magdalen College, Oxford, and another at St. Michael's, Tenbury.

Stainer's sacred music has enjoyed great vogue, greater probably than that of any other English church musician. It is distinguished by melodiousness, and the harmonic texture is rich, and it is often deeply expressive. Stainer began his career as a composer at a period when the influence of Mendelssohn was great, and that of Spohr only less so. The style of both composers can be traced in the idiom adopted by Stainer, but there was also much that was individual. His knowledge of Bach's music, and his intimate acquaintance with that of the early English school of cathedral composers and the madrigal writers, were also formative influences.

[Personal knowledge; *Musical Times*, May 1901; *Grove's Dictionary*; private information.] W. G. McN.

STAMER, SIR LOVEFACE TOM-LINSON, third baronet (1829-1908), bishop-suffragan of Shrewsbury, born at Ingram's Lodgings in the city of York on

18 Oct. 1829, was elder son of Sir Lovelace Stamer, second baronet, a captain in the 4th dragoon guards, by his wife Caroline, only daughter of John Tomlinson, solicitor, of Clifffville, Stoke-upon-Trent. His grandfather Sir William Stamer, sheriff, alderman, and twice lord mayor of Dublin, commanded a regiment of Dublin yeomanry during the rebellion of 1798, and was created a baronet, while lord mayor of the city, on 15 Dec. 1809, the year of King George III's jubilee.

After attending Mr. Fleming's school at Sea View, Bootle, and H. Lovell's English institution at Mannheim, Stamer was at Rugby, under Dr. Tait, from August 1843 to December 1848, his contemporaries including Lord Goschen, Sir Godfrey Lushington, and Edward Parry, suffragan-bishop of Dover. In 1849 he entered Trinity College, Cambridge. He rowed in the first Trinity boat. In 1853 he graduated B.A. with a second class in the classical tripos; he proceeded M.A. in 1856, and D.D. in 1888.

Ordained deacon by the bishop of Lichfield in 1853, he served the curacies of Clay Cross in Derbyshire (1853-4) and of Turvey in Bedfordshire (1854-5). After his ordination as priest by the bishop of Ely in 1855, he was curate-in-charge of Long Melford, Suffolk (1855-7). He succeeded his uncle, John Wickes Tomlinson, as rector of Stoke-upon-Trent in January 1858 on the nomination of his grandfather's trustees, who were patrons. The living was of great value, and Stamer held it for thirty-four years. He became third baronet on the death of his father on 5 March 1860.

Stamer's work at Stoke-upon-Trent showed untiring zeal and an extraordinary capacity for work, coupled with great administrative powers and common-sense views on social questions. He found at Stoke a population of 8000, with one church and one block of schools. When he left Stoke in 1892, there were four churches and five school or mission churches manned by a staff of nine clergy, and five schools with twelve separate departments. Stoke owed an immense debt to him in regard to education. Long before the conscience clause was incorporated in any education acts, he laid it down as a rule in his church schools that any parents might withdraw their children from religious instruction. In 1863 he started night schools, and used his utmost endeavours to induce lads and young men to continue their education after leaving school. He was chairman of the Stoke school board from its formation in

1871 until 1888, and took an active interest in schemes for building groups of new schools to meet the rapid increase of population. He also took keen interest in the training of young men and women for the teaching profession, and freely admitted nonconformists as pupil teachers in his schools. He heartily aided, too, in all philanthropic movements. By the joint exertions of himself and Sir Smith Child nearly 17,000*l.* was raised for the relief of the widows and orphans of the colliers killed in the terrible explosion which occurred on 13 Dec. 1866 at the Talk o' the Hill colliery in North Staffordshire. With a view to future contingencies of the kind, Stamer originated in 1870 the North Staffordshire Coal and Ironstone Workers' Permanent Relief Society, a contributory society of which Stamer was chairman of the committee for thirty-eight years. Its membership in 1897 exceeded 9500—nearly two-thirds of the miners in the district—and by its agency more than 103,000*l.* has been paid to disabled miners and their families. In 1872 he founded the Staffordshire Institution for Nurses, an organisation which employs 130 trained nurses, and through his instrumentality the nurses' home was erected at Stoke in 1876. He was a warm supporter of the North Staffordshire Discharged Prisoners' Aid Society, and on his initiative there was founded in 1879 an industrial home for discharged female prisoners and friendless women, of which he acted many years as chairman of the management committee. In 1867 he served the office of chief bailiff of Stoke.

Stamer was appointed rural dean of Stoke in 1858, prebendary of Longdon in Lichfield Cathedral in 1875, and archdeacon of Stoke-upon-Trent in 1877. As archdeacon he was an unflinching helper and adviser of the clergy. In 1877 he supported the government's burial bill, which enabled nonconformists to have their own funeral services in the churchyards of parishes where there was no nonconformist burial-ground. In 1888 he was appointed suffragan-bishop of Shrewsbury, and was consecrated at St. Paul's Cathedral on 24 Feb. 1888. At the same time he resigned his offices of rural dean and archdeacon, retaining his prebendal stall and his rectory.

In 1889, through Stamer's instrumentality and with a noble disregard of his private family interests, the Stoke Rectory Act was passed, which conveyed the patronage and endowment of the rectory of Stoke-upon-Trent from the trustees who represented

Stamer's mother's family to the bishops of Lichfield, and provided for the material increase of the incomes of six neighbouring parishes.

Stamer resigned the rectory of Stoke in 1892, and from that year to 1896 he was vicar of St. Chad's, Shrewsbury. At Shrewsbury he set the schools on a sound basis, starting a club-house for boys, and obtaining a new scheme for the parochial charities. He was for a time a member of the Shrewsbury school board. As chaplain to the corporation of Shrewsbury, he denounced the bribery and corruption which were prevalent in the town, and the insanitary condition of the slums. In 1896 Stamer became rector of Edgmond, the patron of which had conveyed it to trustees as an endowment for the assistant or suffragan bishop for the time being. Here he built new schools, obtained a water supply at his own expense, and provided a working men's club and reading-room. Owing to illness he resigned the rectory of Edgmond and his suffragan bishopric in September 1905, and removed to Halingdene, a house at Penkridge, Staffordshire, where he died on 29 Oct. 1908. He was buried at Hartshill cemetery, Stoke-upon-Trent. He was married at Hunsingore, Yorkshire, on 16 April 1857 to Ellen Isabel, only daughter of Joseph Dent of Ribston Hall, Yorkshire. His wife, five sons, and three daughters survived him. A portrait of the bishop in his robes, painted by the Hon. John Collier, was presented to him in April 1893 by North Staffordshire friends.

Besides several single sermons and articles in the 'Church Sunday School Institute Magazine,' Stamer published: 1. 'Charges to the Clergy of the Archdeaconry of Stoke-upon-Trent,' 1887-8. 2. 'The Holy Communion considered as generally necessary to Salvation,' 1858.

W. G. D. F.

STANLEY, SIR FREDERICK ARTHUR, sixteenth EARL OF DERBY (1841-1908), governor-general of Canada, born in London on 15 Jan. 1841, was second son in the family of three children of Edward Geoffrey Stanley, fourteenth earl of Derby [q. v.], three times prime minister, by his wife Emma Caroline, daughter of Edward Bootle Wilbraham, first Baron Skelmersdale (created 1828), and aunt of Edward Bootle Wilbraham, first earl of Lathom (created 1880). Stanley's elder brother was Edward Henry Stanley, fifteenth earl [q. v.].

Frederick Stanley, after education at Eton, joined the grenadier guards in 1858. In 1865 he retired from the army as lieutenant and captain. He was subsequently honorary colonel of the third and fourth battalions of the King's own royal Lancashire regiment, and of the first volunteer battalion of the Liverpool regiment. On leaving the army Stanley was returned to the House of Commons unopposed as one of the conservative members for Preston, near which the family estates lay (11 July 1865). When his father resigned in Feb. 1868 and Disraeli became prime minister, he received his first official appointment, as a civil lord of the admiralty. At the general election in November he successfully contested North Lancashire jointly with Colonel Wilson-Patten (afterwards Lord Winmarleigh), displacing Lord Hartington, who had sat for the constituency as a liberal since 1857. Stanley represented this constituency until 1885, being returned unopposed at the general election in 1874 and at two bye-elections (on taking office on 8 April 1878 and 1 July 1885), and after a contest at the general election in 1880. After the Redistribution Act of 1885 he sat for the Blackpool division until he was raised to the peerage in 1886, being unopposed at the general elections of Nov. 1885 and July 1886.

Stanley, following in the steps of his father and brother, held a long succession of political offices. In Feb. 1874 he was appointed financial secretary to the war office in Disraeli's second administration. Although he was ineffective as a speaker, his capacity for business was acknowledged by his chief the secretary of state for war, Gathorne-Hardy, who deplored his transfer in August 1877 to the financial secretaryship to the treasury (*Life of Gathorne-Hardy*, ii. 29). Some months later (April 1878) he returned to the war office as secretary of state, was admitted to the privy council, and joined the cabinet.

His brother and Lord Carnarvon had left the government owing to differences with their colleagues on their anti-Russian policy in Eastern Europe; and Gathorne-Hardy (created Viscount Cranbrook) left the war office vacant on his transference to the India office. Stanley's appointment was popular in the army. The duke of Cambridge wrote to Gathorne-Hardy: 'No one that I could think of in political life would be equally acceptable to me' (*ibid.* ii. 60).

The crisis with Russia which had caused the schism in the cabinet soon ended, and Stanley's two years of office were not eventful. Like his predecessor, he was content to carry on the policy of Cardwell (1868-74) without introducing any novel schemes of reform. In the autumn of 1878 he and W. H. Smith, first lord of the admiralty, paid an official visit to Cyprus, which Turkey had recently ceded to Great Britain. After the defeat of the tory government at the general election of April 1880, Stanley resigned office with his colleagues and was created a G.C.B. During Lord Salisbury's short first administration of 1885-6 Stanley was again in high office, becoming secretary of state for the colonies. The recall of Sir Charles Warren from Bechuanaland was the chief fruit of his brief tenure of the post. In Feb. 1886 he retired on the change of ministry. In August he left the House of Commons on being created Baron Stanley of Preston, and joined Lord Salisbury's new (second) administration as president of the board of trade.

On 1 May 1888 Lord Stanley was nominated to succeed Lord Lansdowne as governor-general of Canada. He was well fitted for the post. Of retiring disposition, and without any pretensions to oratory, there lay behind his natural modesty a firm mind and strong common sense. His patrician lineage gave him an instinctive habit of command, and his manner had a peculiar charm. In Canada Stanley won much popularity; he encouraged the imperial sentiment in the dominion, and although the course of affairs was unexciting, he had full scope for the exercise of his judgment and tact. When he retired, the secretary of state (Lord Ripon) wrote in a despatch: 'In dealing with the many difficult and delicate questions which have arisen in connection with Canada during your term of office, it has been the greatest satisfaction to Her Majesty's government to have the services of a statesman of your lordship's experience and attainments' (22 June 1893).

On 21 April 1893 Stanley succeeded, on the death of his brother, to the earldom and the family estates. The heavy domestic responsibilities compelled him to resign his post in Canada. Thenceforward he held no official post, although he did not neglect politics. In Jan. 1895 he presided over a demonstration at St. Helens in honour of the duke of Devonshire, whom as Lord Hartington he had opposed in North Lancashire in 1868. He fully recognised the value of the alliance of liberal unionists with conservatives in Lord Salisbury's third administration of 1895. He consistently urged the strengthening of the ties between England and the colonies and in 1904 he succeeded the duke of Devonshire as president of the British Empire League. At the Mansion House on 15 March 1904 he spoke of the desirability of bringing representative colonial opinion into efficient touch with the mother country.

Derby performed with dignity and zeal the local civil and social duties attaching to his position. In Liverpool he was a prominent and active figure. In 1895-6 he was first lord mayor of greater Liverpool, and the freedom of the city was conferred on him in 1904. He was chancellor of Liverpool University from its foundation in 1903. In 1902 he was guild mayor of Preston. He entertained largely at his chief country seat at Knowsley, where King Edward VII was regularly among his later guests. He had on his father's death in 1869 inherited a property at Witherslack in Westmorland; he built a country residence there, and gave his neighbours a public hall in 1886. In 1897 he became lord-lieutenant of Lancashire. On succeeding to the title in 1893 he resumed the connection with racing for which his father had been famous. He joined the Jockey Club in the same year. His two greatest successes were in 1893 and 1906, when he won the Oaks with Canterbury Pilgrim and Keystone II respectively. In the latter year he won altogether forty-four races. He was a prominent figure at all Liverpool race meetings.

Derby, who was made K.G. in 1897 and G.C.V.O. in 1905, was active in London in both social and philanthropic affairs. He was a vice-president and benefactor of the Middlesex Hospital, and was president of the Franco-British Exhibition of 1907 at Shepherd's Bush. Early in 1908 Lord Derby's health gave cause for uneasiness, and he died on 14 June at his house, Holwood in Kent. He was buried at Knowsley.

He married, on 31 May 1864, Lady Constance, eldest daughter of George William Frederick Villiers, fourth earl of Clarendon [q. v.], the liberal statesman. His widow survived him with seven sons and one daughter. The eldest son, Edward George Villiers Stanley, seventeenth earl (b. 1865), who served in the South African war, was postmaster-general in Mr. Balfour's cabinet (1903-5).

A portrait by Sir Hubert von Herkomer is in the possession of the dowager countess of Derby. A marble statue by F. W. Pomeroy, A.R.A., was unveiled by Lord Halsbury in St. George's Hall, Liverpool, on 3 Nov. 1911. There is a bust by Sir William Goscombe John in Preston town hall.

R. L.

STANLEY, HENRY EDWARD JOHN, third **BARON STANLEY OF ALDERLEY** (1827-1903), diplomatist and orientalist, born at Alderley Park, Cheshire, on 11 July 1827, was eldest son of Edward John, second Baron Stanley of Alderley [q. v.], by Henrietta Maria [q. v.], daughter of the thirteenth Viscount Dillon. Of his three brothers, Edward Lyulph became fourth Baron Stanley of Alderley, and fourth Baron Sheffield of Roscommon, and Algonon Charles became Roman catholic bishop of Emmaus in 1903. Of his six sisters, Katharine Louisa married in 1864 John Russell, Viscount Amberley [q. v.]; and Rosalind Frances, in the same year, George James Howard, ninth earl of Carlisle [q. v. Suppl. II]. Henry Edward entered Eton in 1841, but owing to illness was removed in the following year, and placed under the care of Henry Alford [q. v.], afterwards dean of Canterbury, at that time vicar of Wymeswold, Leicestershire. He proceeded to Cambridge in 1846 as a fellow-commoner of Trinity College, and during his stay at the university showed his early predilection for Oriental subjects by devoting himself to the study of Arabic.

Stanley left Cambridge in December 1847 to enter the foreign office with the object of qualifying himself for the diplomatic service. He was appointed *précis* writer to Lord Palmerston, then foreign secretary. In 1851 he was sent as an attaché to Constantinople, where Lord Stratford de Redcliffe was ambassador. He had charge of the consulate of Varna from June to August 1853, and was appointed secretary of legation at Athens in 1854, holding that position during the critical period of the Crimean war. From

July 1856 till May 1858 he was attached as secretary to Sir Henry Bulwer's special commission to the Danubian provinces, when the free navigation of the river was secured and the new Russo-Turkish frontier delimited by an international commission appointed at the Congress of Paris. He resigned his post at Athens on 27 Feb. 1859.

During his diplomatic career Stanley acquired most of the European, as well as the Arabic, Turkish, Persian, and Chinese tongues. Of the last-named language he published a manual in 1854. He now began extensive travels in the East, stimulated by the example of his intimate friend, Sir Richard Burton [q. v. Suppl. I]. He visited Tartary, Persia, Kurdistan, Ceylon, the Malay Peninsula, Siam, and Java, everywhere studying the languages, customs, and religions of the countries. The East appealed to his imagination and sympathies; and he came to appreciate the Eastern character, value Eastern customs, and accept the Moslem religion for his faith. He was awarded the collar and star of the Turkish order of Osmanieh. He became a prominent member of the Asiatic and Hakluyt Societies, for the latter of which he translated and edited several volumes.

Succeeding to the peerage on the death of his father on 16 June 1869, Stanley settled down to the life of a country gentleman, devoting much care to the improvement of his Cheshire and Anglesey estates, which were largely augmented on the death of his uncle, William Owen Stanley, in 1884. He gave close personal attention to his property, kept his farm buildings in excellent order, and made a hobby of improved dairy accommodation. On the Penrhôs estate he adorned a farm-dairy with scenes from an Indian epic. In spite of a somewhat imperious manner he was esteemed by his tenants.

Though he was a Mussulman, he was an ardent supporter of the Church of England especially in Wales. In the diocese of Bangor in general, and the island of Anglesey in particular, he rebuilt or restored many churches. He also worked energetically to increase the endowments of poor parishes, himself contributing largely to this object.

In the House of Lords, although a frequent questioner and speaker, he was handicapped by deafness, a weak voice, and hurried articulation. Despite conservative predilections he sat on the cross benches, declining to identify himself with either political party.

Stanley took an active interest in the welfare of the native races of India. His knowledge of Indian life and institutions was wide, and he maintained a constant correspondence with educated Indians and regularly studied Indian newspapers. He was always ready to bring Indian grievances before the party leaders, the press, or parliament. He was a warm supporter of the National Congress movement, and would often quote the Arabic proverb that 'a child that does not cry gets no milk.' To Indians resident in England he was a friend and frequent host. He was a keen sportsman and a strict total abstainer, closing three inns on his Alderley estate. Stanley died at Alderley from pneumonia on 10 Dec. 1903. He was buried, by his own desire, in Alderley Park with Moslem rites, the Imam of the Turkish embassy officiating. His death was announced to the Indian National Congress, which was meeting at the time, and the assembly, numbering 1800 persons, rose as a mark of respect.

He married in August 1862 Fabia, daughter of Don Santiago Federico San Roman of Seville, by whom he left no children. Lady Stanley survived her husband till 15 May 1905. His eldest surviving brother, Edward Lyulph, succeeded him in the peerage.

Besides the works mentioned Stanley edited: 1. 'Rouman Anthology,' 1856. 2. 'Essays on East and West,' 1865. He translated for the Hakluyt Society: 'Barbosa's Description of the Coasts of E. Africa and Malabar in the 16th Century,' from the Spanish (1865); 'The Philippine Islands, Moluccas, etc.,' from the Spanish (1868); 'Vasco da Gama's Three Voyages,' from the Portuguese (1869); 'Barbaro and Contarini's Travels to Tana and Persia,' from the Italian (1873); 'Magellan's First Voyage round the World' (1874); 'Alvarez' Narrative of the Portuguese Embassy to Abyssinia, 1520-1527,' from the Portuguese (1881). He also translated Lamennais's 'Essay on Religious Indifference' (1895), and wrote introductions to Hockley's 'Tales of the Zenana' (1874) and Plumer-Ward's 'Rights and Duties of Belligerents and Neutrals' (1875). He was a contributor to the 'Nineteenth Century' and a constant writer of letters to the 'Morning Post.'

[G. E. C[okayne]'s Peerage; Burke's Peerage; Reis and Rayyet, 9 Jan. 1904; family information; personal knowledge.] F. S.

STANLEY, SIR HENRY MORTON (1841-1904), explorer, administrator, author and journalist, was born at Denbigh on 29 June 1841. He was the son of John Rowlands

of Llŷs, near Denbigh, and of Elizabeth Parry, the daughter of a small butcher and grazier of that town. The boy was baptised at Tremeirchion church in the name of John Rowlands. His father died in 1843; his paternal grandfather, a well-to-do farmer, declined to have anything to do with him, and he was left to the care of his mother's relatives.

His boyhood was hard and loveless. His mother, who had gone to service in London and afterwards married again, he seldom saw; and he was boarded out with an old couple who lived within the precincts of Denbigh Castle, his maternal uncles paying half-a-crown a week for his maintenance. In 1847 the weekly subsidy was withdrawn, and he was taken to St. Asaph workhouse. Here he spent nine years, exposed to the brutal tyranny of the workhouse schoolmaster, John Francis, a savage ruffian who ended his career in a lunatic asylum. He seems, however, to have taught his victims something. Young Rowlands read the Bible and the religious biographies and romances in the school library; and he also learnt a little geography, arithmetic, drawing, and singing, as well as gardening, tailoring, and joiner's work. His energy of character developed early. In May 1856 the boy wrested a rod from the hands of the brutal schoolmaster, and thrashed him soundly. Then he ran away from the workhouse, and took refuge with his Denbigh relatives. One of his cousins, the master of the National school at Brynford, employed him as a pupil teacher, and taught him some mathematics, Latin, and English grammar. Nine months later he was helping an aunt who kept a farm and inn near Tremeirchion, whence he passed to some other relatives, working-people in Liverpool. He got a place in a haberdasher's shop, and then at a butcher's till he shipped as a cabin-boy in the winter of 1859 on board an American packet bound for New Orleans.

He received no wages for the voyage, and stepped ashore, friendless and penniless. Walking along the streets of New Orleans in search of work, he attracted the notice of a kindly cotton-broker named Henry Stanley, who obtained a situation for him in a store. Mr. Stanley took to the boy from the first, made him free of his house, and eventually adopted him as his son, intending to prepare him for a mercantile career. John Rowlands, thenceforward and for the remainder of his life known by his benefactor's name, spent two happy

years travelling among the Mississippi towns with this kindly and cultivated man, and educating himself by sedulous reading. In September 1860 he was sent up to Cyprus Bend, Arkansas, where he was to serve a sort of apprenticeship in a country store, while his adopted father went on a trip to settle some business in Havana. They never saw one another again. The elder Stanley died suddenly in the spring of 1861, without having made any provision for his adopted son.

Meanwhile the state of Arkansas was seething with excitement over the approaching civil war. The young Welshman's friends and neighbours were ardent secessionists, and all the young men were eager to put on uniform for 'Dixie.' Stanley was carried away in the stream, and in July 1861 he entered the service of the Confederate States as a volunteer in the 6th Arkansas regiment. In later life he regarded this step as 'a grave blunder,' for his sympathies, if he had considered the matter, would have been with the north. He served with the Confederates nearly ten months, and had some rough experiences in camp and on the march in the winter of 1861-2. On 6 April in the latter year his regiment was in the thick of the fighting at the battle of Shiloh. Stanley seems to have borne himself bravely, and advancing beyond the firing line when his company retired he was taken prisoner. He was confined at Camp Douglas, Chicago, with some hundreds of other captured Confederates in a state of utter wretchedness and squalor. He endured the miseries of this situation, with disease and death all round him, for some two months. On 4 June he obtained his release by enlisting in the United States artillery. For this transaction he was often reproached afterwards, but in all the circumstances it was excusable enough. He had, however, no opportunity of taking part in the operations of the Federal armies. He was attacked by dysentery and low fever within a few days of his enrolment, taken to hospital, and a fortnight later discharged from the service at Harper's Ferry, without a penny in his pocket, and almost too weak to walk, in a condition 'as low as it would be possible to reduce a human being to, outside of an American prison.'

A kindly farmer took pity on him, and gave him shelter for several weeks until his health was restored by good food and fresh air. He left this harbourage in August 1862, and for the next two years was engaged in an arduous, and at first unpro-

misg, struggle for a livelihood, taking such employment as he could obtain. In the late autumn of 1862 he shipped on board a vessel bound for Liverpool and made his way to his mother's house at Denbigh, very poor, in bad health, and shabbily dressed. He was told that he had disgraced his family and was 'desired to leave as speedily as possible.' He returned to America and the life of the sea. During 1863 and the earlier part of 1864 he made various voyages, sailing to the West Indies, Italy, and Spain. He was wrecked off Barcelona and swam ashore naked, the only survivor of the ship's company. In August 1864 he enlisted in the United States navy, and served as a ship's writer on vessels which took part in the two expeditions against Fort Fisher in North Carolina. A daring exploit commonly credited to him was that of swimming under the fire of the batteries in order to fix a rope to a captured Confederate steamer. Some accounts of these stirring events he sent to the newspapers, and so made his entry into journalism. When he left the navy at the close of the war in April 1865 he had already established a sufficient connection with the press to enable him to wander about the western states as a more or less accredited correspondent of the newspapers. With his budget of adventures, his keen observation, and the graphic descriptive style he was already beginning to acquire, his journalistic progress was rapid. He was well paid for his contributions, and by July 1866 his resources and his connections were sufficient to enable him with a companion to take a trip to Asia Minor. The two young men left Smyrna in search of adventures, and found them, as Stanley usually did. They were attacked by a body of Turkoman brigands, robbed of their money, insulted, beaten, and threatened with death. Escaping with some difficulty, they made their way to Constantinople, where the American minister took up their cause, and obtained compensation for them from the Turkish government. Later in this year, on his way back to America, Stanley revisited his Welsh birthplace, where some of his relatives were now by no means unwilling to recognise the clever and rising young man of the world.

The following year he was sent by the 'Missouri Democrat' as special correspondent with General Hancock on his expedition against the Comanche, Sioux, and Kiowa Indians. His picturesque letters were afterwards republished by himself in the first volume of the book called 'My Early

Travels and Adventures in America and Asia' (London, 1895). Through his contributions to the 'Democrat' and other newspapers, he was able to make ninety dollars a week in addition to his expenses; and 'by economy and hard work' he had saved at the beginning of 1868 six hundred pounds. Hearing of the British expedition to Abyssinia, he threw up his engagement with the Missouri journal, went to New York, and offered his services to the 'Herald,' which gave him a commission as its correspondent for the campaign. He accompanied Sir Robert (Lord) Napier's column in the long and difficult march to Magdala, and described the operations and the entry of the British troops into King Theodore's capital in animated despatches. The campaign established his reputation as a graphic writer and an exceptionally able and energetic journalist. By a smart piece of enterprise he outpaced all his competitors as well as the official despatch-writers, so that London first heard the news of the fall of Magdala through the telegrams of the 'New York Herald.' Stanley was now a man of mark, and was recognised as one of the foremost newspaper correspondents of the time.

His ambition rose to higher things. 'I was not sent into the world,' he wrote long afterwards in his autobiography, 'to be happy or to search for happiness. I was sent for a special work.' He had a premonition that the work was concerned with travel and exploration in Asia or Africa, and he was preparing himself for it by the study of history and geographical literature. His Abyssinian letters are those of the student as well as the adventurer. He had further opportunities of enlarging his knowledge and experience. After the Abyssinian war he wandered about the Mediterranean islands, sending interesting letters from Crete and elsewhere to the 'Herald.' Then he went to Spain, where he saw more fighting, and described the flight of Queen Isabella, and the republican rising of 1869.

It was in October of that year that his great opportunity came. Dr. David Livingstone [q. v.], the famous Scottish missionary and explorer, was lost somewhere in the Lake Tanganyika region, and England and America were interested in his fate. In November 1868 Stanley had been requested by Mr. Gordon Bennett, the proprietor of the 'New York Herald,' to interrupt his Spanish tour in order to go to Egypt and meet Livingstone, who was

supposed to be returning down the Nile. He went to Aden and spent ten weeks there, corresponding with the consul at Zanzibar; but no tidings could be gathered of the missionary, and Stanley was sent back to Spain. He was at Madrid in the autumn of the following year when he received a hasty summons to Paris to meet Bennett, who gave him instructions to 'find Livingstone,' wherever he might be. Stanley was to make such arrangements as he thought fit and to be supplied with all the funds he would require. The commission was accepted without a moment's hesitation, and Stanley set to work to carry it out the next day, 17 Oct. 1869. But Mr. Bennett required him to undertake a number of other important missions before entering upon the search for Livingstone. The first was to describe the series of imposing fêtes and ceremonies with which the opening of the Suez Canal was celebrated. Afterwards he went up the Nile and wrote of the scenery and antiquities of Egypt with a growing breadth of knowledge and outlook. Then he was at Jerusalem looking on at Sir Charles Warren's explorations of the underground passages and conduits, and writing with enthusiasm and interest of Biblical topography. From Palestine he passed to Constantinople and began a long journey to the Caucasus, Batoum, Tiflis, Baku, and Resht, and over the Persian table-land through Teheran and Shiraz to Bushire, where he took ship for Bombay. Thus it was not till 6 Jan. 1871 that he reached Zanzibar and was able to begin organising his expedition into the interior of Africa.

He left Bagamoyo on 21 March with a 'compact little force' of three whites, thirty-one armed Zanzibaris, 153 porters, and twenty-nine pack-animals and riding horses. The objective of the journey was Lake Tanganyika, as it was understood that Livingstone was somewhere near the borders of that inland sea. The march was long and arduous. Passing through the Unyamwezi country, Stanley came to the Arab colony of Unyanyembe, where he imprudently took part in the war between the Arabs and the powerful chief Mirambo and suffered considerable losses both of men and stores. He was compelled to turn southward, and at one time was reduced to so much distress through the disorganisation of his caravan and the exactions of native chiefs that he had thoughts of returning to the coast. News of a white man on the lake shore encouraged him to go forward, and on 10 Nov. 1871 he arrived at Ujiji. Livingstone had reached this

place only ten days earlier on his return from his long journey west of the lake to trace the course of the Lualaba and ascertain whether it flowed into the Nile. The missionary was 'reduced to the lowest ebb in fortune,' in very bad health, 'a mere ruckle of bones,' almost without followers and provisions. He was, however, still determined to pursue his discoveries, and declined Stanley's offer to escort him back to Zanzibar. The two explorers spent some weeks together on the lake, examined its northern shore, and arrived at Unyanyembe on 18 Feb. 1872. On 14 March Stanley began his journey to the coast, reaching Zanzibar fifty-four days afterwards. A fortnight later he was able to despatch to Unyanyembe a well-equipped caravan with which Livingstone set out on what proved to be the last of his explorations.

Stanley returned to find himself famous. England and America rang with the story of his African adventures, which he proceeded to describe in detail in his book 'How I found Livingstone' (1872). But there was a good deal of jealousy of the young explorer, and a tendency among the high-priests of geographical orthodoxy to sneer at his enterprise as a piece of advertising journalism promoted by a newspaper which had become notorious for its sensationalism. Sir Henry Rawlinson [q.v.], president of the Royal Geographical Society, said that it was not Stanley who had discovered Livingstone, but Livingstone who had discovered Stanley; and some of the newspapers threw doubts upon the authenticity of the whole story of the expedition, and found 'something mysterious and inexplicable' in its leader's narrative. Stanley's own bearing did little to soften the prejudices of those who were determined to dislike him. He was quick of speech and temper, and he answered the aspersions cast upon him and his work with passionate directness. At the meeting of the geographical section of the British Association at Brighton he gave an account of his travels to a large and distinguished audience. In the discussion which followed Francis Galton [q.v. Suppl. II] and other eminent men of science showed little respect for either Stanley or Livingstone as geographical experts, and pointed out the weakness of the missionary's theory that the Lualaba was the source of the Nile. It was reserved for Stanley himself at a later period to demonstrate the erroneousness of this belief. But the attacks upon his friend as well as himself nettled him, and at this meeting and at other gatherings he hit

back with a vigour that was sometimes indiscreet, and gave fresh opportunities for hostile criticism. These episodes created a prejudice against him in certain sections of the English press and London society which left traces for years. 'All the actions of my life,' he wrote long afterwards, 'and I may say all my thoughts since 1872, have been strongly coloured by the storm of abuse and the wholly unjustifiable reports circulated about me then. So numerous were my enemies that my friends became dumb.' But the authenticity of the journals he had brought home was certified by Livingstone's family; and in spite of the sneers of the geographers, Stanley received many gratifying proofs of recognition. He was entertained by the duke of Sutherland at Dunrobin Castle, and there presented to Queen Victoria, who sent him a gold snuff-box set with brilliants. His book was widely read and was a great pecuniary success, and so were the lectures which he delivered during the next few months to large audiences, first in England and then in America.

In 1873 the 'New York Herald' commissioned him to accompany the British expedition against the Ashantis under Sir Garnet Wolseley. Stanley won the approval of the English officers by his conduct during the march to Kumassi. Lord Wolseley was struck by his courage. 'I had been,' he wrote (in his *Story of a Soldier's Life*, ii. 342) 'previously somewhat prejudiced against him, but all such feelings were slain and buried at Amoaful. Ever since I have been proud to reckon him amongst the bravest of my brave comrades; and I hope he will not be offended if I add him amongst my best friends also.' Stanley embodied his account of this, and the other British campaign which he had witnessed, in the vivacious pages of his book, 'Coomassie and Magdala,' published in 1874.

On 25 Feb. of this year, on his way back from West Africa, he heard the news of Livingstone's death. 'May I be selected to succeed him,' he wrote in his diary, 'in opening up Africa to the shining light of Christianity!' He was anxious also to settle the great geographical problems left unsolved by Livingstone and by Speke, Burton, Grant, and Baker—that of the Lualaba and of the outlets and extent of the Great Lakes. It was to clear up some of these mysteries that Stanley undertook his next great expedition to equatorial Africa under a joint commission from the 'New York Herald' and the London 'Daily Telegraph.'

In the autumn of 1874, after elaborate and expensive preparations in London and Zanzibar, he was able to begin his march from the coast. He was in his thirty-fourth year, with a store of invaluable experience, and a fund of dauntless energy. The expedition he commanded was probably the best equipped which had ever accompanied a white traveller into the interior of Africa, and it did more to open up the heart of the continent and to elucidate its geography than any other before or since. Stanley with two white companions, Francis and Edward Pocock, a white servant, and 356 native followers, left Zanzibar on 11 Nov. It was nearly three years before he emerged upon the shores of the Atlantic, having in the interval crossed Africa from ocean to ocean, determined the limits, area, and northern river connections of Lakes Nyanza and Tanganyika; examined the interesting kingdom of Uganda, and laid the foundations for its conversion to Christianity by his conversations with King Mtesa, and his communications to the Church Missionary Society. From the lake region he struck west for the Lualaba, worked down it till he reached its confluence with the Congo, and then traced the course of that river along its immense curve to the sea. The difficulties of this amazing march through lands unknown even to the Arab traders and slave-hunters were prodigious. Stanley triumphed over them by the exercise of that indomitable resolution, invincible patience, and sagacious judgment which entitle him to a place in the very front rank of the world's greatest explorers. This journey of 1874-7 left an enduring impress upon history: for out of it grew the Congo State and the Anglo-Egyptian dominion on the Upper Nile; and its direct result was to embark the nations of the West upon that 'scramble for Africa' which created new dominions, protectorates, and spheres of influence in the dark continent, and new rivalries and alliances in Europe. Incidentally Stanley solved a geographical problem of the first importance, and revealed the estuary of the Congo as the entrance to one of the mightiest rivers of the earth.

It was on 9 Aug. 1877 that Stanley's wearied column staggered into Boma. His three white companions were dead; he himself had suffered severely from the strain and solitude of the prolonged marches. With that solicitude for his native followers which he always exhibited, in spite of stories to the contrary effect, his first care was to convey them to their homes

on the shores of the Indian ocean. He took them round to Zanzibar by sea, and thence made his own way back to England. The full account of his expedition was published in 'Through the Dark Continent' (1878), and the book was read with avidity in every civilised country. Its author threw himself into the task of bringing commercial enterprise and civilised government into the vast regions he had disclosed to the world. He lectured to interested audiences in the great manufacturing and trading centres, corresponded with merchants and financiers, and approached the British government; but he met with no effective support in England for his project of bridging the rapids of the Lower Congo by a road and railway from the sea to the navigable portion of the river. He was reluctantly compelled to obtain assistance from another quarter. King Leopold II of Belgium, a monarch of many faults, but with some large and imaginative ideas, was alive to the possibilities of equatorial Africa. In August 1878 Stanley met King Leopold's commissioners in Paris, and in November he was the king's guest at Brussels, and assisted in the formation of the 'Comité d'Études du Haut Congo,' which was intended to prove the capabilities of the Congo territory, and to lay the basis for its systematic exploitation. And it was as the representative of this committee, which afterwards changed its name to that of 'Association Internationale du Congo,' and with funds supplied by its subscribers, that Stanley again set out for Central Africa.

As before he recruited his immediate followers in Zanzibar, taking some of his old faithful retainers who had served with him through the great trans-continental march. He brought them by sea to the mouth of the Congo, where he arrived on 15 Aug. 1879, just two years after he had reached it on his descent of the great river. He remained in the Congo region for nearly five years, and they were years of arduous and fruitful labour. Their story is told in 'The Congo and the Founding of its Free State,' which Stanley published in 1885. The explorer and adventurer had now to act as pioneer, town-builder, road-maker, administrator, and diplomatist. M. de Brazza, a French traveller who had heard of Stanley's projects, made a rapid dash for the Upper Congo, and just forestalled its discoverer in obtaining from the native chiefs the cession of a long strip of territory on the north bank of the river. Thus was Stanley indirectly responsible for endowing France with a great tropical

dominion. He secured for the Association Internationale the whole south bank of the river and the north and west shores as well beyond the confluence with the Mobangi. Then he began the work of establishing a chain of trading stations and administrative stations along the course of the Congo, making treaties with the native chiefs, buying land, building fortified block-houses and warehouses, choosing sites for quays, river-harbours, streets, European settlements, even gardens and promenades. The work was all done under his personal superintendence, and some of it with his own hand; for he often toiled in the midst of his assistants with axe and hammer under the blazing African sun, and his energy in road-making through the boulder-strewn valley of the Lower Congo caused the natives to call him Bula Matari, the Breaker of Rocks, a name which appealed to his imagination and was recalled by him with satisfaction to the end of his life. He was frequently prostrated by fever, and, in 1882 he was compelled to make a trip to Europe. He returned after a few weeks' absence and went on steadily with his political and pioneering work along the thousand miles of the navigable Congo from Stanley Pool to Stanley Falls, laying the foundations of that vast administrative system, extending from the Atlantic to the great lakes, and from the Sudan to Barotseland, which became the Congo State. By the summer of 1884 he felt that the initial stage in the establishment of the State was finished, and it only remained for him to hand over his functions to a competent successor.

He returned to Europe, having given to the huge tract of the dark continent which he had opened to the light, definite boundaries, and the elements of what he hoped might develop into an organised system of government under European direction. He had shown high administrative talent, and on the whole a just and liberal conception of the principles by which European rule over Africans should be inspired. If his counsels had been followed, the abuses which overtook the Congo administration some years later would have been avoided. For these scandals of the Belgian régime Stanley was in no way responsible, and they caused him much chagrin and vexation, which he sometimes revealed in private, though his loyalty to his former employer, the king of the Belgians, restrained him from any public expression of opinion on the subject. The king

frequently invited him to return to the Congo; but he declined, having no desire (so he wrote in 1896) 'to see mistakes consummated, to be tortured daily by seeing the effects of an ignorant and erring policy,' or to be tempted to 'disturb a moral malaria injurious to the re-organiser.'

But for some time after his return to Europe in 1884 he continued to be closely interested in Congo affairs. He attended the Berlin Conference, in which he gave his services to the American delegation as an expert adviser on geographical and technical questions. He lectured in Germany on the commercial possibilities of the newly discovered region, and did much to rouse German interest in Central African trade and exploitation. In England, by lectures and by personal communication with influential groups of financiers and merchants, he endeavoured to promote enterprise in the equatorial regions, and he tried hard to get his scheme for a Congo railway carried out by English capitalists. He regretted that England had allowed the first-fruits of the harvest he had sown to be reaped by others; but he was anxious that she should still obtain the advantage of being the pioneer in that portion of the African continent which was still unappropriated. It was in pursuance of these ideas that he undertook his next and final mission to the lands of the equator.

The expedition was indirectly due to the catastrophe of 26 Jan. 1885, when Khartoum fell into the hands of the Mahdists and Gordon was killed. The Sudan was submerged by the dervish hordes and the only organised Egyptian force left was that under Emin Pasha in Wadelai on the left bank of the Nile, about 25° north of Lake Nyanza. Emin, a German naturalist whose real name was Eduard Schnitzer, had been appointed by Gordon to the governorship of the equatorial province, and was understood to be in a very precarious situation. His difficulties aroused much sympathy in England; Sir William Mackinnon [q. v. Suppl. I], chairman of the British India Steam Navigation Company, raised a fund for his relief, and received a grant for the same purpose from the Egyptian government. To Stanley was entrusted the organisation and leadership of the rescue expedition. Sufficient funds were in the hands of Mackinnon's committee by the end of 1886; and in December of that year Stanley, who had gone to America on a lecturing tour, was recalled to England by cable to begin his preparations for the adventure.

It proved in some respects the least successful of his greater enterprises. From the outset it was hampered by divided aims and inconsistent purposes. It had other objects besides that of relieving Emin Pasha. Mackinnon and his Glasgow and Manchester friends desired to establish a British sphere of influence and trade in the region between Lake Victoria and the Indian Ocean, and they believed that this project might be carried out in connection with the advance to Wadelai. Stanley, fully concurring in this scheme, was also anxious to do what he could for the Congo State and its proprietors. The expedition had been intended to start from Zanzibar and to march westward through Uganda to Lake Albert. But the route was changed almost at the last moment, and it was decided to work from the east coast and march across the whole extent of the Congo state to the Nile. The north-eastern portion of the state would thus be explored, and it was hoped that Stanley would be able to make suitable arrangements with the local chiefs and Arab slave-traders who had not yet acknowledged the authority of the new government. The decision, as it turned out, led to difficulties and misfortunes of many kinds. There were other adverse circumstances. Stanley was not a man who worked easily with others; his personality was too strong and dominating to allow him to give his complete confidence to his lieutenants. On this occasion a good deal of pressure was brought to bear to induce him to accept the services of some of the young men of spirit and social standing who were eager to accompany him. Among those selected were Major E. M. Barttelot and three other officers of the British army, and Mr. Jameson, a wealthy sportsman and naturalist. These young gentlemen, though brave and adventurous, had no specific knowledge of African exploration, and they did not always carry out their leader's instructions with the unquestioning obedience he expected from those under his command.

He recruited his native followers as usual in Zanzibar, and early in 1887 took them by sea to the mouth of the Congo. The expedition arrived at Stanley Pool on 21 March 1887. Stanley had made an agreement with Tippu Tib, a great Arab trading chief, whereby that powerful personage was appointed governor of the Eastern Congo district, and in return undertook to supply the caravan with provisions, guides, and porters. The party worked its way up the Congo to its junction with the Aruwimi,

and then at the end of May turned eastward to march direct to the Albert Nyanza. A fortnight later Yambuya was reached, and at this place Stanley divided his force. Major Barttelot and Jameson were left in command of a strong rear-guard which was to remain at Yambuya and advance when required with the reserve stores and baggage. Stanley himself, with five Europeans and three hundred and eighty-four natives, pushed on, believing Emin to be in such desperate straits that it was essential to lose no time in going to his assistance. The march lay through five hundred and forty miles of absolutely unknown country, much of it dense tropical forest, through which a path had to be cleared with axe, cutlass, and billhook. For five months the party were hidden under this 'solemn and foodless forest,' scarcely ever seeing the open sky, or a patch of clearing, 'with ooze frequently a cubit deep, the soil often as treacherous as ice to the barefooted carrier, creek-beds strewn with sharp-edged oyster shells, streams choked with snags, chilling mist and icy rain, thunder-clatter and sleepless nights, and a score of other horrors.' The Manyema raiders had scared away such natives as might have supplied food, privation and fever worked havoc in the column, and half the coloured followers had perished before the Albert Nyanza was reached on 13 Dec. Here Stanley expected to find Emin and the steamers he was known to have at his disposal.

The Pasha, however, was not there nor were his vessels. The governor, as it turned out, was by no means anxious to be rescued in the sense intended by his English friends. Relief, in his view, did not include being relieved of his governorship or coming away as a fugitive. He exercised a show of authority in the province, his Egyptian officers, though insubordinate and unruly, yielded him a nominal obedience, and he had made terms with some of the powerful local chiefs. He remained at Wadelai, and for nearly three months the relief column awaited him in vain. At length Stanley sent up one of his assistants, Arthur Jermy Mounteney Jephson [q. v. Suppl. II.] to get into touch with the German Pasha, who was with much difficulty induced to come down the lake in his steamer, with a Sudanese guard, an Italian, and several Egyptian officers, and a welcome and much-needed supply of provisions. Twenty-five days were spent by Stanley in camp with Emin, who continued to exhibit the greatest reluctance to be taken away without his 'people,' the soldiers and

civilians who had come with him from Egypt and their native dependants. He was still undecided when Stanley left him to retrace his steps through the forest and look for his rear-guard.

Of that force nothing had been heard, and Stanley's anxiety on its account was fully justified. The rear-column had met with terrible disaster. Tippu Tib had broken faith, and failed to supply food and proper transport; and Major Barttelot had been compelled to linger for ten months at Yambuya before setting out on Stanley's traces with a body of disorderly Manyema savages, whom Tippu Tib had sent as carriers. With these Barttelot advanced ninety miles to a place called Banalya. A month before Stanley's arrival the Manyema broke out into mutiny and Barttelot was shot through the heart. Jameson, who had been sent up the Congo to collect fresh carriers, soon afterwards died of fever, two other officers had gone down to the coast, and only one European was left; three-quarters of the native followers were dead or dying. The remnants Stanley re-organised with his own column, and once more made a march through the Aruwimi forest. Many perished during this toilsome and painful journey; but by the first month of 1889 the whole force (reduced, however, to a third of its original number) was collected on the shores of Lake Albert. Emin, whose troops had revolted during Stanley's absence, was at length induced to join the party, with several hundred of his people, Egyptian officers, clerks, native servants, women, and children. The march to the coast occupied the summer and autumn of 1889; and in the course of the journey Stanley discovered the great snow-capped range of Ruwenzori, the Mountains of the Moon, besides a new lake which he named the Albert Edward Nyanza, and a large south-western extension of Lake Victoria. On the morning of 4 Dec. 1889 the expedition reached the ocean at Bagamoyo. Friction again occurred with Emin, who ultimately transferred himself to the German service, leaving Stanley to come home without him. Thus the expedition had failed to achieve its primary object. It had, however, accomplished great things, it had made notable additions to African geography and ethnology, and it had come upon the pigmy tribes who had inhabited the great African forest since prehistoric times. On his way down to the coast Stanley had concluded treaties with various native chiefs which he transferred to Sir William Mackinnon's company and

so laid the foundation of the British East African Protectorate. In the short space of fifteen years a single private individual, unsupported by a great armed force or the authority of a government, had been the means of incorporating over two million square miles of the earth's surface with the political system of the civilised world.

Before he returned to Europe Stanley stayed for some weeks in Egypt to rest after the fatigue and privations of a journey which shortened the lives of his younger companions and left his own health shattered. After his arrival in England he had to encounter much hostile comment upon the miscarriage of the Emin Pasha 'rescue' project; and an embittered controversy arose over the tragedy of the rear-guard. But the value of Stanley's work and the magnitude of his achievements were recognised by those best capable of understanding them and by the public at large. If he cannot be cleared of all responsibility for some of the misfortunes incurred in the expedition, his gifts of character were never more conspicuously displayed than in the courage and tenacity by which he redeemed the failures, saved his broken columns from utter ruin, and rendered the enterprise fruitful, and, in its ultimate consequences, epoch-making. Only a man of his iron resolution and invincible resource could have carried through the awful marches and counter-marches in the tropical forests and along the banks of the Aruwimi. The journey from the lakes to the coast, with his own weak and exhausted column escorting Emin's mob of a thousand men, women, and children, a worn, diseased multitude, ill-supplied with food, in itself called for the highest qualities of leadership. Sir George Grey, the veteran pro-consul, wrote from Auckland to congratulate Stanley on his exploit. 'I have thought over all history, but I cannot call to mind a greater task than you have performed. It is not an exploration alone you have accomplished; it is also a great military movement.' Honours and distinctions were conferred upon Stanley by universities and learned societies at home and abroad. Ten thousand people attended the reception given by the Royal Geographical Society at the Albert Hall to hear him lecture on his discoveries; and the vote of thanks to the lecturer was moved by the Prince of Wales. The press controversy only increased the demand for the book, 'In Darkest Africa' (1890), in which he wrote an account of his journey. It was published simultaneously

in English, French, German, Italian, Spanish, and Dutch, and in its English form alone it had a sale of a hundred and fifty thousand copies.

On 12 July 1890 Stanley was married in Westminster Abbey to Miss Dorothy Tennant, a lady with many accomplishments and many friends, a painter of distinguished talent, the second daughter of Charles Tennant of Cadoxton, Glamorgan, sometime M.P. for St. Albans. After a restful honeymoon in the south of France and the Engadine, Stanley went with his bride to the United States, where he gave lectures, and had a great reception everywhere. The following year he started with Mrs. Stanley on a prolonged lecturing tour in Australasia, and returned to settle down in England. The king of the Belgians offered him another mission to the Congo; but his health was no longer equal to the strain of any journey more arduous than a holiday trip. Other activities, however, still lay before him. He abandoned his American citizenship and was re-naturalised as a British subject; and in June 1892 he endeavoured, or was induced to endeavour, to enter parliament. Only a fortnight before the polling day he came forward as liberal unionist candidate for North Lambeth, declaring in his election address that his 'one mastering desire' was for 'the maintenance, the spread, the dignity, the usefulness of the British Empire.' He was defeated by a majority of a hundred and thirty votes; and though he heartily detested everything connected with electioneering he consented to stand again. In July 1895, more by his wife's exertions than his own, he was returned as member for North Lambeth with a majority of four hundred and five.

In the House of Commons his career was inconspicuous. He spoke occasionally on African affairs and strongly urged the construction of the Uganda railway. But he made no parliamentary reputation and soon tired of his legislative duties. He had no real interest in party politics, and he disliked the bad air, the late hours, and the dilatory methods of the House of Commons. At the general election of 1900 he did not seek re-election. In October 1897 he paid a visit to South Africa at the invitation of the British South Africa Company and the citizens of Bulawayo, to take part in the opening of the railway connecting that town with the Cape. After a trip through Rhodesia to the Victoria Falls he made a tour in the Transvaal, the Orange Free State, and Natal, conversed

with Boers and Uitlanders at Johannesburg, and had an interview with President Kruger, whose conduct and character he felt convinced would eventually lead to a rupture with the imperial government. His estimate of the military as well as the political situation was singularly acute, and in a letter written just two years before the outbreak of the Boer war he pointed out the strategic weakness of the English position in Natal. With the account of his tour published under the title of 'Through South Africa' (1898) his literary activity came to an end.

His health made a country life essential. In the autumn of 1898 he bought the estate of Furze Hill, Pirbright, Surrey; and there he passed most of his time, residing in London occasionally at the house of his wife's mother, 2 Richmond Terrace, Whitehall. In 1899 his services to geographical science and the British empire were tardily recognised by the grand cross of the Bath. The king of the Belgians had already conferred upon him in 1885 the grand cordon of the order of Leopold. His life at Furze Hill was peaceful and happy. He drained, built, and planted, and devoted himself to the improvement of his Surrey estate with the same systematic method and forethought which he had bestowed on greater enterprises. Time and matured experience had toned down his former nervous, self-assertive vitality. He was a man essentially of a kindly and humane disposition, with strong religious convictions; and there was never any warrant for the allegation that he treated the African natives with brutality or callousness, though no doubt in his earlier expeditions he was sometimes hasty and violent in his methods. His views on the subject are expressed in a letter he sent to 'The Times' in December 1890, during the discussion over the Emin relief expedition.

'I have learnt' (he then wrote) 'by actual stress of imminent danger, in the first place, that self-control is more indispensable than gunpowder, and, in the second place, that persistent self-control under the provocation of African travel is impossible without real, heartfelt sympathy for the natives with whom one has to deal.' The natives should be regarded not as 'mere brutes' but 'as children, who require, indeed, different methods of rule from English or American citizens, but who must be ruled in precisely the same spirit, with the same absence of caprice and anger, the same essential respect to our fellow-men.'

His constitution had never completely

recovered from the effects of his equatorial expeditions, particularly the last. On 15 April 1903 he was stricken with paralysis; and after a year of suffering, borne with characteristic fortitude, he died at Richmond Terrace on 10 May 1904. It was his wish to be buried in Westminster Abbey, beside Livingstone. But the requisite permission was not granted; and the traveller who had done more than Livingstone, or any other explorer, to solve the mysteries of African geography, and open up the interior of the dark continent to European trade, settlement, and administration, was buried in the village churchyard of Pirbright. A granite monolith above his grave bears only the inscription 'Henry Morton Stanley, 1841-1904,' with his African name 'Bula Matari,' and by way of epitaph the one word 'Africa.' Lady Stanley was married in 1907 to Mr. Henry Curtis, F.R.C.S.

There is a good portrait of Stanley in Windsor Castle, painted for Queen Victoria by von Angeli in 1890. It is an excellent likeness and a favourable example of the painter's work. Another portrait, also of considerable artistic merit, was painted by Lady Stanley in 1895. A portrait by Sir Hubert von Herkomer was exhibited at the Royal Academy in 1887; and a sculptured bust by Henry Stormont Leifchild in 1873.

[Personal knowledge and private information; The Autobiography of Sir Henry Morton Stanley, edited by his wife, Dorothy Stanley, London, 1909, which contains Stanley's absorbing account of his boyhood and experiences in America up to the time he quitted the Federal army, with many extracts from his later diaries and correspondence and a connecting narrative; Stanley's own *My Early Travels and Adventures in America and Asia*, 2 vols. 1895; Henry M. Stanley, *The Story of his Life*, London, n.d., written by a relative, Cadwalader Rowlands, about 1872, gives some information about Stanley's early years and his family, but is inaccurate and untrustworthy. The record of the great African adventures must be read in the vivid pages of the explorer's travel-books, the titles of which are given above; and they may be supplemented by two lighter works, *My Kalulu, Prince, King, and Slave*, 1873, and *My Dark Companions and their Strange Stories*, 1893. For the Emin relief expedition and the controversies that arose in connection with it, see H. Brode's *Tippoo Tib*, 1907; G. Schweitzer's *Emin Pasha, his Life and Work*, 2 vols. 1898; Major G. Casati's *Ten Years in Equatoria and the Return with Emin Pasha*, 1891; A. J. Mounteney-Jephson's *Emin Pasha and the Rebellion at the Equator*, 1890. The books

compiled by those who had a close personal interest in the disasters of the rear column, J. R. Troup's *With Stanley's Rear Column*, 1890; Herbert Ward's *With Stanley's Rear Guard*, 1891; Mrs. J. S. Jameson's *The Story of the Rear Column*, 1890; and W. G. Barttelot's *Life of Edmund Musgrave Barttelot*, 1890, must be read with caution, especially the last, which is written in a spirit of virulent animosity against Stanley. See also for general summaries of Stanley's career and achievements, *The Times*, and *The Standard*, 11 May 1904; and an article by the present writer in the *Cornhill Magazine* for July 1904.] S. J. L.

STANLEY, WILLIAM FORD ROBINSON (1829-1909), scientific instrument maker and author, born at Buntingford, Hertfordshire, on 2 Feb. 1829, was son of John Stanley (1804-1865), a mechanical engineer, inventor, and builder, by his wife Selina Hickman (1809-1881). After scanty education at private schools at Buckland, Hertfordshire, Stanley as a boy successively worked in his father's unsuccessful building business (1843), obtained employment as a plumber and joiner in London through the good offices of his uncle and godfather, William Ford Hickman, who enabled him to attend classes in technical drawing and modelling at the Birkbeck Institution; he then joined his father in 1849 at an engineering works at Whitechapel, where he first substituted for the wooden wheel and spokes of the tricycle, the steel-wired spider wheel which has since become universal. For five subsequent years he was in partnership with a builder at Buntingford, where he commenced studies in architecture, astronomy, geology, and chemistry which he continued through life.

In 1854 Stanley left Buntingford, and with 100*l.* capital rented a shop and parlour at 3 Great Turnstile, Holborn (now rebuilt), and at his father's suggestion started business for himself as a metal and ivory worker and maker of mathematical and drawing instruments, at first in wood but afterwards in metal. A cousin, Henry Robinson, soon joined him with a capital of 150*l.*, but died in 1859. In 1855 his 'Panoptic Stereoscope,' a simplified and cheapened form of stereoscope, brought financial profit, and he started a metal drawing instrument branch, taking an additional shop at Holborn Bars and a skilled assistant. In December 1861 he patented the application of aluminium to the manufacture of mathematical instruments, and next year made a straight line dividing machine for which he was awarded

the only medal for mathematical instrument work at the International Exhibition of 1862. This success brought him much work at home and abroad and laid the foundation of his later fortunes. He greatly improved the elegance and stability of surveying instruments, especially the theodolite. In 1866 he published 'A Descriptive Treatise on Mathematical Drawing Instruments,' which became the standard authority (7th edit. 1900). The rapid growth of the business led to the opening of branches at Lincoln's Inn, at London Bridge, and at Norwood, and in 1900 the firm became a limited company, with a capital of 120,000*l.*, under the title of W. F. Stanley & Co.

Stanley's scientific inventions, besides improvements in cameras, lenses, and surveying instruments, included a meteorometer, for recording wind direction, pressure, temperature, moisture, and rainfall (patented in 1867), an integrating anemometer (1883; described in *Quarterly Journal Roy. Meteor. Soc.* ix. 208 seq.), a machine for measuring the height of human beings automatically—one of the first modern 'penny in the slot' machines (1886; cf. caricatures in *Moonshine*, 6 Oct. 1888, and *Scraps*, 8 Dec. 1888), and spirometers, a machine for testing lung capacity (1887; cf. caricature by H. FURNISS in *Yorkshire Evening Post*, 6 Sept. 1890).

Stanley's versatile interests embraced geology, astronomy, anthropology, phrenology, painting, music, the drama, photography, and wood-carving. In the intervals of business he lectured and wrote on scientific subjects for learned societies. He became a member of the Physical Society of London in 1882, a fellow of the Geological Society in 1884, and of the Royal Astronomical Society in 1894. An accomplished musician, artist, and architect, he was the composer of part songs; exhibited three oil paintings at the Marlborough Gallery in 1891; and designed his own residence at Norwood. He was fond of foreign travel, and visited Palestine and Egypt in 1889, and Switzerland in 1893.

To Norwood, whither Stanley retired in later life, and where he took a prominent part in philanthropic and municipal affairs, Stanley was a generous benefactor. There he designed and on 2 Feb. 1903 opened to the public the Stanley Public Hall and Gallery at a cost of 13,000*l.* for the purpose of lectures, concerts, and entertainments. A clock tower and hall were added in 1904. A further benefaction was a technical school, which was opened in 1907, for the

education of boys as skilled scientific mechanics. The school met with instant success, and Stanley subsequently presented the buildings to the public with an endowment valued at 50,000*l.* In 1907 Stanley was made an honorary freeman of Croydon, and a clock tower was unveiled in South Norwood to commemorate his golden wedding.

Stanley died at his residence, Cumberlow, South Norwood, on 14 Aug. 1909, and was buried at Crystal Palace cemetery. He married on 22 Feb. 1857 Eliza Ann Savoury (*d.* April 1913) but had no issue. Many Croydon and Norwood hospitals, charities, and technical schools benefited under his will.

Besides the work already mentioned Stanley published: 1. 'Proposals for a New Reform Bill,' 1867. 2. 'Photography Made Easy,' 1872. 3. 'Stanley's Pretty Figure Book Arithmetic,' fol. 1875. 4. 'Experimental Researches into the Properties and Motions of Fluids,' 1881. (this work, which embodies the results of much study and research, was commended by Darwin and Tyndall; a supplementary work on sound motions in fluids was unfinished, and remains in manuscript). 5. 'Surveying and Levelling Instruments, theoretically and practically described,' 1890; 3rd edit. 1901. 6. 'Notes on the Nebular Theory,' 1895. 7. 'Joe Smith and his Waxworks,' 1896. 8. 'The Case of the Fox: a Political Utopia,' 1903.

[William Ford Stanley, his *Life and Work*, mainly autobiographical, by Richard Inwards, 1911; *The Times*, 16 Aug. 1909; *Croydon Times*, 18 Aug. 1909; *Engineer*, 20 Aug. 1909; *Engineering*, 28 Sept. 1909 (an account of his inventions); *Norwood News*, 28 Aug. 1909; *Quarterly Journal Geol. Soc.* 1910, vol. lxvi. p. lii.; *Astron. Soc. Monthly Notices*, 1910, lxx. 300.] W. B. O.

STANNARD, MRS. HENRIETTA ELIZA VAUGHAN, writing under the pseudonym of 'JOHN STRANGE WINTER' (1856–1911), novelist, born on 13 Jan. 1856 in Trinity Lane, York, was only daughter of Henry Vaughan Palmer, rector of St. Margaret's, York, by his wife Emily Catherine Cowling. Her father had been an officer in the Royal Artillery before taking orders, and came of several generations of soldiers. Her great-great-grandmother was Hannah Pritchard [q. v.] the actress. Henrietta was educated at Bootham House School, York. In 1874 she began her career as a novelist by writing under the pseudonym of 'Violet Whyte' for the 'Family Herald.' Her

connection with that journal lasted for ten years, and she contributed to it 42 short stories issued as supplements, besides many long serials. In 1881 appeared 'Cavalry Life,' a collection of regimental sketches, and in 1883 'Regimental Legends.' Both bore the name of 'John Strange Winter,' a character in one of the tales in the former volume. The publisher refused to bring out the books under a feminine pseudonym. The public assumed the author to be a cavalry officer. She retained the name for literary and business purposes through life.

Miss Palmer married at Fulford, York, on 26 Feb. 1884, Arthur Stannard, A.M.I.C.E. (d. 1912) and had issue one son and three daughters. She settled in London and continued her literary labours. In 1885 'Bootles' Baby: a story of the Scarlet Lancers,' the tale that assured her popularity, appeared in the 'Graphic.' Two million copies were sold within ten years of its first publication. Tales of a similar character, with military life for their setting, followed in rapid succession until her death. There are 112 entries to her name in the British Museum Catalogue. She found an admirer of her work in Ruskin, whom she visited at Sandgate in 1888. Ruskin wrote of 'John Strange Winter' as 'the author to whom we owe the most finished and faithful rendering ever yet given of the character of the British soldier' (*Daily Telegraph*, 17 Jan. 1888; cf. also *Ruskin's Letters*, 1909, ii. 592-3). For some time Ruskin and John Strange Winter constantly corresponded.

In 1891 she started a penny weekly magazine, 'Golden Gates'; in 1892 the title was altered to 'Winter's Weekly,' and so continued until 1895. In 1896 the health of her husband and of her youngest daughter made residence at the seaside imperative, and Dieppe became her home until 1901, when she returned to London, retaining a house at Dieppe for summer residence until 1909. She wrote enthusiastic articles about Dieppe which greatly increased its popularity. The municipality presented her with a diamond ring in recognition of her services to the town.

Mrs. Stannard wrote vivaciously, and sketched with lightness of touch the personality of the British officer as he was at the end of the purchase system. Well known in journalistic circles, she was first president of the Writers' Club (1892), and was president of the Society of Women Journalists (1901-3). She was intensely fond of animals. Interesting herself in matters concerning women's dress and

personal appearance, she towards the end of her life compounded and sold a number of toilet preparations for the hair and complexion which found wide acceptance.

Mrs. Stannard died, from complications following an accident, on 13 Dec. 1911 at York House, Hurlingham, Putney. She was cremated and the ashes interred at Woking crematorium. Notwithstanding her many activities she left only 547l.

A crayon drawing by Lionel Smythe (1887) and an etched portrait by Batley (1889) were in possession of Mr. Arthur Stannard; a pastel portrait (1891) by Mrs. Jopling is owned by the artist.

[*The Times*, 15 Dec. 1911; *Daily Chronicle*, 15 Dec. 1911; Helen C. Black's *Notable Women Authors of the Day*, 1893; *Men and Women of the Time*, 1899; *Allibone*, Suppl. II, 1891; private information.] E. L.

STANNUS, HUGH HUTTON (1840-1908), architect, author, and lecturer, born at Sheffield on 21 March 1840, was son of the Rev. Bartholomew Stannus, member of an old Irish family, by his wife Jane, daughter of the Rev. William Hutton of Belfast. His first artistic training was gained in Sheffield under H. D. Lomas at the local School of Art, after which he was articled to the firm of H. E. Hoole & Co. in that town, whose foundry was then engaged in producing work from the designs of Alfred Stevens [q. v.]. From this apprenticeship resulted a close acquaintance with the details of artistic metal casting. Some designs by Stannus for foundry work were selected for the Exhibition of 1862, and an 'Essay on the History of Founding in Brass, Copper, and Bronze' won him in 1881 the freedom and livery of the Founders' Company, of which he became in 1907 sub-warden. A more important consequence of the employment at Hoole's was the personal acquaintance with Stevens. Stannus became his pupil, his assistant, his devoted friend, and afterwards his biographer. With Stevens he worked at the production of the Wellington monument for St. Paul's Cathedral, and the long story of the delays which beset that production may be read in 'Alfred Stevens and his Work' (1891), an important folio in which Stannus commemorated his master.

Some years before the death of Stevens in 1875 Stannus appears to have decided to make his training more definitely architectural, and in 1872 he was studying architecture at the Royal Academy Schools. In 1873 he passed the voluntary examination of the Royal Institute of British

Architects with such distinction as to be awarded the Ashpitel Prize. In 1877 he won at the same institute the silver medal for essays with a paper on 'The Decorative Treatment of Constructive Ironwork' (printed Jan. 1882). He was elected an associate of the institute in 1880 and a fellow in 1887, taking till the year of his death an active part in its meetings and committee work. His independent practice dated from 1879, but was never extensive, and he never established an office. After bringing to a close Stevens's work on the Wellington monument, he was engaged simultaneously with (Lord) Leighton [q. v. Suppl. I] and (Sir) Edward J. Poynter in the preparation of a design for the decoration of the cupola of St. Paul's, which was not carried out. Stannus's executed work consisted chiefly of structural or decorative alterations to existing buildings such as the Cutlers' Hall, the gas offices, the unitarian church, and the Channing Hall at Sheffield, the residences of Sir Edwin Durning Lawrence at Ascot and at Carlton House Terrace, the Phoenix brewery at Bedford, a house for Mr. Faber, M.P., at Beckenham, and Norman Macleod's church in Edinburgh. He designed the Sunday School centenary memorial at Essex church (unitarian), Notting Hill, and his own house, The Cottage, Hindhead, Surrey. He also carried out some work in the picture gallery at Kew designed by James Fergusson [q. v.]. When in 1903 it was decided further to complete the Wellington monument by the addition of the equestrian statue of the duke, Stannus, whose forethought had preserved Stevens's plaster model for the figure, was able to lay before the authorities several important drawings and other evidences of the original designer's intentions.

Stannus had great powers of architectural composition. A scheme which he submitted in the competition for the University of California was considered exceptionally skilful. But his energies were mainly absorbed from the age of forty to sixty in the work of a teacher and lecturer, to which he brought exceptional powers of analysis and great lucidity of expression. From 1881 to 1900 he taught modelling at the Royal Academy, and he held appointments as lecturer at University College, London, and at the Royal College of Art, South Kensington. For two years (1900-1902) he was director of architectural studies at the Manchester School of Art, and subsequently (1905-1907) he lectured at the evening school of the Architectural

Association. In 1890 and 1898 he was Cantor lecturer to the Society of Arts, and twice received the Society's silver medal. In 1891 he delivered for the same society a course of lectures on Romanesque Architecture in North Italy.

Stannus belonged to the Hellenic and Japan Societies, to the St. Paul's Ecclesiological Society, to the Society of Arts and Crafts, and to that for the Preservation of Ancient Buildings. He had great knowledge of all periods of art, being a continual student and a frequent traveller. His collection of examples, sketches, and photographic lantern-slides was exceptional. He was a good linguist, a great reader, a musician, and in a measure a poet. His writing, always carefully studied, shows certain idiosyncrasies of punctuation and style. He died at Hindhead on 18 Aug. 1908.

In 1872 he married Ann, daughter of John Anderson, B.A. London, who with two daughters and a son (Dr. Hugh S. Stannus) survived him.

Apart from the work on Stevens, Stannus's publications, which were largely based on his lectures, were: 1. 'Decorative Treatment of Natural Foliage,' 1891. 2. 'Decorative Treatment of Artificial Foliage,' 1895. 3. 'Theory of Storiion in Applied Art,' 1898. 4. 'Some Principles of Form Design in Applied Art,' 1898. 2. 'Some Examples of Romanesque Architecture in North Italy,' 1901. He also revised for the 3rd (English) edition Meyer's 'Handbook of Ornament,' and assisted James Fergusson in some of the illustrations for his books. He left materials for a work on the classic orders, a subject upon which he had some original ideas.

[Athenæum, 29 Aug. 1908; R.I.B.A. Journal, 3rd Series, 1908, xv. 587, 588 (by R. Phéné Spiers) and 621; personal knowledge and information from Mrs. Stannus.] P. W.

STARK, ARTHUR JAMES (1831-1902), painter, born in Beaufort Street, Chelsea, on 6 Oct. 1831, was the only son of James Stark [q. v.], the landscape painter, by his wife Elizabeth Young Dinmore. An artistic aptitude was early fostered by lessons from his father. Between 1839 and 1849, when the family was residing at Windsor, young Stark studied animal painting under Edmund Bristow [q. v.], an intimate friend of the family, and acquired a love of the Thames valley, where he found the subjects of many of his pictures. As early as 1848 he exhibited

at the Royal Academy and the British Institution, his first picture at the Academy being hung on the line between works by Landseer and Sir Francis Grant. In 1849 the elder Stark removed to London for the sake of the education of his son, who entered the Royal Academy schools in the same year. For some time young Stark used to paint in the stables of Messrs. Chaplin & Horne, the carriers, and at a later period he rented for three years at Tattersall's a studio where he perfected his painting of horses. His ability became known, and in 1874, from a fear of hampering his progress, he declined a private offer of the post vacated by the death of Frederick William Keyl [q. v.], of animal painter to Queen Victoria. For many years he taught art in London as well as painted. In 1886 he retired to Nutfield, Surrey, where he devoted the remainder of his life exclusively to painting.

Stark was one of the last artists of the Norwich school (of which his father was a chief disciple), and probably the only one to acquire a reputation for animal painting. The minute touch of his earlier work shows the strong influence of his father, but his later pictures display a more marked individuality and abandon many of the traditions of his father's school. He was fond of depicting homely English scenes, such as haymaking, harvesting, and the farmyard; his landscapes were largely derived from the Thames valley (especially the neighbourhood of Sonning), Surrey, and Norfolk. He painted both in oil and water-colour.

Between 1848 and 1887 he exhibited thirty-six pictures at the Royal Academy, thirty-three at the British Institution, fifty-one at the Society of British Artists, three at the Institute of Painters in Water Colours, and fifty-seven at other galleries. Among his works were 'A Water Mill' (1848), 'Forest Scene' (1850), 'Interior of a Stable' (1853), 'A Quiet Nook' (1857), 'A Shady Pool' (1861), 'In Moor Park, Rickmansworth' (1865), 'Timber Carting' (1874), 'A Farmyard' (1875), and 'Dartmoor Drift' (1877)—the last-named was one of his best paintings.

A water-colour drawing of 'Calves' is at the Victoria and Albert Museum; three water-colours, 'Interior of a Windmill (on Reigate Heath) fitted up as a Chapel,' 'Windmill and Cottage,' and 'Heath Scene,' are at the British Museum, and an oil painting of 'Dartmoor Ponies' is in the Norwich Castle Museum. Exhibitions of works by him were held at the Dudley

Galleries, 169 Piccadilly, in Oct. 1907 and Oct. 1911.

Stark, who was a man of culture and high principle, and of simple and genial manner, was at work till within a few days of his death at Thornbank, South Nutfield, Surrey, on 29 Oct. 1902. He was cremated at Woking, and a tablet was placed to his memory in Nutfield old church. His portrait in miniature by H. B. Love (1837); in oil, as a child, by Charles Hancock, and in water-colour by his wife (1883) are in the possession of his widow.

He married on 20 Nov. 1878, at Ascot, Rose Isabella youngest daughter of Thomas Fassett Kent, counsel to the chairman of committees in the House of Lords, by whom he had a daughter (b. 1879) and a son (b. 1881), both of whom survived him.

[Information kindly supplied by Mrs. Stark; The Times, 30 Oct. 1902; Eastern Daily Press, 10 Oct. 1911; A. P. Nicholson in The Nineteenth Century and After, April 1907; Graves's Dict. of Artists, Roy. Acad. and British Institution.] B. S. L.

STEGGALL, CHARLES (1826-1905), organist and composer, son of Robert William Steggall, was born in London on 3 June 1826. He was educated at the Royal Academy of Music, principally under Sir William Sterndale Bennett. In 1848, while still a student, he was appointed organist of Christ Chapel, Maida Vale, and in 1849 was consulted by Bennett as to the inauguration of the Bach Society, of which he was honorary secretary till its dissolution in 1870. He was appointed a professor of the organ at the Royal Academy of Music in 1851; and next year graduated Mus.Bac. and Mus.Doc. at Cambridge. In 1855 he was chosen the first organist of Christ Church, Lancaster Gate, being at the same time organist of Clapham grammar school, and in 1864 he became organist of Lincoln's Inn Chapel, where he remained till his death, though for the later years his son, William Reginald Steggall, usually discharged the duties. Between 1850 and 1870 he frequently lectured on musical subjects in London and the provinces. He was one of the founders of the Royal College of Organists in 1864, gave the inaugural lecture, and, with John Hullah and Edward John Hopkins, conducted the first examination in July 1866. In 1884 he joined the board of directors of the Royal Academy of Music; and when Principal Macfarren died, in 1887, he took his place until the election of

a successor. He resigned his professorship at the Academy in 1903, after fifty-two years' service. He died in London on 7 June 1905. As a composer he is best known by his church music—hymn tunes, anthems, services, carols, chants, organ compositions and arrangements. He wrote an 'Instruction Book for the Organ' (1875) edited 'Church Psalmody' (1848) and six motets of Bach, and succeeded Dr. W. H. Monk as musical editor of 'Hymns Ancient and Modern' (1889).

STEPHEN, SIR ALEXANDER CONDIE (1850–1908), diplomatist, born at Dudley, Worcestershire, on 20 July 1850, was third and youngest son of Oscar Leslie Stephen (1819–1898) by his wife Isabella, daughter of William Birkmyre. Oscar Leslie Stephen was a director of the London and North Western and chairman of the North London railways, and by his descent from James Stephen of Ardenbraught was third cousin of Sir James Stephen, (1789–1859) [q. v.]. Stephen was at Rugby for rather more than a year (1865–6). Subsequently in 1876 he entered the diplomatic service, and in 1877 was sent as attaché to St. Petersburg. His aptitude in foreign languages, especially Russian, assisted his rapid promotion, and having been appointed third secretary at Constantinople in 1879, he was in 1880 put in charge of the consulate-general at Philippopolis, and thus became the official representative of Great Britain in Eastern Rumelia, the southern province of Bulgaria which had obtained 'autonomy' under that name by the provisions of the treaty of Berlin. At the end of 1881 Stephen, who had been made C.M.G. that year, was promoted second secretary and transferred to Teheran, being then in receipt of special allowances in respect of his knowledge of Russian, Turkish, and Persian. In 1882–3 he was employed on special service in Khorassan, the north-east province of Persia, at that time of critical importance as the neighbour both of Afghanistan and of that part of Central Asia over which the Russian power was extending. In 1884 Stephen was made C.B., and in 1885 was appointed assistant commissioner to Sir Peter Lumsden in the Anglo-Russian Commission for the demarcation of the north-west boundary of Afghanistan. In this capacity he was present at the affray between Russian and Afghan troops

at Penjdeh, which involved the danger of war between England and Russia, and he was sent home with the official despatch describing that event. He rode in six days from the Afghan frontier to Astrabad on the Caspian Sea, and delivered his despatch sooner than had been thought possible, but peace had been practically secured by telegraphic communications before his arrival in England. Stephen's next appointment was at Sofia, and he held it when in 1886 Prince Alexander of Bulgaria was kidnapped. It is said that his presence of mind saved the Prince's private papers from falling into the hands of the conspirators. In the following year Stephen was second secretary, first at Vienna and then at Paris. It is probable that had he exerted himself to that end he might have filled the highest positions in his service, but in 1893 he accepted the office of chargé d'affaires at Coburg, and in 1897 was appointed minister resident both to Saxony and Coburg, his services being acknowledged by his creation in 1894 as K.C.M.G., and in 1900 as K.C.V.O. The discharge of his duties at Coburg involved close and constant personal relations with King Edward VII, when Prince of Wales, and various members of the English and the related royal families. In 1901, after the accession of King Edward VII, Stephen retired from the diplomatic service, and became a groom-in-waiting to the king, an appointment which he held until his death. In that situation he made good use of his exceptional acquirements and experience.

He died at 124 Knightsbridge, London, after an operation for appendicitis on 10 May 1908. He was unmarried. He wrote in French a short 'Comédie vaudeville' (1872), and published 'The Demon,' a translation of a Russian poem by Mikhail Yar'evich Lermontov (1875; 2nd edit. 1881), and a volume of stories adapted from Persian originals called 'Fairy Tales of a Parrot' (1892).

A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1902.

[The Times, 11 May 1908; private information; Lodge's Peerage.] H. S.

STEPHEN, SIR LESLIE (1832–1904), first editor of this Dictionary, man of letters and philosopher, was born at a house in Kensington Gore, now 42 Hyde Park Gate, on 28 Nov. 1832. His grandfather, James Stephen, his father, Sir James Stephen, and his elder brother, Sir James Fitzjames Stephen, are already noticed separately. His father's sister, Annie

Mary, married Thomas Edward Dicey and was mother of Edward James Stephen Dicey [q. v. Suppl. II] and of Prof. Albert Venn Dicey. His mother, whom Leslie credited with 'strength absolutely free from harshness,' was Jane Catherine, daughter of John Venn, the evangelical rector of Clapham. Her children numbered three sons and two daughters. The eldest son, Herbert Venn, died in 1846 aged twenty-four, and the elder daughter, Frances Wilberforce, in infancy in 1824. The surviving daughter, Caroline Emelia, the youngest of the family, is noticed at the close of this article.

In the autumn of 1840 Leslie's parents removed to Brighton for the sake of his health, which suffered from a precociously active brain. There he attended a day school, but on 15 April 1842 he and his brother James Fitzjames entered Eton College as town boys. His parents took a house at Windsor so that their sons might live at home. Leslie made little progress, and was removed by his father at Christmas 1846. After a short experience of a small day school at Wimbledon during 1847, he was sent to King's College, London, on 15 March 1848. There he attended F. D. Maurice's lectures in English literature and history, but they failed to rouse in him any enthusiasm, although his literary sympathies were pronounced from childhood. His health was still uncertain. At Easter 1850 he left King's College. After some coaching at Cambridge from Llewelyn Davies he entered Trinity Hall at Michaelmas 1850. At the end of his first year he won a scholarship in mathematics.

To the university Stephen owed an immense debt. His health rapidly improved and became robust, while he quickly assimilated the prevalent atmosphere of dry common-sense. Although mathematics was his chief study, he developed his youthful taste for literature, tried his hand at sketching, and taught himself shorthand, which he practised in correspondence with his sister till the end of his life. He spoke occasionally at the Union Society on the liberal side, and joined the library committee. He was spontaneously drawn to athletics, to which he was previously almost a stranger, and soon distinguished himself as a long-distance runner, a walker of unusual endurance, and 'a fanatical oarsman.' His chief undergraduate friend was Henry Fawcett, who migrated to Trinity Hall in 1853. In Jan. 1854 Stephen was twentieth wrangler in the mathematical tripos. He continued to reside at Cam-

bridge in the hope of gaining a fellowship. In the following long vacation he went to Heidelberg to improve his German.

On 23 Sept. 1854 Stephen was appointed to a Goodbehere fellowship at his college. It was a small post bringing only 100*l.* a year. Its holder was bound to give some assistance to the two college tutors and to take holy orders within a year. The clerical condition presented no difficulty to Stephen. He had been reared by his parents in orthodox beliefs and had taken them on trust. Accordingly on 21 Dec. 1855 he was ordained deacon by the archbishop of York, and became priest on Trinity Sunday 1859. He pleased his father by entering the church, and the step provided him with a modest livelihood. Meanwhile on 29 April 1856 he was admitted to the junior tutorship which then fell vacant at Trinity Hall, and was only tenable by a clergyman. He occasionally preached in the college chapel and at St. Edward's church in the town, and he taught mathematics to the more promising undergraduates. But his chief energies were absorbed by the social welfare of the college and its athletic prestige, by private study of current literature and philosophy, and by intercourse with the manliest and most enlightened of resident graduates.

Stephen's athletic prowess brought him his first fame. For the college boat, which he coached for many years, he cherished an especial affection (cf. SIR G. O. TREVELYAN in *Macmillan's Magazine*, May 1860). His staying power grew as a runner and walker. He walked from Cambridge to dine in London—fifty miles—in twelve hours. In 1860 he won the mile race (5 mins. 4 sec.) at the university athletic games, which he helped to start, and he encouraged the inauguration of the inter-university sports which began in 1864. But it was as a mountaineer that his athletic zeal showed to best advantage. In 1855 he had tramped through the Bavarian highlands in Tyrol, and in 1857, during a holiday spent at Courmayeur, he made, with Francis Galton, his first Swiss ascent—the Col du Géant. Next year, after climbing Monte Rosa, he joined the Alpine Club, of which he remained a member till death. Thenceforth he was an ardent Alpinist and distinguished himself by many new ascents. In 1863 he described the 'Ascent of the Allalinhorn' in Francis Galton's 'Vacation Tourists' (1861). In 1861 he first vanquished the Schreckhorn in the Oberland and made the passage of the Eiger Joch, writing of these exploits in

'Peaks, Passes, and Glaciers' (vol. ii. 1862). In the same year (1861) he achieved the first complete ascent of Mont Blanc from St. Gervais. In 1862 he added to his conquests the Jungfrau Joch, the Viescher Joch, and the Monte della Disgrazia. In 1864 he scaled the Lyskamm, Zinal Rothorn, and the Jungfrau. The summer of 1866 was spent in the eastern Carpathians with Mr. James Bryce.

After his first marriage in 1867 his mountaineering activity gradually diminished (cf. his *Regrets of a Mountaineer*, Nov. 1867). But he explored the Dolomites in 1869 and was in Switzerland again in 1871, in 1873, and 1875. In later life he only visited the Alpine country in the winter. The last visit was paid in 1894, when he stayed at Chamonix with his friend of early mountaineering days, M. Gabriel Loppé, the French Alpine artist.

Stephen became a master of mountain craft, fleet of foot, but circumspect and cautious. His merit was acknowledged by his election as president of the Alpine Club (1865-8). From 1868 to 1871 he served, too, as editor of the 'Alpine Journal.' But mountaineering appealed to Stephen not only as a sport but also as an incentive to good-fellowship. Many of his closest friendships were formed in the Alps. With his guide Melchior Anderegg, whom he regularly employed from his first season in 1858, he was always on the best of terms. Anderegg was Stephen's guest in London in 1861 and 1888. Stephen felt deeply the beauty of the mountains, and it was his Alpine experiences which led him to become an author. His first book was a modest translation from the German of H. Berlepsch's 'The Alps: or Sketches of Life and Nature in the Mountains.' But he was soon contributing accounts of his Alpine ascents to the 'Alpine Journal' and elsewhere. These papers he collected in 1871 as 'The Playground of Europe,' with a frontispiece by his fellow-mountaineer Edward Whymper [q. v. Suppl. II] (2nd edit. revised, 1894, reissued in Longmans' 'Silver Library,' 1899). In the literature of mountaineering, Stephen's papers inaugurated a new style. It was vivid, direct, and unpretendingly picturesque, at the same time as it was serious and reflective.

The years which Stephen spent at Cambridge as a college don were probably the happiest of his life. But his position underwent an important change in the summer of 1862. His reading in Mill, Comte, and Kant, and his independent thought had led him to reject the historical

evidences of Christianity. He declined to take part in the chapel services. Thereupon at the Master's request he resigned his tutorship. Owing apparently to the influence of his friend Fawcett, he was allowed to retain his fellowship and some minor offices. He had never taken the clerical vocation very seriously. He had not examined closely the religious convictions in which he was bred, and he abandoned them with relief and without mental perturbation. He did not, he said, lose his faith, he merely discovered that he never had any. Stephen's scepticism steadily grew thenceforth, and on 25 March 1875 he took advantage of the Act of 1870, and relinquished his orders.

When he was freed from tutorial and clerical duties, Stephen's interests took a wider range. He naturally sympathised with the views of the philosophical radicals of whom Mill was high priest. In university politics he was on the side of reform and desired to see the efficiency of the university increased. In 1863 he published a tract, 'The Poll Degree from the Third Point of View,' in which he urged the need of making the pass examination more adaptable to students' needs and abilities. But he was not greatly excited by university controversies. He was more stirred by the political ambitions of his college friend Henry Fawcett, professor of political economy in the university, who had become blind in 1859. Resolved to enter the House of Commons in the radical interest, Fawcett early in 1863 vainly contested the town of Cambridge with Stephen's active help. Next year Fawcett stood, again unsuccessfully, for Brighton; Stephen was his ablest electioneering lieutenant, and, by way of advocating his friend's candidature, ran a daily paper which he wrote himself and called 'The Brighton Election Reporter.'

One political issue of the day moved Stephen's especial ardour. He was a staunch adherent of the cause of the North in the American civil war, and an enthusiastic champion of slavery emancipation. In the summer of 1863, armed with some introductions from his first cousin, Edward Dicey, he went to America to study the question at first hand. At Boston he met J. R. Lowell, who was soon an intimate friend, and he made the acquaintance of Garrison and Wendell Phillips. His itinerary took him from New York to Chicago, down the Mississippi to St. Louis, and thence by Cincinnati to Philadelphia and Washington. After seeing Abraham Lincoln at the White House he visited the seat of war in Virginia and

inspected General Mead's army. He came home more convinced than before of the righteousness of the northern plea. Subsequently he published 'The Times on the American War, by L. S.' (1865), in which he sought to refute the English arguments in favour of the South.

At the end of 1864 Stephen left Cambridge for London in order to embark on a literary career. He retained his fellowship till 1867, when it lapsed on his marriage. At times he thought of attempting other than literary occupation. He was for a brief period secretary of the newly formed Commons Preservation Society in 1865, and on 27 May 1867 he was admitted a student of the Inner Temple, in spite of some doubt as to his eligibility owing to his clerical orders; but he was not called to the bar, and removed his name from the books of the Inn in 1875. Sufficient literary work was quickly offered him to make it needless for him to seek employment elsewhere. His brother, James Fitzjames Stephen, was between 1860 and 1870 dividing his practice at the bar with a vigorous pursuit of journalism. He was acquainted with Carlyle, Froude, and other literary leaders, and to his recommendations Leslie owed a promising start in the literary world. Leslie was soon invited to write for the 'Saturday Review,' and for many years he contributed two articles a week—a review and a 'middle.' There he attacked every subject from popular metaphysics to the university boartrace, but avoided politics and religion, on which the paper pursued conservative lines. But more important to his future literary career was his brother's early introduction of him to George Smith, who during 1864 was laying the foundation of a new evening paper, the 'Pall Mall Gazette.' The editor, Frederick Greenwood, welcomed Stephen's co-operation, and from the second number on 8 Feb. 1865 he was a regular contributor of miscellaneous literary matter for six years, and was an occasional contributor at later dates, notably in 1880, when Mr. John Morley suddenly succeeded Greenwood as editor. To the 'Pall Mall' he contributed at the outset a series of frankly humorous and occasionally flippant 'Sketches from Cambridge, by a Don' (1865). From October 1866 to August 1873 he wrote, too, a fortnightly article on English affairs for the weekly 'Nation' of New York, of which the editor was Edwin Lawrence Godkin [q. v. Suppl. II]. Here Stephen dealt with the political situation at Westminster and occasionally attended for the purpose the sittings

of the House of Commons, which wearied him.

At the same time he formed important connections with the chief monthly magazines. In 1866 he began writing for the 'Cornhill Magazine,' another of George Smith's literary ventures. At first he wrote there on social themes under the signature of 'A Cynic' (not reprinted), but he soon confined himself in the 'Cornhill' to literary criticism, which, according to the practice of the magazine, was anonymous. His literary essays from 1871 onwards bore the general heading 'Hours in a Library,' and were collected from time to time in separate volumes (1st ser. 1874; 2nd ser. 1876; 3rd ser. 1879). His position as an independent and sagacious literary critic was thereby established. His relations with the 'Cornhill' had meanwhile grown in importance. In February 1871 George Smith appointed him editor, and he held the post for more than eleven years. He was thus enabled to abandon much of his journalism, but he remained faithful to the 'Saturday.' In the 'Cornhill' magazine he sought to uphold a high standard of theme and style. He encouraged young writers, many of whom afterwards became famous, and with whom he formed cordial and enduring personal relations. Robert Louis Stevenson, Thomas Hardy, James Sully, W. E. Henley, Henry James, and Edmund Gosse were among the contributors in whose work Stephen took especial pride. When visiting Edinburgh to lecture on the Alps in February 1875 he sought out in the infirmary there W. E. Henley, who had offered the magazine his 'In Hospital' series of poems; a day or two later Stephen introduced R. L. Stevenson to the sick-room, with the result that an interesting literary friendship was formed. Matthew Arnold's 'Literature and Dogma' ran through the 'Cornhill' under Stephen's auspices; but it was in purely literary work that the magazine won its reputation during Stephen's editorship.

Not that literature was by any means the editor's sole personal interest. Religious and philosophical speculation engaged much of his attention, and he presented his results elsewhere than in the 'Cornhill.' J. A. Froude, who was editor of 'Fraser's Magazine,' and Mr. John Morley, who was editor of the 'Fortnightly Review,' gave him every opportunity of defining his position in the pages of those periodicals. A collection of religious and philosophic essays, which he fittingly entitled 'Essays on Free Thinking and Plain Speaking,' came out in

1873. The book constituted him a leader of the agnostic school, and a chief challenger of the popular religion, which he charged with inability to satisfy genuine spiritual needs. But Stephen was not content to dissipate his energy in journalism or periodical writing. His leisure was devoted to an ambitious 'History of English Thought in the Eighteenth Century' (1876, 2 vols.), in which he explained the arguments of the old English deists and the scepticism of Hume. In June 1876 his article called 'An Agnostic's Apology,' in the 'Fortnightly Review,' further revealed his private convictions and went far to familiarise the public with the term 'agnostic,' which had been invented in 1870 by Huxley, but had not yet enjoyed much vogue.

In spite of his unpopular opinions, Stephen's critical powers were generally acknowledged, and although somewhat distant and shy in manner he was an honoured figure in the best intellectual society. He had married in 1867 the younger daughter of Thackeray, and settled with his wife and her sister (now Lady Richmond Ritchie) at 16 Onslow Gardens, South Kensington; thence he moved in 1872 to a newly built residence at 8 Southwell Gardens, and in 1876 to 11 (now 22) Hyde Park Gate, where he remained till death. A second visit to America in 1868 (with his wife) greatly extended his American acquaintance and confirmed his sympathies with the country and its people. He there met Emerson, 'a virtuous old saint,' who was never one of his heroes, but Charles Eliot Norton and Oliver Wendell Holmes the younger were, like Lowell, thenceforth reckoned for life among his dearest friends and most faithful correspondents. In England he came to be on affectionate terms with George Meredith, whom he first met by chance at Vienna in 1866 on a holiday tour, and with Mr. John Morley. Carlyle, whom he often visited, equally repelled and attracted him, and he usually felt dazed and speechless in his presence. In 1877 the committee elected Stephen to the Athenæum under Rule II. In 1879 he formed among his literary friends a society of Sunday walkers which he called 'The Tramps'; he remained its 'leader' till 1891, making his last tramp in 1894, when the society dissolved. 'The Tramps,' with Stephen at their head, were from time to time entertained on their Sunday expeditions by Darwin at Down, by Tyndall at Hindhead, and by George Meredith at Box Hill.

Stephen's literary fertility was exceptional, and seemed little affected by the

domestic crises of his career, his first wife's sudden death in 1875 and his second marriage in 1878. During 1876-1877 he wrote fourteen articles for the 'Cornhill' and four for the 'Fortnightly.' On 7 Aug. 1877 Mr. John Morley invited him to inaugurate with a volume on Johnson the projected series of monographs called 'English Men of Letters.' The manuscript was delivered on 4 Feb. 1878 and was soon published. It was, Stephen wrote, 'the cause of more compliments than anything he had done before.' The book satisfied the highest requirements of brief literary biography. To the same series Stephen subsequently contributed with little less success memoirs of Pope (1880) and Swift (1882), and towards the close of his life for a new series of 'English Men of Letters' he wrote on 'George Eliot' (1902) and on Hobbes (1904). But again his deepest thought was absorbed by philosophical questions. He had joined in 1878 the Metaphysical Society on the eve of its dissolution, and read two papers at its meetings, but he spoke with impatience of the society's debates. In 1882 he produced his 'Science of Ethics,' in which he summed up, in the light of his study of Mill, Darwin, and Herbert Spencer, his final conclusions on the dominant problems of life.

In the summer of 1881 George Smith broached to Leslie Stephen a project, which he then first contemplated, of a great Dictionary of Biography. The discussion continued through great part of the next year (1882) and ended in the evolution of the plan of this 'Dictionary of National Biography.' Stephen urged that the scheme should be national rather than universal, the scope which was originally suggested. George Smith entrusted Stephen with the editorship, and he entered on its duties in November 1882. At the same time he resigned the editorship of the 'Cornhill,' which had failed pecuniarily of late years, and was succeeded there by his friend, James Payn [q. v. Suppl. I].

Stephen possessed obvious qualifications for the control of George Smith's great literary design. His wide reading, his catholic interests in literary effort, his tolerant spirit, his sanity of judgment, and his sense of fairness, admirably fitted him for the direction of an enterprise in which many conflicting points of view are entitled to find expression. On the other hand, though familiar with the general trend of history, he was not a trained historical student, and was prone to impatience with mere antiquarian research. But he recognised that archæological details within

reasonably liberal limits were of primary importance to the Dictionary, and he refused mercy to contributors who offered him vague conjecture or sentimental eulogy instead of unembroidered fact. To the selection of contributors, to the revision of manuscripts, to the heavy correspondence, to the clerical organisation, he gave at the outset anxious attention. But he never quite reconciled himself to office routine, and his steady application soon developed a nervous depression. The first volume of the Dictionary appeared under his editorship in January 1886, and the stipulated issue of the succeeding volumes at quarterly intervals was never interrupted. But Stephen's health soon rendered periodic rests necessary. At the end of 1886 he spent the Christmas vacation in Switzerland, and he revisited the Alps in the winters of 1888, 1889, and 1890. In 1889 a serious breakdown compelled a year's retirement from the editorship, in the course of which he paid a third visit to America and received the degree of LL.D. from Harvard. A recurrence of illness led to his resignation of his editorial office in April 1891, after more than eight years' tenure. He was succeeded by the present writer, who had become his assistant in March 1883, and was joint editor from the beginning of 1890. The twenty-sixth volume of the original issue of the Dictionary is the last bearing Stephen's name on the title-page. But Stephen had been from the outset a chief contributor to the work as well as editor, and re-established health enabled him to write important articles for the Dictionary until the close of the first supplement in 1901. To the substantive work he contributed 378 articles, covering 1000 pages, and dealing with such names as Addison, Burns, Byron, Carlyle, Coleridge, Defoe, Dickens, Dryden, Goldsmith, Hume, Landor, Macaulay, the Mills, Milton, Pope, Scott, Swift, Thackeray, and Wordsworth. Although in letters to friends Stephen repeatedly complained of the 'drudgery' of his editorial task, and frequently avowed regret at his enforced withdrawal from speculative inquiry, he expressed every satisfaction in living to see the work completed.

While Stephen was actively engaged in editorial labours he yet found time for other literary work. In 1883 he was chosen the first Clark lecturer at Trinity College, Cambridge, and delivered a course of lectures on eighteenth-century literature, but he resigned the post at the end of the year. In 1885 he wrote a sympathetic

biography of Henry Fawcett, his intimate friend from Cambridge days, who had died on 6 Nov. 1884. On his retirement from the editorship of the Dictionary in 1891 he reverted to a plan which had long occupied his mind—of extending to the nineteenth century his 'History of English Thought in the Eighteenth Century.' But his scheme underwent many vicissitudes, and after long delay the work took the limited shape of an account of 'The English Utilitarians,' which was published in three volumes in 1900. Although somewhat discursive, the work abounds in happy characterisation of movements and men.

Stephen, although little of a propagandist, was never indifferent to the growth in the number of adherents to his ethical and religious views. The movement for forming ethical societies with Sunday services in various parts of London found in him an active supporter. He became president of the Ethical Societies of London, and in that capacity he delivered many lectures, which he collected in two volumes, entitled 'Social Rights and Duties' (1896). At the same time he continued to write on biography, criticism, and philosophy in the magazines with all his old zest and point, and as was his wont he collected these efforts from time to time. A volume named 'An Agnostic's Apology,' after the opening paper, which was reprinted from the 'Fortnightly' of June 1876, came out in 1893, and 'Studies of a Biographer,' in two series, each in two volumes, in 1899 and 1902.

Loss of friends and kinsfolk deeply tried Stephen's affectionate nature towards the end of his life. With James Russell Lowell, while he was United States ambassador in London, Stephen's relations grew very close (1880-7), and after Lowell's death on 12 Aug. 1891 Stephen organised with his wife's aid the presentation of a stained glass memorial window to the chapter-house at Westminster. The death of George Croom Robertson [q. v.] in 1892 and of James Dykes Campbell [q. v. Suppl. I] in 1895 removed two very congenial associates. Of his friends Henry Sidgwick and James Payn he wrote in the first supplement of this Dictionary. But a severer blow was the death on 11 March 1894 of his elder brother, Sir James Fitzjames Stephen [q. v.], of whom he prepared with great rapidity a full memoir between November 1894 and January 1895. The death, on 5 May 1895, of his second wife, to whose devotion he owed much, caused him poignant grief, from which he recovered slowly. Yet in spite of private sorrows and of the growing infirmity

of deafness which hampered his social intercourse in his last years he wrote, shortly before his death, that 'not only had he had times of exceeding happiness,' but that he had been 'continuously happy except for certain periods.'

Stephen received in later life many marks of distinction. He was chosen president of the London Library in 1892 in succession to Lord Tennyson, and keenly interested himself until his death in its welfare. He was made hon. LL.D. of Edinburgh in 1885, and of Harvard in 1890; hon. Litt.D. of Cambridge in June 1892, and D.Litt. of Oxford in December 1901. He was elected hon. fellow of Trinity Hall on 13 June 1891, and a corresponding member of the Massachusetts Historical Society in December 1895. In June 1902, on the occasion of King Edward VII's coronation, he was made K.C.B. He was also appointed in 1902 an original fellow of the British Academy, and he was for a year a trustee of the National Portrait Gallery.

In 1901 Stephen edited 'The Letters of J. R. Green,' and in 1903 he contributed to the 'National Review' four autobiographical articles called 'Early Impressions,' which showed no decline of vivacity (not reprinted). His latest books were the monograph on Hobbes (posthumously published, 1904), and 'English Literature and Society in the Eighteenth Century' (published on the day of his death), a course of lectures prepared in his capacity of Ford lecturer in English History at Oxford for 1903; illness compelled him to entrust to another the delivery of these lectures.

Stephen's health broke down in the spring of 1902, when internal cancer manifested itself. The disease progressed slowly. An operation in December 1902 gave temporary relief, but he thenceforth lived the life of an invalid. He was able to pursue some literary work till near the end. He died at his residence, 22 Hyde Park Gate, on 22 Feb. 1904. He was cremated at Golder's Green, and his ashes were buried in Highgate cemetery.

Stephen's work, alike in literary criticism and philosophy, was characterised by a frank sincerity which is vivified by a humorous irony. His intellectual clarity bred an impatience of conventional religious beliefs and many strenuous endeavours to prove their hollowness. The champions of the broad church excited his particular disdain, because to his mind they were muddle-headed, and therefore futile. He put: no trust in halfway houses. At the

same time both in his philosophical and especially in his literary judgments there was an equability of temper which preserved him from excesses of condemnation or eulogy. Reserved and melancholy in manner, he enjoyed the affectionate admiration of his most enlightened contemporaries. His friend George Meredith sketched him in the 'Egoist' (1879) as Vernon Whitford, 'a Phœbus Apollo turned fasting friar'; Meredith admitted that the portrait did not do Stephen 'full justice, though the strokes within and without are correct' (MEREDITH'S *Letters*, ii. 331). There was something of the Spartan in Stephen's constitution. But there was no harshness about his manly tenderness, his unselfishness, and his modesty. To younger associates he was always generous in encouragement and sympathy. His native magnanimity abhorred all the pettiness of temper which often characterises the profession of letters. It is supererogatory to dwell here on the services which he rendered to this Dictionary, alike as first editor and as chief contributor.

Stephen married (1) on 19 June 1867, Harriet Marian, younger daughter of Thackeray the novelist (she died in London suddenly on 28 Nov. 1875); (2) on 26 March 1878, Julia Prinsep, widow of Herbert Duckworth and youngest daughter of Dr. John Jackson, long a physician at Calcutta, by his wife Maria Pattle; she was a woman of singular beauty and refinement of mind, and died after a short illness on 5 May 1895. She was a close friend of G. F. Watts, who painted her portrait, of James Russell Lowell, and of George Meredith. She published in 1883 'Notes from Sick Rooms,' and wrote for this Dictionary a memoir of her aunt, Julia Margaret Cameron. By his first wife Stephen left a daughter, Laura; and by his second wife two sons and two daughters. The elder son, Julius Thoby Stephen (1880-1906), was at one time scholar of Trinity College, Cambridge.

A portrait by G. F. Watts, painted in 1878, belongs to his surviving son, Adrian. His 'Collected Essays' (10 vols., with introd. by Mr. James Bryce and Mr. Herbert Paul) came out in 1907.

Stephen's friends founded in 1905 the Leslie Stephen lectureship in Cambridge, for the biennial delivery of a public lecture 'on some literary subject, including therein criticism, biography, and ethics.' The subscribers also presented an engraving of Stephen's portrait by Watts to the Athenæum, the London Library, Trinity Hall, Cambridge, the Working Men's College, London, and Harvard University,

institutions with which he had been associated.

CAROLINE EMELIA STEPHEN (1834-1909), Sir Leslie Stephen's only surviving sister, and youngest of the family, was born at Kensington on 8 Dec. 1834. Educated at home in a literary atmosphere, she became an occasional contributor at an early age to the 'Saturday Review' and the 'Spectator.' Always religiously inclined, she occupied herself with philanthropic work, and in 1871 published a sympathetic tractate on 'The Service of the Poor.' Acquaintance with Robert Fox and his family at Falmouth interested her in the Society of Friends. After attending several Friends' meetings she joined the society in 1879, being almost the only convert to Quakerism of her generation. She explained the grounds of her conversion in 'Quaker Strongholds' (1891). She remained till her death a loyal and zealous member of the society. Establishing herself in Chelsea after her mother's death in 1875, she continued in spite of feeble health her philanthropic activities. She was on friendly terms with Octavia Hill (1838-1912), and under her influence built in Chelsea a block of tenements which she called Hereford Buildings, and collected the rents herself. She subsequently moved to Westcott, near Dorking, and in 1882 to West Malvern. In 1885 she settled at Cambridge, where she remained till her death. Her niece, Miss Katharine Stephen, was principal of Newnham College, and Miss Stephen occasionally gave addresses there and at Girton. Some of these were published in the 'Hibbert Journal.' A collected volume of addresses and essays, chiefly on religious subjects, appeared in 1908 as 'Light Arising.' In 1908 she privately printed a selection of her father's correspondence under the title 'The First Sir James Stephen.' Until deafness disabled her she served on the committee of management of the convalescent home attached to Addenbrooke's hospital. She died at The Porch, Cambridge, on 7 April 1909, and was buried there. After her death was published 'The Vision of Faith and other Essays' (1911), with a memoir by her niece, Katharine Stephen, and notice of her relation with the Society of Friends by Dr. Thomas Hodgkin.

STEPHENS, FREDERIC GEORGE (1828-1907), art critic, born on 10 Oct. 1828, was the son of Septimus Stephens and his wife, who were for a time during Frederic's youth master and mistress of the Strand Union Workhouse in Cleveland Street. He was lamed for life through an accident at the age of nine. He entered as a student in the Royal Academy on 13 Jan. 1844, on the nomination of Sir William Ross [q. v.], who lived in Fitzroy Square hard by. Here he made the acquaintance of Holman Hunt, of Millais, and subsequently of Rossetti and of Madox Brown. When in process of time the Pre-Raphaelite Brotherhood was founded in 1848 by Millais and Holman Hunt, Stephens was nominated a member by the latter. In 1849 he made some progress with a picture of King Arthur and Sir Bedivere, and in 1850 acted as an assistant to Holman Hunt in the restoration of Rigaud's ceiling decoration at Trinity House. He painted small whole-length portraits of his father and mother, both of which were exhibited at the Royal Academy, the latter in 1852 and the former in 1854. But it soon became evident that Stephens had mistaken his vocation, and he became an art-critic. He contributed some papers on Italian painting to 'The Germ,' the Pre-Raphaelite organ. He was soon writing notices for the 'Critic,' the 'London Review,' 'Dublin University Magazine,' 'Macmillan's Magazine,' 'Weldon's Register,' and for some American and French periodicals. In 1861 he was introduced by David Masson [q. v. Suppl. II] to Hepworth Dixon, the editor of the 'Athenæum,' and from that time till January 1901 he was the art-critic of that periodical, contributing to every number but two for forty years. His series of articles on 'The Private Collections of England,' correcting and supplementing van Waagen, were invaluable at the time, and are even now often the sole sources of the information they supply. As a critic he was industrious, learned, and careful, accumulating and testing facts most laboriously and conscientiously; but he was out of sympathy with modern developments of his art. He was for many years teacher of art at University College School, where he taught with much seriousness drawing from the antique. He was also secretary of the Hogarth Club. Besides his contributions

to periodicals Stephens was a voluminous writer of books. His best-known works are the unfinished 'Catalogue of Prints and Drawings (Personal and Political Satire) in the British Museum' (4 vols. 1870-83), a massive collection of minute detail, and his 'Portfolio' sketch of the work and life of D. G. Rossetti (1894; new edit. 1908), which, though not free from inaccuracies, is of great value as written from personal knowledge. Stephens's anonymous pamphlet, 'William Holman Hunt and his Work' (1860) (on Holman Hunt's 'Christ in the Temple') gives a good idea of the inspiration and methods of the Pre-Raphaelites, and he remained for many years a personal friend of Holman Hunt. But he was more in sympathy with the aims and teaching of Rossetti, whose champion he constituted himself, than with those of the Pre-Raphaelite school. A rupture between him and Holman Hunt took place in their old age, and after the publication of Holman Hunt's 'Pre-Raphaelitism' in 1905 some controversy took place in the press between them over the respective parts that Holman Hunt and Rossetti played in the initiation of the Pre-Raphaelite movement. Stephens contended that Rossetti was the moving spirit and Holman Hunt the disciple (cf. *The Times*, 16 Feb. 1906).

Other of Stephens's more important publications were: 1. 'Masterpieces of Mulready,' 1867, much of which appeared in 'Memorials of William Mulready' in 'Great Artists' series, 1890. 2. 'The Early Works of Sir Edwin Landseer, R.A.,' anon. 1869; re-issued as 'Memoirs of Landseer,' 1874; revised in a volume in 'Great Artists' series, 1880. 3. 'A Memoir of George Cruikshank' (including an essay by W. M. Thackeray), 1891. He also wrote two works on Norman and Flemish art (1865). He contributed letterpress to illustrations of Reynolds (1866), J. C. Hook (1884), and Alma Tadema (1895), and notes to the catalogues of exhibitions at the Grosvenor Gallery of the works of Reynolds (1884), Gainsborough (1885), Millais (1886), and Van Dyck (1887). He also penned a prefatory essay to Ernest Rhys's 'Sir Frederic Leighton' (folio, 1895).

In the course of his career Stephens brought together a large collection of prints and drawings at his house in Hammersmith Terrace, where he died of heart disease on 9 March 1907. He married early in 1866. His widow survives with one son, Holman Stephens, a civil engineer, born on 31 Oct. 1868.

Stephens was in his youth remarkably

handsome. He was the model for the head of Christ in Ford Madox Brown's 'Christ washing Peter's Feet,' the Ferdinand in Millais's 'Ferdinand and Ariel,' and the servant in the same artist's 'Lorenzo and Isabella.'

Journal; Esther Wood, Dante Rossetti and the Pre-Raphaelite Movement, 1894; Letters to William Allingham, 1911; Francis, Notes by the Way, xxxiii-iv; MS. note supplied by Mr. Denis Eden, a pupil at University College School; private information.] R. S.

STEPHENS, JAMES (1825-1901), organiser of the Fenian conspiracy, the son of an auctioneer's clerk, was born in the city of Kilkenny either in 1824 (*Pall Mall Mag.* xxiv. 331) or, more probably, in 1825. Displaying as a boy considerable talent for mathematics, he received a fairly good education with a view to becoming a civil engineer, and at the age of twenty he obtained an appointment on the Limerick and Waterford railway, then in course of construction. He was a protestant, and like many of his class and creed he fell under the influence of the Young Ireland propaganda, but unlike the majority his interests were rather of an active than of a literary sort, and he took a chief part in organising the military clubs which were intended to secure the success of the revolutionary movement. He joined William Smith O'Brien [q. v.] shortly before the Killenalee affair, and acted as a sort of aide-de-camp to him both before and during the affray at Ballingarry on 29 July 1848. He was slightly wounded on that occasion, but by shamming death he managed to elude detection and effect his escape. While wandering about the country from one hiding-place to another he fell in with Michael Doheny of the 'Felon's Track,' and with him planned a daring scheme for kidnapping the prime minister, Lord John Russell, who was at the time visiting Ireland. The plot miscarried, and after several hairbreadth escapes Stephens managed on 24 Sept. to slip out of the country in disguise and eventually to reach Paris.

Here he seems for some years to have earned a scanty livelihood by giving lessons in English; but he was a born plotter, and the atmosphere of conspiracy hung at the time thickly over Europe (cf. O'LEARY, *Fenians and Fenianism*, i. 70, note). A

scheme of a plot for effecting the freedom of Ireland was broached to him by John O'Mahony [q. v.], and while O'Mahony and Doheny proceeded to America to see what could be done in that quarter, Stephens, accompanied by Thomas Clarke Luby [q. v. Suppl. II], made a tour of inspection through Ireland. After travelling up and down the country for nearly a year and mixing with all classes and conditions of the population, Stephens was convinced of the feasibility of a fresh movement in the form of a secret conspiracy, with himself as its chief organiser.

Thus the Irish Republican Brotherhood, as it was afterwards called, came into being. The society was based on military principles, the unit being the 'circle' or regiment. For the purposes of organisation the country was divided into provinces, and to each province (Dublin being reserved by Stephens for himself as a separate province) was assigned an organiser whose business it was, wherever he thought fit, to select some individual as a 'centre' or colonel, who in his turn was to choose nine captains, each captain nine sergeants, and each sergeant nine men to form the rank and file of the 'circle.' In this way a 'circle' would consist of 820 men. The scheme appealed to the military instincts of the Irish, and before long Leinster and Munster and even parts of Ulster were dotted with 'circles.' The main drawback was the lack of funds to provide arms. To remedy this defect Stephens visited America towards the close of 1858. During the five months he spent there his enthusiasm and ability as an organiser gave life to the Fenian Brotherhood, which was simultaneously planned on the same lines and with the same aims as the Irish Republican Brotherhood, established there by O'Mahony, and when he returned to Europe in March 1859 he was richer by some 700*l*. His success stimulated the movement in Ireland, and in 1861, by way of demonstrating the strength of his organisation, he exerted himself, after some hesitation, to give as imposing a character as possible to the public funeral in Glasnevin cemetery, Dublin, of Terence Bellew MacManus [q. v.], a rather insignificant member of the Young Ireland party. After that event there was no question as to the strength of Fenianism in Ireland. But neither the arms nor the opportunity of using them seemed to be forthcoming, and as time went on Fenian opinion in both Ireland and America grew restive. Stephens encouraged the belief that O'Mahony was

to blame for the inaction. The result was that under the impression that O'Mahony was acting as a drag on the movement a party of action sprang into existence in America which in the end wrecked the conspiracy.

Meanwhile Stephens had been employing his leisure time in drawing up a scheme for the future government of Ireland in the event of the success of the conspiracy, which he published as a pamphlet entitled 'On the Future of Ireland, and on its Capacity to exist as an Independent State. By a Silent Politician' (Dublin, 1862). If his plan had been realised, it would have conferred almost unlimited power on him as the probable president of the proposed republic (cf. RUTHERFORD, *Secret Hist. of the Fenian Conspiracy*, i. 288-95). In the autumn of 1863 Stephens founded a newspaper for the propagation of his ideas. Under the editorship of Luby, Kickham, and O'Leary the 'Irish People' proved a great success both financially and as an organ of the party. In America, on the other hand, the agitation, owing to the quarrel between O'Mahony and the party of action, was stagnating, and in March 1864 Stephens recrossed the Atlantic. Though his intervention was at first resented by O'Mahony he was on the whole well received, and during his five months' visit he did much to restore order and to extend the organisation. He announced that in the case of England being drawn into war, as seemed probable at the time, over the Schleswig-Holstein business, he would at once raise Ireland, and that war or no war a rising should take place in 1865 or the association be dissolved. His pronouncement stimulated the flow of subscriptions.

On returning to Ireland in August, Stephens found things there in a very forward state. But England did not go to war, and when the summer of 1865 arrived the situation was unchanged except for the fact that the clamour for an immediate rising or dissolution, fed by American intrigues, had grown practically irresistible. Unable to go back on his promise, Stephens finally fixed as the day for the rising the anniversary of Robert Emmet's execution, 20 Sept. But before that day arrived government had obtained information of what was intended, and on 15 Sept. the offices of the 'Irish People' were raided and the principal conspirators arrested. Stephens represented that the loss of some papers by an American envoy put the police on the track. On the other hand

Rutherford hints that Stephens himself, seeing the game was up, betrayed the plot. The fact seems to be that while there was no direct treachery there was a good deal of culpable negligence. Stephens was not arrested at the time, a point which is considered to weigh heavily against him, but neither were Kickham, Brophy and others, and there is no reason to doubt that, had he liked, Stephens could easily have slipped out of the country. He remained at his post, hoping against hope that the expected money to purchase arms would arrive from America in time. The money miscarried, and on 11 Nov. Stephens, under the name of Herbert, was arrested at Fairfield House, Sandymount, and confined in Richmond prison. He had boasted that his organisation was so perfect that no gaol in Ireland was strong enough to hold him. His confidence proved well founded. With the connivance of his warder and the assistance of his friends outside he managed to escape on 24 Nov. A large reward was offered for his capture, but Stephens seemed to lead a charmed life. No assistance arrived from America, and he easily escaped to Paris on 11 March 1866. Some weeks later he sailed for New York. His efforts to close up the Fenian ranks there proved fruitless. As a last desperate throw he announced amid applause, at a monster meeting on 28 Oct., his intention of immediately returning to Ireland and unfurling the flag of rebellion. But when in the succeeding weeks Stephens showed no sign of action he was denounced as a traitor on 20 Dec. at a meeting at which he was present. Next day he was formally deposed as 'a rogue, an impostor, and a traitor.' After lingering for some time in New York in constant fear of his life, Stephens made his way back to Paris, where he eked out a scanty livelihood by journalism and by giving lessons in English. In 1885 he was wrongly suspected of being concerned in the American dynamite plots and his expulsion from France was demanded, but the mistake being admitted he was allowed to return to Ireland, where his friends organised a national subscription on his behalf. He was thereby enabled to live in comparative comfort at Blackrock, where he died on 29 April 1901.

Stephens was the creator of an organisation which, if it failed in its immediate object, exercised an enormous influence not only on Irish opinion the wide world over but on the relations between England and Ireland for many years. Believing that it was only by open force—by meeting

England on the field of battle—that the freedom of Ireland could be won, he had no sympathy with the methods of the dynamite conspirators, and even less with the parliamentary methods of Butt and Parnell. He was a difficult man to deal with—vain, arrogant, and not scrupulously truthful. On the accessible evidence he may be pronounced not guilty of treachery to his fellow-conspirators. At any rate the charge is not proven.

Stephens is described as a broad-shouldered, stoutly built man of medium height, with small, furtive-looking eyes. A photographic likeness of him forms the frontispiece to vol. ii. of O'Leary's 'Fenians and Fenianism,' and there is another by Lafayette, Ltd., in the article in the 'Pall Mall Magazine.' Stephens married the sister of his friend George Hopper, whose father was a small tradesman in Dublin.

[O'Leary's *Recollections of Fenians and Fenianism*; James Stephens, by one who knew him, in *Pall Mall Mag.* xxiv. 331-7; Rutherford's *Secret Hist. of the Fenian Conspiracy*; Doherty's *Felon's Track*; Pigott's *Personal Recollections of an Irish Journalist*; Le Caron's *Twenty-five Years of Secret Service*; *Eye-Witness's Arrest and Escape of James Stephens*; J. Stephens, *Chief Organiser of the Irish Republic, N.Y., 1866*; and authorities mentioned in the text. An examination of Stephens's unpublished papers, lately in the possession of a personal friend of Michael Davitt (cf. *Davitt's Fall of Feudalism in Ireland*, ch. vii.), is needed to reveal the full truth.] R. D.

STEPHENS, JAMES BRUNTON (1835-1902), Queensland poet, born at George Place, Borrowstounness in Linlithgowshire, on the Firth of Forth, on 17 June 1835, was son of a schoolmaster there in poor circumstances. When he was still quite young, his family moved to Edinburgh, and he was educated at Edinburgh University (1852-4), paying his college fees, it is said, by teaching in the evening and in the vacations. He had a successful university career, although he took no degree, and on leaving college became a travelling tutor for three years, spending a year in Paris, six or seven months in Italy, and visiting Egypt, Palestine, Turkey, the Levant, and Sicily. Subsequently he was for six years a schoolmaster at Greenock, and did some writing in a small way. In 1866, on account of health, he emigrated to Queensland, and landed in the colony about the end of April. For a short time he lived with a cousin at Kangaroo Point on the outskirts of Brisbane. He engaged

in tutorial work there, and afterwards at a bush station, where he wrote the first and most important of his poems, 'Convict Once.' This was published in London in 1871. In 1873 he was appointed a teacher in the department of public instruction under the government of Queensland, and became headmaster successively of schools at Stanthorpe on the Darling Downs and at Ashgrove in the Brisbane suburbs. In 1883 he was appointed by Sir Thomas McIlwraith correspondence clerk in the colonial secretary's office. He proved a capable and hard-working official, and was chief clerk and acting under-secretary, when he died at Brisbane on 29 June 1902. He was buried in the South Brisbane cemetery. In 1876 he married Rosalie, eldest daughter of Thomas Willet Donaldson, of Danescourt, co. Meath, Ireland, and left one son and four daughters.

Stephens, who stands in the forefront of Australian poets, long contributed both verse and prose to Australian newspapers and reviews. A blank verse poem, 'Mute Discourse,' was first published in the 'Melbourne Review,' and 'A Hundred Pounds,' a novelette, appeared in the 'Queenslander,' being republished in 1876. His first separately issued poem, 'Convict Once' (London, 1871; Melbourne, 1885; 1888), written in English hexameters, alternately rhymed, showed a rare wealth of imagination and diction called forth by the Australian bush. Other volumes which prove his whimsical humour and metrical facility, as well as serious sentiment, were 'The Godolphin Arabian,' written in 1872 (Brisbane, 1873; new edit. 1894), and 'The Black Gin and other Poems' (Melbourne, 1873); 'Mute Discourse' (Brisbane, 1878); 'Marsupial Bill' (Brisbane, 1879); 'Miscellaneous Poems' (London and Brisbane, 1880); and 'Fayette or Bush Revels' (Brisbane, 1892). A collection of his poetical works was published at Sydney in 1902. Although he did not confine himself to Australian subjects, and some of his inspiration came from books and travel, yet his work bears the impress of Australia, especially of Queensland, where he spent his Australian life. He was a central figure in the literary circle at Brisbane which developed into the Johnsonian Club, of which he was at one time president, and which gave occasion to one of his lighter pieces, 'A Johnsonian Address.'

C. P. L.

STEPHENS, WILLIAM RICHARD WOOD (1839-1902), dean of Winchester, born on 5 Oct. 1839 at Haywards Field, Stonehouse, Gloucestershire, where his father carried on a wool or cloth business before he became partner in a Reading bank, was younger son of Charles Stephens and Catharine, daughter of Sir Matthew Wood [q.v.] and sister of William Page Wood, baron Hatherley [q.v.]. Being delicate in boyhood, Stephens was educated at home until he went to Balliol College, Oxford, where he obtained a second class in moderations and a first in the final classical school, and graduated B.A. in 1862, proceeding M.A. in 1865, B.D. in 1895, and D.D. in 1901. After leaving Oxford he lived at home or travelled on the continent in company with his college friend John Addington Symonds (1840-1893) [q.v.] until 1864, when he was ordained to the curacy of Staines, Middlesex. In 1866 he became curate of Purley, Berkshire, and in 1870, on the recommendation of Walter Farquhar Hook [q.v.], dean of Chichester, the duke of Richmond presented him to the vicarage of Mid Lavant, Sussex; he was lecturer at Chichester Theological College (1872-5), and examining chaplain to the bishop of Chichester 1875-94. In 1875 he was preferred to the prebend of Whiting or Wittering, then an office of emolument and carrying with it the post of theological lecturer in Chichester Cathedral. He was presented to the rectory of Woolbeding, Sussex, in 1876, and was proctor of the clergy in convocation 1880-6. In 1894 he was appointed by the crown to the deanery of Winchester, and was installed on 4 Feb. 1895. In the same year he was elected F.S.A. After an illness of about six weeks he died at the deanery of typhoid fever on 22 Dec. 1902, and was buried in the graveyard of the cathedral. He married, on 31 Aug. 1869, Charlotte Jane, youngest daughter of Dean Hook; she survived him with one son and three daughters.

Stephens was wealthier than most clergy, and spent his money liberally; he restored the church at Mid Lavant and practically rebuilt the chancel at Woolbeding. At Winchester he contributed largely to the repair of the roof of the cathedral, which was carried out while he was dean, mainly through his exertions in raising money, at a cost of 12,600*l.* Other improvements in

the fabric and the character and order of the services were due to his authority or influence; he spared no trouble and no expense in fulfilling his desire to make the cathedral services 'a pattern of devout worship.' The chapter benefited by his capacity for business. He devoted much time to conducting working people and colonial and foreign visitors over the cathedral and instructing them in its history and architecture; he took part in many local endeavours for religious and social reforms, and was active in the cause of temperance. He was a liberal in politics, and although a high churchman, cordially co-operated with nonconformists in social and philanthropic work.

Throughout life he read and wrote much ecclesiastical history and biography. His historical work is scholarly, careful, and attractively presented. He was a sympathetic biographer, and able to depict personality. He published: 1. 'St. Chrysostom: his Life and Times,' 1872, 1880. 2. 'Memorials of the South Saxon See and the Cathedral Church of Chichester,' 1876. 3. 'Christianity and Islam, the Bible and the Koran, Four Lectures,' 1877. 4. Two pamphlets on the 'Burials Question' and 'Cathedral Chapters considered as Diocesan Councils,' 1877. 5. 'The Life and Letters of Walter Farquhar Hook, D.D.,' 2 vols. 1878, a biography of high merit which met with much success (condensed edition, 1880). 6. 'The Relations between Culture and Religion, Three Lectures,' 1881. 7. 'The South Saxon Diocese, Selsey, Chichester,' in 'Diocesan Histories,' 1881. 'Memoir of the Right Hon. William Page Wood, Baron Hatherley,' 2 vols. 1883. 9. 'Hildebrand and his Times,' in Bp. Creighton's 'Epochs of Church History,' 1886. 10. A translation from St. Chrysostom, 'On the Christian Priesthood,' in Schaff's 'Nicene and Post-Nicene Fathers,' xii. 1889. 11. 'Life and Letters of E. A. Freeman,' 2 vols. 1895, too long a record of the uneventful life of a scholar. 12. Completion of Dean Kitchin's pamphlet on 'The Great Screen in Winchester Cathedral,' 1899. 13. 'Memoir of Richard Durnford, D.D., Bishop of Chichester,' 1899. 14. 'Helps to the Study of the Book of Common Prayer,' 2nd edit. 1901. 15. 'A History of the English Church from the Norman Conquest to the Accession of Edward I,' 1901, the second volume of 'A History of the English Church,' edited by him and W. Hunt, complete in 9 vols., of which he only lived to see four published. 16. 'The Bishops of Winchester,' with the Rev. Canon W. W. Capes, reprinted from

the 'Winchester Diocesan Chronicle,' 1907, 4to. He also in 1887, in conjunction with the Rev. Walter Hook, produced a revised edition of Dean Hook's 'Church Dictionary,' and he contributed several articles, including that on St. Anselm, to this Dictionary.

A portrait in oils by Mr. Frederic Calderon is in the possession of his widow.

[Private information; personal knowledge; the Guardian, 31 Dec. 1902; Memoir reprinted, with reproduction of a photograph, from the Hampshire Observer, 27 Dec. 1902 and 3 Jan. 1903.] W. H.

STEPHENSON, SIR FREDERICK CHARLES ARTHUR (1821-1911), general, born in London on 17 July 1821, was son of Sir Benjamin Charles Stephenson, K.C.H., surveyor-general of the board of works by his wife Maria, daughter of the Rev. Sir Peter Rivers, sixth baronet. He was present as a page of honour at the coronation of William IV on 8 Sept. 1831, and thereby became entitled to a commission in the army. He joined the Scots Guards as a lieutenant on 25 July 1837, and was promoted captain on 13 Jan. 1843. He was appointed brigade major in April 1854, and attained the rank of lieutenant-colonel on 20 June following. He served throughout the Crimean war with his regiment. He was engaged at the battles of Alma and Inkerman, and during the siege of Sevastopol he acted as military secretary to General Sir James Simpson [q. v.], who succeeded to the command of the British troops in the Crimea on 28 June 1855. For his services Stephenson received the medal with four clasps, the legion of honour, and the fourth class of the order of the Mejidie. In 1857 he sailed for China, and was wrecked in the transport vessel Transit off the straits of Banca. Although some of the troops under his charge were diverted to India, where the Mutiny had just broken out, Stephenson himself proceeded to China, where he was nominated assistant adjutant-general to the force under Sir Charles Van Straubenzee [q. v.]. He took part in the capture of Canton (5 Jan. 1858), and after the conclusion of peace at Tientsin he remained with the army of occupation. He was gazetted C.B., and was twice mentioned in despatches (*Lond. Gaz.* 5 Mar., 15 Oct. 1858). On the renewal of hostilities in 1860 he shared in Sir Hope Grant's expedition and was present at the storming of the Taku forts (21 Aug.) and the capture of Peking (15 Oct.). Stephenson was awarded the Chinese medal with three clasps, and on his return

home he was promoted colonel on 15 Feb. 1861. In 1868 he was given the command of the Scots fusiliers, and was advanced to major-general. From 1876 to 1879 he commanded the brigade of guards, and meanwhile he attained the rank of lieutenant-general on 23 Feb. 1878.

In May 1883 Stephenson succeeded Sir Archibald Alison [q. v. Suppl. II] as commander of the army of occupation in Egypt. After the defeat of Valentine Baker [q. v. Suppl. I] at El Teb on 4 Feb. 1884 he organised the expedition under Sir Gerald Graham [q. v. Suppl. I] for the relief of Tokar and the defence of Suakin. In the following May, when the British government was contemplating the despatch of an expedition to the relief of Charles George Gordon [q. v.], Stephenson made urgent representations to Lord Hartington [q. v. Suppl. II] in favour of an advance on Khartoum by the Suakin-Berber route. His scheme, however, was rejected by the cabinet, and the Nile expedition proposed by Lord Wolseley was carried out in opposition to Stephenson's advice. He was nominated K.C.B. in 1884, and after the evacuation of the Sudan he took command of the frontier field force. On 30 Dec. 1885 he inflicted a severe defeat on the main body of the Mahdists at Ginniss. For his services he received the thanks of parliament, the G.C.B., and the grand cross of the order of Mejidie. He resigned his command in 1887 and returned to England. In 1889 he became colonel of the Lancashire and Yorkshire regiment, and in 1892 he succeeded to the colonelcy of the Coldstream guards. He was made constable of the Tower of London in 1898. He died unmarried in London on 10 March 1911, and was buried at Brompton cemetery. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1887.

[The Times, 11 March 1911; Daily Telegraph, 13 March 1911; Official Army List; Lord Wolseley, *Story of a Soldier's Life*, 1903, i. 231; R. H. Vetch, *Life, Letters, and Diaries of Lieut.-general Sir Gerald Graham*, 1905; Sir Charles Watson, *Life of Major-general Sir Charles Wilson*, 1909; H. E. Colville, *History of the Sudan Campaign*, 2 parts, 1889; Ross of Bladensburg, *History of the Coldstream Guards*, 1896.] G. S. W.

STEPHENSON, GEORGE ROBERT (1819-1905), civil engineer, born at New-castle-on-Tyne on 20 Oct. 1819, was only son of Robert Stephenson, brother of George Stephenson of railway fame [q. v.]. He was thus a first cousin of Robert Stephen-

son [q. v.]. At the age of twelve he was sent to work with underground viewers and surveyors at the Pendleton collieries, near Manchester, where his father was chief engineer. He was then trained for two years in the colliery workshops and was given charge of one of the engines used for drawing wagons up an incline. Owing to his father's improved circumstances a better education was then designed for him, and he was sent to King William's College, Isle of Man. In 1837 his father died, and he was obliged to set to work again. Thereupon his uncle George employed him in the drawing-office of the Manchester and Leeds railway, where he remained until 1843, when he was appointed engineer to the Tapton collieries. Shortly afterwards his cousin Robert made him resident engineer on the new lines of the South Eastern railway, of which Robert was engineer-in-chief. He superintended the construction of the Maidstone and the Minster and Deal branches; the surveys and construction of the North Kent line; the conversion into a railway of the long canal tunnel between Strood and Higham, and the completion of the line to Gravesend; the laying out and partial construction of the Ashford, Rye and Hastings line, and the design of the iron swing-bridge at Rye, one of the earliest of its kind for railway purposes; the laying out of the line from Red Hill to Dorking, and other work. He remained with the South Eastern Railway Company until his cousin Robert's resignation. His activities were not confined to the South Eastern system. In 1845 he laid out an abortive line between Manchester and Southampton, and he constructed the Waterloo and Southport railway near Liverpool. He was engineer-in-chief of the Ambergate, Matlock and Rowsley, the Grantham, Sleaford and Boston, and the Northampton and Market Harborough railways (the last opened in 1855). He was a persistent advocate of a line from the north to London for the sole purpose of mineral traffic. With George Parker Bidder [q. v.] he constructed railways for the Danish government in Schleswig-Holstein and laid out lines in Jutland; and in 1860, as consulting engineer to the provincial government of Canterbury, New Zealand, he built the line from Lyttelton to Christchurch, and designed breakwaters for Lyttelton harbour, which were executed in accordance with his plans. In 1864 he was joint engineer-in-chief with (Sir) John Hawkshaw [q. v. Suppl. I] for the East London railway. Stephenson was associated with his

cousin Robert in the design and construction of the Victoria tubular bridge across the St. Lawrence, completed in 1859, and he built the large railway bridge across the Nile at Kafr Zayat and many smaller fixed and swing bridges at home and abroad. With Robert Stephenson and Bidder he wrote a joint report (London, 1862) to the corporation of Wisbech on improvement of the River Nene; he reported with Sir John Rennie [q. v.] on the River Ouse from Lynn to the Middle Level sluice; and was responsible for the diversion of the river from Lynn to the sea, through Vinegar Middle Sand. For Said Pasha he built at Alexandria a huge bathing palace of iron and glass, the materials alone costing 70,000*l*.

In 1859, owing to the death of his cousin, he became proprietor of the locomotive-works at Newcastle-on-Tyne, with extensive collieries at Snibston and Tapton. He thereupon gradually relinquished his private practice and personally controlled these works until 1886, when the firm (Robert Stephenson & Co.) was registered as a private limited liability company. Later it was formed into a joint-stock company, of which Stephenson was a director until 1899.

He was elected a member of the Institution of Civil Engineers on 24 May 1853, became a member of the council in 1859, and was president in 1875-7. His presidential address (xlv. 2) was his only contribution to its 'Proceedings,' apart from his share in debates; but he actively fostered the welfare of the institution and helped the extension of its premises in Great George Street in 1868 by presenting his interest in premises at the rear of No. 24.

Stephenson was an enthusiastic yachtsman, and a member of the Royal Yacht Squadron. By giving prizes and in other ways he endeavoured to improve the design of the rowing and sailing vessels in use in the Kyles of Bute. His efforts for the general welfare of the district were acknowledged by the freedom of the royal burgh of Rothesay, which was conferred upon him in 1869. Keenly interested in the volunteer movement, he was a lieutenant-colonel of the engineer volunteer staff corps.

He wrote, in addition to the presidential address and the reports already mentioned, a pamphlet in the form of a letter to the president of the board of trade on 'High Speeds' (London, 1861), a protest against what he considered excessive speeds on railways. Jointly with J. F. Tone he issued a pamphlet, 'The Firth of Forth Bridge' (London, 1862), in which the

bridging of the Forth about 4 miles above Queensferry was advocated.

He died on 26 Oct. 1905 at his home, Hetton Lawn, Charlton Kings, Cheltenham.

He married (1) in 1846 Jane (1822-1884), daughter of T. Brown of Whickham, co. Durham; and (2) in 1885 Sarah (d. 1893), younger daughter of Edward Harrison, of co. Durham. He had a family of six children. A life-size portrait in oils by J. Lucas, as well as a three-quarter length portrait, belongs to his son, Mr. F. St. L. Stephenson.

[Proc. Inst. Civ. Eng. clxiii. 386; Engineer, and Engineering, 3 Nov. 1905; The Times, 31 Oct. 1905; private information.] W. F. S.

STERLING, ANTOINETTE, MRS. JOHN MACKINLAY (1843-1904), contralto singer, was born at Sterlingville, New York State, U.S.A., on 23 Jan. 1843. Her father, James Sterling, owned large blasting furnaces, and she claimed descent from William Bradford [q. v.], a pilgrim father. In childhood she imbibed anti-British prejudices, and her patriotic sympathies were so stirred in childhood by the story of the destruction of tea cargoes in Boston harbour, that she resolved never to drink tea, and kept the resolution all her life. She already possessed a beautiful voice of great compass and volume, and took a few singing lessons at the age of eleven from Signor Abella in New York. When she was sixteen her father was ruined by the reduction in 1857 of the import duties in the protective tariff, and died; she went to the state of Mississippi as a teacher, and after a time gave singing lessons. When the civil war broke out her position became very unpleasant, and with another northern girl she fled by night during the summer of 1862, and was guided north by friendly negroes. Afterwards she became a church singer and was engaged in Henry Ward Beecher's church at Brooklyn, where a special throne-like seat was erected for her. In 1868 she came to Europe for further training; she sang at Darlington in Handel's 'Messiah' on 17 Dec., and elsewhere, taking some lessons under W. H. Cummings in London before proceeding to Germany. There she studied under Madame Marchesi and Pauline Viardot-Garcia, and finally under Manuel Garcia in London. In 1871 she returned to America and became a prominent concert singer. Her voice had settled into a true contralto of exceptional power and richness. She came back to England at the beginning of 1873, but almost immediately returned to America,

and toured with Theodore Thomas's orchestra; on 13 May she gave a farewell concert at Boston. Her first engagement in London was at the promenade concert of 5 Nov. 1873; the programmes were then distinctly popular, with a tendency towards vulgarity; she insisted, in spite of all expostulations, in singing the 'Slumber Song' from Bach's 'Christmas Oratorio' and some classical Lieder. She obtained great popular success, and enthusiastic receptions on her appearance at the Crystal Palace, the Albert Hall, Exeter Hall, and St. James's Hall quickly followed. In Feb. 1874 she sang in Mendelssohn's 'Elijah' on two consecutive nights at Exeter Hall and Royal Albert Hall. Her repertory was entirely oratorio music or German Lieder. Dissident voices were not lacking; 'her style is wanting in sensibility and refinement. Excellence of voice is not all that is required in the art of vocalisation' (*Athenæum*, 14 March). Her popularity was undeniable, and she was engaged for the three choirs festival at Hereford. On Easter Sunday 1875 she was married at the Savoy Chapel to John MacKinlay, a Scotch American; they settled in Stanhope Place, London.

She did not improve in musicianship; her time was quite untrustworthy. Engagements for high-class concerts gradually ceased, but she still for some years sang in oratorio, and her taste remained faithful to the German school, including Wagner. In 1877 she found her vocation. Sullivan's 'Lost Chord' exactly suited her, and attained unprecedented popularity. She became more and more restricted to simple sentimental ballads, especially those with semi-religious or moralising words, which she declaimed with perfect distinctness and intense fervour. She invested 'Caller Herrin' with singular significance. In her later years she favoured Tennyson's 'Crossing the Bar' in Behrend's setting.

She had always leant to eccentricity, refusing to wear a low-necked dress, and getting permission to dispense with one at a command performance before Queen Victoria. She never wore a corset. After belonging to various sects, she at last became an ardent believer in 'christian science.' In 1893 she made an Australian tour, during which her husband died at Adelaide. In 1895 she revisited America, but did not feel at home there, and soon returned to London.

In the winter of 1902-3 her farewell tour was announced. Her last appearance was at East Ham on 15 Oct. 1903, and the last

song which she sang was 'Crossing the Bar.' She died at her residence in Hampstead on 10 Jan. 1904, and was cremated at Golder's Green. She was survived by a son and a daughter, both now popular vocalists.

A full-length portrait by James Doyle Penrose, exhibited at the Royal Academy in 1891, now belongs to her son.

[Herson, M. Sterling MacKinlay's Antoinette Sterling and other Celebrities (with two portraits), 1906; the same writer's Garcia the Centenarian and his Times, 1908; Illustrated London News, 24 April 1875 (with portrait); Musical Herald, Feb., March, and Nov. 1904; Musical Times, Feb. 1904; Grove's Dict. (with inaccurate date of birth); personal reminiscences from March 1874.] H. D.

STEVENSON, DAVID WATSON (1842-1904), Scottish sculptor, born at Ratho, Midlothian, on 25 March 1842, was son of William Stevenson, builder. Educated at the village school, Ratho, he was for eight years (1860-8) in Edinburgh as pupil of the sculptor William Brodie [q. v.]. During that time he attended the School of Art and the Life School of the Royal Scottish Academy. In 1868 he took a studio at Edinburgh and commenced work as a sculptor on his own account. Subsequently, in 1876, he pursued his studies in Rome, and later interest in modern French sculpture took him frequently to Paris. Elected an associate of the Royal Scottish Academy in 1877, he gradually added to his reputation, and in 1886 he was chosen academician. As early as 1868 he undertook the groups of 'Labour' and 'Learning' for the Prince Consort memorial, Edinburgh, and amongst later commissions of a monumental kind were the Platt memorial, Oldham, the colossal figure of Wallace for the national monument on the Abbey Craig, and statues of Tannahill at Paisley, 'Highland Mary' at Dunoon, and Burns at Leith. Of his ideal works, 'Nymph at the Stream,' 'Echo,' 'Galatea,' and 'The Pompeian Mother' may be named. He also executed many portrait busts. While his earlier work was pseudo-classic in manner, his later shows a certain sensitiveness to modern developments in which realism, individuality, and style are combined. After a few years of failing health, he died unmarried in Edinburgh on 18 March 1904. His younger brother, Mr. W. G. Stevenson, R.S.A., is a sculptor, and his sister, Mrs. Drew, is an accomplished embroiderer.

[Private information; R.S.A. catalogues

and report, 1904; *Scotsman*, 19 March 1904.] J. L. C.

STEVENSON, JOHN JAMES (1831-1908), architect, born in Glasgow on 24 Aug. 1831, was third son of James Stevenson by his wife Jane, daughter of Alexander Shannan. His education, begun in the High School of Glasgow, was continued in the university, where he graduated M.A. Being intended for the Scottish ministry, he took the theological course at Edinburgh, followed by a summer at Tübingen.

But a strong personal bent towards architecture, strengthened by a visit to Italy, induced him in 1856 to enter the office of David Bryce [q. v.] of Edinburgh, whence in 1858 he proceeded to London for further training under Sir George Gilbert Scott [q. v.]. With R. J. Johnson, a fellow student at Scott's, he made an architectural tour in France and began practice about 1860 as a partner with Campbell Douglas in Glasgow. Nine years later he spent a winter studying in Paris, and in 1870 joined E. R. Robson, a fellow pupil under Scott, who had just been appointed architect to the London school board. With him Stevenson evolved a simple type of brick design sufficiently in sympathy with early eighteenth-century architecture to be styled 'Queen Anne,' and at about the same date he built for himself 'The Red House,' Bayswater Hill, which became the meeting-place of friends prominent in literature and art, such as Alfred Ainger [q. v. Suppl. II], George MacDonald [q. v. Suppl. II], Sir W. Q. Orchardson [q. v. Suppl. II], J. H. Middleton [q. v. Suppl. I], William Morris [q. v. Suppl. I], and Prof. Robertson Smith [q. v.]. In association with Morris he became one of the original members of the committee of the Society for the Protection of Ancient Buildings. Besides the board schools, Stevenson's work comprised many designs of an ecclesiastical and domestic nature. Among the former were churches at Monzie (1868), Criefie (1881), Perth (1883), the first modern example of a crowned tower, Fairlie, an enlargement (1894), Stirling (1900), and Glasgow (1900). His country house designs include two at Westoe, South Shields (1868 and 1874); Ken Hill, Norfolk (1888); Oatlands Mere, Weybridge (1893); several in the neighbourhood of Camberley, and at Oxford and Cambridge.

His London houses were numerous, among them being groups in Palace Gate and Lowther Gardens (1878), a house, with studio, for Colin Hunter in Melbury Road

(1878), others in South Street (1879), Kensington Court (1881), the south side of Cadogan Square (1881), and Buckingham Palace Road (1892). He designed a school at Fairlie (1880), the offices of the Tyne Commissioners at Newcastle (1882), and some shipping offices in Fenchurch Avenue.

At Oxford Stevenson carried out restorations or repairs at St. John's College (1889) and Oriel (1899), besides designing the University Morphological Laboratory (1899). At Cambridge he was responsible for the university chemical laboratory (1889), new buildings at Christ's College (1886 and 1906), and made designs for the Sedgwick Memorial Museum and additions to Sidney Sussex and Clare Colleges, none of which were however carried out.

For the Orient Company he designed the interior decoration of several vessels, being the first architect to undertake such work. In 1896 Stevenson took into partnership Mr. Harry Redfern, and all works carried out after that date may be assigned to their joint authorship.

Among papers read by Stevenson to societies, many were concerned with the preservation of ancient buildings; some had an archaeological trend; he especially interested himself in the attempt to recover the design of the Mausoleum at Halicarnassus. In 1880 he published an illustrated work in two volumes, entitled 'House Architecture.'

Stevenson was elected F.S.A. in 1884 and fellow of the Royal Institute of British Architects in 1879.

Stevenson died at 4 Porchester Gardens on 5 May 1908. He married in 1861 Jane, daughter of Robert Omond, M.D. F.R.C.S. England, and was survived by her and two sons and four daughters.

[*Journal of the Royal Institute of British Architects*, 3rd series, vol. xv. 1908, p. 482; the *Builder*, vol. xciv. 1908, p. 551; information from Mr. Harry Redfern.] P. W.

STEVENSON, SIR THOMAS (1838-1908), scientific analyst and toxicologist, born on 14 April 1838 at Rainton in Yorkshire, was second son and fourth of the six children of Peter Stevenson, a pioneer in scientific farming. Thomas, a first cousin of the father, was an author and publisher, whose business at Cambridge was acquired in 1846, a year after his death, by Daniel and Alexander Macmillan, the founders of the publishing firm of Macmillan. His mother was Hannah, daughter of Robert Williamson, a banker and coachmaker of Ripon.

Stevenson, educated privately and at Nesbit's school of chemistry and agriculture, studied scientific farming for a year with his father and then in 1857 became a medical pupil under Mr. Steel of Bradford. In 1859 he entered the medical school of Guy's Hospital, graduating M.B. in 1863 and M.D. at London in 1864. In the earlier examinations he gained the scholarship and gold medal in organic chemistry (1861), in forensic medicine, and in obstetric medicine (1863). In 1864 he became M.R.C.P. and in 1871 F.R.C.P. London. In 1863 he started private practice in Bradford, but after a year returned to Guy's Hospital, where he became successively demonstrator of practical chemistry (1864-70), lecturer on chemistry (1870-98), and lecturer on forensic medicine (1878-1908), succeeding in both lectureships Alfred Swaine Taylor [q. v.]. He was analyst to the home office from 1872 to 1881, when he was appointed senior scientific analyst. That office he held till death. He was also analyst to the counties of Surrey and Bedfordshire and the boroughs of St. Pancras and Shoreditch, and medical officer of health to St. Pancras. He served as president of the Society of Medical Officers of Health, of the Society of Public Analysts, and of the Institute of Chemistry.

Pre-eminent as a scientific toxicologist, Stevenson was best known to the public as an expert witness in poisoning cases, especially in the well-known cases of Dr. G. H. Lamson (aconitine) in 1882; Mrs. Maybrick (arsenic) in 1889; Dr. Thomas Neill or Cream (strychnine) in 1892; George Chapman (antimony) in 1903; Miss Hickman (morphine) in 1903; Arthur Devereux (morphine) in 1905. He was an admirable witness, his evidence being so accurately and carefully prepared that cross-examination strengthened rather than weakened its effect. He was knighted in 1904.

Stevenson died on 27 July 1908, and was buried at Norwood cemetery. He married in 1867 Agnes, daughter of George Maberly, a solicitor of London, and had issue two sons and five daughters. His portrait was painted and is in possession of his family. A cartoon portrait appeared in 'Vanity Fair' in 1899.

Stevenson edited and greatly enlarged the 3rd edition of A. Swaine Taylor's 'Principles and Practice of Medical Jurisprudence' (1883), and together with Sir Shirley Murphy edited a treatise on 'Hygiene and Public Health' (1894). He

made eighteen contributions to the 'Guy's Hospital Reports.'

[Brit. Med. Journ. 1908, ii. 361; information from son, C. M. Stevenson, M.D., G. A. Macmillan, and F. Taylor, M.D., F.R.C.P.]
H. D. R.

STEWART, CHARLES (1840-1907), comparative anatomist, born in Princess Square, Plymouth, on 18 May 1840, was son of Thomas Anthony Stewart of Princess Square, Plymouth, M.D. of Leyden and surgeon to the Plymouth public dispensary, by his wife Harriet Howard. Charles was educated at St. Bartholomew's Hospital, and was admitted M.R.C.S. England in 1862. After practising for four years at Plymouth, he was appointed in 1866 curator of the museum at St. Thomas's Hospital, then situated in the Surrey Gardens. In 1871, shortly after the removal of the hospital to the Albert Embankment, he was appointed lecturer on comparative anatomy in the medical school, and in 1881 he became lecturer on physiology jointly with Dr. John Harley. He was also professor of biology and physiology at the Bedford College for Women from 1882-4. He left St. Thomas's Hospital in 1884 on his appointment as conservator of the Hunterian museum at the Royal College of Surgeons in succession to Sir William Henry Flower [q. v. Suppl. I]. In 1886 he became Hunterian professor of comparative anatomy and physiology at the college, and gave an annual course of lectures until 1902. Stewart fully maintained at the college the Hunterian tradition. Abreast of the current knowledge of anatomy, physiology, and bacteriology, which together make up modern pathology, he was able to utilise to the best advantage the stores of specimens collected by John Hunter. His dissections enabled him to correlate many facts for the first time, and his results were set forth in his lectures. In 1885 he lectured on the structure and life history of the hydrozoa; in 1886 and 1887 on the organs of hearing; in 1889 and again in 1896 on the integumental system; in 1890 on phosphorescent organs and colour; in 1891 on secondary sexual characters; in 1895 on the endoskeleton; in 1897 on joints, and on the protection and nourishment of the young; in 1899 on the alteration of generations. He spoke without notes and drew admirably on the blackboard, illustrating his remarks from the stores of the museum. But unhappily the lectures were neither published nor reported, and only remain in the memories

of his auditors or in their scanty notes. His valuable work survives alone in the catalogues of the Hunterian museum.

In spite of ill-health Stewart was active outside the College of Surgeons. From 1894 to 1897 he was Fullerian professor of physiology at the Royal Institution, where on two occasions he delivered the 'Friday evening' discourse. In 1866 he was elected a fellow of the Linnean Society, and served as its president (1890-4). He also took an active part in founding the Anatomical Society of Great Britain and Ireland, of which he was the original treasurer (1887-1892). He also served as secretary of the Royal Microscopical Society from 1879 to 1883. He was deeply interested in the welfare of the Marine Biological Association which was established at Plymouth, his native place. He was admitted F.R.S. in 1896, and in 1899 he received the honorary degree of LL.D. from Aberdeen. He died in London on 27 Sept. 1907, and was buried at Highgate cemetery. He married in 1867 Emily Browne, and left three sons and two daughters.

[Lancet, 1907, ii. 1061; Brit. Med. Journal, 1907, ii. 1023; Proc. Royal Soc. 1908, vol. lxxx. p. lxxxii; Field, 5 Oct. 1907; personal knowledge.] D'A. P.

STEWART, ISLA (1855-1910), hospital matron, born at Slodahill, Dumfriesshire, on 25 Aug. 1855, was second daughter of John Hope Johnstone Stewart by Jessie Murray his wife. Her father, a journalist who had served as an officer of irregular cavalry in the earlier South African campaigns, was a fellow of the Scottish Society of Antiquaries and published 'The Stewarts of Appin' in conjunction with Lieut.-colonel Duncan Stewart (Edinburgh, 1880, 4to).

Miss Stewart received her early education at home, and entered St. Thomas's Hospital, London, as a special probationer on 29 Sept. 1879. Here she made rapid progress and was entrusted with the charge of a ward sixteen months later. She left St. Thomas's Hospital in 1885 on her appointment as matron of a smallpox hospital at Darenth, in Kent, and in 1886 she became matron of the Homerton Fever Hospital. She was elected matron and superintendent of nursing at St. Bartholomew's Hospital in 1887 in succession to Miss Ethel Manson (Mrs. Bedford Fenwick). As matron she founded the League of St. Bartholomew's Hospital Nurses, the first organisation of its kind in England, though it had been foreshadowed by the American Nursing Alumnae. She remained president of the league until 1908. In 1894 Miss Stewart

was one of the founders of the Matrons' Council for Great Britain and Ireland, and she remained its president until her death. From this body came the National and the International Councils of Nurses and the Society for the State Registration of Trained Nurses, in all of which Miss Stewart was keenly interested. She was a member of the Nursing Board of Queen Alexandra's Imperial Military Nursing Service, and Principal Matron of No. 1 (City of London Hospital) of the territorial nursing service. She was also an honorary member of the Irish Nurses' Association, the German Nurses' Association, and the American Federation of Nurses. During 1907 she gave much good advice and active assistance in furthering the professional training of French nurses on the lines which had been found successful in England. For these services she was on 27 June 1908 publicly presented with a medal specially struck in her honour by the Assistance Publique, the official department which controls the hospitals at Paris.

Miss Stewart was one of the hospital matrons who by powers of organisation, foresight, and ability finally raised nursing of the sick by women from a business to a profession. In the large nursing school at St. Bartholomew's Hospital she introduced the methods of the English public schools and ruled by inculcating an *esprit de corps* which made her nurses proud to serve under her. She died at Chilworth, in Surrey, during a week-end holiday, on 6 March 1910, and was buried at Moffat, N.B. There is a bronze tablet to her memory in the church of St. Bartholomew-the-Less. A memorial to her took the form of an annual 'oration' on subjects connected with nursing; the first oration was delivered on 24 Nov. 1911.

Miss Stewart published 'Practical Nursing' in conjunction with Dr. Hubert Cuff (London and Edinburgh, vol. i, 1899; vol. ii. 1903; 11th edit. 1910).

[Brit. Journal of Nursing, vol. xlv. 1910, p. 202; St. Bartholomew's Hospital Journal, 1910, p. 104; The first Isla Stewart Oration, by Miss Rachel Cox-Davies, 1911; information from Miss Janet Stewart and Miss Hay-Borthwick; personal knowledge.] D'A. P.

STEWART, JAMES (1831-1905), African missionary and explorer, born at 5 South Charlotte Street, Edinburgh, on 14 Feb. 1831, was son of James Stewart, at one time a prosperous cab proprietor in Edinburgh, who lost his means as tenant (1842-7) of the farm of Pictstonhill, between Perth and Scone. His mother was

Jane Dudgeon, of Liberty Hall, near Glasmuir, in Haddingtonshire. After attending successively a preparatory school, Edinburgh High School, and Perth Academy, James worked as a boy on his father's farm. When the farm was abandoned, he was put to business for a time in Edinburgh. From 1850 to 1852 and 1854 to 1856 he was at Edinburgh University, spending the intervening two years (1852-4) at St. Andrews. He took the arts course, but mainly interested himself in science. His study of botany yielded two short treatises: 'A Synopsis of Structural and Physiological Botany, presenting an Outline of the Forms and Functions of Vegetable Life' (n.d.), and 'Botanical Diagrams' (1857), both of which were long in use as school and college text-books.

From 1855 to 1859 Stewart studied theology at New College, Edinburgh. The summer session of 1858 was passed at the University of Erlangen, and at the close he made a tour through Europe, including Greece and Turkey. Later, he visited North America, crossing to the Pacific coast. In 1859 he began the study of medicine at Edinburgh University.

Meanwhile in 1857 Stewart came under the spell of David Livingstone [q. v.], who was then revisiting Scotland. In 1860 he announced to the foreign missions committee of the Free Church of Scotland his intention of establishing a mission in Central Africa. He was told that a separate fund, independently administered, was needful. Accordingly he formed an influential committee, at whose request he went to Central Africa to make inquiries. With Mrs. Livingstone, who was rejoining her husband, he sailed from Southampton on 6 July 1861, and reaching Cape Town on 13 Aug., he arrived on 9 March 1862 at Livingstone's headquarters at Shupanga. There for four busy months he often acted as both doctor and chaplain. Deciding to push into the interior, he, with only one white man, a member of the Universities' Mission, explored on foot the highland lake region on both sides of the Shire and the district now covered by the Blantyre Mission. He returned, after many perilous adventures, to Shupanga on 25 Sept. 1862, and, a fortnight later, started to explore the Zambesi. Reaching Shupanga again on New Year's Day 1863, he was in Scotland in the autumn. The special mission committee in Edinburgh, on receiving his report in November, declined immediate action. The Royal Geographical Society, which elected him

(1866) an honorary fellow, acknowledged that his travels had helped to extend British territory and to undermine the slave traffic.

Stewart's interrupted medical studies were resumed at Glasgow University in 1864 and completed in 1866, when he received the degrees of M.B. and C.M., with special distinction in surgery, materia medica, and forensic medicine. At the end of 1866 he returned to Africa, reaching, on 2 Jan. 1867, Lovedale, near the eastern boundary of Cape Colony, 700 miles north-east of Cape Town. In 1870 Stewart became principal of the Lovedale Missionary Institute, which was founded in 1841 by the Glasgow Missionary Society for the training of native evangelists. Under Stewart's supervision the institute greatly extended its operations. Though supported financially by the Free Church of Scotland (now the United Free Church), Lovedale, under Stewart's rule, became a non-sectarian centre of religious, educational, industrial, and medical activity. Lovedale, owing to Stewart's efforts, is now recognised as one of the foremost educational missions in the world, and its methods have been widely adopted.

In 1870 Stewart co-operated in the establishment of a mission at Umsinga in Natal as a memorial to the Hon. James Gordon, brother of the seventh earl of Aberdeen, and in 1875 he founded the Blythswood Mission Institute, Transkei, which was opened in July 1877 with accommodation for 120 native and thirty European boarders, and quickly proved a powerful civilising agency.

On 18 April 1874, while at home for the purpose of raising money for Lovedale and Blythswood, he attended Livingstone's burial in Westminster Abbey, and soon reopened the question of establishing a mission in that part of Africa associated with Livingstone's name. In May he brought his proposal before the general assembly of the Free Church of Scotland, urging the foundation of a mission town to be called Livingstonia. 10,000*l.* was soon raised, a small steamer, the *Ilala*, was built, and an advance party which made its way to Lake Nyasa in 1875 founded Livingstonia near Cape Maclear at the southern end of Lake Nyasa. Next year, on 21 Oct., Stewart arrived and chose a new site at Bandawe, 200 miles farther north, on the western side of the lake. He spent fifteen months in organising the settlement. Meanwhile he and Dr. Robert Laws explored Lake Nyasa, which they found to

be 350 miles long, with a breadth varying from sixteen to fifty miles. They were the first white men to set foot on its northern shores. The natives were the most uncivilised they had seen. Stewart soon arranged to start a store for the benefit of the natives. The African Lakes Corporation, Ltd., 'the first of all the trading companies in that region, was formed, and did excellent civilising service' (STEWART'S *Dawn in the Dark Continent*, p. 219). The corporation acquired a capital of 150,000*l.*, and proved of immense service in fighting the slave traffic. Stewart, who returned to Lovedale at the end of 1877, left Livingstonia, which he modelled on Lovedale, to the guidance of Dr. Laws. Its prosperity grew quickly. The mission now consists of a network of stations stretching for many miles along the western shore of Lake Nyasa as well as inland, while Livingstonia itself has become a city of modern type.

From 1878 to 1890 Stewart chiefly devoted his energies to the consolidation and expansion of Lovedale, alike on its missionary and its educational sides. Sir George Grey [q. v.] obtained for him a government grant of 3000*l.* for industrial training there. He erected technical workshops, initiated a mission farm of 2000 acres, and founded a mission hospital, the first in South Africa, where native nurses and hospital assistants might be trained, and a medical school begun.

Stewart became a leading authority on all native questions, and was frequently consulted by Sir Bartle Frere [q. v.], General Gordon [q. v.], Cecil Rhodes [q. v. Suppl. II.] and Lord Milner. In 1888 he helped to draft a bill codifying the native criminal law, and did much to ensure the adoption by Cape Colony of the principle that legally the native has equal rights with the white man. In 1904 he gave evidence before the Native Affairs Commission, stoutly opposing the creed of Ethiopianism, which aimed at setting up in Africa a self-supporting and self-governing native church.

In September 1891 Stewart, amid many difficulties and dangers, established a new mission on the model of Lovedale, within the territories of the Imperial British East Africa Company, now the East African Protectorate, about 200 miles from Mombasa. This East African mission is now large and flourishing.

Returning to Scotland, Stewart in the winter of 1892-3 gave a course of lectures on evangelistic theology to the divinity students of the Free Church of

Scotland in Edinburgh, Glasgow, and Aberdeen; in 1892 he received from Glasgow University the honorary degree of D.D., and in 1899 he was moderator of the general assembly of the Free Church of Scotland. Later in 1899, at the seventh general council of the Alliance of Reformed Churches at Washington, U.S.A., he pleaded for a union of all presbyterian churches in the mission field, in an address entitled 'Yesterday and To-day in Africa.'

Stewart defended British action in the Boer war (1899-1901) on the ground that the Transvaal government was incurably corrupt and injurious to the interests of the natives and the country. In 1902 he delivered the Duff missionary lectures in Edinburgh, which, published as '*Dawn in the Dark Continent*' (1903), gave a popular account of what missionary societies have accomplished in Africa, and is used as a text-book in mission circles in Great Britain and America. He revisited America in 1903 to examine new methods in negro colleges. Returning to Lovedale in April 1904, he presided over the first General Missionary Conference at Johannesburg (June). In November 1904 and January 1905 he was at Cape Town with a view to furthering native education. He died at Lovedale on 21 Dec. 1905, and was buried on Christmas Day on Sandili's Kop, a rocky eminence about a mile and a half east of Lovedale. At the funeral all races and denominations in South Africa were represented.

A presentation portrait, painted by John Bowie, A.R.S.A., Edinburgh, now hangs in the United Free Church Assembly Hall of Edinburgh.

In November 1866 he married Mina, youngest daughter of Alexander Stephen, shipbuilder, of Glasgow. She survived him, having borne him one son and eight daughters.

As the founder of Livingstonia, Stewart played no mean part as an empire-builder. Lord Milner described him as 'the biggest human in South Africa.' Besides the works cited, Stewart was author of: 1. '*Lovedale, Past and Present*,' 1884. 2. '*Lovedale Illustrated*,' 1894. 3. '*Livingstonia, its Origin*,' 1894. 4. '*Kafir Phrase Book and Vocabulary*,' 1898. 5. '*Outlines of Kafir Grammar*,' 1902. He was also a contributor to religious and geographical periodicals, and founded and edited the newspapers, '*Lovedale News*' and the '*Christian Express*,' both of which are published at Lovedale and have well served the mission cause.

[Life of James Stewart, D.D., M.D., by James Wells, D.D. (n.d.); Robert Young, F.R.G.S., *African Wastes Reclaimed*, illustrated in the *Story of the Lovedale Mission*, 1902; J. W. Jack, *Daybreak in Livingstonia*, 1901; W. A. Elmslie, *Among the Wild Ngoni*, Edinburgh, 1899; reprint, 1901.] W. F. G.

STEWART, SIR WILLIAM HOUSTON (1822–1901), admiral, third son of Admiral of the Fleet Sir Houston Stewart [q. v.] by his wife Martha, daughter of Sir William Miller, first baronet, was born at Kirk-michael House, Ayrshire, on 7 Sept. 1822. He entered the navy on 29 April 1835, and as a midshipman of the Tweed served on shore in the Carlist war of 1836–7, being present at the different actions in which the royal marine battalion under Col. Owen co-operated with the British legion under Sir George de Lacy Evans [q. v.] and with the Spanish army. He served as a midshipman of the Carysfort during the Syrian war of 1840, was mentioned in despatches for gallant conduct at Tortosa, and was present at the bombardment of St. Jean d'Acre. He received the Syrian medal, with clasp, and the Turkish medal. He passed his examination in April 1841, and as mate served in the *Illustrious*, flagship on the North America station. On 29 June 1842 he was promoted to lieutenant and moved into the *Volge*, from which ship he returned, in March following, to the flagship. In 1844 he was first lieutenant of the sloop *Ringdove*, on the coast of Africa, and next, after a short spell of service as flag lieutenant to Sir E. Durnford King, commander-in-chief at the Nore, was appointed in Nov. 1845 to the *Grampus* in the Pacific. On his return home in 1847 he passed in steam at Woolwich, a thing which few officers then did, and on 19 May 1848 he was promoted to commander. In August 1851 Stewart was appointed to the paddle sloop *Virago*, which he commanded in the Pacific till 1853. He retook the revolted Chilean colony of Punta Arenas in the Straits of Magellan, released an American barque and an English vessel with a freight of treasure which had been illegally captured, and received the thanks of the French, American, and Chilean governments for these services. He was promoted to captain on 9 July 1854.

Stewart commanded the steam sloop *Firebrand* in the Black Sea in 1854, and was specially mentioned for his services at the bombardment of Sevastopol on 17 Oct., when he was wounded. He received the Crimean and Turkish medals,

with the clasp for Sevastopol, the fourth class of the *Mejidie*, and was nominated for the Legion of Honour. In the campaign of 1855 he commanded the *Dragon*, paddle frigate, in the Baltic and saw much active service. At the bombardment of Sveaborg he had command of a division of the gunboats and mortar vessels; he was again mentioned in despatches and received the medal. For three years from May 1857 he was flag captain to the commander-in-chief at Devonport, and in May 1860 joined the *Marlborough*, of 131 guns, as flag captain to Sir William Fanshawe Martin [q. v. Suppl. I], commander-in-chief in the Mediterranean, where he remained for three years. The rest of his service was in administrative appointments. From Nov. 1863 to Nov. 1868 he was captain-superintendent of Chatham dockyard. On 1 April 1870 he was promoted to flag rank, and from July of that year was admiral-superintendent of Devonport dockyard until Nov. 1871, when he was appointed in the same capacity to Portsmouth dockyard. There he remained until he was chosen to be controller in April 1872. He held that post till 1881, but by the arrangement published in the Order in Council of 19 March 1872 was without a seat at the board. He was promoted to vice-admiral on 12 Nov. 1876, and was awarded the K.C.B. in June 1877. On 23 Nov. 1881 he reached the rank of admiral, and in Dec. was chosen as commander-in-chief at Devonport, where he remained for the full period of three years. On 31 March 1885 he accepted retirement; at Queen Victoria's Jubilee of 1887 he was made an additional G.C.B., and in 1894 he was awarded a flag officer's good service pension. He was a fellow of the Royal Geographical Society, served on the council of the Royal United Service Institution, and took part in the work of several naval benevolent societies. He occasionally published his views, contributing to the newspaper controversies which led to the passing of the Naval Defence Act of 1889 and to subsequent programmes for the strengthening of the navy. He died at 51 Hans Road, Chelsea, on 13 Nov. 1901, and was buried at Brompton.

Stewart was twice married: (1) on 20 Feb. 1850 to Catherine Elizabeth (d. 23 Nov. 1867), only daughter of Eyre Coote of West Park, Hampshire; (2) on 11 Jan. 1872 to Blanche Caroline, third daughter of Admiral the Hon. Keith Stewart, C.B., and granddaughter of George, eighth earl of Gallo-way. He left issue two sons and three

daughters by his first marriage, and one daughter by the second.

[The Times, 14 and 18 Nov. 1901; O'Byrne's Naval Biogr. Dict.; R.N. List; an engraved portrait was published by Messrs. Walton of Shaftesbury Avenue.] L. G. C. L.

STIRLING, JAMES HUTCHISON (1820–1909), Scottish philosopher, born in Glasgow on 22 June 1820, was youngest of the six children of William Stirling, a Glasgow manufacturer, who was a man of intellectual ability, a student more especially of mathematics. His mother, Elizabeth Christie, died while he was still a child. Three brothers died young. James Stirling was educated first at Young's Academy, Glasgow, and then for nine successive sessions (1833–42) at Glasgow University, where he attended the classes in the faculties of arts and medicine, and took a high place in mathematics and classics. He became M.R.C.S. Edinburgh in July 1842, and F.R.C.S. in 1860. In 1843 he was appointed assistant to a medical practitioner at Pontypool in Monmouthshire, and in 1846 he was made surgeon to the Hirwain iron-works. Meanwhile he interested himself in literature, and as early as 1845 contributed to 'Douglas Jerrold's Magazine.' After his father's death in 1851 Stirling gave up medical practice, and, inheriting a competency, took no other professional post. He travelled in France and Germany, devoting himself mainly to the study of German philosophy. Stirling's first and most important book was 'The Secret of Hegel, being the Hegelian System in Origin, Principle, Form and Matter' (2 vols. 1865; 2nd edit. 1898). The book may be said to have revealed for the first time to the English public the significance and import of Hegel's idealistic philosophy. Stirling's style of writing, trenchant and forceful as that of Carlyle, from whom he learned much, emphasised the lessons he set himself to teach. Few philosophical books have exerted an equal influence on the trend of thought in younger students, and to it and Stirling's succeeding works may be ascribed in great measure the rise of the school of idealism which has flourished of late years, more especially in the Scottish universities. The 'Secret' was succeeded in 1865 by an 'Analysis of Sir William Hamilton's Philosophy,' a forcible attack on Hamilton's philosophy of perception; but the point of view differs from that of Mill's famous onslaught. In 1867 was published Stirling's translation with annotations of Schwegler's

'History of Philosophy,' which has gone through fourteen editions and still holds its place as a standard text-book. The next of Stirling's works, 'As Regards Protoplasm' (1869; new edit. 1872), was a refutation, by means of reasoning based on physiological considerations, of Huxley's theory 'that there is one kind of matter' named Protoplasm 'common to all living beings.' Then came 'Lectures on the Philosophy of Law,' delivered in Edinburgh in 1871 and afterwards republished, which contain an exposition of Hegelianism in short form; and finally, in 1881, his 'Text-book to Kant,' a scholarly exposition and faithful reproduction of the 'Critique of Pure Reason' (which is translated), and of Kantian doctrines generally, with a biographical sketch of Kant. A masterpiece of criticism and interpretation, Stirling's 'Text-book' resolves many difficulties which seemed to former critics well-nigh insoluble, and shows how Hegel's philosophy originates in the Kantian system, from which it was a natural and necessary development, and how the English philosopher Hume, who had propounded the questions Kant set himself to answer, stands in relationship to German philosophy.

Stirling was appointed Gifford lecturer at Edinburgh (1889–90), and his lectures 'Philosophy and Theology' were published there in 1890. He was made hon. LL.D. of the University of Edinburgh in 1867 and of Glasgow in 1901; he was elected a foreign member of the Philosophical Society of Berlin in 1871. In 1889 he was granted a civil list pension of 50*l*. Meanwhile he wrote much in the 'Fortnightly Review,' 'Macmillan's Magazine,' and 'Mind,' as well as in American periodicals. His themes included materialism, philosophy in the poets, and nationalisation of the land; in 'Community of Property' (1885) he sought to refute the views of Henry George.

Stirling lived the ideal life of a philosopher, devoting all his time and talents to special studies. He died at Edinburgh on 19 March 1909, and was buried at Warriston cemetery there. He married in 1847 Jane Hunter Mair, and had two sons and five daughters. His daughter Amelia has written several historical books and was joint translator of 'Spinoza's Ethic' with Mr. Hale White; another, Florence, was for three successive years the Scottish lady chess champion.

Besides the books already cited, Stirling also published: 1. 'Jerrold, Tennyson and Macaulay, with other Critical Essays,' Edin-

burgh, 1868. 2. 'Burns in Drama, together with Saved Leaves,' Edinburgh, 1878, a collection of literary writings. 3. 'Darwinianism: Workmen and Work,' Edinburgh, 1894, an acute criticism of the Darwinian theory of evolution. 4. 'What is Thought?' Edinburgh, 1900. 5. 'The Categories,' Edinburgh, 1903; 2nd edit. 1907; an appendix to the former book, both further elucidating the Hegelian position.

A painted portrait by Stirling's daughter Florence is in the possession of the family. There is also a black-and-white drawing, of which a replica is in the philosophy classroom of St. Andrews University.

[A biography of Stirling, by his daughter Amelia, is in course of publication.]

E. S. H.

STOKES, SIR GEORGE GABRIEL, first baronet (1819-1903), mathematician and physicist, born at Skreen, co. Sligo, 13 Aug. 1819, was youngest son of Gabriel Stokes, rector of Skreen, by his wife Elizabeth, daughter of John Houghton, rector of Kilrea, co. Derry. First educated at Dr. Wall's school in Dublin from 1831, he proceeded in 1835 to Bristol college under Dr. Jerrard, the mathematician, and entered Pembroke College, Cambridge, in 1837, becoming senior wrangler, first Smith's prizeman, and fellow of his college in 1841.

In his early Cambridge years he established a close scientific friendship with William Thomson (afterwards Lord Kelvin) [q. v. Suppl. II], which gathered force throughout their long lives. Both were impelled by the keenest interest in the advance of scientific discovery, but their endowments were in some respects complementary. Stokes remained a student throughout his life, closely pondering over mathematical questions and the causes of natural phenomena, perhaps over-cautious in drawing conclusions and in publication of his work, remarkable for his silence and abstraction even in crowded assemblies, but an excellent man of affairs, inspiring universal confidence for directness and impartiality in such administration as came to him. Thomson, during all his career, took Stokes as his mentor in the problems of pure science which he could not find leisure to probe fully for himself; and, though their opinions sometimes clashed, yet in the main no authority was with him more decisive or more venerated than that of his friend. In 1845, at the end of his undergraduate course, Thomson took over the editorship of the 'Cambridge Mathematical Journal'

from Robert Leslie Ellis [q. v.], and for the following ten years his own contributions and those which he obtained from Stokes made that journal a classic. In 1849 Stokes was appointed Lucasian professor of mathematics at Cambridge, and he held the post till his death.

In his early years of residence as a graduate Stokes promoted most conspicuously the development of advanced mathematical knowledge at Cambridge. His own earliest work was mainly on the science of the motion of fluids, which he found in the preliminary stage in which it had been left by Lagrange, notwithstanding some sporadic work done by George Green [q. v.], then resident at Cambridge; in a few years he developed it into an ordered mathematical and experimental theory. To this end, in addition to a very complete discussion of the phenomena of waves on water, he created, in two great memoirs of dates 1845 and 1850, the modern theory of the motion of viscous fluids, a subject in which some beginnings had been made by Navier. In the later of these memoirs the practical applications, especially to the important subject of the correction of standard pendulum observations for aerial friction, led him into refined extensions of mathematical procedure, necessary for the discussion of fluid motion around spheres and cylinders; these, though now included under wider developments in pure analysis, have remained models for physical discussion, and have been since extensively applied to acoustics and other branches of physical science.

In the science of optics he had already in 1849 published two memoirs on Newton's coloured rings, treated always with dynamical implications; one appeared in 1851 establishing on a firm physical basis the explanation of Newton's colours of thick plates; and he had elucidated the principles of interference and polarisation in many directions. In 1849 a new path was opened in the great memoir on 'The Dynamical Theory of Diffraction,' which deals with the general problem of propagation of disturbances spreading from vibrating centres through an elastic æther, and in which mathematical expressions were developed wide enough to include the Hertzian theory of electrical vibrations and other more recent extensions of the theory of radiation. A side problem was the experimental investigation of the displacement of the plane of polarisation of light by diffraction, in order, by comparison with the theory, to ascertain the relation

of the plane of its vibration to that of its polarisation. Such a determination, though fundamental for a purely dynamical view, is not essential to the construction of an adequate formal account of the phenomena of radiation, and the workers in the modern electric theory have been content in the main to stop short of it.

The calculations relating to corrections for pendulums had led him into pure analysis connected with Bessel functions and other harmonic expansions; in various subsequent memoirs he established and justified the semi-convergent series necessary to their arithmetical use over the whole range of the argument, thus making practical advances that were assimilated only in later years into general analysis. Likewise the discrepancies which he encountered in practical applications of Fourier's theory led him as early as 1847 to a reasoned exposition of doctrines, now fundamental, relating to complete and limited convergence in infinite series. Here and elsewhere, however, his work developed rather along the path of advance of physical science than on the lines of formal pure analysis; and the recognition of its mathematical completeness was in consequence delayed.

In 1859 great interest was excited by the announcement of the discovery and development of spectrum analysis by Kirchhoff and Bunsen, and its promised revelations regarding the sun and stars by means of the Fraunhofer lines, an advance which was introduced to English readers by Stokes's translation of their earlier papers. It was soon claimed by William Thomson (Lord Kelvin) that he had been familiar with the scientific possibilities in this direction since before 1852, having been taught by Stokes the dynamical connection between the opacity of a substance to special radiation and its own power of emitting radiation of the same type. The theoretical insight thus displayed, on the basis of the interpretation of isolated observations, was, of course, no detracting from the merit of the practical establishment of the great modern science of spectrum analysis by the former workers: yet the feeling in some circles, that such a claim for Stokes was not quite warranted, was only set at rest by the posthumous discovery, among his papers, of a detailed correspondence with Lord Kelvin on this subject, mainly of date 1854, which is now printed in vol. iv. of his 'Collected Papers' (cf. pp. 126-36 and 367-76).

But in fact it was hardly necessary to

wait for this evidence: for the same general considerations had already entered essentially into Stokes's discussion of one of his most refined and significant experimental discoveries. Shortly after he entered on the study of optics as a subject for his activity in the Lucasian chair at Cambridge, his attention was attracted to the blue shimmer exhibited by quinine in strong illumination, which had been investigated by Sir John Herschel [q. v.] in 1845. He soon found (1852) that the phenomenon was at variance with the Newtonian principle of the definite prismatic analysis of light, as the blue colour appeared when it was not a constituent of the exciting radiation. He discovered that this emission of light, called by him fluorescence from its occurrence in fluor-spar, was provoked mainly by rays beyond the violet end of the visible spectrum; and as a bye-product he thus discovered and explored the great range of the invisible ultra-violet spectrum, having found that quartz prisms could be used for its examination, though glass was opaque. Discussion of the exceptional nature of this illumination, created by immersion of the substance in radiation of a different kind, necessarily led him into close scrutiny of the dynamics of ordinary absorption and radiation; and the idea of a medium absorbing specially the same vibrations which it could itself spontaneously emit was thus fully before him (cf. § 237 of the memoir).

Another mathematical memoir (1878), suggested by the feeble communication of sound from a bell to hydrogen gas, elucidated the circumstances which regulate the closeness of the grip that a vibrating body gets with the atmosphere; and its ideas have also wider application, to the facility for emission and absorption of radiations of all kinds from and into the vibrating bodies which are their sources.

In two memoirs of date 1849 (*Papers*, ii. 104-121), on the variation of gravity over the earth's surface, he became virtually the founder of the modern and more precise science of geodesy. The fundamental proposition was there established, as the foundation of the subject, that the form of the ocean level determines by itself the distribution of the earth's attraction everywhere outside it, without requiring any reference to the internal constitution of the earth, which in this regard must remain entirely unknown.

His earlier scientific work, with that of Helmholtz and Lord Kelvin, may be said to mark the breaking away of physical science

from the *à priori* method depending on laws of attraction, which was inherited from the astronomers; for this there was substituted a combination of the powerful analysis by partial differentials, already cultivated by Laplace and Fourier, with close attention to the improvement of physical ideas and modes of expression of natural phenomena. The way was thereby prepared for Clerk Maxwell's interpretation of Faraday, and for the modern wide expansion of ideas.

The copious early output of Stokes's own original investigation slackened towards middle life. In 1851 he had been elected F.R.S., and next year was awarded the Rumford medal for his discovery of the nature of fluorescence. In 1854 he became secretary of the Royal Society, and the thirty-one years of his tenure of this office (1854-85) were devoted largely to the advancement of science in England and the improvement of the publications of the Royal Society. There were few of the memoirs on physical science that passed to press through his hands that did not include valuable extensions and improvements arising from his suggestions. When the Indian geodetic survey was established, he was for many years its informal but laborious scientific adviser and guide. The observatory for solar physics, which was founded in 1878, was indebted to him in a similar manner. His scientific initiative as a member of the meteorological council, who managed from 1871 the British weather service, was a dominant feature of their activity. During these years the imperfect endowment of his chair at Cambridge made it necessary for him to supplement his income from other sources: thus he was for some time lecturer at the School of Mines, and a secretary of the Cambridge University Commission of 1877-81. He had vacated his fellowship at Pembroke on his marriage in 1857, but was re-elected under a new statute in 1869.

In 1883 Stokes was appointed, under a new scheme, Burnett lecturer at Aberdeen, and delivered three courses of lectures on 'Light' (1883-5), which were published in three small volumes (1884-7). In 1891 he became Gifford lecturer at Edinburgh, and delivered other three courses on the same general subject (1891-3). The theme in all these courses was treated from the point of view of natural theology, as the terms of the foundations required. His interests as a churchman and theologian were strong through life, and found occasional expression in print. He often took

part in the proceedings of the Victoria Institute in London, which was founded for inquiry into Christian evidences.

Stokes received in his later years nearly all the honours that are open to men of science. He was president of the British Association at the Exeter meeting in 1869. In 1885 he succeeded Professor Huxley as president of the Royal Society, holding the office till 1890, when he was himself succeeded by his friend Lord Kelvin; he remained on the council as vice-president two years longer, and on his retirement he was immediately awarded in 1893 the society's Copley medal. On the death of Beresford-Hope in 1887, he was elected without opposition, in the conservative interest, one of the members of parliament for Cambridge University, and he sat in the House of Commons till 1891. He was a royal commissioner for the reform of the University of London (1888-9). In 1889 he was created a baronet (6 July). In 1899 the jubilee of his tenure of the Lucasian chair was celebrated at Cambridge by a notable international assembly. Through the friendship of Hofmann, Helmholtz, Cornu, Becquerel, and other distinguished men, he became in his later years widely known abroad; and the Prussian order *pour le mérite* and the foreign associateship of the Institute of France were conferred on him. At his jubilee celebration the Institute of France sent him the special Arago medal; and he was one of the early recipients of the Helmholtz medal from Berlin. He received honorary doctor's degrees from Edinburgh, Dublin, Glasgow, and Aberdeen, as well as from Oxford and Cambridge. In October 1902 his colleagues of Pembroke College, of which he had long been fellow and of late years president, elected him Master. He died at Cambridge on 1 Feb. 1903, and was buried there at the Mill Road cemetery.

Stokes married on 4 July 1857 Mary (*d.* 30 Dec. 1899), daughter of Thomas Romney Robinson, the astronomer [q. v.], and left issue two sons and one daughter. His elder son, Arthur Romney Stokes succeeded him as second baronet.

Stokes's writings have been collected into five volumes of 'Mathematical and Physical Papers' (Cambridge, 1880-1905) of which the first three were carefully edited by himself, and the other two were prepared posthumously by Sir Joseph Larmor, his successor in the Lucasian chair. Two volumes of his very important 'Scientific Correspondence' were published in 1907 under the same editorship, and

include a biographical memoir (pp. 1-90) prepared mainly by his daughter, Mrs. Laurence Humphry.

There is a portrait by G. Lowes Dickinson in Pembroke College, and one by Sir Hubert von Herkomer at the Royal Society; marble busts by Hamo Thornycroft were presented to the Fitzwilliam Museum and to Pembroke College on the celebration of his jubilee as Lucasian professor in 1899, and a memorial medallion bust by the same sculptor is in Westminster Abbey.

[Mrs. Humphry's memoir mentioned above; notice by Lord Rayleigh in *Proc. Royal Soc.* 1903, and reprinted in *Papers*, vol. v. pp. ix-xxv; cf. also Silvanus Thompson's *Life of Lord Kelvin*, 1910.] J. L.

STOKES, SIR JOHN (1825-1902), lieutenant-general, royal engineers, born at Cobham, Kent, on 17 June 1825, was second son in a family of three sons and three daughters of John Stokes (1773-1859), vicar of Cobham, Kent, by his wife Elizabeth Arabella Franks (1792-1868). Educated first at a private school at Ramsgate, then at the Rochester Proprietary School, Stokes passed into the Royal Military Academy at the head of the list in the summer of 1841. On leaving he was awarded the sword of honour and received a commission as second lieutenant in the royal engineers on 20 Dec. 1843. After professional instruction at Chatham, he was posted in February 1845 to the 9th company of royal sappers and miners at Woolwich, with which he proceeded in June to Grahamstown, South Africa. He was promoted lieutenant on 1 April 1846.

In Cape Colony he spent five adventurous years, taking part in the Kaffir wars of 1846-7 and of 1850-1. In the first war he was deputy assistant quartermaster-general on the staff of Colonel Somerset commanding a column of the field force in Kaffraria. He was particularly thanked by the commander-in-chief, General Sir Peregrine Maitland [q. v.], for his conduct in the action of the Gwanga on 8 June 1846, and on 25 July following, when he opened communications through the heart of the enemy's country. In the war of 1850-1 he was again on the staff as a deputy assistant quartermaster-general to the 2nd division of the field force; he was in all the operations of the division from February to July 1851, and helped to organise and train some 3000 Hottentot levies. He was repeatedly mentioned in general orders, and was thanked by the commander-in-chief, Sir Harry Smith [q. v.].

Returning home from the Cape in October 1851, Stokes became instructor in surveying at the Royal Military Academy at Woolwich. He was promoted captain on 17 Feb. 1854, and in March 1855 was appointed to the Turkish contingent, a force of 20,000 men raised for service in the war with Russia and commanded by Sir Robert John Hussey Vivian [q. v.]. Stokes sailed at the end of July after raising and organising a nucleus for the contingent's corps of engineers, to be supplemented by Turks on the spot. He was given the command of the corps, and arriving in the Crimea in advance, witnessed the final assault on Sevastopol on 8 Sept. 1855. The Turkish contingent was sent to Kertch, where Stokes employed his corps in fortifying the place and in building huts for the troops during winter. When peace was concluded in March 1856 Stokes was made British commissioner for arranging the disbandment of the contingent. For this work he received the thanks of the government, and for his services in the Crimea a brevet-majority on 6 June 1856, the fourth class of the Mejidie, and the Turkish medal.

In July 1856 Stokes was nominated British commissioner on the European commission of the Danube, constituted under the treaty of Paris to improve the mouths and navigation of the Lower Danube. The commission, at first appointed for two years, became a permanent body, with headquarters at Galatz. Stokes's colleagues were often changed, but he held office for fifteen years, and thus came to exert a commanding influence on the commission's labours. By Stokes's advice (Sir) Charles Hartley was appointed engineer and the Sulina mouth of the Danube was selected for experimental treatment. The waterway was straightened and narrowed so as to confine and accelerate the current and thus concentrate its force to scour away the bar. In 1861 it was decided to replace the temporary constructions by permanent piers which should extend into the deeper water of the Black Sea. In order to obtain the necessary funds small loans were raised on the shipping dues, but these proved insufficient for the larger scheme. Stokes devoted himself to the finances and at the same time suppressed disorders on the river, and regulated the navigation and pilotage. The fixing of a new scale of dues involved a thorough investigation into the mode of measuring ships, as to which all nations then differed. In 1865 the 'Public Act' was promulgated, embodying the decision

of the commission and establishing the 'Danube Rule' of measurement, which was a modification of the English rule.

On 6 July 1867 Stokes was promoted to be a regimental lieutenant-colonel and paid one of his periodical visits home. He prevailed on Lord Stanley, then foreign secretary, to provideneedful financial help for the moment and to arrange with the powers concerned to guarantee a loan, which was sanctioned next year by an international convention, Russia alone standing out. Great Britain gave effect to the convention in the 'Danube Loan Act.' When in the autumn of 1870 Russia repudiated the Black Sea articles of the treaty of Paris, Stokes urged the British government to secure in perpetuity European control over the mouths of the Danube by means of the commission. During the congress in London in 1871 he acted as the intermediary of Lord Granville, foreign secretary, with the foreign ambassadors and plenipotentiaries on questions affecting the Danube. He arranged the terms with them and drafted the articles on the Danube in the treaty of London of March 1871. For his services he was created a C.B., civil division.

The works at the Sulina branch of the Danube were now approaching completion; the channel had been increased from eight or nine to twenty feet at low water, and was available for large ships for a hundred miles above its mouth; the new tariff gave a yearly increasing income for the maintenance of the navigation, the river was well lighted, and the pilotage satisfactorily arranged (see Stokes's paper on the mouths of the Danube in *Roy. Eng. Establishment Papers*, 1865, and 'The Danube and its Trade' in *Soc. of Arts Journal*, 1890). Accordingly, when the war office summoned Stokes to return to corps duties, if he wished to remain on the effective list, he resigned the commissionership. In 1872 he was appointed commanding royal engineer of the South Wales military district, and on 4 June 1873 received a brevet colonelcy.

But international diplomacy continued to be his main occupation. Stokes served at Constantinople as British commissioner (Oct.-Dec. 1873) on the international commission to settle a difficulty that had arisen over the Suez Canal dues, which, hitherto calculated by the canal company on net tonnage, had recently been charged on gross tonnage. The view of the majority of the commissioners in favour of the charge on net tonnage was resisted on behalf of the canal company

by the representatives of France and some other powers. The difference was settled by a compromise, which Stokes proposed, to the effect that in addition to the ten francs a ton on net tonnage, the company should be empowered to levy a surtax of three and a half francs a ton, to be reduced in certain defined proportions as the traffic through the canal increased. The sultan marked his satisfaction by promoting Stokes to the second class of the order of the Mejdide in 1874. After reporting for the foreign office on the condition of the canal, Stokes in the spring resumed his duties at Pembroke Dock. M. Ferdinand de Lesseps, however, objected to the arrangements made at Constantinople, and Stokes was in frequent attendance at the foreign office. Early in 1875 he was made commanding royal engineer of the Chatham district, to be more within reach.

On 1 Nov. 1875 he was appointed commandant of the School of Military Engineering at Chatham. Later in the month his opinion was invited as to the purchase, which he advised, of the Khedive's shares in the Suez Canal, and subsequently at the Khedive's request the British government sent Mr. Cave of the paymaster-general's department and Colonel Stokes to Egypt for four months to examine and report on the Khedive's financial embarrassments. In pursuit of separate instructions he concluded a convention settling outstanding difficulties with M. de Lesseps and the Suez Canal Company under the Constantinople agreement of 1873. The terms included representation of the British government on the board of directors, and Stokes was nominated to the board in June 1876. Next year he was created a K.C.B., civil division. During 1879-80 he served on an international commission, with headquarters at Paris, to examine the works at the port of Alexandria in Egypt, and decide what dues should be levied on the shipping. In Nov. 1880 he joined the royal commission on tonnage measurement, which reported in 1881. Appointed deputy adjutant-general for royal engineers at the war office on 1 April 1881, Stokes was a member of the Channel tunnel committee, and opposed its construction in 1882. The Egyptian expedition of that year exposed him to some friction with French colleagues on the Suez Canal board, who objected to the use made of the canal by the British authorities, but his tact overcame all objections, and he received the personal thanks of Gladstone, the prime minister, for his good service. In March 1885 Stokes

was given the temporary rank of major-general, succeeding to the establishment on 6 May following. His services as deputy adjutant-general were retained for three months over the usual five years, and he left the war office on 30 June 1886, retiring from the service with the honorary rank of lieutenant-general on 29 Jan. 1887.

On leaving the war office he resided first at Haywards Heath, and afterwards at Ewell. The Suez Canal board, of which he became vice-president in 1887, frequently called him to Paris, and he undertook the administration of the 'Lady Strangford Hospital' at Port Said after her death in 1887. In the same year he was appointed a visitor of the Royal Military College at Sandhurst. In 1894 he attended de Lesseps's funeral in Paris, and delivered a set oration in French. He paid his last visit to Egypt in 1899 to be present at the unveiling of de Lesseps's statue at the entrance to the canal at Port Said. Stokes, who was also director in later life of several public companies, died suddenly of apoplexy at Ewell on 17 Nov. 1902. He was elected an associate member of the Institution of Civil Engineers on 13 Jan. 1875.

He married at Grahamstown, Cape Colony, on 6 Feb. 1849, Henrietta Georgina de Villiers (*d.* 1893), second daughter of Charles Maynard, of Grahamstown. By her he had three sons and three daughters. The second son, Arthur Stokes, is a brevet colonel in the royal artillery and a D.S.O.

[War Office Records; Royal Engineers' Records; private information; Porter's History of the Royal Engineers, 1889; Royal Engineers' Journal, 1903; Leading Men of London, 1894; Men and Women of the Time, 1899; Proc. Inst. Civ. Eng. 1902; The Times, 18 Nov. 1902.] R. H. V.

STOKES, WHITLEY (1830-1909), Celtic scholar, eldest son of William Stokes, M.D. [q. v.], by his wife Mary Black, was born in Dublin on 28 Feb. 1830. His family tree does not contain a single native Irish name. He entered St. Columba's College at Rathfarnham, co. Dublin, on 8 Oct. 1845, and left on 16 Dec. in the same year. Denis Coffey, a Munster man, was the Irish teacher there, and his 'Primer of the Irish Language,' which had just appeared, was probably the first Irish book placed in the hands of Stokes. The next was undoubtedly the 'Grammar of the Irish Language' of John O'Donovan, published in 1845 at the expense of St. Columba's College. His first guide to the vocabulary of Irish was the Irish dictionary of Edward

O'Reilly, as is shown by Stokes's interleaved, annotated, and marked copy of the book. He entered Trinity College, Dublin, in 1847, and graduated B.A. in 1851. In his father's house he became acquainted with George Petrie [q. v.], deep in Irish architecture and music, with John O'Donovan [q. v.], the best Irish scholar of the time and the greatest of all Irish topographers, and with Eugene O'Curry [q. v.], the most accomplished modern representative of the ancient Irish scribes. Stokes thus had the opportunity of laying a broad foundation for every part of Irish learning. He elected early to devote himself to the study of the words and forms of the Irish language, and regarded Irish literature as chiefly interesting in so far as it furnished material for comparative philology. Rudolf Thomas Siegfried, a philologist from Tübingen, first assistant librarian of Trinity College and afterwards professor there of Sanscrit and comparative philology, a man of much learning and great enthusiasm, became his friend and influenced his studies, and the vast field for philological research opened by the publication of the 'Grammatica Celtica' of John Caspar Zeuss in 1853 decided the direction of the studies which Stokes pursued with unremitting industry till death. He took some lessons in Irish from John O'Donovan, but never acquired its pronunciation, and used always to read Irish exactly as English schoolboys once read Latin, according to the English powers of the letters, and he never sounded the 'r,' nor had he any idea of quantity.

Stokes became a student of the Inner Temple on 9 Oct. 1851, and was called to the bar on 17 Nov. 1855. He was a pupil of Cayley, Cairns, and Chitty, and practised in London for six years till 1862, when he went to Madras and afterwards to Calcutta. In India he formed a friendship with Sir Henry Sumner Maine [q. v.], and partly through his influence, after being secretary to the governor-general's legislative council, was made secretary to the legislative department in 1865, and was from 1877 to 1882 law member of the council of the governor-general. In 1879 he was appointed president of the Indian law commission. He had published in London 'A Treatise on the Liens of Legal Practitioners' in 1860, and one on 'Powers of Attorney' in 1861. He drafted many Indian consolidation acts and the bulk of the codes of procedure, and published 'Hindu Law Books' at Madras in 1865, the Anglo-Indian codes (two volumes) in 1887-8, with supplements 1889-91, and three other books

on the statutes of India. He was made C.S.I. in 1877 and C.I.E. in 1879. In 1882 he left India, and for the rest of his life resided for a time in Oxford and at Camberley in Surrey, but chiefly in Kensington.

Meanwhile Stokes continued his Irish studies without intermission alike in England and in India. In 1859 he published as a paper in the 'Transactions of the Philological Society of London,' 'Irish Glosses from a MS. in Trinity College, Dublin.' His first book was 'A Mediæval Tract on Latin Declension, with Examples explained in Latin and the Loricæ of Gildas, with the Gloss thereon and Glosses from the Book of Armagh'; it was printed in 1860 in Dublin by the Irish Archaeological and Celtic Society, and he received for it the gold medal of the Royal Irish Academy. In 1862 he published in London three Irish glossaries. The first was that of Cormac MacCuillennain, the second that of Domnall O'Dubhdhaborenn, written in 1569, and the third that occurring in the 'Calendar of Oengus Cele Dé.' These are accompanied by a long introduction and verbal indexes, but are not translated. In 1868 Stokes published at Calcutta an edition of John O'Donovan's manuscript translation of Cormac's glossary, with notes and sixteen separate verbal indexes, as well as three of matters, authors, and persons. Throughout his writings he retained the practice of having many indexes to each book. He published 'Goidelica,' a collection of Old and Early-middle Irish glosses, at Calcutta in 1866, (2nd edit. London, 1872), as well as many smaller collections of glosses, Irish, Welsh, and Breton, and in 1901 and 1903, with John Strachan [q.v. Suppl. II], a 'Thesaurus Palæohibernicus' of more than twelve hundred pages of old Irish glosses from manuscripts anterior to the eleventh century. The Italian government had spent large sums in the publication of the Milan glosses and thought part of the work an unjust invasion of their property, and a reflection upon it. An apologetic statement was in consequence inserted in the second volume by the editors. The book rendered the mass of Old Irish glosses on the Continent and in Ireland easily accessible for the first time. All this glossarial study rendered Stokes in the highest degree competent to write the 'Ürkeltischer Sprachschatz' in 1894, with Professor Bezzenberger. He also prepared many papers on grammatical subjects, of which one of the chief is an elaborate

investigation of 'Celtic Declension,' issued by the Philological Society in 1885-6. He published texts and translations with notes, and generally with glossaries, of a great many pieces of Irish literature, of which the earliest was the 'Fis Adamnain,' the account of the journey of Adamnan, grandson of Tinne, to Paradise and to Hell, from a manuscript of 1106. This was printed at Simla in 1870. At Calcutta in 1877 he published Irish lives of Patrick, Brigit, and Columba from a fifteenth-century manuscript, and at the same place in 1882 the 'Togail Troi,' a tale of the destruction of Troy in part based on Dares Phrygius. In 1890 he published at Oxford, in the 'Anecdota Oxoniensia,' 'Lives of Saints from the Book of Lismore,' a manuscript of about 1450. The 'Félire' of Angus, a sort of metrical calendar of saints, he first edited in 1871, in the publications of the Royal Irish Academy, and again from ten manuscripts in 1905, in a volume of the Henry Bradshaw Society. The same society published in 1895 his edition of the 'Félire' of O'Gorman, another metrical calendar. He edited in the Rolls series in 1887, 'The Tripartite Life of St. Patrick,' in two volumes. Besides all these and many more Irish works he edited and translated the Cornish mystery, 'Gwreansan Bys' (Creation of the World), in 1864, 'The Life of St. Meriasek' in 1872, and a volume of 'Middle Breton Hours' in 1876 (Calcutta). Another part of his writings consists of controversial attacks, generally on the interpretation of texts, on O'Beirne Crowe, O'Curry, Sullivan, Prof. Robert Atkinson [q.v. Suppl. II], S. H. O'Grady, and others. Nemesis is always on the watch in such controversies, and Stokes himself fell into many errors of the kind he censured in others. No man could have edited so many difficult texts for the first time without making some mistakes. Stokes often came to perceive his own, and altered them quietly in a fresh edition. The severity of his studies sometimes broke down his health, and produced conditions of extreme irritability or of depression, which explain the violence of his language. His last Irish work was an edition of the Irish prose version of Lucan's 'Pharsalia' known as 'Cath Catharda,' which Professor Ernst Windisch of Leipzig printed after his death. Windisch and Stokes together brought out a series of 'Irische Texte,' at Leipzig, 1884-1909, of which this was the last.

Stokes died at 15 Grenville Place

Kensington, after a short illness, on 13 April 1909. He was an original fellow of the British Academy, a foreign associate of the Institute of France, and an honorary fellow of Jesus College, Oxford. He was a kindly and hospitable entertainer and was fond of laughter in his conversation and of relating anecdotes, but did not pour out in talk the extensive knowledge he possessed, nor often take part in fruitful discussion. He wished to pursue his subject with paper, ink, and books at hand, doggedly progressing from point to point, and was unwilling to commit himself by word of mouth. His whole life was one of unflagging industry in Celtic studies.

Stokes married: (1) in 1865 Mary, daughter of Colonel Bazely of the Bengal artillery, by whom he had two sons and two daughters; (2) on 18 Oct. 1884 Elizabeth (*d.* 1901), third daughter of William Temple.

His daughters presented, in Dec. 1910, his library of Celtic printed books to University College, London. Its most important feature is a collection of all his own works, which is scarcely to be found anywhere else. It was his habit to paste letters and printed scraps into books to which they referred. Many of his books bear the marks of his study and criticism.

[Works; personal knowledge; Kuno Meyer in *Proc. Brit. Acad.*, vol. iv.; full bibliography by Prof. R. I. Best in *Zeitschrift für celtische Philologie*, viii. 351-406, 1911; Letters of William Allingham, 1911; information from Rev. W. Blackburn of St. Columba's College.] N. M.

STONEY, BINDON BLOOD (1828-1909), civil engineer, born at Oakley Park, King's Co., Ireland, on 13 June 1828, was younger brother of George Johnstone Stoney [see below]. Bindon was educated at Trinity College, Dublin, where he graduated B.A. with distinction in 1850, proceeding M.A. and M.A.I. in 1870. In 1850-2 he served as assistant to the earl of Rosse [q. v.] in the Parsonstown observatory. There he made more accurate delineations of nebulae than had been obtained previously, and ascertained, before the days of astronomical photography, the spiral character of the great nebula in Andromeda.

His first work as an engineer was on railway surveys in Spain in 1852-3. In 1854-5 he was resident engineer on the construction of the Boyne Viaduct under James Barton. This viaduct was probably the earliest instance of the use of metal girders of any considerable span in which

lattice bars were substituted for a continuous plate web, and the cross sections of the web members as well as of the flanges were proportioned to the stresses imposed by the rolling load. In Barton's account of the viaduct (*Proc. Inst. Civ. Eng.* xiv. 452) Stoney's assistance on an important point in connection with the design of this type of structure is acknowledged. His work on this viaduct led him to that thorough study of stresses in girders which bore fruit in his elaborate treatise 'The Theory of Strains in Girders and Similar Structures' (2 vols. 1866; 2nd edit. 1873; 1 vol.; 3rd edit. 1886, entitled 'The Theory of Stresses in Girders, &c.').

Meanwhile Stoney in 1856 became assistant engineer to the port authority of Dublin; three years later, owing to the ill-health of the chief engineer, George Halpin, junior, he acted as executive engineer, and in 1862 he succeeded Halpin as chief engineer. He held that post until his retirement in 1898. As engineer to the port and docks board he improved the channel between Dublin Bay and the city, designing for the purpose powerful dredging plant. He also rebuilt about 1½ mile of quay-walls, providing deep-water berths for oversea vessels, extended the northern quays to the east, and began the Alexandra basin. In the construction of the northern quays he employed concrete monoliths of the then unprecedented weight of 350 tons, and designed the appliances necessary for handling and setting the huge blocks. He also rebuilt the Grattan and O'Connell bridges, and built the Butt bridge across the Liffey.

Stoney was elected F.R.S. in 1881, and in the same year was made hon. LL.D. by Trinity College, Dublin. He was elected an associate of the Institution of Civil Engineers on 12 Jan. 1858, became a full member on 17 Nov. 1863, and was a member of the council from 1896 to 1898. Of the Institution of Civil Engineers of Ireland he was elected a member in 1857, served as joint honorary secretary (1862-70), and was president in 1871 and 1872. He was also a member of the Royal Irish Academy, of the Royal Dublin Society, and of the Institution of Naval Architects. The Institution of Civil Engineers awarded him in 1874 a Telford medal and premium for a paper on his work on the Dublin northern quays (*Proc.* xxxvii. 332; cf. other papers, *ibid.* xx. 309 and lviii. 285). To the Institution of Civil Engineers of Ireland he contributed eight papers between 1858 and 1903, including

his presidential address (1872) and a paper on 'Strength and Proportions of Riveted Joints' which was re-published in book form (1885). To the publications of the Royal Irish Academy he contributed four papers dealing with the theory of structures (*Proc.* vii. 165; viii. 191; *Trans.* xxiv. 189; xxv. 451).

He died in Dublin on 5 May 1909, and was buried in Mount Jerome cemetery. He married, in 1879, Susannah Frances, daughter of John Francis Walker, Q.C., by whom he had one son and three daughters.

[*Proc. Roy. Soc.* vol. 85; *Minutes of Proc. Inst. Civ. Eng.* clxxvii. 287; *Who's Who*, 1907.] W. F. S.

STONE, GEORGE JOHNSTONE (1826–1911), mathematical physicist, born at Oakley Park, King's Co., Ireland, on 15 Feb. 1826, was elder son of George Stoney of Oakley Park by his wife Anne, second daughter of Bindon Blood of Cranagher and Rockforest, co. Clare. Bindon Blood Stoney [q. v. Suppl. II] was his only brother. His sister, who married her cousin, William FitzGerald, afterwards bishop of Cork and subsequently of Killaloe, was mother of George Francis FitzGerald [q. v. Suppl. II]. Sir Bindon Blood, general R.E., G.C.B., and Sir Frederic Burton [q. v. Suppl. I] were also his cousins. Three members of the family besides himself—his brother Bindon, his eldest son, George, and his nephew, George Francis FitzGerald—were fellows of the Royal Society.

Stoney, whose father's Irish property had greatly depreciated in value after the Napoleonic wars, and had to be sold at the time of the Irish famine (1846–8), was sent with his brother to Trinity College, Dublin, where he paid his expenses by 'coaching.' There he had a distinguished career, and obtained in 1847 the second senior moderatorship in mathematics and physics. He graduated B.A. in 1848, proceeding M.A. in 1852. On leaving Trinity College, he was in 1848 appointed by Lord Rosse the first astronomical assistant at the Parsonstown Observatory, a post which he held till 1852. His interest in astronomy continued through life, and he contributed occasional papers on astronomical subjects to the scientific societies' journals, several of them being instigated by the expected appearance of a profuse shower of Leonid meteors in 1899 (*Proc. Roy. Soc.* lxiv. 403; *Monthly Notices*, vols. lvi.–lix). The present use

of the cœlostast in astronomical observation is largely due to his efforts in reviving a forgotten principle, and papers by him on improvements in the Foucault-Sidenstat as well as on the phenomena of shadow bands in eclipses will be found in the 'Monthly Notices.' While he was with Lord Rosse he unsuccessfully competed in 1852 for the fellowship at Trinity, winning the second place and the Madden prize. The same year he became through Lord Rosse's influence professor of natural philosophy at Queen's College, Galway, one of his unsuccessful rivals being Professor Tyndall. After five years' work in Galway he returned to Dublin in 1857 as secretary of the Queen's University, with an office in Dublin Castle, and till the dissolution of the university in 1882 he devoted himself wholeheartedly to his duties, which involved the organisation of the scattered colleges constituting the university. The excellence of Stoney's report and minutes on educational matters led the Irish under-secretary, Sir Thomas Aiskew Larcom [q. v.], to recommend Stoney as his successor on his own retirement in 1868. But Stoney approved of Gladstone's disestablishment policy, and declined the post, although the conservative Irish secretary, Lord Mayo, urged its acceptance. At the request of the civil service commissioners, Stoney soon after became superintendent of civil service examinations in Ireland, a post which he held till he left Dublin in 1893. He did much for Irish education. He was a member of the royal commission on the Queen's Colleges, 1885. He was an able advocate of higher education for women, and mainly through his exertions women obtained legal medical qualifications in Ireland before they were available in England or Scotland. His many essays in reviews on educational subjects include 'On the Demand for a Catholic University' (*Nineteenth Century*, Feb. 1902). At the same time he was frequently consulted by the Irish government, not only on education, but (in virtue of his connection with the Royal Dublin Society) on questions of agriculture, fisheries, light railways, and the like. The death of his wife in 1872, and other family trouble, followed by two severe illnesses—small-pox in 1875 and typhoid in 1877—enfeebled his health. These misfortunes, combined with his manifold official duties, greatly hampered his scientific research, which was the main interest of his life.

Physical optics was a subject to which Stoney gave much attention, and he

treated it on somewhat original lines. One of his first papers explained by geometrical reasoning the conditions of the propagation of undulations of plane waves in media (*Trans. Roy. Irish Acad.* vol. 24, 1861). Late in life he pursued the subject in his 'Monograph on Microscopic Vision' (*Phil. Mag.* Oct.-Dec. 1896), in which he analysed and proved the fundamental proposition—first enunciated by Sir George Stokes in 1845—that 'the light which emanates from the objective field may be resolved into undulations, each of which consists of uniform plane waves,' suffering no change as they advance. This theme was pursued after the close of his official life in several papers and memoirs in the 'Philosophical Magazine,' the last being a monograph on 'Telescopical Vision' (Aug.-Dec. 1908), in which he discussed among other matters the possibility of seeing very small markings on the planet Mars.

Valuable as these optical researches are, Stoney's work in molecular physics and the kinetic theory of gases proved more important. An early paper on Boyle's law (*Proc. Roy. Irish Acad.* vol. vii. 1858) was followed ten years later (in *Phil. Mag.* Aug. 1868) by his paper 'On the Internal Motions of Gases compared with the Motions of Waves of Light,' in which he estimated the number of molecules in a gas at standard pressure and temperature.

There followed inquiries into the conditions limiting planetary atmospheres. As early as 1868 he published a long paper 'On the Physical Constitution of the Sun and Stars' (*Proc. Roy. Soc.* 1868), in which he first suggested limits of atmospheres. Stoney considered this paper one of his chief achievements. In a very valuable contribution, 'On Atmospheres of Planets and Satellites' (*Trans. Roy. Soc. Dublin*, 1897, vi. 305), Stoney afterwards explained from inductive reasoning the absence of hydrogen and helium from the atmosphere of the earth, and the absence of an atmosphere from the moon and from the satellites and minor planets of the solar system. This paper was reprinted in the 'Astrophysical Journal' (vii. 25), and gave rise to controversy, but Stoney's position was unshaken. His investigations as to helium are of great importance in view of recent inquiries into the length of geological epochs, and into the past history of the radio-activity of the materials of the earth's crust.

To Stoney was due the introduction of the word 'electron' into the scientific vocabulary. In a paper 'On the physical

units of nature,' which he read before the British Association at Belfast in 1874 (printed in *Phil. Mag.* May 1881), he pointed out that 'an absolute unit of quantity of electricity exists in that amount of it which attends each chemical bond or valency.' He proposed that this quantity should be made the unit of electricity, and for it subsequently suggested the name 'electron' in place of the old name 'corpuscle' proposed by Prof. J. J. Thomson (cf. *Phil. Mag.* Oct. 1894). Stoney worked with admirable results on the periodic motion of the atom and its connection with the spectrum (*Proc. Roy. Irish Acad.* Jan. 1876; *Trans. Roy. Soc. Dublin*, May 1891). To the units of physical science and their nomenclature Stoney devoted much of his attention. He served on the committee of the British Association for the selection and nomenclature of dynamical and electrical units in 1873, which adopted the C[entimetre] G[ramme] S[econd] system of units in England. He did much work in physical mensuration, and strove to facilitate the introduction of the metric system into England.

In 1888 Stoney entered upon a study of the numerical relations of the atomic weights (see *Proc. Roy. Soc.* April 1888). His versatility was also illustrated by papers on 'The Magnetic Effect of the Sun or Moon on Instruments at the Earth's Surface' (*Phil. Mag.* Oct. 1861); 'On the Energy expended in driving a Bicycle' (*Trans. Roy. Dublin Soc.* 1883, with his son); 'On the Relation between Natural Science and Ontology' (*Proc. Roy. Dublin Soc.* 1890), and many papers on abstract physics. In bacteriology he suggested that the source of the life energy in bacteria was to be found in their bombardment by the faster moving molecules surrounding them, whose velocity is great enough to drive them well into the organism, and carry in energy, of which they can avail themselves (*Phil. Mag.* April 1890).

Music also claimed his attention, and he wrote papers on musical shorthand and on echoes (*Proc. Roy. Dublin Soc.* 1882), and did much for the advance of musical culture in Dublin by inducing the council of the Royal Dublin Society to inaugurate chamber music concerts by leading European musicians.

During the twenty years that he was hon. secretary of the Royal Dublin Society he zealously fulfilled the duties of the office at a period when the affairs of the society demanded much attention. He was afterwards vice-president till 1893, and to its

'Transactions' he communicated most of the earlier results of his researches. He received the society's first Boyle medal in 1899. He also became hon. D.Sc. of Queen's University in Ireland in 1879, and hon. Sc.D. of the University of Trinity College, Dublin, in 1902. Stoney's work received recognition from learned societies at home and abroad. He was a foreign member of the Academy of Science at Washington, and of the Philosophical Society of America and a corresponding member of the Accademia di scienze, lettere ed arti di Benevento. He regularly attended the meetings of the British Association, served on several committees, and acted as president of section A at the meeting at Sheffield in 1879. Elected F.R.S. in 1861, he was vice-president of the society in 1898-9, and he was a member of the council (1898-1900). He was a visitor of the Royal Observatory at Greenwich and of the Royal Institution. He was also a member of the joint permanent eclipse committee of the Royal Society and the Royal Astronomical Society, and of several international committees for scientific objects.

In 1893 Stoney left Dublin for London, in order to give his daughters the opportunity, denied them at that time in Dublin, of university education. He settled first at Hornsey and afterwards at Notting Hill, engaging in physical experiments, principally optical, and in writing scientific papers. Stoney, who was always ready to help younger scientific men, died on 5 July 1911 at his residence, 30 Chepstow Crescent, Notting Hill Gate, W. After cremation his ashes were buried in Dundrum, co. Dublin. Stoney married in Jan. 1863 his cousin, Margaret Sophia (*d.* 1872), second daughter of Robert Johnstone Stoney of Parsonstown, sister of Canon Stoney, and left issue two sons and three daughters. His elder son, George Gerald, F.R.S., holds a Watt medal of the Institute of Electrical Engineers, and was till 1912 manager of the turbine works of the Hon. Sir Charles Parsons, F.R.S. Of the daughters Edith Anne (equal to seventeenth wrangler in the mathematical tripos at Cambridge in 1893, and M.A. Trinity College, Dublin) is lecturer in physics at the London School of Medicine for Women; the second, Florence Ada, M.D., B.S. London, is in practice in London, and is head of the electrical department, New Hospital for Women, London.

A collection of Stoney's scientific writings is being prepared for publication by his eldest daughter.

Of four portraits in oils, one painted in 1883 by Sir Thomas Jones, P.R.H.A., for the old students of the Queen's University on its dissolution, was presented by them to the Royal Dublin Society, in whose council room in Leinster House, Kildare Street, Dublin, it now hangs; a second portrait by the same artist (1883), presented to Stoney, as well as two other portraits (1896)—one in oils and one in chalk—by his third daughter, Gertrude, are in the possession of his elder daughters at 20 Reynolds' Close, Hampstead.

[Proc. Roy. Soc., 86A, 1912 (with portrait; art. by Prof. J. Joly); Abstract of Mins. Roy. Irish Acad. 1911-12; The Observatory, Aug. 1911 (notice by Sir Robert Ball, F.R.S.); Nature, 12 July 1911 (art. by Prof. F. T. Tronton, F.R.S.); The Times, and Daily Express (Dublin), 6 July 1911; E. E. Fournier d'Albé, The Electron Theory, with preface by and frontispiece portrait of Stoney, 1907; and Contemporary Chemistry, 1911; notes from Mr. H. P. Hollis; information from son and from daughter, Edith A. Stoney.] W. B. O.

STORY, ROBERT HERBERT, D.D. (1835-1907), principal of Glasgow University, born at Roseneath manse, Dumbartonshire, on 28 Jan. 1835, was only surviving son of Robert Story (1790-1859) [q.v.], parish minister of Rosneath, by his wife Helen Boyle Dunlop. After home teaching from his father and learning mathematics and other subjects at the parish school, he studied arts at Edinburgh University (1849-54), gaining distinction in literature and philosophy. He spent a semester in 1853 at Heidelberg. He won prizes for poetry, and Professor Aytoun urged him to discipline his gift for verse; he wrote later much occasional poetry, including some excellent hymns. He studied divinity at Edinburgh and St. Andrews Universities (1854-7), and after the first of many continental trips was licensed a preacher by the presbytery of Dumbarton on 2 Nov. 1858.

Story was assistant in St. Andrew's church, Montreal, from 12 March to 20 Nov. 1859, when he left to become assistant to his father at Rosneath. Before he reached home his father died and the patron, the Duke of Argyll, presented him to the parish into which he was inducted on 23 Feb. 1860. In general accord with Dr. Robert Lee [q.v.] he sought to systematise the form of service and to modify the old observances at the celebration of the communion. With two others he founded, on 31 Jan. 1865, the Church Service Society, which in the course of years efficiently transformed ancient usages.

Both Lee, who died in 1868, and himself persevered in spite of opposition, and Story had the satisfaction of seeing their views prevail. In 1884 a lectureship was founded in memory of Lee, and Story delivered the first lecture in St. Giles's Cathedral, Edinburgh, in April 1886, his subject being 'The Reformed Ritual in Scotland.'

Story, who meanwhile proved himself an ideal country parson, gradually became a leader in the church courts. From 1863 to 1875 he attended the general assembly of the church in accordance with ordinary regulations, but through special provisions he was a regular member from 1877 onwards. He became one of the ablest debaters in the house, advocating useful measures and sensible reforms. His name is conspicuously associated with discussions on Sabbath observance, on the abolition of patronage, on the Free Education Act, on the adaptability of the Confession of Faith to modern conditions, and, notably, on the movement for disestablishment before and after 1885. In May 1886 he was appointed junior clerk to the general assembly and in 1894 he was moderator, closing the meetings with a lucid and stirring address on 'The Church of Scotland, its Present and its Future.' Next year he became senior clerk of the assembly, holding the position for the rest of his life. From 1885 to 1889 he edited a magazine—first called 'The Scottish Church' and then 'The Scots Magazine'—primarily designed for support of the principles he upheld. He had grave doubts as to the wisdom of the Free Education Act, but resolved to make the best of it when it had passed, and he was chairman of Rosneath school board from its first meeting in March 1873 till he left the parish. In 1886 he succeeded John Caird [q. v. Suppl. I] as chaplain-in-ordinary to Queen Victoria, and the appointment was renewed in 1901 by King Edward VII.

On 9 Nov. 1886 Story became professor of church history in Glasgow University. While zealously performing his special work he readily responded to the numerous calls which the city made upon him. In 1895 he was one of several Scottish ministers who discussed presbyterian reunion at a conference held at Grindelwald. In 1897 he was the Baird lecturer and took for his theme 'The Apostolic Ministry in the Scottish Church.' He was one of the representative divines who convened at Iona, on 9 June 1897—the anniversary of the death of Columba, 597—to offer 'thanksgiving

for the introduction of the Gospel into our land.' Meanwhile he actively interested himself in the position of the church in the Highlands and in India, and in the Layman's League and home missions.

In 1898 Story was appointed principal of Glasgow University in succession to Dr. John Caird [q. v. Suppl. I]. In 1901 the ninth jubilee of the university was celebrated under his presidency. To his exertions was largely due the provision of new university buildings, mainly for medical and scientific purposes. At the same time he was a convinced champion of 'the humanities,' and his tenure of office was not free from friction with students. With the Carnegie Trust for the benefit of the Scottish Universities he was not in full sympathy, partly because of the exclusion of literary studies from its scope, but chiefly owing to its haphazard scheme for the payment of fees; but he fully recognised its value as a means of encouraging post-graduate research. After a period of gradually declining strength he died on 13 Jan. 1907, and was interred in the family burying-ground at Roseneath.

Story was made hon. D.D. of Edinburgh in 1874; hon. LL.D. of Michigan University, U.S.A. in 1887; hon. LL.D. of St. Andrews in 1900. He was also a fellow of the Scottish Society of Antiquaries, and he reached high degree as a freemason.

Story's chief publications were: 1. 'Memoir of [his father] the Rev. Robert Story,' Cambridge, 1862, an admirable contribution to ecclesiastical biography. 2. 'The Life and Remains of Robert Lee, D.D.,' 1870. 3. 'William Carstares: a Character and Career of the Revolutionary Epoch (1649–1715),' 1874, a survey of church and state in a time of transition. 4. 'The Apostolic Ministry of the Scottish Church' (Baird lecture), Glasgow, 1897. Other works were 'Christ the Consoler, or Scripture Hymns and Prayers for Times of Trouble and Sorrow' (Edinburgh, 1865); 'Creed and Conduct,' a collection of sermons (Glasgow, 1878; new edit. 1883); 'Saint Modan of Rosneath: a Fragment of Scottish Hagiology' (1878); and 'Health Haunts of the Riviera and South-West of France' (1881), the fruit of a continental holiday. Story edited a 'History of the Church of Scotland' (4 vols. 1890–91).

A portrait, presented by friends and painted in 1890 by Sir Philip Burne-Jones, and a study by John Bowie, A.R.S.A., for a group of Queen's chaplains, belong to the family. Two portraits in oil, by Sir George Reid, P.R.S.A., were prepared respectively for the Church of Scotland (now at 22 Queen

Street, Edinburgh, the offices of the church) and for Glasgow University (in the Hunterian Museum, Glasgow University). Of the latter there is a good photogravure. There is a fine drawing by William Strang, A.R.A. A memorial window was unveiled in Rosneath Church on 24 Sept. 1908, and another, by Douglas Strachan, was placed in the Bute Hall, Glasgow University, on 21 Oct. 1909.

On 31 Oct. 1863 Story married Janet Leith, daughter of Captain Philip Maughan, H.E.I.C. Mrs. Story was author of three well-constructed novels, 'Charley Nugent,' 'The Co-heiress,' and 'The St. Aubyns of St. Aubyn,' and of 'Kitty Fisher,' a children's story. In 1911 she published deeply interesting 'Early Reminiscences,' Two surviving children, Elma and Helen Constance Herbert, jointly wrote a memoir of their father.

[Memoir of Robert Herbert Story, D.D., LL.D., by his daughters; Mrs. Oliphant, Memoir of Principal Tulloch, 1888, and Autobiography 1899; Twenty-five Years of St. Andrews, by Dr. A. K. H. Boyd, 1896; Life of Dr. Robert Wallace, by Sheriff Campbell Smith; Scotsman, and Glasgow Herald, 14 Jan. 1907; information from Miss Story; personal knowledge.] T. B.

STORY-MASKELYNE, MERVYN HERBERT NEVIL (1823-1911), mineralogist, born at Basset Down House, near Wroughton, Wiltshire, on 3 Sept. 1823, was eldest son in the family of two sons and four daughters of Anthony Mervyn Reeve Story, F.R.S. (1791-1879), by his wife Margaret, only child and ultimate heiress of Nevil Maskelyne [q. v.], astronomer royal. The father acquired through his wife the Maskelyne estates in Wiltshire, and in 1845 adopted the surname of Story-Maskelyne. One of the mineralogist's sisters, Antonia, married Sir Warrington Wilkinson Smyth [q. v.].

After spending ten years at Bruton grammar school in Somerset, Story-Maskelyne was admitted to Wadham College, Oxford, as a commoner on 19 Nov. 1840, and graduated B.A. with a second class in mathematics in Easter term 1845. He proceeded M.A. on 7 June 1849. On leaving Oxford he studied for the bar, but he had, almost from boyhood, taken a keen interest in natural science, and his early studies in photography led to a friendship with William Henry Fox Talbot [q. v.]. He was persuaded to abandon the law for science in 1847 by Benjamin Brodie the younger [q. v.], and in 1850 was invited

to deliver lectures on mineralogy at Oxford. He accepted this invitation on condition that a laboratory should be assigned to him, where he could teach mineralogical analysis and chemistry in general. Chemical manipulation had not been taught previously in the University of Oxford, and great interest was excited by the opportunity of learning what sort of thing chemistry might be. A suite of rooms under the Ashmolean Museum was allotted Story-Maskelyne, and there he lived and worked from 1851 to 1857. His first student was William Thomson [q. v.], afterwards archbishop of York.

Story-Maskelyne was an early advocate of the due recognition of natural science in the Oxford curriculum, and was examiner in the new school of natural science in 1855 and 1856. He was active in the struggle which lasted from 1847 to 1857 over the proposal to erect a museum in Oxford. The foundation stone of the museum was laid in 1855 and it was opened in 1861 (cf. *ATLAY's Henry Acland: a Memoir*, 1903, pp. 197 seq.). Story-Maskelyne became professor of mineralogy in 1856 in succession to Dean William Buckland [q. v.], and was duly allotted as professor a laboratory in the new museum. The chair had been founded by George IV in 1813, but it was very inadequately remunerated till 1877, when it was reconstituted as the Waynflete professorship of mineralogy.

In 1857 Story-Maskelyne was appointed to the newly created post of keeper of the minerals at the British Museum and, although he retained his Oxford professorship, he settled in London. It became his practice to invite the most promising of his Oxford pupils, who included Professor W. J. Lewis, Dr. L. Fletcher, and Sir Henry A. Miers, to work with him at the British Museum. He thus extended the usefulness of both his London and Oxford offices, and trained many distinguished members of the next generation of British mineralogists.

Since 1851 no one at the British Museum had taken any special interest in mineralogy. Story-Maskelyne undertook the re-arrangement of all the minerals under his charge according to the crystallochemical system of Rose. He also maintained and developed the collections so that they became the largest and best arranged series of minerals and meteorites in existence. During his tenure of the keepership no fewer than 43,000 specimens were added to the collection. He published a catalogue of

minerals at the museum in 1863 (new edit. 1881) and a 'Guide to the Collection' in 1868.

Story-Maskelyne was always much interested in meteorites, which he was one of the first to study by means of thin sections for the microscope. He published the results of his numerous researches, of which the most important are those on the nature and constitution of the Parnallee, Nellore, Breitenbach, Manegaum, Busti, Shalka, and Rowton meteorites. Chief among his mineral researches were those upon Langite, Melaconite, Tenorite, Andrewsrite, Connellite, Chalkosiderite, and Ludlamite. New minerals described by him were Andrewsrite, Langite, Liskeardite, and Waringtonite. Asmanite, Oldhamite, and Osbornite, constituents of meteoric stones, were first isolated and determined by him, though the first named, described by him in 1871, is now generally regarded as identical with the mineral tridymite. He was also the first to recognise the presence of enstatite in meteorites.

Deeply interested in the history of the diamond, he wrote on the Koh-i-noor stone (*Chemical News*, 1860, i. 229; *Nature*, 1891, xlv. 555; xlv. 5). In 1880 he proved that the supposed diamonds manufactured by Mactear were in reality a crystallised silicate. The mode of occurrence of the diamond in South Africa also occupied his attention, and he described the enstatite rock which is associated with it in that part of the world (*Philosophical Magazine*, 1879, vii. 135).

Story-Maskelyne gave some notable courses of lectures on crystallography both in London and Oxford. In a course delivered in 1869 he announced an important proof of the number and mutual inclinations of the symmetry planes possible in a crystalloid system. His general views were stated in a series of lectures before the Chemical Society in 1874. On his lectures he largely based his well-known text book, 'The Morphology of Crystals,' which was published in 1895. In his mathematical as well as in his purely scientific treatment of his theme his writing was characterised by distinction and charm of style.

Story-Maskelyne's scientific attainments were widely recognised. Elected a fellow of the Royal Society in 1870, he was vice-president from 1897 to 1899. He received in 1893 the Wollaston medal of the Geological Society, of which he became a fellow in 1854, was chosen an honorary fellow of Wadham College in 1873, and was made hon. D.Sc. in 1903. He was

corresponding or honorary member of the Imperial Mineralogical Society of St. Petersburg, of the Society of Natural History of Boston, of the Royal Academy of Bavaria, and of the Academy of Natural Sciences in Philadelphia.

On the death of his father in 1879 Story-Maskelyne succeeded to the Basset Down estates, and thenceforward became an active country gentleman. He resigned his post at the British Museum next year, but he continued to hold the professorship of mineralogy at Oxford till 1895. By that time funds were obtained for securing the whole time of a resident professor, and he was succeeded by (Sir) Henry A. Miers.

Story-Maskelyne entered the House of Commons in 1880, when he was elected in the liberal interest as member for the borough of Cricklade. He was re-elected for the Cricklade division of North Wiltshire in 1885 and 1886, but he refused to follow Gladstone in his home rule policy in 1886, and thenceforth sat in parliament as a liberal-unionist until his defeat in July 1892. He took no prominent part in the debates, but introduced in 1885 the Thames preservation bill, and was chairman of the committee to which the bill's consideration was referred. The bill was passed on 14 Aug. 1885. He was a member of the Wiltshire county council from its foundation in 1889 till 1904, when he was over eighty years of age, and was for many years chairman of the agricultural committee. He was an active member of the Bath and West of England Agricultural Society, and it was at his suggestion that the first itinerant dairy school was established. He was a good scholar and was one of the few scientific men who read Homer till late in life. He formed a valuable private collection of antique engraved gems, and he privately printed a catalogue of the intaglios and cameos known as the Marlborough Gems.

Story-Maskelyne died at Basset Down on 20 May 1911, after a prolonged illness, and was buried at Purton, Wiltshire.

He married on 29 June 1853, after settling in London, Thereza Mary, eldest daughter of John Dillwyn Llewellyn, F.R.S., and granddaughter of Lewis Weston Dillwyn [q. v.], the botanist. He was survived by his wife and three daughters, of whom the second, Mary Lucy, married Hugh Oakeley Arnold-Forster [q. v. Suppl. II], some time secretary of state for war, and the third, Thereza Charlotte, became wife of Sir Arthur Rücker, F.R.S., in 1892.

His portrait by the Hon. John Collier,

subscribed for by friends in 1895, is now a Basset Down House, Swindon.

[Burke's Landed Gentry; Gardiner's Reg. Wadham College, p. 401; The Times, 21 May 1911; Proc. Roy. Soc.]

H. A. M.
A. W. R.

STRACHAN, JOHN (1862-1907), classical and Celtic scholar, born at the farm of Brae near Keith, Banffshire, on 31 Jan. 1862, was only son of James Strachan, farmer of Brae, by his wife Ann Kerr. He was educated at the grammar school of Keith under Dr. James Grant till he entered the University of Aberdeen in 1877 at the age of fifteen. Strachan proved an excellent all-round scholar, but especially distinguished himself in classics and philosophy. In 1880 he spent the summer at Göttingen working with Professor Benfey. In 1881, having completed the course at Aberdeen with first-class honours in classics, he entered Pembroke College, Cambridge, where another Aberdonian, Robert Alexander Neil [q. v. Suppl. II], was the principal classical lecturer. In 1882 he won the Ferguson scholarship, which is open to the four Scottish universities. In 1883 he won at Cambridge the Porson university scholarship, and having taken the first part of the classical tripos with the highest distinction, proceeded to Jena, where he worked at Sanskrit with Professor Delbrück and at Celtic with Professor Thurneysen. The following year he spent the whole summer at Jena in the same pursuits, and in 1885 graduated at Cambridge with special distinction in classics and comparative philology. He was also second chancellor's medallist. In the summer of the same year he was elected professor of Greek at Owens College, Manchester, and in 1889, by a re-arrangement of work with Augustus Samuel Wilkins [q. v. Suppl. II], the professor of Latin, he added to Greek the teaching of comparative philology.

In his first years at Manchester, Strachan busied himself especially with work upon Herodotus, the fruit of which was an excellent school edition of book vi. (1891), containing an account of the Ionic dialect superior to anything preceding it. At his death he left in manuscript a large Greek grammar treated on philological principles, which is not yet published. He gradually devoted himself, however, more and more to Celtic studies, and during the last few years of his life his distinction in this department was recognised by the university, which appointed him to a newly founded and unpaid lectureship in Celtic; in order to give him time for

this work he was granted an additional assistant in Greek. His publications on Celtic were numerous and important; the greatest of them was the 'Thesaurus Palæo-Hibernicus,' which he undertook in conjunction with Dr. Whitley Stokes [q. v. Suppl. II]; it appeared in two large volumes in 1901 and 1903. At the time of his death he was making arrangements for compiling the Dictionary to the texts thus published.

The increasing interest in Irish studies was fostered by the School of Irish Learning established in 1903 by Professor Kuno Meyer in Dublin, in which during several long vacations Strachan taught Old Irish with much enthusiasm. For his pupils he produced several little books containing the grammar and selections from the Old Irish texts. In the 'Transactions of the Philological Society' he published a long series of valuable memoirs upon the 'History of Irish,' the most important perhaps being 'The Compensatory Lengthening of Vowels in Irish' (1893), 'The Deponent Verb in Irish' (1894), 'The Particle "ro" in Irish' (1896), 'The Subjunctive Mood in Irish' (1897), 'The Sigmatic Future and Subjunctive in Irish' and 'Action and Time in the Irish Verb' (both in 1900). Shorter papers appeared in the 'Zeitschrift für celtische Philologie,' and other journals at home and abroad. In 1906 and 1907 he took up the study of early Welsh, and began preparing for the press 'An Introduction to Early Welsh.' This was published posthumously in 1909 by the Manchester University Press after a satisfactory settlement of a lawsuit brought against the publishers by the Welsh scholar Dr. John Gwenogvryn Evans, who thought that inadequate acknowledgment of Strachan's debt to his own published Welsh texts had been made by the editor. In September 1907 Strachan went for a few days to Wales in order to collate at Peniarth the texts of some of the early manuscripts which he wished to publish. While at Peniarth he caught a chill which on his return to Manchester developed into pneumonia. On 25 Sept. he died at Hilton Park, Prestwich, where he had lived for some years.

Besides his work on Greek, comparative philology, and Celtic, Strachan also taught Sanskrit at Manchester. In 1900 Aberdeen University conferred upon him the honorary degree of LL.D. No good portrait of Strachan exists, and the bronze bust in the possession of Manchester University only faintly resembles him. His Celtic books were

purchased by Manchester University. In 1886 he married Mina, eldest daughter of Dr. James Grant, his old schoolmaster, and by her had issue two sons and six daughters. A pension of 80*l.* from the civil list was granted to his widow in 1909.

[Information from Mrs. Strachan ; personal knowledge from 1880.] P. G.

STRACHEY, SIR EDWARD, third baronet (1812–1901), author, born at Sutton Court, Chew Magna, Somerset, on 12 Aug. 1812, was eldest of the six sons of Edward Strachey by his wife Julia Woodburn, third daughter of Major-general William Kirkpatrick [q. v.], ‘a singular pearl of a woman’ (CARLYLE, *Reminiscences*, i. 128). His five brothers, all long-lived, were Sir Henry Strachey (1816–1912), lieutenant-colonel of the Bengal army; Sir Richard Strachey [q. v. Suppl. II]; William Strachey (1819–1904), of the colonial office; Sir John Strachey [q. v. Suppl. II], and George (1823–1912), minister at the court of Saxony.

His father, Edward (1774–1832), second son of Sir Henry Strachey [q. v. Suppl. I], first baronet, was educated at Westminster and St. Andrews, went to Bengal as a writer in 1793, became a judge, was employed in diplomacy, and was one of the dearest friends of Mountstuart Elphinstone [q. v.], who said that in his early years he owed much to Strachey’s advice and example, and depended on his friendship (*Life*, ii. 309). He married in 1808, returned to England in 1811, and retired from the Bengal service in 1815. He resided at Sutton Court until 1820, when, having been appointed an examiner at the India House, he moved to London, and there became a friend of Thomas Carlyle, who was often at Strachey’s house in Fitzroy Square, and visited him at his summer residence at Shooters Hill. He was a student of English literature, and a good Persian scholar: he published ‘*Bija Ganita*’ (1813, 4to), a translation from the Persian of a Hindu treatise on algebra, originally written in Sanskrit.

Edward Strachey was destined for the East India Company’s service, and was educated at Haileybury, but when about to sail for India he was attacked by inflammation of the knee-joint, which destroyed his hope of an Indian career, and forced him to use crutches for more than twenty years. He was eventually cured when past forty by the waters of Ischia when on a visit to Naples, but his knee always remained stiff. In 1836, having been attracted

by ‘Subscription no Bondage,’ by F. D. Maurice [q. v.], he obtained an introduction to him through John Sterling [q. v.], a friend of his mother, and asked to be allowed to read with him with a view to entering a university. This intention an increase of his malady forced him to abandon. However, he spent the second half of that year with Maurice at Guy’s Hospital, and from that time an intimate friendship existed between them; Maurice became his spiritual adviser and exercised a lasting influence on his mind.

In 1858 he succeeded to the title and the Somersetshire estates of his uncle, Sir Henry Strachey, the second baronet, who died unmarried. He took a warm interest in the welfare of his tenants, specially those of the labouring class, was an active magistrate and a deputy-lieutenant, and in 1864 was high sheriff of Somerset; he was a poor-law guardian and was a member of the first Somerset county council. A keen politician, and a liberal of a somewhat idealistic type, he was an admirer of Gladstone and in 1870 wrote a series of articles in the ‘Daily News’ on the proposed Irish Land bill, for which materials were supplied him by his friend and neighbour, Chichester Fortescue, afterwards Lord Carlingford [q. v. Suppl. I]. His life was largely that of a man of letters; he followed up his early studies in Oriental languages, especially in Persian, occasionally making translations from Persian poems, and was well versed in English literature. Besides his books he wrote articles in the ‘Spectator,’ ‘Blackwood’s Magazine,’ and other periodicals. His interests were wide and his mind alert. As a disciple of Maurice he was firmly attached to the Church of England, but was strongly opposed to high church doctrines and practices, and respected the opinions of his nonconformist neighbours. He was deeply religious, although his religious opinions in his early days were in advance of contemporary standards of orthodoxy. Biblical criticism, especially on its historical side, was one of his favourite studies, and he learnt Hebrew in order to pursue it. He died at Sutton Court on 24 Sept. 1901, and was buried in Chew Magna churchyard.

He married (1) on 27 Aug. 1844, Elizabeth, eldest daughter of the Rev. W. Wilkieson, of Woodbury Hall, Bedfordshire; she died without issue on 11 April 1855; and (2) on 3 Nov. 1857, Mary Isabella, second daughter of John Addington Symonds (1807–1871) [q. v.]; she died on 5 Oct. 1883, leaving three sons: Edward, who was created Baron Strachie of Sutton Court on

3 Nov. 1911; John St. Loe, editor of the 'Spectator'; Henry, an artist, and one daughter, all now (1912) living.

There are three painted portraits of Strachey at Sutton Court, one by Samuel Laurence [q. v.] and two by his son, Mr. Henry Strachey.

Strachey published: 1. 'A Commentary on the Marriage Service,' 1843, 24mo. 2. 'Shakespeare's Hamlet: an Attempt to find a Key to a great Moral Problem,' 1848. 3. 'Hebrew Politics in the Time of Sargon and Sennacherib: an Inquiry into the Meaning of the Prophecies of Isaiah,' 1853, revised and enlarged as 'Jewish History and Politics,' 1874, bringing the prophecies into connection with what is known from other sources as to the Jewish kingdom, and discussing the questions of their unity, arrangement, authorship, &c. 4. 'Miracles and Science,' 1854. 5. 'Politics Ancient and Modern,' with F. D. Maurice, in 'Tracts for Priests,' 1861. 6. 'Talk at a Country House,' 1895, originally published in the 'Atlantic Monthly,' largely autobiographical in thought though not in circumstance, the 'Squire' being the author and his interlocutor 'Forster,' Sir Edward used to say, representing his ideas in his younger days. He also edited Malory's 'Morte d'Arthur' (1868, 1891) for the Globe edition; contributed to Richard Garnett's edition of Peacock's works, vol. x., 'Recollections' of the author, Peacock having been a colleague of Strachey's father at the India House, and wrote an introduction to Edward Lear's 'Nonsense Songs' (1895, 4to).

[Private information; Sir F. Maurice's Life of F. D. Maurice, 1884. For Sir Edward's father see Carlyle's *Reminiscences*, ed. Froude, 1881; Sir E. Colebrooke's *Life of Mountstuart Elphinstone*, 1884.] W. H.

STRACHEY, SIR JOHN (1823-1907), Anglo-Indian administrator, born in London on 5 June 1823, was fifth son of Edward Strachey by his wife Julia, youngest daughter of Major-General William Kirkpatrick [q. v.]. Sir Edward Strachey [q. v. Suppl. II] and Sir Richard Strachey [q. v. Suppl. II] were elder brothers.

After being educated at a private school at Totteridge, John entered Haileybury in 1840, among his contemporaries being Sir E. Clive Bayley, Sir George Campbell [q. v. Suppl. I], Sir Alexander Arbutnot [q. v. Suppl. II], W. S. Seton-Karr, and Robert Needham Cust [q. v. Suppl. II]. He was one of the editors of the 'Haileybury Observer,' to which he contributed a vindication of

Shakespeare, described as 'displaying a considerable mastery of Coleridge's writings.' He passed out second on the list for Bengal in 1842, having won prizes for classics and English and also the medal for history and political economy. Literature and art were always among his interests.

Appointed to the North West Provinces, he divided his first years of service between the plains of Rohilkhand and the neighbouring hills of Kumaon. At the outbreak of the Mutiny he was absent on furlough in England. Hitherto he had served as an ordinary district officer, without any of the chances that are open to those at headquarters. But after his return to India he was selected for a series of special appointments. Lord Canning nominated him in 1861 president of a commission to inquire into a great epidemic of cholera; and Lord Lawrence made him in 1864 president of the permanent sanitary commission then formed as a result of the report of a royal commission on the health of the army in India. Meanwhile, in 1862, he had been judicial commissioner, or chief judge, in the newly constituted Central Provinces. Lord Lawrence formed so high an opinion of him as to appoint him in 1866 to be chief commissioner of Oudh, at a time when the question of tenant-right there was rousing heated controversy. Strachey succeeded in persuading the taluqdars or landlords to accept a compromise, afterwards enacted by the legislative council, though his private views would have granted much larger privileges to the tenant class. In 1868 he became a member of the governor-general's council, and held office throughout Lord Mayo's viceroyalty. When the news of Lord Mayo's assassination first reached Calcutta in Feb. 1872, he acted for a fortnight as governor-general. With the legal member of the council, Sir James Fitzjames Stephen, he formed an enduring friendship (cf. *LESLIE STEPHEN, Life of Sir J. F. Stephen*, pp. 245 seq.). In 1874 Strachey was appointed lieutenant-governor of the North West Provinces; but he vacated the post in 1876, when Lord Lytton persuaded him to enter the governor-general's council for a second time as finance member.

His lieutenant-governorship of the North West Provinces was too brief to leave a permanent mark, but the measures associated with his name include the creation of a department of agriculture and commerce; a new system of village accounts, by which the record is written up annually

instead of only on the occasion of a thirty years' settlement; the extension of the survey to permanently settled districts; the attempt to construct railways from provincial resources. It was also his pride that he took the first active steps to secure the conservation of the historic Mogul buildings at Agra.

As finance minister Strachey shares with his brother Sir Richard, whose work in India was closely connected with his own, the credit of extending the decentralisation of provincial finance, started under Lord Mayo in 1871, and of abolishing the customs line across the peninsula, which permitted the equalisation and ultimate reduction of the salt duty. To Strachey and his brother were due too the recognition of a light income tax as a permanent part of the system of taxation; the creation of a famine insurance fund of incalculable benefit, amounting to a million and a half sterling annually; and the application of free trade principles to the customs tariff so far as circumstances permitted. Another of Strachey's reforms, which has not been carried out, was the passing of a statute authorising the introduction of the metric standard of weights and measures. Unhappily, Strachey's term of office as finance minister closed prematurely under a cloud. The cost of the war in Afghanistan, owing mainly to a defective system of military accounts, was found to have been under-estimated by no less than twelve millions sterling [see *LYTTON, EDWARD ROBERT BULWER, first EARL OF LYTTON*]. Strachey, upon whom the responsibility was fixed by the home government, thought it his duty to retire twelve months before his full time. He finally left India at the close of 1880, after thirty-eight years' service. He had been knighted in 1872 and made G.C.S.I. in 1878.

After India, Italy appealed to his sympathies. An ardent supporter of the movement for national unity and liberation, he used to regret that he could not have enlisted under Garibaldi. On his retirement from India he occupied for some time a villa at Florence, where he studied art and architecture. Subsequently he spent the winter there or on the Italian lakes. He was familiar with the language and literature, and Italians were among his intimate friends. Part of this period of rest he devoted to literary work. As early as 1881 he collaborated with his brother, Sir Richard, in a record of what the two had helped to accomplish in India, under the title of 'The Finances

and Public Works of India' (1882), which is a mine of historical information. Again, after settling in England, he in 1884 gave before the University of Cambridge a course of lectures on India, which were published under the title 'India' in 1888, and reached a fourth edition in 1911, being revised by Sir T. W. Holderness after the author's death. In 1885 Strachey was nominated by Lord Randolph Churchill to be a member of the secretary of state's council of India, an office which then lasted for ten years. While actively engaged on the council he found time to follow the example of his friend, Sir James Fitzjames Stephen, and to attempt in 'Hastings and the Rohilla War' (1892), to clear the memory of Warren Hastings from the charges arising from the Rohilla war of 1774.

Strachey, who on the occasion of Lord Curzon's inauguration as chancellor at Oxford, in June 1907, received the honorary degree of D.C.L., died at his house in Cornwall Gardens, South Kensington, on 19 Dec. 1907, and was buried at Send, near Woking. On 8 Oct. 1856 Strachey married Katherine Jane, daughter of George H. M. Batten, of the Bengal civil service; she received the imperial order of the Crown of India on its institution in 1878. Of their sons, the eldest, Colonel John Strachey, M.V.O., was controller of the household to Lord Curzon when viceroy of India; Sir Arthur is mentioned below; and Charles is principal clerk in the colonial office. A bronze tablet in Send church commemorates him and his wife, who predeceased him by a few months. There is also a tablet in the church of Chew Magna, Somerset, the burial-place of the family. In India the Strachey Hall of the Muhammadan Anglo-Oriental College at Aligarh is named after him as a memorial; and a tablet in the fort at Agra records that he cleared and restored the Diwan-i-Am, or hall of public audience of the Mogul emperors, in 1876.

Strachey holds an almost unique position in Anglo-Indian administration as minister to no fewer than three viceroys, and as the literary expositor of their domestic and financial policy. With his brother, Sir Richard [q. v. Suppl. II], he exerted the dominant influence in consolidating the new system of government gradually adopted after the catastrophe of the Mutiny. By inheritance and education they belonged to the school of philosophical radicalism represented in John Stuart Mill; and their best work, much of which came to fruition after the

brothers had left India, was accomplished under two viceroys (Mayo and Lytton) who rank as conservatives at home but as active reformers in India. Strachey's valuable literary work in connection with India shows throughout the mind of a strong man and the pen of a ready writer.

SIR ARTHUR STRACHEY (1858-1901), second son of Sir John, was born on 5 Dec. 1858. Educated first at Uppingham and afterwards at Charterhouse, he proceeded to Trinity Hall, Cambridge, where he graduated in 1880 with a second class in the law tripos, taking later the degree of LL.B. Among his chief friends at the university were James Kenneth Stephen and Theodore Beck. Called to the bar from the Inner Temple in 1883, he went out almost at once to India, to practise before the high court at Allahabad. In 1892 he became public prosecutor and standing counsel to the provincial government. In 1895 he was appointed judge of the high court at Bombay, in which capacity it fell to him to preside at the first trial for sedition of Bal Gangadhar Tilak in 1897. An unfortunate phrase in his charge to the jury, that 'disaffection means simply the absence of affection,' attracted much censure, but the general purport of his language on this point was approved on appeal to a full bench. In 1899 he was promoted to be chief justice of the high court at Allahabad, and knighted. He died at Simla on 14 May 1901. His remains were cremated in Hindu fashion, and the ashes brought home and deposited in the churchyard of Send, near Woking. A bronze tablet to his memory has been placed in the church of Trent, near Yeovil, where much of his boyhood was passed. On 22 Oct. 1885 he married Ellen, daughter of John Conolly, who survived him. There was no issue of the marriage.

[The Times, 20 Dec. 1907; R. Bosworth Smith, *Life of Lord Lawrence* (1883); Sir William Hunter, *Life of Lord Mayo*, 1875; Sir Richard Temple, *Men and Events of my Time in India* (1882); Herbert Paul, *Hist. of Modern England*, iv. passim; Lady Betty Balfour, *Memoir of Lord Lytton*.] J. S. C.

STRACHEY, SIR RICHARD (1817-1908), lieutenant-general, royal (Bengal) engineers, younger brother of Sir Edward Strachey [q. v. Suppl. II for parentage], and elder brother of Sir John Strachey [q. v. Suppl. II], was born on 24 July 1817 at Sutton Court, Somerset, the seat of his uncle, Sir Henry Strachey (1772-1858), second baronet.

Educated at a private school at Totteridge, Richard entered the East India Company's military seminary at Addiscombe in 1834, and left it as the head of his term with a commission as second lieutenant in the Bombay engineers on 10 June 1836. After professional instruction at Chatham, Strachey went to India, and did duty first at Poona and then at Kandeish. On the augmentation of the Bengal engineers in 1839 he was transferred to that corps, and posted to the irrigation works of the public works department on the Jumna Canal, under (Sir) William Erskine Baker [q. v.]. Promoted lieutenant on 24 Feb. 1841, he was appointed in 1843 executive engineer on the Ganges Canal under (Sir) Proby Thomas Cautley [q. v.], and began the construction of the head works at Hurdwar.

In December 1845 Strachey was hurried off with all the other engineer officers within reach of the Sikh frontier to serve in the Sutlej campaign. He was appointed to Major-general Sir Harry Smith's staff, was present at the affair of Badiwal, at the battle of Aliwal on 28 Jan. 1846, where he had a horse shot under him, and at the victory of Sobraon on 10 Feb. After the battle he assisted in the construction of the bridge over the Sutlej, by which the army crossed into the Punjab. Sir Harry Smith, in his despatch after the battle of Aliwal, dated 30 Jan. 1846, highly commended the ready help of Strachey and of Richard Baird Smith [q. v.], also describing them as 'two most promising and gallant officers.' Strachey drew the plan of the battle to illustrate the despatch, and he was also employed on the survey of the Sobraon field of battle. For his services he received the medal with clasp, and, the day after his promotion to the rank of captain on 15 Feb. 1854, a brevet majority.

At the end of the campaign Strachey returned to the Ganges Canal, but frequent attacks of fever compelled him in 1847 to go to Nani Tal in the Kumaon Himalayas for his health. There he made the acquaintance of Major E. Madden, under whose guidance he studied botany and geology, making explorations into the Himalaya ranges west of Nepal for scientific purposes. In 1848 he accompanied Mr. J. E. Winterbottom, F.L.S., botanist, into Tibet, penetrating as far as lakes Rakas-tal and Manasarowar, previously visited by his elder brother, Captain Henry Strachey, in 1846. Starting from the plain of Rohilkhand at an elevation of about 1000 feet

above sea level, a north-easterly route was taken across the snowy ranges terminating on the Tibetan plateau at an altitude of between fourteen and fifteen thousand feet, on the upper course of the river Sulej. Strachey's detailed account of this journey, entitled 'Narrative of a Journey to Lakes Rakas-tal and Manasarowar in Western Tibet,' appeared in the 'Geographical Journal' (1900), vol. xv. (see also Mr. W. B. HEMSLEY's paper on the 'Flora of Tibet or High Asia' published in the *Journal of the Linnean Society*, vol. xxv. 1902). Over 2000 botanical species (including cryptogams) were collected, and of these thirty-two new species and varieties bear Strachey's name. The result of his geological observations was to establish the fact, which had been doubted by Humboldt, that in Kumaon there were glaciers in all respects similar to those of the European Alps, as shown, among other things, by the direct measurements of their rates of motion; he also settled another disputed point—the true position of the snow line. Travelling over the mountains, he observed the existence of a great series of paleozoic beds along the line of passes into Tibet with jurassic and tertiary deposits overlying them. These fruits of his journey were given in a paper on 'The Physical Geography of the Provinces of Kumaon and Garhwal,' published in the 'Geographical Journal' in 1851.

Strachey returned to England in 1850, and remained at home for nearly five years, occupied, among other things, in arranging and classifying his Kumaon collection. A provisionally named catalogue was prepared by him and printed; it was afterwards revised, and appeared in 1852 in Atkinson's 'Gazetteer of the Himalayan Districts of the North-West Provinces and Oude.' Another revised edition was prepared at Strachey's request by Mr. J. F. Duthie, and published in 1906. In 1854 Strachey was elected a fellow of the Royal Society. He returned to India in the following year, and for a short time had charge of irrigation works in Bundelkhand.

His first connection with the secretariat of the public works department was in 1856, when he was acting under-secretary in the absence of (Sir) Henry Yule [q. v.]. At Calcutta he was brought into contact with (Sir) John Peter Grant [q. v. Suppl. I], a member of the supreme council. When the Mutiny broke out, John Russell Colvin [q. v.], lieutenant-governor of the North West Provinces in Agra, was cut off by the mutineers from all communications with a portion of his

territory; that portion was temporarily constituted a separate government, called the Central Provinces, under Grant as lieutenant-governor, and he appointed Strachey secretary in all departments under him.

Grant and Strachey went to Benares in July 1857, accompanied so far by Sir James Outram [q. v.] and Colonel Robert Napier, afterwards Lord Napier of Magdala [q. v.], who were on their way to Lucknow. After the fall of that place, Grant and Strachey moved to Allahabad, and when Grant was nominated president in council, Strachey remained behind to lay out the new railway station of Allahabad, the mutineers having almost destroyed the old one. He returned to Calcutta in 1858 on his appointment as consulting engineer to government in the railway department. He obtained acceptance of the principle so abundantly justified by its results—that for the construction of irrigation works and for railway development it was right to supply by loan the funds which could not otherwise be provided. His great constructive ability was shown in his reorganisation of the public works department, and in the initiation of an adequate forest service; he was appointed secretary and head of the public works department in 1862.

From this time until he left India for good Richard Strachey was a power in the country, and was, perhaps, the most remarkable man of a family which, for four generations, extending over more than a century, served the Indian government. A strong man with a determined will and a somewhat peppery temperament, he generally carried his way with beneficial results, though he sometimes took the wrong side in a controversy, as in the battle of the railway gauges. Strachey remained secretary to government for the public works department until 1865. Meanwhile he had been promoted lieutenant-colonel on 2 July 1860, and colonel on 31 Dec. 1862. He was created a C.S.I. in 1866 for his services and appointed inspector-general of irrigation, and in 1869 acting secretary of the public works department, with a seat in the legislative council. On leaving India on promotion to major-general on 24 March 1871 (antedated to 16 March 1868), he received the thanks of government for his valuable services during a period of thirty-three years.

Soon after reaching England, Strachey was appointed by Lord Salisbury inspector of railway stores at the India office, and after

retirement from the army on 23 Feb. 1875, with the honorary rank of lieutenant-general, a member of the council of India.

In 1877 Strachey was sent to India to arrange with the Indian government the terms for the purchase of the East India railway, the first of the guaranteed railways to be taken over by the government on the termination of the original thirty years' lease, and he initiated the policy of and drew up the contract for the continued working of the railway by the company under government control. While in India he presided with great ability over a commission to inquire into the causes of the terrible famine and to suggest possible remedies. He also filled the post of financial member of council during the absence of his brother John, and was thus associated with the Indian government in the negotiations which led to the rupture with Shere Ali and war with Afghanistan.

On his return home in 1879 Strachey was re-appointed to a seat in the council of India; he was one of the British commissioners at the Prime Meridian Conference held at Washington, U.S.A., in 1884, and was elected one of the secretaries; in 1887 he was chosen president of the Royal Geographical Society and held the post for two years; he was also an honorary member of the geographical societies of Berlin and of Italy. He resigned his seat on the India council in 1889 to become chairman of the East India Railway Company, and his beneficial rule is commemorated by the 'Strachey' bridge over the river Jumna, opened shortly before his death. He was also chairman of the Assam Bengal Railway Company, and only resigned these positions when nearly ninety years of age, in consequence of increasing deafness. Under his management the East India railway became the most prosperous trunk line in the world.

In 1892 Strachey was one of the delegates to represent India at the international monetary conference at Brussels, and the same year he was a member of the committee on silver currency presided over by Lord Herschell, when there was adopted a far-reaching reform which he had proposed when finance minister in India in 1878, viz. to close the Indian mint to the free coinage of silver. In June 1892 he received from the University of Cambridge the honorary degree of LL.D.

Strachey did much good work for the Royal Society, served on its council four times, from 1872 to 1874, 1880 to 1881, 1884 to 1886, and 1890 to 1891, and was

twice a vice-president; he was a member of its meteorological committee (which controlled the meteorological office) in 1867, and he was a member of the council which replaced the committee in 1876, and from 1883 to 1895 was its chairman. From 1873 he was on the committee of the Royal Society for managing the Kew observatory. The royal medal of the society was bestowed upon him in 1897 for his researches in physical and botanical geography and in meteorology, and the Royal Meteorological Society awarded him the Symons medal in 1906. His most important scientific contributions to knowledge were made in meteorology. He laid the foundations of the scientific study of Indian meteorology, organising a department whose labours have been of use in assisting to forecast droughts and consequent scarcity and of no little advantage to meteorologists generally. For years he served on the committee of solar physics. A sound mathematician, Strachey delighted in mechanical inventions and especially in designing instruments to give graphic expression to formulas he had devised for working out meteorological problems. In 1884 he designed an instrument called the 'sine curve developer' to show in a graphic form the results obtained by applying to hourly readings of barograms and thermograms his formula for the calculation of harmonic coefficients. In 1888 and 1890 he designed two 'slide rules,' one to facilitate the computation of the amplitude and time of maximum of harmonic constants from values obtained by applying his formula to hourly readings of barograms and thermograms; the other to obtain the height of clouds from measurements of two photographs taken simultaneously with cameras placed at the ends of a base line half a mile in length. A further invention was a portable and very simple instrument, called a 'nephoscope,' for observing the direction of motion of high cirrus clouds, whose movement is generally too slow to allow of its direction being determined by the unaided eye.

Strachey had been granted a distinguished service pension and created C.S.I. in 1866, after thirty years' service. Subsequently he declined the offer of K.C.S.I. But on the diamond jubilee of Queen Victoria in 1897 he was gazetted G.C.S.I. After leaving India he lived at Stowey House on Clapham Common; later he moved to Lancaster Gate, and only a few months before his death to Hampstead. He died at 67 Belsize Park Gardens

on 12 Feb. 1908, and was cremated at Golder's Green.

On his return from India in 1879 Richard Strachey collaborated with his brother John in writing 'The Finances and Public Works of India' (1882), a record of their joint achievements from 1869 to 1881. In the preface to the fourth edition (1911) of Sir John Strachey's 'India: its Administration and Progress,' a development of the original work by the two brothers, Sir Thomas W. Holderness says: 'It describes a system of government which they, more than any other public servants of their day, had helped to fashion. It narrates the concrete results of this system, with intimate first-hand knowledge of its working and of the country and the populations which it affected, with an honourable pride in its pacific triumphs and in the benefits which it had conferred on their fellow Indian subjects.' Strachey wrote the articles on 'Asia' and 'Himalaya' in the ninth edition of the 'Encyclopædia Britannica' and contributed many more papers than those already cited to scientific journals.

Sir Richard was twice married: (1) on 19 Jan. 1854 to Caroline Anne (d. 1855), daughter of the Rev. George Downing Bowles; (2) on 4 Jan. 1859 to Jane Maria, daughter of Sir John Peter Grant [q. v. Suppl. I.] of Rothiemurchus, N.B., his chief in the Mutiny days. She survived him with five sons and five daughters.

A portrait in oils (1889), by Lowes Dickinson [q. v. Suppl. II]; another in water-colours by Miss Jessie MacGregor; a third in pastel (1902), by Simon Bussy; and a medallion in bronze (1898), by Mr. Alfred Gilbert, R.A., are in possession of the family.

STRETTON, HESBA, pseudonym. [See SMITH, SARAH (1832-1911), authoress.]

STRONG, SIR SAMUEL HENRY (1825-1909), chief justice of Canada, born at Poole, Dorsetshire, on 13 Aug. 1825, was son of Samuel S. Strong, D.D., LL.D., by his wife Jane Elizabeth Gosse of that town, sister of Philip Henry Gosse [q. v.]. In his

eleventh year he accompanied to Canada his father, who became chaplain of the forces in Quebec and rector of Bytown (now Ottawa) and rural dean. Educated in the Quebec High School and privately, the son began to study law in Bytown, and was called to the bar in Toronto in 1849. He entered into partnership with H. Eccles (afterwards librarian of Osgoode Hall) and later with Sir Thomas W. Taylor (subsequently chief justice of Manitoba) and (Sir) James David Edgar (who became speaker of the Canadian House of Commons). Strong rapidly secured a reputation in the courts of equity, and was appointed in 1856 a member of the commission for the consolidation of the statutes of Canada and of Upper Canada. He was elected a bencher of the Law Society of Upper Canada in 1860 and took silk in 1863. Six years later he was raised to the bench as one of the vice-chancellors of Ontario. He served on the commission of inquiry into a union of the law and equity courts in 1871. In 1874 he was transferred to the Court of Error and Appeal of Ontario, then the highest of the provincial tribunals.

In 1875 Strong was advanced to the newly constituted Supreme Court of Canada as a puisne judge, and on the death in Dec. 1892 of Sir William Johnstone Ritchie [q. v.], he became chief justice. He was knighted next year. His appointment as a member of the judicial committee of the privy council followed in Jan. 1897. He resigned the chief-justiceship in 1902 in order to become chief of a commission for the consolidation of the statutes of Canada. He died at Ottawa on 21 Aug. 1909.

One of the ablest jurists of Canada, Strong was distinguished by his powerful memory for cases, by a scientific knowledge of the principles of both law and equity, and by a power of incisive comment that added much to the force of his *obiter dicta*. He married in 1850 Elizabeth Charlotte Cane, by whom he had two children.

A portrait in oils hangs in the Supreme Court at Ottawa.

STRONG, SANDFORD ARTHUR (1863-1904), orientalist and historian of art, born in London on 10 April 1863, was second son of Thomas Strong of the war office. His eldest brother, Thomas Banks Strong, is dean of Christ Church, Oxford. In 1877 he entered St. Paul's School as a

foundation scholar, but remained there for little more than a year. His next two years were passed as a clerk at Lloyd's, though during this time he also attended classes at King's College. In 1881 he matriculated at Cambridge, with a Hutchinson student-ship at St. John's College. He graduated in 1884, with a third class in Part I of the classical tripos, being placed in the second class in Part II the following year. He proceeded M.A. in 1890. Even in his undergraduate days the bent of his mind had been towards oriental studies, and on the recommendation of Professor Edward Byles Cowell [q. v. Suppl. II] he worked at Sanskrit with Cecil Bendall [q. v. Suppl. II]. But receiving little encouragement at Cambridge, he migrated to Oxford towards the end of 1885. There he found occupation as subkeeper and librarian of the Indian Institute, and also friends in Max Müller, Professor Sayce, and Adolf Neubauer [q. v. Suppl. II]. Neubauer advised him to visit the continent, and gave him letters of introduction to Renan and James Darmesteter at Paris. Both were deeply impressed with his attainments, and he also studied with Schrader at Berlin. Renan wrote of him : 'L'étendue et la sagacité de son intelligence me frappèrent. Ses connaissances littéraires et scientifiques sont vastes et sûres. C'est certainement un des esprits les plus distingués que j'ai rencontrés.' Darmesteter spoke no less confidently of his 'exactitude and precision' as a specialist, and his width of views and interest. Despite the qualifications thus attested, Strong on his return to England found recognition or remunerative employment slow in coming. To Sanskrit he added Pali, to Arabic he added Persian and Assyrian, and he made some progress in hieroglyphics and Chinese. On all these he wrote in learned publications, and he also contributed reviews to the 'Athenæum' and the 'Academy.' But he failed in his candidature for the chair of Arabic at Cambridge vacant by the death of Robertson Smith in 1894, nor was it a consolation to be appointed in 1895 professor of Arabic at University College, London, though he held that almost nominal office until his death.

But at the darkest hour a new career suddenly opened before him. (Sir) Sidney Colvin introduced him to the duke of Devonshire, who was then in need of a librarian to succeed Sir James Lacaita. Installed at Chatsworth in 1895, he was as much interested in the historic collection of pictures and other works of art there as in the books in the library. He now showed

what the scientific training of a scholar could accomplish in a novel field, which was indeed the return to an old love. As a boy he had been taught drawing by Albert Varley, who gave him a copy of Pilkington's 'Dictionary of Painters,' and he had made himself acquainted with the style of the different masters in the National Gallery. The discoveries he made at Chatsworth, and no doubt also his personal charm, opened to him other collections—the Duke of Portland's at Welbeck, where he also acted for a time as librarian, the Earl of Pembroke's at Wilton, and Lord Wantage's at Lockinge. Between 1900 and 1904 he published descriptions of these treasures, artistic and literary. In 1897 he was appointed librarian at the House of Lords, where he compiled two catalogues, one of the general library and one of the law books. This appointment, while it did not interrupt his studies, nor his tenure of office at Chatsworth, introduced him to another sphere of interest, where he made himself equally at home. He became absorbed in politics and even dreamed that his ideal occupation would be to govern orientals. But his health was never robust, and he had strained the measure of physical vigour that he possessed. After a lingering illness, he died in London on 18 Jan. 1904, and was buried in Brompton cemetery. In 1897 Strong married Eugénie Sellers, the well-known classical archaeologist. His wife survived him, but there were no children of the marriage. Two portraits by Legros and one by Sir Charles Holroyd are in the possession of his widow. A bust by the Countess Feodora Gleichen (1894) was presented by a group of his friends to the 'Arthur Strong Oriental Library' at University College, London, the nucleus of which is formed by his books given in his memory by his widow.

Of special importance among Strong's oriental publications are his editions of the 'Maha-Bodhi-Vamsa' for the Pali Text Society (1891), and of the 'Futah al-Habashah' or 'Conquest of Abyssinia' (1894) for the Royal Asiatic Society's monographs. At his death he was engaged on the Arabic text of Ibn Arabshah's 'History of Yakmak, Sultan of Egypt,' the first part of which appeared in the 'Journal of the Royal Asiatic Society' for 1904.

Among his art publications the principal are: 1. 'Reproductions of Drawings by the Old Masters in the Collection of the Earl of Pembroke and Montgomery at Wilton House,' 1900. 2. Preface to Messrs

Hanfstaengl's 'Plates of National Gallery Pictures,' 1901. 3. 'Masterpieces of the Duke of Devonshire's Collection of Pictures,' 1901. 4. 'Reproductions of Drawings by the Old Masters at Chatsworth,' 1902. 5. 'Catalogue of Letters and other Historical Documents in the Library of Welbeck,' 1903.

[Memoir by Lord Balcarres, prefixed to 'Critical Studies and Fragments' by S. Arthur Strong, with reproductions of portraits and full bibliography, 1905; *The Times*, 19 Jan. 1904; éloge by Lord Reay, *Journal Royal Asiatic Society*, 1904; and *A Distinguished Librarian*, by M. E. Lowndes, June 1905.] J. S. C.

STUBBS, WILLIAM (1825-1901), historian and bishop successively of Chester and Oxford, was the eldest son of William Morley Stubbs, solicitor, of Knaresborough, and Mary Ann, daughter of William Henlock. He came of such solid yeoman stock that he could amuse himself in later life by working out his line of ancestors among the crown tenants of the forest of Knaresborough as far back as the fourteenth century. He was born on 21 June 1825 in High Street, Knaresborough. In 1832 he went to a school at Knaresborough kept by an old man named Cartwright, and thence in 1839 to Ripon grammar school, where he attracted the attention of Charles Thomas Longley [q. v.], afterwards archbishop of Canterbury, then bishop of Ripon. In 1842 his father died, leaving the widow (who survived till 1884) to face a severe struggle against poverty with her six young children. Shortly afterwards Longley's influence obtained from Dean Gaisford his nomination to a servitorship at Christ Church, Oxford, where he went into residence in April 1844, and took his degree in 1848 with a first in classics and a third in mathematics. At Christ Church he was 'kept at arms length as a servitor,' and is described as 'timid, grateful, feeling his isolation, and possessed of an amazing memory.' His father had taught him to read old charters and deeds, and he now laid the foundations of his historical learning in the college library, where he attracted 'the amused and approving surprise' of the dean by his devotion to such strange studies. Though official good-will refused to break through the tradition which forbade the election of a servitor as a student, he ever remained a 'loyal son of the House.' However, within a few weeks of his degree he was elected to a

fellowship at Trinity College, where he resided till 1850. Stubbs had come to Oxford a tory and an evangelical, but tractarian influence soon made him a lifelong high churchman (*Visitation Charges*, pp. 347-8). In 1848 he was ordained deacon and in 1850 priest by Bishop Wilberforce, and on 27 May 1850 he was presented to the college living of Navestock, near Ongar, in Essex, thereby vacating his fellowship. He remained vicar of Navestock until 1866, performing diligently the work of a country parson, and winning the affection of his flock by his kindness and geniality. 'I suppose,' he said in later years, 'I knew every toe on every baby in the parish' (HUTTON, p. 259). In June 1859 he married Catherine, daughter of John Dellar of Navestock, who survived him. She had been mistress of the village school. He had a family of five sons and one daughter.

Stubbs utilised his leisure while a village parson in acquiring such a knowledge of the sources for mediæval English history as made him the foremost scholar of his generation. He published nothing before 1858, when he issued his 'Registrum Sacrum Anglicanum,' which exhibited in a series of tables the course of episcopal succession in England. Its genesis is described in the autobiographical postscript (ix-xi) to the preface of the second edition (1897). Modest as was its scope, it had kept him busy for ten years. He now began to write more freely. In 1861 came his first edition of a mediæval document, 'De inventione Sanctæ Crucis,' and in the same year began his contributions to the 'Archæological Journal' and other occasional papers. Increasing practical duties as a guardian of the poor and a diocesan inspector of schools did not drive him from study. He sometimes had private pupils, among them Henry Parry Liddon [q. v.] and Algernon Charles Swinburne [q. v. Suppl. II]. His appointment by Archbishop Longley in Oct. 1862 as Lambeth librarian gave him access to a great library, hampered by but few routine duties. His learning was known to a few discerning friends, such as Edward Augustus Freeman [q. v. Suppl. I] and later John Richard Green [q. v.]. Public recognition, however, came very slowly. He was anxious to be employed as an editor for the Rolls Series, which had been projected in 1857, but it was not until 1863 that official 'polite obstructiveness' was overcome and the new series

obtained its most distinguished editor. In 1862 he was a candidate for the Chichele professorship of modern history at Oxford, but the electors preferred Montagu Burrows [q. v. Suppl. II]. In 1863 he was a candidate for the professorship of ecclesiastical history, when Walter Waddington Shirley [q. v.] was chosen. In 1866 he sought to become principal librarian of the British Museum, but the trustees appointed John Winter Jones [q. v.]. Though sometimes rather restive, he continued steadily at his work. In 1864-5 the two volumes of the 'Chronicles and Memorials of Richard I,' edited for the Master of the Rolls, showed that he was a consummate editor and a true historian. Yet when Goldwin Smith [q. v. Suppl. II] resigned the regius professorship of history at Oxford, he was too discouraged to avow himself a candidate. 'I am not,' he wrote to Freeman, 'going to stand for any more things. If I am not worth looking up, I am not ambitious enough to like to be beaten!' (HURTON, p. 102). However, Lord Derby ascertained from Longley that Stubbs would accept the post, and made him an offer on 2 Aug. 1866, which was joyfully accepted. Before the end of the year Stubbs left Navestock for Oxford, which remained his home until 1884. After 1870 he lived at Kettel Hall, a roomy and interesting old house in Broad Street, which belonged to Trinity College, and is now part of the college buildings. He was the first regius professor to be an ex-officio fellow of Oriel College.

On 7 Feb. 1867 Stubbs introduced himself in his inaugural lecture, 'not as a philosopher, nor as a politician, but as a worker at history,' and anticipated 'the prospect of being instrumental, and able to assist in the founding of an historical school in England.' He soon, however, found that there were great difficulties in his path in Oxford itself. He took immense pains in preparing his lectures. He not only set before his pupils a great deal of the best that he afterwards published in his books, but put together elaborate courses on mediæval German history and foreign history from the Reformation to the Treaty of Westphalia. In later years he sometimes took his 'Select Charters' as a text-book, and made them the starting-point of illuminative, informal talks on mediæval constitutional history. He was compelled by statute to produce, as he said, 'something twice a year which might attract an idle

audience without seeming to trifle with a deeply loved study.' This was the only side of his professorial work that he actively disliked, yet the only lectures which he himself thought fit to publish were some of these popular discourses contained in the 'Seventeen lectures on the study of mediæval and modern history and kindred subjects' which he issued in 1886 (3rd edit., with additions, 1900), soon after he resigned the professorship. After his death four volumes of his more formal lectures were published. These were 'Lectures on European History' (1904), 'Lectures on Early English History' (1906), 'Germany in the Early Middle Ages, 476-1250' (1908), 'Germany in the Later Middle Ages, 1250-1500' (1908). The editing of these volumes is perfunctory, and the attempt made in the English volume to weave together lectures delivered at various times and to various audiences is not successful.

Stubbs's lectures never attracted a large audience. During his professorship the number of undergraduates who read for honours in the school of modern history enormously increased, but his hearers, if anything, diminished in numbers. Between 1869 and 1874 arose an organised system of 'combined lectures,' largely the work of his friend Mandell Creighton [q. v. Suppl. I], which satisfied the wants of those who read history for examinations, and there were few who required what he had to give. Even Creighton 'convinced himself that the only real function which remains for professors to accomplish is that of research' (*Life of Mandell Creighton*, i. 62). This doctrine Stubbs could not accept. In after years he described rather bitterly how he 'revolted against the treatment which he had to undergo,' and that after 1874 he had 'scarcely a good class or any of the better men,' and that 'the historical teaching of history has been practically left out in favour of the class-getting system of training' (HURTON, pp. 264, 270). In the end he renounced the idea, if he had ever entertained it, of organising a school of history such as had been set up by his colleagues in Germany. He refused to impose on others the fetters of an organisation which he himself resented. Closely associated with the strongest school of conservatism in all other matters, he had no fellow-workers in carrying out ideals that would have involved a radical recasting of the prevailing methods of historical teaching. He disliked controversy, and always remained friendly with the tutors.

Despite the limitations imposed upon him, there were few earnest students of history at Oxford who were not indebted to him for advice, encouragement, sympathy, and direction.

The restrictions under which he chafed allowed Stubbs to concentrate himself upon his personal work. Society and academic business did not appeal to him. He disliked dinner-parties, smoking, late hours, and committees. He conscientiously discharged every duty that lay straight before him, but he did not spend too much time in doing so. His real life, however, was in his study, and in the libraries where he sought material. His literary output was prodigious. The history of scholarship would have to be ransacked to afford parallels of a work so distinguished both in quantity and quality within the seventeen years of his professorship. He worked with extraordinary rapidity, accuracy, and sureness. Of many large literary schemes, perhaps the only one which he did not complete was his projected reproduction 'in accordance with the present state of our knowledge and materials' of all that part of Wilkins's 'Concilia' antecedent to the Reformation. Leaving the Welsh, Scottish, and Irish sections to his colleague, Arthur West Haddan [q. v.], Stubbs undertook the Anglo-Saxon period, and published in 1878 vol. iii. of 'Councils and Ecclesiastical Documents covering the History of the Anglo-Saxon Church,' but the plan never went any further. A by-product of this was the long series of lives of Anglo-Saxon bishops, saints, kings, and writers, from Stubbs's pen, which were published in the four volumes of the 'Dictionary of Christian Biography' between 1877 and 1887. He also contributed to the two volumes of the 'Dictionary of Christian Antiquities' (1875-80), and had a share in the editing of that work (*Preface* to vol. i. p. xi).

The most characteristic work done by Stubbs in these fruitful years is to be found in the editions of chronicles which he contributed to the Rolls Series. The two volumes of the 'Chronicles and Memorials of Richard I,' issued in 1864-5, were followed by the two volumes of the 'Gesta regis Henrici II' attributed to Benedict of Peterborough (1867), the four volumes of Roger Howden or Hoveden's 'Chronica' (1868-71), the two volumes of the 'Memoriale or historical collections of Walter of Coventry' (1872-3), the one volume of the 'Memorials of Saint Dunstan' (1874), the two volumes of

'The Historical Works of Ralph Diceto' (1878), the two volumes of 'The Historical Works of Gervase of Canterbury' (1879-80), and the two volumes of the 'Chronicles of the Reigns of Edward I and Edward II' (1882-3). While professor Stubbs published for the Rolls Series fifteen large volumes. There were also the two published before, and the two volumes of William of Malmesbury issued later. This monumental series won a very high reputation for a collection which, apart from Stubbs's contributions to it, contains some bad and more indifferent work. They are in every respect models of what the 'editio princeps' of an original authority should be. The text is impeccable, and based upon the careful collation of the available manuscripts. Every help is given in the way of introductions, notes, and elaborate indexes to lighten the labours of those using the texts. They are much more than ideal examples of editorial workmanship. A liberal construction of the directions given to the Rolls editors allowed Stubbs to write 'excellent history on a large scale' in every one of his introductions which revealed him as an historical narrator of the first order, equally at home in painting a large gallery of historical portraits, and in working out the subtlest of problems. The shy student, who had been thought a mere antiquary, proved to be a constructive historian of real power and eloquence. The range of his historical vision was enormous. Here he vindicated the claims of Dunstan to be a pioneer of English political unity and of mediæval intellectual life. There he threw new light on the reign of Edward I, and for the first time analysed fully the causes of the fall of Edward II. Yet while all periods were treated with wonderful grasp, a special mastery was shown of the age of Henry II. It was unfortunate for Stubbs's wider fame that the form in which the historical part of these introductions appeared made them inaccessible to general readers. An attempt to collect them in a detached form, made after his death (*Historical Introductions to the Rolls Series*, 1902), was too carelessly performed to be entirely successful.

Side by side with his other tasks, Stubbs devoted himself to writing on a large scale the constitutional history of mediæval England. As a forerunner to this great work, he issued in 1870 the most widely used of all his publications. This was 'Select Charters, and other Illustrations of English Constitutional History from the Earliest Times to the Reign of Edward I,'

with a luminous tightly packed 'introductory sketch.' No single book has done so much to put the higher study of English mediæval history on the sound basis of the study of original texts. 'Select Charters' was followed in 1873 by the first volume of the 'Constitutional History of England,' which covers the ground from the origins to the Great Charter. Next came in 1875 vol. ii., which went to 1399, and in 1878 vol. iii., which took the story down to 1485, and completed the work. It is by this massive work of historic synthesis that Stubbs's position among historians has generally been estimated, and not unjustly, if we recognise that the immense ground covered made pioneer work such as illuminated his contributions to the Rolls Series impossible, and that his limitation to the history of institutions gave few opportunities for the remarkable narrative and pictorial gifts there displayed. Rapidly as the book was executed, it shows extraordinary mastery of the mass of material which had to be dealt with. Stubbs evenly distributes his attention over the whole corpus of printed chronicles, printed charters, laws, rolls, and documents; he has at his fingers' ends the monumental compilations of the great seventeenth-century scholars, and he uses to the full (perhaps too fully) the modern investigations of his German masters such as Maurer and Waitz. He moves easily under all this mass of learning and uses it with accuracy, precision, and insight. By the happy device of dividing his book into analytic and descriptive chapters alternating with annalistic narratives, he furnished the best skeleton of our mediæval political history that has been written, and gave width and human interest to his pages. Though necessarily dealing with great masses of detail, general principles are wisely and impressively emphasised; though constantly concerned with abstractions and tendencies, it has rightly been pronounced to be 'marvellously concrete.' Self-suppression, impartiality, accuracy, sympathy, sobriety of judgment, and sense of proportion stand out in every part of the great book.

No work of erudition can altogether stand the test of time, but 'Stubbs's Constitutional History' still remains unsurpassed nearly forty years after its publication. It gave a new direction to the study of mediæval English history, and its influence for good is as lively now as when it first issued from the press. The austerity which

sometimes repels the beginner has been mitigated by a whole literature of easy introductions to its doctrines, some good, more indifferent, none original, nearly all useful. By-ways which Stubbs was not able to explore have been pursued by critical disciples, among whom we may place Frederic William Maitland [q. v. Suppl. II], Mary Bateson [q. v. Suppl. II], Prof. Vinogradoff, and Dr. J. Horace Round. It is inevitable, under such circumstances, that many of Stubbs's conclusions have to be reviewed. This is especially the case since absorbing occupations and, perhaps, an increasingly conservative temper of mind prevented Stubbs from adequately revising what he had written. The 'Germanist' school of which he was the soberest and most reasonable exponent in England is no longer in universal favour, and it is plain that large portions of the 'Constitutional History,' notably the Anglo-Saxon and Norman parts, will have, to some extent, to be re-written. Problems of 'origins' did not appeal to him, and he only moved easily when texts were abundant. As regards Anglo-Saxon history Stubbs confessed himself an 'agnostic,' as compared with his friends Freeman and Green. Yet the passages in which his conclusions least meet the views of modern scholars are those in which he looked into the facts with the eyes of his German guides. In later parts of the book there is little to alter, though there is much to supplement. After the Norman reigns he seldom goes astray save when unconsciously influenced by general theories of tendency, or when dealing with subjects like the royal revenue in the fourteenth century, which could not be blocked out even in outline in the light of the printed materials then available. In 1907 the first volume of a French translation, 'Histoire constitutionnelle de l'Angleterre par W. Stubbs. Traduction de G. Lefebvre,' was published with notes and elucidations by Professor C. Petit-Dutaillis, wherein an effort was made to summarise the more generally accepted criticisms and amplifications of the early part of Stubbs's history. These criticisms have been translated by Mr. W. E. Rhodes in 1908 as 'Studies and Notes supplementary to Stubbs's "Constitutional History," down to the Great Charter.'

Stubbs never forgot that he was a clergyman. Pusey was his 'master,' and he was intimate with Liddon and the other high church leaders in Oxford, and strenuously supported their ecclesiastical and academic programme. In 1868 he

would gladly have changed his professorship for that of ecclesiastical history. In 1869 he spent much labour in preparing for the press Cardinal J. de Torquemada's treatise on the 'Immaculate Conception,' a fifteenth-century treatise reissued at Pusey's instigation to influence the Vatican council. Between 1875 and 1879 he was rector of the Oriel living of Cholderton on Salisbury Plain, and spent his summers there until his resignation in 1879. After 1876 he acted as chaplain to Balliol College, and in 1878 he was sorely tempted by the offer of the living of the university church of St. Mary's. In April 1879 he accepted a canonry at St. Paul's Cathedral, London, vacated by the promotion of Joseph Barber Lightfoot [q. v.] to the bishopric of Durham. He appreciated this preferment very much; it was the first tangible recognition in his own country of his great work; it gave him an ecclesiastical position in which he could urge his opinions with authority, a residence in London which was helpful to his historical work, and emoluments which put him in easy circumstances. His friendship with the dean, Richard William Church [q. v. Suppl. I], and other members of the chapter made his personal relations pleasant. During his periods of residence he worked on the muniments and chronicles of St. Paul's, and took immense pains with his Sunday afternoon sermons, though he humorously quoted the newspapers which said 'the sermons in the morning and evening were preached by Mr. A. and Mr. B., in the afternoon the pulpit was occupied by the canon in residence' (HUTTON, p. 131). In fact his sermons became exceedingly weighty, valuable, and strong, though he made too great demands on the attention of his hearers ever to attract the immense congregations which flocked to hear Liddon.

In 1881 Stubbs was appointed a member of the royal commission on ecclesiastical courts, and was present at every one of the seventy-five sessions which that body held between May 1881 and July 1883. Church called him 'the hero of the commission' (CHURCH'S *Life*, p. 312). He took a leading part in its debates, waged fierce war against 'lawyers' and the 'Erastians' among his colleagues, and presented suggestions for a final court of appeal which left to ecclesiastical tribunals the sole determination of points of ritual and doctrine. He drew up five historical appendices to the report in which he discussed the nature of the courts which exercised ecclesiastical jurisdiction in England at various times,

the trials for heresy up to 1533, the acts by which the clergy recognised the royal supremacy, and some aspects of the power and functions of convocation. There can be no doubt of the permanent value of the great bulk of the very careful and detailed research contained in these appendices. Nevertheless some of the main positions maintained by Stubbs were subjected to damaging criticism from Professor Frederic William Maitland [q. v. Suppl. II], in articles published in the 'English Historical Review' of 1896 and 1897, and soon afterwards in book form as 'Roman Canon Law in the Church of England' (1898). It may be recognised that Stubbs minimised unduly the authority of the Pope as 'universal ordinary' and suggested the unhistorical view that the English church might, and did, accept or reject canonical legislation emanating from the Papacy, and that without such acceptance Roman canon law was not held to be binding in the English ecclesiastical courts. Stubbs himself never dealt with Maitland's arguments, but contented himself with affirming that his appendices contained 'true history and the result of hard work' (preface to third edit. of *Seventeen Lectures*).

In Feb. 1884 Stubbs was offered by Gladstone the bishopric of Chester. Accepting the post he was consecrated on 25 April in York Minster by Archbishop Thomson. Bidding adieu to the university on 8 May in the characteristic last statutory public lecture (published in his 'Seventeen Lectures,' 1886), he was enthroned in Chester Cathedral on 24 June. For a time he cherished the hope of carrying on his historical work, but his edition for the Rolls Series of the 'Gesta regum Anglorum' and the 'Historia novella' of William of Malmesbury, published in two volumes in 1887 and 1889, mark the practical conclusion of his historical labours. He maintained to the last his interest in his subject, and was never weary in aiding his friends and disciples with advice and substantial assistance. He kept up with the best work done in his subject in England and Germany, though somewhat blind to the new school of mediæval historians growing up in France. He had, however, little sympathy now for historical novel-ties. The conservative note sounded in the new preface to the last edition of the 'Select Charters' published in his lifetime is characteristic of his later attitude (preface to eighth edit. 1895).

As bishop, Stubbs was at his best when

dealing with big issues, and somewhat less successful when tackling the petty details of administration and correspondence. His friend Liddon warned him to be on his guard against 'looking at persons and events from the critical and humorous side,' and of the danger of killing zeal. Though no man approached the episcopal office in a more earnest spirit, it cannot be said that he was always mindful of his friend's advice. As he became known his clergy better understood the seriousness that underlay his humorous modes of expression, and appreciated his simplicity of life, his unostentatious friendliness, his liberality, shrewd insight into men, and wise counsels. He made an energetic and successful attempt to build new churches, and increase the number of the clergy in the densely peopled district that ranges from Stockport to Stalybridge. He was unwearied in visiting the parishes of his diocese, and in preaching in them. 'I am engaged,' he wrote, 'in a regularly organised attempt to prove to the clergy of the diocese that I am not a good preacher. I think I shall succeed' (HUTTON, p. 262). He urged on his clergy the necessity of 'constructive not controversial' teaching in church history. He interested himself in educational and historical work in his neighbourhood; he welcomed the Archaeological Institute to Chester in 1886; he became vice-president, and ultimately president, of the Chetham Society; he was a member of the court of the newly founded Victoria University, and championed, unsuccessfully for the moment, the establishment of a theological faculty in it. He was much consulted on matters of general ecclesiastical policy. His brother prelates heard his opinions with extreme respect. In 1886 he drew up at the request of E. W. Benson, archbishop of Canterbury, an historical paper on the possibility of establishing a national synod in England; he took a prominent part in the Lambeth conference of 1888, and a large part of the encyclical letter drawn up by it was written out in his own clear hand. It was composed by Stubbs and two other bishops, who sat up all night in the Lollards' tower at Lambeth Palace.

In July 1888 Stubbs accepted from Lord Salisbury an offer of translation from Chester to the bishopric of Oxford. But the resignation of his predecessor, John Fielder Mackarness [q. v.], did not take legal effect till November, and it was not until 24 Dec. 1888 that he was elected bishop. He began his work in the spring of 1889.

A strong reason which weighed with Stubbs in accepting translation was the prospect of returning to his old surroundings. However, he disliked a large and remote country house like Cuddesdon. He strongly urged the ecclesiastical commissioners to sell Cuddesdon, and buy for the see a house in Oxford. Though the prime minister supported him, the ecclesiastical commissioners refused his request, perhaps through the influence of Archbishop Benson, who believed that bishops should maintain high state. Stubbs never reconciled himself to Cuddesdon, and vented his spleen in humorous verses, wherein lurks just a trace of bitterness. He found it very difficult to work a diocese of three counties from a village remote from railway stations. Age soon began to tell upon him, and he found his routine work increasingly irksome and laborious, and his clergy did not appreciate his attempts to distinguish between his strictly episcopal functions, which he rigidly discharged, and the conventional duties which modern bishops are expected to fulfil, and for which he did not conceal his distaste. He was greatly helped by his chaplain, Canon E. E. Holmes, and before the end of 1889 the consecration of J. L. Randall as a suffragan bishop of Reading lessened the travelling and administrative work. In all essential matters, however, he remained to the end the model of the careful, judicious, and sympathetic diocesan, and the wise and courageous advocate of the older high church tradition. Perhaps the most permanent records of his episcopate are to be found in his public utterances, the most important of which were published by Canon Holmes after his death. These were: (1) 'Ordination Addresses by William Stubbs, late bishop of Oxford' (1901), and (2) 'Visitation Charges delivered to the Clergy and Churchwardens of the Dioceses of Chester and Oxford' (1904). In all these addresses can be seen his ardent faith, his strong sense of personal religion, his kindly tolerance, his strenuous maintenance of the ancient ways in all matters of dogma and church usage, and his increasing dislike of all ecclesiastical innovations. Very noteworthy are the luminous surveys of the history and actual position of the English church, which give permanent value to his visitation charges.

Stubbs's intellectual interests remained unabated, though he constantly complained that he had no time for study. He managed, however, to bring out a new edition of the 'Registrum Sacrum Anglicanum',

in 1897, and revised editions of 'Select Charters,' 'Constitutional History,' and the 'Seventeen Lectures.' To the last he amused himself with pedigrees, writing prefaces, reading proof sheets, and helping his historical friends. He renewed his interest in the University of Oxford, and again became a curator of the Bodleian, a delegate of the university press, and a member of the board of modern history. Even more than at Chester he was constantly consulted on general matters of ecclesiastical politics. In 1889 he unwillingly yielded to the strong pressure of Archbishop Benson to act as one of his assessors in the trial of Edward King [q. v. Suppl. II], bishop of Lincoln, for ritualistic practices. His personal affection for the archbishop was his main reason for undertaking this unwelcome task. He was convinced that the archbishop was no 'Canterbury pope,' with a right to sit alone in judgment on his suffragans. Stubbs, too, was little interested in questions of vestments and ceremonies, though he strongly shared Bishop King's theological convictions, and regarded him as the victim of persecution. Between 12 Feb. 1889 and 21 Nov. 1890 Stubbs regularly attended the archbishop's court in the Lambeth library. He felt compromised by being there, and was bored by the lengthy arguments. He vented his displeasure in jest and verse. 'It is a sheer waste of time,' he cried, 'and the court has not a shadow of real authority.' 'We are discussing forms and ceremonies. Oh! the wearing weariness of it all!' (HUTTON, pp. 326-8). He expressed, however, his hearty approval 'of all and every part' of the primate's judgment. (*Visitation Charges*, pp. 154-166, expounds in full his point of view. Benson's is seen in A. C. BENSON's *Life of E. W. Benson*, ii. 348-81.) For the rest of his life he scrupulously adhered to it, and forbade his clergy to practise any of the ceremonies which Benson had declared illegal.

Early in 1898 Stubbs's health began to fail. Though he rallied somewhat he was again ill in 1900. Early in 1901 he wrote 'I can do all my hand and head work, but am weak in moving about.' He felt deeply the deaths of Bishop Creighton and Queen Victoria. Ordered by King Edward VII to preach the sermon in St. George's chapel the day after Queen Victoria's funeral, he disobeyed his physicians, and went. For the next two months he struggled against increasing weakness, but at the end of March he was told that he must resign his bishopric. He began his preparations to

move from Cuddesdon, when he had a serious relapse, and died on 22 April 1901. He was buried in Cuddesdon churchyard. A portrait in oils by Sir Hubert von Herkomer (1885) is in the picture gallery of the Bodleian Library; another, by Charles Wellington Furse (1892), is at Cuddesdon.

Among the public honours Stubbs received may be mentioned membership of the Berlin, Munich, and Copenhagen academies, corresponding membership of the Académie des sciences morales et politiques of the French Institut, honorary doctorates of Heidelberg, Edinburgh, Cambridge, Dublin, and Oxford, and the rarely conferred Prussian order *pour le mérite* (1897). Perhaps no recognition pleased Stubbs better than that of his old Oxford contemporaries and brother historians, the friendship of such German scholars as Pauli, Maurer, Waitz, and Liebermann, and his honorary studentship of Christ Church.

Stubbs's more important writings have already been enumerated. He seldom contributed to periodical writings after the early years of his literary activity, and he boasted that he wrote only one review, which apparently has not been identified. Yet besides those mentioned above there were many books which he edited and prefaces which he wrote. The list of these occasional and minor writings can be found in the bibliography of his historical works, edited for the Royal Historical Society by Dr. W. A. Shaw (pp. 17-23, 1903), and in the bibliography in Archdeacon Hutton's 'Letters of William Stubbs' (pp. 409-15, 1904).

[The most copious materials for Stubbs's biography are to be found in *The Letters of William Stubbs, Bishop of Oxford*, edited by W. H. Hutton, 1904. Of special value are the autobiographical fragments that Stubbs was fond of inserting in some of his later utterances, as for instance *Seventeen Lectures*, 3rd edit., pp. vi-xii, 432-3, 474-8; *Visitation Charges*, pp. 347-8; postscript to preface to *Registrum Sacrum Angliæ*, 1897. Some further details can be gleaned from Mrs. Creighton's *Life and Letters of Mandell Creighton* (1904), W. R. W. Stephens's *Life and Letters of E. A. Freeman* (1895), and Leslie Stephen's *Letters of J. R. Green* (1901). To these may be added particulars derived from the various obituary notices, and from personal knowledge and private information. Among the most noteworthy appreciation of Stubbs's historical work may be mentioned that by F. W. Maitland in the *English Historical Review*, xvi. 417-26 (1901), reprinted in *The Collected Papers of F. W. Maitland*, iii. 495-511 (1911). Others appear in *Quarterly*

Review, ccli. 1-34 (1905); *Revue Historique*, lxxvi. 463-6 (1901, by Charles Bémont); *Church Quart. Rev.* lii. 280-99.] T. F. T.

STURGIS, JULIAN RUSSELL (1848-1904), novelist, born at Boston, Massachusetts, U.S.A., on 21 Oct. 1848, was fourth son of Russell Sturgis of Boston, U.S.A., by his wife Juliet Overing Boit, also of Boston. When seven months old, the boy was brought to England, and he resided there for the rest of his life. Educated at Eton (in Dame Evans's house) from 1862 to 1867, he matriculated at Balliol College, Oxford, on 27 Jan. 1868, and graduated B.A. in 1872, taking a second class in the final classical school; he proceeded M.A. in 1875. His intellectual interest at the university lay chiefly in history and political economy. He was also a notable athlete in school and college days, being captain of the school football eleven and rowing in his college boat. In 1876 he was called to the bar of the Inner Temple. He became a naturalised British subject in Jan. 1877. In 1878 he travelled in the Levant, visiting the Turkish and Russian armies before Constantinople, and in 1880 he made a tour in the west of America. He was more attracted by life and character than by art and archaeology, and he wove descriptions of his travels into his novels (cf. *John Maidment*, 1885, and *Stephen Calinari*, 1901).

His first work, a novel entitled 'John-a-Dreams,' appeared in 1878. It was followed by 'An Accomplished Gentleman' in 1879, and by 'Little Comedies,' dialogues in dramatic form, containing some of his most delicate and characteristic writing, in 1880. 'Comedies New and Old' and 'Dick's Wandering' appeared in 1882.

Sturgis married on 8 Nov. 1883, at St. Patrick's Cathedral, Armagh, Ireland, Mary Maud, daughter of Colonel Marcus de La Poer Beresford. There were three sons of the marriage. Possessed of ample means, Sturgis after his marriage divided his time between London and the country, first at Elvington near Dover, and then at Compton near Guildford, where he built a house. He continued writing, issuing the novels 'My Friends and I' in 1884, 'John Maidment' in 1885, 'Thraldom' in 1887, 'The Comedy of a Country House' in 1889, 'After Twenty Years' in 1892, 'A Master of Fortune' in 1896, 'The Folly of Pen Harrington' in 1897, and 'Stephen Calinari,' his last and best novel, in 1901. He also attempted verse in 'Count Julian: a Spanish Tragedy'

(1893) and 'A Book of Song' (1894), and wrote the librettos for Goring Thomas's 'Nadeshda' (1885), for Sir Arthur Sullivan's 'Ivanhoe' (1891), and for Sir Charles Villiers Stanford's 'Much Ado about Nothing' (1901).

Sturgis died on 13 April 1904 at 16 Hans Road, London, S.W., and after cremation at Woking was buried in the Compton burial ground.

Sturgis was a man of singular charm of character, the reticence which distinguishes his writings being laid aside in his intercourse with his friends. His novels show a peculiar and sympathetic insight into the immature mind of masculine youth. His style, clear, delicate, and expressive of the writer's refinement and culture, is at times allusive and elliptical, and bears witness to the influence of Pater and Meredith; of the latter Sturgis was a great admirer and a personal friend.

[The Times, 14 and 18 April 1904; Who's Who, 1903; Monthly Review, No. 46, July 1904 (article by P. Lubbock and A. C. Benson); private information.] E. L.

STURT, HENRY GERARD, first **BARON ALINGTON** (1825-1904), sportsman, born on 16 May 1825, was eldest son of Henry Charles Sturt (1795-1866) of Crichel, Dorset, sometime M.P., by his wife Charlotte Penelope, third daughter of Robert Brudenell, sixth earl of Cardigan. From Eton he went to Christ Church, Oxford, where he graduated B.A. in 1845, proceeding M.A. in 1848. From 1847 to 1856 he was conservative M.P. for Dorchester, and from 1856 to 1876 for the county of Dorset. He was raised to the peerage on 15 Jan. 1876, as Baron Alington, a title borne by maternal ancestors in both the English and Irish peerages which had become extinct.

Sturt's name first appeared in 1849 in the list of winning owners on the turf, and he was elected to the Jockey Club next year. The colours he registered were 'light blue, white cap,' which were those formerly belonging to Lord George Bentinck. Almost throughout his career on the turf Lord Alington had a racing partner. His first confederate was Mr. H. Curzon, with whom he owned a filly called Kate. Thinking she was of no account, they sold her as a two-year-old, and the following year, 1852, had the mortification of seeing her win the One Thousand Guineas. For some years Sturt's horses were trained by John Day at Danebury, but when in 1868 he entered into a racing partnership with Sir Frederic Johnstone—a partnership which

was dissolved only by the death of Lord Alington—the horses were next transferred to William Day at Woodyates. The colours adopted by the ‘confederates’ were those of Sir Frederic Johnstone, ‘chocolate, yellow sleeves.’ The new partnership, which in after years came to be known as ‘the old firm,’ speedily scored a notable success, for in 1869 *Brigantine*, bought as a yearling for a small sum, won the Oaks and the Ascot Cup. In 1871 a reverse was experienced. As the result of bad jockeyship, *Allbrook* was beaten by a head by *Sabinus* for the Cambridgeshire Stakes. Sturt stood to win a sum variously stated as 30,000*l.* to 50,000*l.* on *Allbrook*.

In 1881 the partners transferred their horses to John Porter at Kingsclere, and a series of important successes followed. In 1883 the partners won the Derby with *St. Blaise*; in 1891 Common won the Two Thousand Guineas, the Derby, and the *St. Leger*; in 1894 *Matchbox* ran second to *Ladas* in the Derby, and *Throstle* won the *St. Leger*, beating *Ladas* and *Matchbox*. *Matchbox* had been sold for 16,000*l.* to Baron Hirsch, who after the *St. Leger* parted with it to the Austrian government. *St. Blaise* was sold to Mr. Belmont, an American sportsman, after whose death the horse was sold at auction in New York for 20,000*l.* Sir Blundell Maple bought Common for 15,000*l.* the day after he won the *St. Leger*. Among the partners’ many other victories was that of *Friar’s Balsam* in all his races as a two-year-old in 1887. Meeting with an accident to his jaw, the horse failed next year to win ‘classic’ honours.

At his home, Crichel, Lord Alington dispensed a liberal hospitality. He was a delightful host, a considerate landlord, and magnificently generous. He died of heart failure at Crichel on 17 Feb. 1904, after a lingering illness, and was buried there. A full-length portrait by Graves is in the staircase hall at Crichel.

Alington married (1) on 10 Sept. 1853 *Augusta* (*d.* 1888), eldest daughter of George Charles Bingham, third earl of Lucan; by her he had one son and five daughters; (2) on 10 Feb. 1892 *Evelyn Henrietta*, daughter of Henry Blundell Leigh; she survived him without issue. He was succeeded by his son, Humphrey Napier Sturt, M.P. for East Dorset (1891–1904).

[Sportsman, and *The Times*, 19 Feb. 1904; *The Field*, 20 Feb.; *Truth*, 24 Feb.; William Day’s *The Race Horse in Training*, 1880, and *Reminiscences of ‘Woodyates,’ 1886*; Burke’s *Peerage*; Ruff’s *Guide to the Turf*.]

E. M.

SUTHERLAND, ALEXANDER (1852–1902), Australian journalist, born at Wellcroft Place, Glasgow, on 26 March 1852, was eldest son of George Sutherland, artist, by his wife Jane, daughter of William Smith, of Galston, Ayrshire. Two brothers, George and William, distinguished themselves, the former as a journalist and inventor and the latter as a mathematician and an original scientific inquirer. Alexander was educated in Glasgow until 1864, when the state of his father’s health led to the whole family emigrating to Sydney, Australia. At the age of fourteen he became a pupil teacher in the education department of New South Wales and studied for the arts course at Sydney University. In 1870 the family removed to Melbourne, where he taught at the Hawthorn grammar school during the day and worked at night for the arts course at Melbourne University. He entered that university in the first term of 1871 and graduated B.A. with distinction in 1874, proceeding M.A. in 1876.

On leaving the university he was mathematical master in the Scotch College, Melbourne (1875–7) and principal of Carlton College, Melbourne (1877–92). In 1892 he retired, chiefly with a view to devoting himself to a work on the ‘Origin and Growth of the Moral Instinct’ (published in London in 1898). The financial crisis of 1893, however, compelled him to take up journalism, and he contributed largely to the ‘Melbourne Review,’ ‘Argus,’ ‘Australasian,’ and other papers and periodicals. He made two vain attempts to enter politics. In 1897 he contested Williamstown in the Victorian legislature, and in 1901 stood for South Melbourne in the federal parliament. At the close of 1898 he came to London as representative of the ‘South Australian Register,’ and reported the sittings of the Peace Conference at the Hague. On his return to Australia he was appointed in 1901 registrar of Melbourne University, and after the death of Professor Morris continued his lectures on English literature. The double duty overtaxed him, and he died suddenly on 9 Aug. 1902, and was buried in Kew cemetery, Melbourne. A tablet was placed to his memory in Carlton College by his old pupils.

Sutherland married Elizabeth Jane, the second daughter of Robert Dundas Ballantyne (who was controller-general of the convict settlement at Port Arthur, Van Diemen’s Land), and had two sons (the elder of whom predeceased him) and three daughters.

Sutherland was in the front rank of Australian men of letters. A stimulating teacher, he was equally successful in the preparation of school books. His 'History of Australia from 1606 to 1876' (Melbourne, 1897) (in which his brother George collaborated) had a very large circulation. He was a poet of taste and a scientific investigator, acting for some years as secretary of the Royal Society of Victoria. His published books include, besides the works noticed: 1. 'A New Geography,' Melbourne, 1885. 2. 'Victoria and its Metropolis,' 2 vols. Melbourne, 1888. 3. 'Thirty Short Poems,' Melbourne, 1890. 4. 'Geography of British Colonies,' London, 1892. 5. 'A Class Book of Geography,' London, 1894. 6. 'History of Australia and New Zealand, 1606-1890,' London, 1894. 7. Lives of Kendall and Gordon in the 'Development of Australian Literature,' Melbourne, 1898. 8. 'Origin and Growth of the Moral Instinct,' London, 1898. 9. 'The Praise of Poetry in English Literature,' Melbourne, 1901.

An India-ink sketch of Sutherland at the age of twenty-two, drawn by his father, is in the possession of his sister, Miss Sutherland, of 4 Highfield Grove, Kew, Melbourne. A photographic copy is in the library of the colonial office, London.

A.

SUTTON, HENRY SEPTIMUS (1825-1901), author, born at Nottingham on 10 Feb. 1825, was seventh child in a family of seven sons and three daughters of Richard Sutton (1789-1856) of Nottingham, bookseller, printer and proprietor of the 'Nottingham Review,' by his wife Sarah, daughter of Thomas Salt, farmer, of Stanton by Dale, Derbyshire. A sister, Mrs. Eliza S. Oldham, was author of 'The Haunted House' (1863) and 'By the Trent' (1864). From childhood he spent his time among the books in his father's shop, and early acquired literary tastes. He was educated at a private school in Nottingham and at Leicester grammar school. A study of medicine was soon abandoned for literature and journalism. Among early literary friends were his fellow townsman, Philip James Bailey [q. v. Suppl. II], and Coventry Patmore, with whom an intimacy was

formed soon after the publication of Patmore's first volume of poems in 1844, and continued till Patmore's death in 1896. The two friends long corresponded on literary and religious subjects (see BASIL CHAMPNEYS, *Coventry Patmore*, vol. ii. ch. ix. pp. 142-65).

Sutton, who was through life a vegetarian and total abstainer, developed a strong vein of mysticism with an active interest in social and religious problems. Emerson's writings greatly influenced his early thought and style. His first book in prose, 'The Evangel of Love' (1847), which closely echoed Emerson, was welcomed by Patmore with friendly encouragement, while his master Emerson, to whom the book had been shown by J. Neuberger, Carlyle's friend and admirer, declared it to be 'worthy of George Herbert.' When Emerson visited Manchester in 1847 he invited Sutton from Nottingham to meet him, and a lifelong friendship was begun. Emerson visited Sutton at Nottingham next year; they met again in Manchester in 1872. In 1849, on Emerson's recommendation, Alexander Ireland [q. v.] found for Sutton, who became an expert shorthand writer, journalistic employment in Manchester, and in 1853 he became chief of the 'Manchester Examiner and Times' reporting staff. Soon after he met George MacDonald [q. v. Suppl. II] in Manchester; they became lifelong friends, and mutually influenced each other's spiritual development (*Letters to William Allingham*, 1911, pp. 44-8).

In 1848 his first poetical work, a tiny volume of mystical tone entitled 'Clifton Grove Garland,' came out at Nottingham. In 1854 there appeared his 'Quinquenergia: Proposals for a New Practical Theology,' including a series of simply phrased but subtly argued poems, 'Rose's Diary,' on which his poetic fame rests. The volume was enthusiastically received. Emerson's friend, Bronson Alcott, writing on 15 Oct. 1854, detected in Sutton's 'profound religious genius' a union of 'the remarkable sense of William Law with the subtlety of Behmen and the piety of Pascal' (F. G. SANBORN and WILLIAM T. HARRIS, *A. Bronson Alcott*, 1893, ii. 484-5). The book became Frances Power Cobbe's constant companion. James Martineau rated it very highly. Francis Turner Palgrave included 'How beautiful it is to be alive' from 'Rose's Diary' and two other of Sutton's poems in his 'Golden Treasury of Sacred Poetry.' Carlyle, however, scornfully wondered that 'a lad in a provincial

town' should have presumed to handle such themes (F. ESPINASSE, *Literary Recollections*, p. 160). To a collected edition of his poems (1886) Sutton added, among other new poems, 'A Preacher's Soliloquy and Sermon,' which reveals a genuine affinity with Herbert. 'Rose's Diary' with other poems was reprinted in the 'Broadbent' booklets as 'A Sutton Treasury' (Manchester, 1899; seventeenth thousand, 1909).

Meanwhile Sutton was pursuing his journalistic work on very congenial lines. He had joined the United Kingdom Alliance on its foundation at Manchester in 1853, and was editor of its weekly journal, the 'Alliance News,' from its inception in 1854 until 1898, contributing leading articles till his death. He was also editor from 1859 to 1869 of 'Meliora,' a quarterly journal devoted to social and temperance reform. His religious mysticism at the same time deepened. In 1857 he joined the Peter Street Society of Swedenborgians. He took an active part in Swedenborgian church and Sunday school work, was popular as a lay preacher, and zealously expounded Swedenborg's writings on somewhat original lines in 'Outlines of the Doctrine of the Mind according to Emanuel Swedenborg' (1889), in 'Five Essays for Students of the Divine Philosophy of Swedenborg' (1895), with a sixth essay, 'Our Saviour's Triple Crown' (1898), and a seventh and a last essay, 'The Golden Age: pt. i. Man's Creation and Fall; pt. ii. Swedenborgian Phrenology' (Manchester, 1900).

Sutton, who was of retiring but most genial and affectionate disposition, died at 18 Yarrowburgh St., Moss Side, Manchester, on 2 May 1901, and was buried at Worsley. He was twice married: (1) in January 1850 to Sarah Prickard (*d.* June 1868), by whom he had a son, Arthur James, a promising scholar of Balliol College, Oxford, who predeceased him in 1880, and a daughter who survived him; (2) in May 1870 to Mary Sophia Ewen, who survived him without issue till April 1910. A painted portrait by his sister Eliza belongs to the family.

[The Times, 6 May 1901; New Church Mag., June 1901, 271-86; Alliance News, 9 May 1901 (with portrait); Manchester Guardian, 3 May 1901; Manchester City News, 20 and 27 May 1899 (Sutton's Reminiscences of Emerson's Visit to Manchester); Francis Espinasse, *Literary Recollections and Sketches*, 1893; A. SWAIN, JOSEPH (1820-1909), wood-engraver, born at Oxford on 29 Feb. 1820, was second son of Ebenezer Swain by his wife Harriet James. Joseph Swain, pastor of East Street baptist church, Walworth, was his grandfather. He was educated at private schools, first at Oxford, and afterwards in London, whither the family removed in 1829.

In 1834 he was apprenticed by his father (who was a printer of the firm of Wertheimer & Co.) to the wood-engraver Nathaniel Whittock, and was transferred in 1837 to Thomas Williams. In 1843 he was appointed manager of the engraving department of 'Punch,' but in the following year set up in business for himself, retaining the whole of the engraving for 'Punch' from 1844 until 1900. His name is best known from his wood-engravings of 'Punch' cartoons by Sir John Tenniel. Nearly all the illustrations in the 'Cornhill Magazine' were engraved by him, and he also worked largely for other periodicals such as 'Once a Week,' 'Good Words,' the 'Argosy,' and for the publications of the Religious Tract Society and the Baptist Missionary Society. He was one of the most prolific wood-engravers of the nineteenth century, engraving very largely after Fred Walker, J. E. Millais, Frederick Sandys, Richard Doyle, R. Andsell, F. Barnard, and practically all famous illustrators from 1860 onwards. His own work is not always signed, and the signature 'Swain sc.' must be taken to include the engraving of assistants working for the firm. In the latter part of the nineteenth century his wood-engravings were more generally printed from electro-types, but those done for 'Punch' were invariably printed from the original wood-blocks. He died at Ealing on 25 Feb. 1909.

In 1843 he married Martha Cooper, and had issue three daughters and a son, Joseph Blomeley Swain, who carries on his printing and engraving establishment.

A series of articles on Fred Walker, C. H. Bennett, G. J. Pinwell, and F. Eltze, which he wrote for 'Good Words' (1888-9), were incorporated in 'Toilers in Art,' edited by H. C. Ewart (1891).

[The Times, 4 March 1909; M. H. Spielmann, *Hist. of Punch*, 1895; Gleeson White, *English Illustration: The Sixties*, 1897; Thackeray, *Harry Furniss Centenary edition*, artist's preface to the *Virginians*, 1911; information supplied by Mr. J. B. Swain.]

A. M. H.

SWAN, JOHN MACALLAN (1847-1910), painter and sculptor, was the son of Robert Wemyss Swan, a civil engineer, by his wife Elisabeth MacAllan. He was born at Old Brentford on 9 Dec. 1847, both parents being Scots. Swan began his study of art in the schools at Worcester and Lambeth and in those of the Royal Academy. He afterwards worked in Paris, under Gérôme and Frémiet. His chief school after his return to London was the Zoological Gardens, where his friends were almost as likely to find him as in his own house.

In 1878 he began to exhibit, sending pictures to both the Royal Academy and the Grosvenor Gallery. At first he confined himself to animals, but he soon began to introduce the human figure, choosing subjects of a more or less idyllic character, which lent themselves to the use of the nude. Commencing chiefly as a painter, he gradually devoted himself more and more to modelling, until at last he divided his time pretty equally between the two forms of art. Among his best, and best-known, pictures are 'The Prodigal Son' (bought for the Chantrey bequest in 1888) in the Tate Gallery; 'Maternity' (a lioness suckling her cubs) in the Rijksmuseum, Amsterdam; 'A Lioness defending her Cubs' in Mr. J. C. Williams's collection; and 'Leopards' in the Bradford gallery.

Among his works in sculpture the following may be named: 'The Walking Leopard' at Manchester; 'Orpheus,' in silver, in Mrs. Joseph's collection; a larger and slightly different group of the same in bronze in Mrs. Coutts Michie's collection; 'Indian Leopard and Tortoise,' silver, in Mr. Ernest Sichel's collection, and the same in bronze in Mrs. Swan's possession; 'Leopard running' in Lady Shand's collection; a bronze bust of Cecil Rhodes [q. v. Suppl. II] and the eight colossal lions for Rhodes's monument at Grootte Schuur, Capetown; and a 'Lioness drinking' in the Luxembourg.

Swan was elected an associate of the Royal Academy in 1894, and a full member in 1905. He was elected a member of the Royal Water Colour Society in 1899. He was also an hon. LL.D. of Aberdeen. He was one of the few English artists who won a wide acceptance abroad at the outset of their career. In 1885 he became a member of the Dutch Water Colour society. He won a silver medal at Paris in 1889, a gold medal at Munich in 1893, the grand medal at Munich in 1897, two gold medals at the Chicago World's Fair, and three gold medals at the Paris exhibition of 1900.

He was a member of the 'Secessions' of Vienna and Munich, and in 1911, after his death, his work was awarded a memorial gold medal at Barcelona.

Swan early gained a reputation among the more discriminating collectors in this country, and from about 1880 until the time of his death the only things which debarred him from a wide popularity were his own fastidiousness and consequent slowness of production. Few artists have lavished so much care on their work before allowing it to leave their studios. Consequently he left a vast number of unfinished pictures and works of sculpture, as well as preparatory drawings. His studies, of which a special exhibition was held by the Fine Art Society in 1897, are among the finest ever made; a special fund was raised after his death, chiefly through the exertions of Mr. J. C. Drucker, to acquire as many as possible for the nation, so that the British Museum, the National Galleries of England, Scotland, and Ireland, the Guildhall Gallery, and many provincial museums are rich in his drawings. These are characterised by an almost unrivalled combination of artistic with scientific qualities. Even in his most fragmentary studies the structure and movement of his favourite models, the great cats, are at once given with extraordinary truth and vivacity and organised into æsthetic unity. As a painter his chief qualities were a touch of poetry in his imagination; good, sometimes fine, colour, which was in a key of his own; tone; and great power of modelling.

Swan died in London on 14 Feb. 1910. He married in 1884 Mary, eldest daughter of Hamilton Rankin of Camdonagh, co. Donegal, by whom he had two children, a son and a daughter. The latter follows her father's profession. Swan's appearance was remarkable. He was tall, dark, and burly, with a large head, like a Roman emperor's. His best portraits are a bust by Sir William Goscombe John, R.A., a bronze relief by H. Pegram, A.R.A., and paintings by Mr. McClure Hamilton and Mrs. Swan. He figures in Herkomer's 'Council of the Royal Academy' (1907) at the Tate Gallery.

Swan was the author of a 'Treatise on Metal Work,' read before the R.I.B.A. in 1906, and of papers on technical artistic questions, some of which were printed in the 'Proceedings of the Japanese Society.'

A memorial exhibition of his works, nearly a hundred items, was held at the Royal Academy in the winter of 1911.

Baldry, 1905; Introduction to Fine Art Society's Catalogue of Exhibition of Wild Beasts, by Cosmo Monkhouse.] W. A.

SWAYNE, JOSEPH GRIFFITHS (1819-1903), obstetric physician, born on 18 Oct. 1819 at Bristol, was second son of John Champeny Swayne, lecturer on midwifery in the Bristol medical school, whose father was for nearly sixty years vicar of Pucklechurch, Gloucestershire. His mother was eldest daughter of Dr. Thomas Griffiths, a medical practitioner in Bristol. After education at the now extinct proprietary Bristol college, where one of his teachers was Francis William Newman [q. v. Suppl. I], Swayne was apprenticed to his father and at the same time studied at the Bristol medical school and the royal infirmary. Later he went to Guy's Hospital and became M.R.C.S. and a licentiate of the Society of Apothecaries in 1841. He also studied in Paris, and in 1842 graduated M.B. of the University of London, obtaining the gold medal in obstetric medicine and being bracketed with Sir Alfred Baring Garrod [q. v. Suppl. II] for the gold medal in medicine. In 1845 he proceeded M.D. at London and joined his father as lecturer on midwifery in the Bristol medical school; he was sole lecturer from 1850 until 1895, when he was appointed emeritus professor. In 1853 he was elected physician accoucheur to the Bristol general hospital, one of the first appointments of the kind out of London; he held this post until 1875, when he became consulting obstetric physician. Greatly esteemed as a consultant, he had a large practice in the west of England. He attached an importance in advance of his time to asepsis, and deprecated long hair or beards for those who practise surgery or midwifery. As early as 1843 he investigated cholera, and described a micro-organism which some have suggested was the comma bacillus which Koch proved to be the cause of the disease in 1884. Swayne died suddenly on 1 Aug. 1903, and was buried at Arno's Vale cemetery, Bristol. He married Georgina (d. 1865), daughter of the Rev. G. Gunning, and had issue one son and one daughter.

Swayne possessed much artistic and literary ability. He published, in addition to many papers in medical journals, 'Obstetric Aphorisms for the Use of Students' (1856; 10th edit. 1893), which was translated into eight languages, including Japanese and Hindustani.

202 (with photograph and bibliography); Brit. Med. Journal, 1903, ii. 338.] H. D. L.

SWAYTHLING, first BARON. [See MONTAGU, Sir SAMUEL (1832-1911).]

SWINBURNE, ALGERNON CHARLES (1837-1909), poet, born in Chester Street, Grosvenor Place, London, on 5 April 1837, was eldest child of Admiral Charles Henry Swinburne (1797-1877), by his wife Lady Jane Henrietta (1809-1896), daughter of George Ashburnham, third earl of Ashburnham. His father was second son of Sir John Edward Swinburne (1762-1860), sixth baronet of Capheaton, in Northumberland. This baronet, who exercised a strong influence over his grandson, the poet, had been born and brought up in France, and cultivated the memory of Mirabeau. In habits, dress, and modes of thought he was like a French nobleman of the *ancien régime*. From his father, a cut and dried unimaginative old 'salt,' the poet inherited little but a certain identity of colour and expression; his features and something of his mental character were his mother's. Lady Jane was a woman of exquisite accomplishment, and widely read in foreign literature. From his earliest years Algernon was trained, by his grandfather and by his mother, in the French and Italian languages. He was brought up, with the exception of long visits to Northumberland, in the Isle of Wight, his grandparents residing at The Orchard, Niton, Ventnor, and his parents at East Dene, Bonchurch.

He had been born all but dead and was not expected to live an hour; but though he was always nervous and slight, his childhood, spent mainly in the open air, was active and healthy. His parents were high-church and he was brought up as 'a quasi-catholic.' He recollected in after years the enthusiasm with which he welcomed the process of confirmation, and his 'ecstasies of adoration when receiving the Sacrament.' He early developed a love for climbing, riding, and swimming, and never cared, through life, for any other sports. His father, the admiral, taught him to plunge in the sea when he was still almost an infant, and he was always a fearless and, in relation to his physique, a powerful swimmer. 'He could swim and walk for ever' (LORD REDSDALE). He was prepared for Eton by Collingwood Forster Fenwick, rector of Brook, near Newport, Isle of Wight, who expressed his surprise at finding the child so deeply read in certain directions; Algernon having,

from a very early age, been 'privileged to have a book at meals' (MRS. DISNEY LEITH).

He came to Eton at Easter 1849, arriving, 'a queer little elf, who carried about with him a Bowdlerised Shakespeare, adorned with a blue silk book-marker, with a Tunbridge-ware button at the end of it' (LORD REDESDALE). This volume had been given to him by his mother when he was six years of age. Up to the time of his going to Eton he had never been allowed to read a novel, but he immediately plunged into the study of Dickens, as well as of Shakespeare (released from Bowdler), of the old dramatists, of every species of lyrical poetry. The embargo being now raised, he soon began to read everything. It is difficult to say what, by the time he left Eton, 'Swinburne did not know, and, what is more, appreciate, of English literature' (SIR GEORGE YOUNG). He devoured even that dull *gradus* the 'Poetæ Græci,' a book which he long afterwards said 'had played a large part in fostering the love of poetry in his mind' (A. G. C. LIDDELL). In 1850 his mother gave him Dyce's Marlowe, and he soon knew Ford and Webster. He began, before he was fourteen, to collect rare editions of the dramatists. Any day he could be found in a bay-window of the college library, the sunlight in his hair, and his legs always crossed tailor-wise, with a folio as big as himself spread open upon his knees. The librarian, 'Grub' Brown, used to point him out, thus, to strangers as one of the curiosities of Eton. He boarded at Joynes's, who was his tutor; Hawtrey was headmaster.

It has been falsely said that Swinburne was bullied at Eton. On the contrary, there was 'something a little formidable about him' (SIR GEORGE YOUNG), considerable tact (LORD REDESDALE), and a great, even audacious, courage, which kept other boys at a distance. He did not dislike Eton, but he cultivated few friendships; he did not desire school-honours, he never attempted any game or athletics, and he was looked upon as odd and unaccountable, and so left alone to his omnivorous reading. He was a kind of fairy, a privileged creature. Lord Redesdale recalls his taking 'long walks in Windsor Forest, always with a single friend, Swinburne dancing as he went, and reciting from his inexhaustible memory the works which he had been studying in his favourite sun-lighted window.' Sir George Young has described him vividly: 'his hands and feet all going' while he talked; 'his little white face, and great aureole of hair, and green eyes,

the hair standing out in a bush of 'three different colours and textures, orange-red, dark red, and bright pure gold.' Charles Dickens, at Bonchurch in 1849, was struck with 'the golden-haired lad of the Swinburnes' whom his own boys used to play with, and when he went to congratulate the poet on 'Atalanta' in 1865, he reminded him of this earlier meeting. In 1851 Algernon 'passed' in swimming, and at this time, in the holidays, caused some anxiety by his recklessness in riding and climbing; he swarmed up the Culver Cliff, hitherto held to be impregnable: a feat of which he was proud to the end of his life. Immediately on his arrival at Eton he had attacked the poetry of Wordsworth. In September 1849 he was taken by his parents to visit that poet in the Lakes; Wordsworth, who was very gracious, said in parting that he did not think that Algernon 'would forget' him, whereupon the little boy burst into tears (MISS SEWELL'S *Autobiography*). Earlier in the year Lady Jane had taken her son to visit Rogers in London; the old man laid his hand on Algernon's head in parting, and said 'I think that you will be a poet, too!' He was, in fact, now writing verses, but none of these were ever printed, and in 1855 he burnt 'every scrap of MS. he had in the world.' (Some verse appearing in 'Fraser's Magazine' in 1848 and following years under the initials A. C. S. and subsequently assigned in error to Swinburne was by Sir Anthony Coningham Sterling [q. v.]) At the age of fourteen many of his lifelong partialities and prejudices were formed; in the course of 1851 we find him immersed in Landor, Shelley and Keats, in the 'Orlando Furioso,' and in the tragedies of Corneille, and valuing them as he did throughout his life; while, on the other hand, already hating Euripides, insensible to Horace, and injurious to Racine. In the catholicity of his poetic taste there was one odd exception: he had promised his mother, whom he adored, not to read Byron, and in fact did not open that poet till he went to Oxford. In 1852, reading much French with Tarver, 'Notre Dame de Paris' introduced him to Victor Hugo. He now won the second Prince Consort's prize for French and Italian, and in 1853 the first prizes for French and Italian. His Greek elegiacs were greatly admired. He was, however, making no real progress at school, and was chafing against the discipline; in the summer of 1853 he had trouble with Joynes, of a rebellious kind, and did not return to Eton, 'although nothing

had been said during the half about his leaving' (YOUNG). When he left he was within a few places of the headmaster's division.

In 1854 there was some talk of his being trained for the army, which he greatly desired; but this was abandoned on account of the slowness and shortness of his figure. All his life he continued to regret the military profession. He was prepared for Oxford, in a desultory way, by John Wilkinson, perpetual curate of Cambo in Northumberland, who said that he 'was too clever and would never study.' He now spent a few weeks in Germany with his uncle, General the Hon. Thomas Ashburnham. On 24 Jan. 1856 Swinburne matriculated at Balliol College, Oxford, and he kept terms regularly through the years 1856, 1857, and 1858. After the first year his high-church proclivities fell from him and he became a nihilist in religion and a republican. He had portraits of Mazzini in his rooms, and declaimed verses to them (LORD SHEFFIELD); in the spring of 1857 he wrote an 'Ode to Mazzini,' not yet published, which is his earliest work of any maturity. In this year, while at Capheaton, he formed the friendship of Lady Trevelyan and Miss Capel Lofft, and was for the next four years a member of their cultivated circle at Wallington. Here Ruskin met him, and formed a very high opinion of his imaginative capacities. In the autumn Edwin Hatch [q.v.] introduced him to D. G. Rossetti, who was painting in the Union, and in December the earliest of Swinburne's contributions to 'Undergraduate Papers' appeared. To this time belong his friendships with John Nichol, Edward Burne-Jones, William Morris, and Spencer Stanhope. Early in 1858 he was writing his tragedy of 'Rosamond,' a poem on 'Tristram,' and planning a drama on 'The Albigenses.' In March 1858 Swinburne dined at Farringford with Tennyson, who thought him 'a very modest and intelligent young fellow' and read 'Maud' to him, urging upon him a special devotion to Virgil. In April the last of the 'Undergraduate Papers' appeared. In the Easter term Swinburne took a second in moderations, and won the Taylorian scholarship for French and Italian. He now accompanied his parents to France for a long visit. The attempt of Orsini, in January 1858, to murder Napoleon III had found an enthusiastic admirer in Algernon, who decorated his rooms at Oxford with Orsini's portrait, and proved an embarrassing fellow-traveller in Paris to his parents.

He kept the Lent and Easter terms of 1859 at Balliol, and when the Austrian war broke out in May, he spoke at the Union, 'reading excitedly but ineffectively a long tirade against Napoleon and in favour of Orsini and Mazzini' (LORD SHEFFIELD). He began to be looked upon as 'dangerous,' and Jowett, who was much interested in him, expressed an extreme dread that the college might send him down and so 'make Balliol as ridiculous as University had made itself about Shelley.' At this time Swinburne had become what he continued to be for the rest of his life, a high tory republican. He cultivated few friends except those who immediately interested him poetically and politically. But he was a member of the club called the Old Mortality, in which he was associated with Nichol, Dicey, Luke (who was drowned in 1861), T. H. Green, Caird, and Pater, besides Mr. Bryce and Mr. Bywater.

Jowett thought it well that Swinburne should leave Oxford for a while at the end of Easter term, 1859, and sent him to read modern history with William Stubbs [q.v. Suppl. II] at Navestock. Here Swinburne recited to his host and hostess a tragedy he had just completed (probably 'The Queen Mother'). In consequence of some strictures made by Stubbs, Swinburne destroyed the only draft of the play, but was able to write it all out again from memory. He was back at the university from 14 Oct. to 21 Nov., when he was principally occupied in writing a three-act comedy in verse in the manner of Fletcher, now lost; it was called 'Laugh and Lie Down.' He had lodgings in Broad Street, where the landlady made complaints of his late hours and general irregularities. Jowett was convinced that he was doing no good at Oxford, and he left without taking a degree. His father was greatly displeased with him, but Algernon withdrew to Capheaton, until, in the spring of 1860, he came to London, and took rooms near Russell Place to be close to the Burne-Joneses. He had now a very small allowance from his father, and gave up the idea of preparing for any profession. Capheaton was still his summer home, but when Sir John Swinburne died (26 Sept. 1860) Algernon went to the William Bell Scotts' in Newcastle for some time. His first book, 'The Queen Mother and Rosamond,' was published before Christmas; it fell dead from the press.

When Algernon returned to London early in 1861 his friendship with D. G. Rossetti became intimate; for the next ten

years they 'lived on terms of affectionate intimacy; shaped and coloured, on his side, by cordial kindness and exuberant generosity, on mine by gratitude as loyal and admiration as fervent as ever strove and ever failed to express all the sweet and sudden passion of youth towards greatness in its elder' (from an unpublished statement, written by Swinburne in 1882). This was by far the most notable experience in Swinburne's career. Rossetti developed, restrained, and guided, with marvellous skill, the genius of 'my little Northumbrian friend,' as he used to call him. Under his persuasion Swinburne was now writing some of his finest early lyrics, and was starting a cycle of prose tales, to be called 'The Triameron'; this was to consist of some twenty stories. Of these 'Dead Love' alone was printed in his lifetime; but several others exist unpublished, the most interesting being 'The Marriage of Mona Lisa,' 'A Portrait,' and 'Queen Fredegonde.' In the summer of 1861 he was introduced to Monckton Milnes, who actively interested himself in Swinburne's career. Early in 1862 Henry Adams, the American writer, then acting as Monckton Milnes's secretary, met Swinburne at Fryston on an occasion which he has described in his privately printed diary. The company also included Stirling of Keir (afterwards Sir W. Stirling-Maxwell) and Laurence Oliphant, and all Milnes's guests made Swinburne's acquaintance for the first time. He reminded Adams of 'a tropical bird,' 'a crimson macaw among owls'; and it was on this occasion that Stirling, in a phrase often misquoted, likened him to 'the Devil entered into the Duke of Argyll.' All the party, though prepared by Milnes's report, were astounded at the flow, the volume and the character of the young man's conversation; 'Voltaire's seemed to approach nearest to the pattern'; 'in a long experience, before or after, no one ever approached it.' The men present were brilliant and accomplished, but they 'could not believe in Swinburne's incredible memory and knowledge of literature, classic, mediæval and modern, nor know what to make of his rhetorical recitation of his own unpublished lyrics, "Faustine," "The Four Boards of the Coffin Lid" [a poem published as "After Death"], "The Ballad of Burdens," which he declaimed as though they were books of the "Iliad." These parties at Fryston were probably the beginning of the social 'legend' of Swinburne, which preceded and encouraged the reception of his works a few years later.

It was at Milnes's house that he met and formed an instant friendship with Richard Burton. The relationship which ensued was not altogether fortunate. Burton was a giant and an athlete, one of the few men who could fire an old-fashioned elephant-gun from his shoulder, and drink a bottle of brandy without feeling any effect from it. Swinburne, on the contrary, was a weakling. He tried to compete with the 'hero' in Dr. Johnson's sense, and he failed.

He was being painted by Rossetti in February 1862 when the wife of the latter died so tragically; Swinburne gave evidence at the inquest (12 Feb.). In the spring of that year he joined his family in the Pyrenees, and saw the Lac de Gaube, in which he insisted on swimming, to the horror of the natives. He was now intimate with George Meredith, who printed, shortly before his death, an account of the overwhelming effect of FitzGerald's 'Rubáiyát' upon Swinburne, and the consequent composition of 'Laus Veneris,' probably in the spring of 1862. In this year Swinburne began to write, in prose as well as in verse, for the 'Spectator,' which printed 'Faustine' and six other important poems, and (6 Sept.) a very long essay on Baudelaire's 'Fleurs du Mal,' written 'in a Turkish bath in Paris.' A review of one of Victor Hugo's books, forwarded to the French poet, opened his personal relations with that chief of Swinburne's literary heroes. He now finished 'Chastelard,' on which he had long been engaged, and in October his prose story, 'Dead Love,' was printed in 'Once a Week' (this appeared in book form in 1864). Swinburne joined Meredith and the Rossettis (24 Oct. 1862) in the occupation of Tudor House, 16 Cheyne Walk, Chelsea. Rossetti believed that it would be good for Swinburne to be living in the household of friends who would look after him without seeming to control him, since life in London lodgings was proving rather disastrous. Swinburne's extremely nervous organisation laid him open to great dangers, and he was peculiarly unfitted for dissipation. Moreover, about this time he began to be afflicted with what is considered to have been a form of epilepsy, which made it highly undesirable that he should be alone.

In Paris, during a visit in March 1863, he had made the acquaintance of Whistler, whom he now introduced to Rossetti. Swinburne became intimate with Whistler's family, and after a fit in the summer of 1863 in the American painter's studio,

he was nursed through the subsequent illness by the mother of Whistler. On his convalescence he was persuaded, in October, to go down to his father's house at East Dene, near Bonchurch, where he remained for five months and entirely recovered his health and spirits. He brought with him the opening of 'Atalanta in Calydon,' which he completed at East Dene. For a story called 'The Children of the Chapel,' which was being written by his cousin, Mrs. Disney Leith, he wrote at the same time a morality, 'The Pilgrimage of Pleasure,' which appeared, without his name, in March 1864. From the Isle of Wight, at the close of February 1864, Swinburne went abroad for what was to remain the longest foreign tour in his life. He passed through Paris, where he saw Fantin-Latour, and proceeded to Hyères, where Milnes had a villa, and so to Italy. From Rossetti he had received an introduction to Seymour Kirkup [q. v.], then the centre of a literary circle in Florence, and Milnes added letters to Landor and to Mrs. Gaskell. Swinburne found Landor in his house in Via della Chiesa, close to the church of the Carmine, on 31 March, and he visited the art-galleries of Florence in the company of Mrs. Gaskell. In a garden at Fiesole he wrote 'Itylus' and 'Dolores.' Before returning he made a tour through other parts of Italy. Two autumn months of this year (1864) were spent in Cornwall, at Tintagel (in company with Jowett), at Kynance Cove, and at St. Michael's Mount. On his return to London he went into lodgings at 22A Dorset Street, where he remained for several years.

'Atalanta in Calydon,' in a cream-coloured binding with mystical ornaments by D. G. Rossetti, was published by Edward Moxon [q. v.] in April 1865. At this time Swinburne, although now entering his twenty-ninth year, was entirely unknown outside a small and dazzled circle of friends, but the success of 'Atalanta' was instant and overwhelming. Ruskin welcomed it as 'the grandest thing ever done by a youth—though he is a Demoniac youth' (E. T. Cook's *Life of Ruskin*). In consequence of its popularity, the earlier tragedy of 'Chastelard' was now brought forward and published in December of the same year. This also was warmly received by the critics, but there were murmurs heard as to its supposed sensuality. This was the beginning of the outcry against Swinburne's literary morals, and even 'Atalanta' was now searched for evidences of atheism and indelicacy.

He met, on the other hand, with many assurances of eager support, and in particular, in November 1865, he received a letter from a young Welsh squire, George E. J. Powell of Nant-Eòs (1842-82), who soon became, and for several years remained, the most intimate of Swinburne's friends. The collection of lyrical poems, written during the last eight years, which was now almost ready, was felt by Swinburne's circle to be still more dangerous than anything which he had yet published; early in 1866 (probably in January) the long ode called 'Laus Veneris' was printed in pamphlet form, as the author afterwards stated, 'more as an experiment to ascertain the public taste—and forbearance!—than anything else. Moxon, I well remember, was terribly nervous in those days, and it was only the wishes of mutual good friends, coupled with his own liking for the ballads, that finally induced him to publish the book at all.' The text of this herald edition of 'Laus Veneris' differs in many points from that included in the volume of 'Poems and Ballads' which eventually appeared at the end of April 1866. The critics in the press denounced many of the pieces with a heat which did little credit to their judgment. Moxon shrank before the storm, and in July withdrew the volume from circulation. Another publisher was found in John Camden Hotten [q. v.], to whom Swinburne now transferred all his other books. There had been no such literary scandal since the days of 'Don Juan,' but an attempt at prosecution fell through, and Ruskin, who had been requested to expostulate with the young poet, indignantly replied 'He is infinitely above me in all knowledge and power, and I should no more think of advising or criticising him than of venturing to do it to Turner if he were alive again.'

Swinburne now found himself the most talked-of man in England, but all this violent notoriety was unfortunate for him, morally and physically. He had a success of curiosity at the annual dinner of the Royal Literary Fund (2 May 1866), where, Lord Houghton being in the chair, Swinburne delivered the only public speech of his life; it was a short critical essay on 'The Imaginative Literature of England' committed to memory. In the autumn he spent some time with Powell at Aberystwyth. His name was constantly before the public in the latter part of 1866, when his portraits filled the London shop-windows and the newspapers outdid one another in legendary tales of his eccentricity. He

had published in the summer a selection from Byron, with an introduction of extreme eulogy, and in October he answered his critics in 'Notes on Poems and Reviews'; William Michael Rossetti also published a volume in defence.

The winter was spent at Holmwood, near Henley-on-Thames, which his father bought in 1865, and where his family was now settled; here in November he finished a large book on Blake, which had occupied him for some time, and in February 1867 completed 'A Song of Italy,' which was published in September. His friends now included Simeon Solomon [q. v. Suppl. II], whose genius he extolled in the 'Dark Blue' magazine (July 1871) and elsewhere. In April 1867, on a false report of the death of Charles Baudelaire (who survived until September of that year), Swinburne wrote 'Ave atque Vale.' This was a period of wild extravagance and of the least agreeable episodes of his life; his excesses told upon his health, which had already suffered, and there were several recurrences of his malady. In June, while staying with Lord Houghton at Fryston, he had a fit which left him seriously ill. In August, to recuperate, he spent some time with Lord Lytton at Knebworth, where he made the acquaintance of John Forster. In November he published the pamphlet of political verse called 'An Appeal to England.' The Reform League invited him to stand for parliament; Swinburne appealed to Mazzini, to whom he had been introduced, in March 1867, by Karl Blind [q. v. Suppl. II]. Mazzini strongly discouraged the idea, advising him to confine himself to the cause of Italian freedom, and he declined. Swinburne now became intimate with Adah Isaacs Menken [q. v.], who had left her fourth and last husband, James Barclay. It has often been repeated that the poems of this actress, published as 'Infelicia' early in 1868, were partly written by Swinburne, but this is not the case; and the verses, printed in 1883, as addressed by him to Adah Menken, were not composed by him. She went to Paris in the summer of 1868 and died there on 10 Aug.; the shock to Swinburne of the news caused an illness which lasted several days, for he was sincerely attached to her. He was very busily engaged on political poetry during this year. In February 1868 he wrote 'The Hymn of Man,' and in April 'Tiresias'; in June he published, in pamphlet form, 'Siena.' Two prose works belong to this year: 'William Blake' and 'Notes on the Royal

Academy,' but most of his energy was concentrated on the transcendental celebration of the Republic in verse. At the height of the scandal about 'Poems and Ballads' there had been a meeting between Jowett and Mazzini at the house of George Howard (afterwards ninth earl of Carlisle) [q. v. Suppl. II], to discuss 'what can be done *with* and *for* Algernon.' Mazzini had instructed Karl Blind to bring the poet to visit him, and had said 'There must be no more of this love-frenzy; you must dedicate your glorious powers to the service of the Republic.' Swinburne's reply had been to sit at Mazzini's feet and to pour forth from memory the whole of 'A Song of Italy.' For the next three years he carried out Mazzini's mission, in the composition of 'Songs before Sunrise.'

His health was still unsatisfactory; he had a fit in the reading-room of the British Museum (10 July), and was ill for a month after it. He was taken down to Holmwood, and when sufficiently recovered started (September) for Étretat, where he and Powell hired a small villa which they named the Chaumière de Dolmancé. Here Offenbach visited them. The sea-bathing was beneficial, but on his return to London Swinburne's illnesses, fostered by his own obstinate imprudence, visibly increased in severity; in April 1869 he complained of 'ill-health hardly intermittent through weeks and months.' From the end of July to September he spent some weeks at Vichy with Richard Burton, Leighton, and Mrs. Sartoris. He went to Holmwood for the winter and composed 'Diræ' in December. In the summer of 1870 he and Powell settled again at Étretat; during this visit Swinburne, who was bathing alone, was carried out to sea on the tide and nearly drowned, but was picked up by a smack, which carried him in to Yport. At this time, too, the youthful Guy de Maupassant paid the friends a visit, of which he has given an entertaining account. When the Germans invaded France, Swinburne and Powell returned to England. In September Swinburne published the 'Ode on the Proclamation of the French Republic.' He now reappeared, more or less, in London artistic society, and was much seen at the houses of Westland Marston and Madox Brown. 'Songs before Sunrise,' with its prolonged glorification of the republican ideal, appeared early in 1871. In July and August of this year Swinburne stayed with Jowett in the little hotel at the foot of Loch Tummel. Here he made the acquaintance of Browning, who was

writing 'Hohenstiel-Schwangau.' Browning was staying near by, and often joined the party. Swinburne, much recovered in health, was in delightful spirits; like Jowett, he was ardently on the side of France. In September he went off for a prolonged walking-tour through the highlands of Scotland, and returned in splendid condition. The life of London, however, was always bad for him, and in October he was seriously ill again; in November he visited George Meredith at Kingston. He was now mixed up in much violent polemic with Robert Buchanan and others; early in 1872 he published the most effective of all his satirical writings, the pungent 'Under the Microscope' [see under BUCHANAN, ROBERT WILLIAMS, Suppl. II]. He had written the first act of 'Bothwell,' which F. Locker-Lampson set up in type for him; this play, however, was not finished for several years. His intercourse with D. G. Rossetti had now ceased; his acquaintance with Mr. Theodore Watts (afterwards Watts-Dunton) began. In July and August of this year he was again staying at Tummel Bridge with Jowett, and once more he was the life and soul of the party, enlivening the evenings with paradoxes and hyperboles and recitations of Mrs. Gamp. Jowett here persuaded Swinburne to join him in revising the 'Children's Bible' of J. D. Rogers, which was published the following summer. In May 1873 the violence of Swinburne's attacks on Napoleon III (who was now dead) led to a remarkable controversy in the 'Examiner' and the 'Spectator.' Swinburne had given up his rooms in Dorset Street, and lodged for a short time at 12 North Crescent, Alfred Place, whence he moved, in September 1873, to rooms at 3 Great James Street, where he continued to reside until he left London for good. Meanwhile he spent some autumn weeks with Jowett at Grantown, Elginshire. During this year he was busily engaged in writing 'Bothwell,' to which he put the finishing touches in February 1874, and published some months later.

The greater part of January 1874 he spent with Jowett at the Land's End. Between March and September he was in the country, first at Holmwood, afterwards at Niton in the Isle of Wight. In April 1874 he was put, without his consent, and to his great indignation, on the Byron Memorial Committee. He was at this time chiefly devoting himself to the Elizabethan dramatists; an edition, with critical introduction, of Cyril Tourneur

had been projected at the end of 1872, but had been abandoned; but the volume on 'George Chapman' was issued, in two forms, in December 1874. This winter was spent at Holmwood, whence in February 1875 Swinburne issued his introduction to the reprint of Wells's 'Joseph and his Brethren.' From early in June until late in October he was out of London—at Holmwood; visiting Jowett at West Malvern, where he sketched the first outline of 'Erechtheus'; and in apartments, Middle Cliff, Wangford, near Southwold, in Suffolk. His monograph on 'Auguste Vacquerie,' in French, was published in Paris in November 1875; the English version appeared in the 'Miscellanies' of 1886. Two volumes of reprinted matter belong to this year, 1875: in prose 'Essays and Studies,' in verse 'Songs of Two Nations'; and a pseudonymous pamphlet, attacking Buchanan, entitled 'The Devil's Due.' Most of 1876 was spent at Holmwood, with brief and often untoward visits to London. In July he was poisoned by lilies with which a too-enthusiastic hostess had filled his bedroom, and he did not completely recover until November. In the winter of this year appeared 'Erechtheus' and 'A Note on the Muscovite Crusade,' and in December was written 'The Ballad of Bulgarie,' first printed as a pamphlet in 1893. Admiral Swinburne, his father, died on 4 March 1877. The poet sent his 'Charlotte Brontë' to press in June, and then left town for the rest of the year, which he spent at Holmwood and again at Wangford, where he occupied himself in translating the poems of François Villon. He also issued, in a weekly periodical, his unique novel entitled 'A Year's Letters,' which he did not republish until 1905, when it appeared as 'Love's Cross-Currents.' In April 1878 Victor Hugo talked of addressing a poem of invitation to Swinburne, and a committee invited the latter to Paris in May to be present as the representative of English poetry at the centenary of the death of Voltaire; but the condition of his health, which was deplorable during this year and the next, forbade his acceptance. In 1878 his chief publication was 'Poems and Ballads (Second Series).'

Swinburne's state became so alarming that in September 1879 Mr. Theodore Watts, with the consent of Lady Jane Swinburne, removed him from 3 Great James Street to his own house, The Pines, Putney, where the remaining thirty years of his life were spent, in great retirement but with health slowly and completely restored. Under the guardianship of his

devoted companion, he pursued with extreme regularity a monotonous course of life, which was rarely diversified by even a visit to London, although it lay so near. Swinburne had, since about 1875, been afflicted with increasing deafness, which now (from 1879 onwards) made general society impossible for him. In 1880 he published three important volumes of poetry, 'Studies in Song,' 'Heptalogia' (an anonymous collection of seven parodies), and 'Songs of the Springtides'; and a volume of prose criticism, 'A Study of Shakespeare.' In April 1881 he finished the long ode entitled 'Athens,' and began 'Tristram of Lyonesse'; 'Mary Stuart' was published in this year. In February 1882 he made the acquaintance of J. R. Lowell, who had bitterly attacked his early poems. Lowell was now 'very pleasant' and the old feud was healed. In April, as he was writing the last canto of 'Tristram,' he was surprised by the news of D. G. Rossetti's death, and he wrote his (still unpublished) 'Record of Friendship.' In August Mr. Watts took him for some weeks to Guernsey and Sark. In September, as he 'wanted something big to do,' Swinburne started a 'Life and Death of Cæsar Borgia,' of which the only fragment that remains was published in 1908 as 'The Duke of Gandia.' The friends proceeded to Paris for the dinner to Victor Hugo (22 Nov.) and the resuscitation of 'Le Roi s'amuse' at the Théâtre Français. Swinburne was introduced for the first time to Hugo and to Leconte de Lisle, but he could not hear a line of the play, and on his return to Putney he refused to go to Cambridge to listen to the 'Ajax,' his infirmity now excluding him finally from public appearances. To 1883 belongs 'A Century of Roundels,' which made Tennyson say 'Swinburne is a reed through which all things blow into music.' In June of that year Swinburne visited Jowett at Emerald Bank, Newlands, Keswick. His history now dwindles to a mere enumeration of his publications. 'A Midsummer Holiday' appeared in 1884, 'Marino Faliero' in 1885, 'A Study of Victor Hugo' and 'Miscellanies' in 1886, 'Loocrine' and a group of pamphlets of verse ('A Word for the Navy,' 'The Question,' 'The Jubilee,' and 'Gathered Songs') in 1887.

In June 1888 his public rupture with an old friend, Whistler, attracted notice; it was the latest ebullition of his fierce temper, which was now becoming wonderfully placid. His daily walk over Putney Heath, in the course of which he would

waylay perambulators for the purpose of baby-worship, made him a figure familiar to the suburban public. Swinburne's summer holidays, usually spent at the sea-side with his inseparable friend, were the sources of much lyrical verse. In 1888 he wrote two of the most remarkable of his later poems: 'The Armada' and 'Pan and Thalassius.' In 1889 he published 'A Study of Ben Jonson' and 'Poems and Ballads (Third Series).' His marvellous fecundity was now at length beginning to slacken; for some years he made but slight appearances. His latest publications were: 'The Sisters' (1892); 'Studies in Prose and Poetry' (1894); 'Astrophel' (1894); 'The Tale of Balen' (1896); 'Rosamund, Queen of the Lombards' (1899); 'A Channel Passage' (1904); and 'Love's Cross-Currents'—a reprint of the novel 'A Year's Letters' of 1877—in 1905. In that year he wrote a little book about 'Shakespeare,' which was published posthumously in 1909. In November 1896 Lady Jane Swinburne died, in her eighty-eighth year, and was mourned by her son in the beautiful double elegy called 'The High Oaks: Barking Hall.'

Swinburne's last years were spent in great placidity, always under the care of his faithful companion. In November 1903 he caught a chill, which developed into double pneumonia, of which he very nearly died. Although, under great care, he wholly recovered, his lungs remained delicate. In April 1909, just before the poet's seventy-second birthday, the entire household of Mr. Watts-Dunton was prostrated by influenza. In the case of Swinburne, who suffered most severely, it developed into pneumonia, and in spite of the resistance of his constitution the poet died on the morning of 10 April 1909. He was buried on 15 April at Bonchurch, among the graves of his family. He left only one near relation behind him, his youngest sister, Miss Isabel Swinburne.

The physical characteristics of Algernon Swinburne were so remarkable as to make him almost unique. His large head was out of all proportion with his narrow and sloping shoulders; his slight body, and small, slim extremities, were agitated by a restlessness that was often, but not correctly, taken for an indication of disease. Alternately he danced as if on wires or sat in an absolute immobility. The quick vibrating motion of his hands began in very early youth, and was a sign of excitement; it was accompanied, even when he was a child, by 'a radiant expression of his face, very striking indeed' (MISS ISABEL SWINBURNE). His puny frame required

little sleep, seemed impervious to fatigue, was heedless of the ordinary incentives of physical life; he inherited a marvellous constitution, which he impaired in early years, but which served his old age well. His character was no less strange than his physique. He was profoundly original, and yet he took the colour of his surroundings like a chameleon. He was violent, arrogant, even vindictive, and yet no one could be more affectionate, more courteous, more loyal. He was fierce in the defence of his prejudices, and yet dowered with an exquisite modesty. He loved everything that was pure and of good report, and yet the extravagance of his language was often beyond the reach of apology. His passionate love for very little children was entirely genuine and instinctive, and yet the forms of it seemed modelled on the expressions of Victor Hugo. It is a very remarkable circumstance, which must be omitted in no outline of his intellectual life, that his opinions, on politics, on literature, on art, on life itself, were formed in boyhood, and that though he expanded he scarcely advanced in any single direction after he was twenty. If growth had continued as it began, he must have been the prodigy of the world, but his development was arrested, and he elaborated during fifty years the ideas, the convictions, the enthusiasms which he possessed when he left college. Even his art was at its height when he was five and twenty, and it was the volume and not the vigour that increased. As a magician of verbal melody he impressed his early contemporaries to the neglect of his merit as a thinker, but posterity will regard him as a philosopher who gave melodious utterance to ideas of high originality and value. This side of his genius, exemplified by such poems as 'Hertha' and 'Tiresias,' was that which showed most evidence of development, yet his masterpieces in this kind also were mainly written before he was thirty-five.

No complete collection of Swinburne's works has appeared, but his poems were published in six volumes in 1904, and his tragedies in five in 1905-6.

The authentic portraits of Swinburne are not very numerous. D. G. Rossetti made a pencil drawing in 1860, and in 1862 a water-colour painting, an excellent portrait, now in the Fitzwilliam Museum, Cambridge; the bust in oils, by G. F. Watts, May 1867, is now in the National Portrait Gallery; as a likeness this is very unsatisfactory. A water-colour drawing (*circa* 1863) by Simeon Solomon has disappeared.

Miss E. M. Sewell made a small drawing in 1868, lately in the possession of Mrs. F. G. Waugh; a water-colour, by W. B. Scott (*circa* 1860), is now in the possession of Mr. T. W. Jackson; a large pastel, taken in old age (Jan. 1900), by R. Ponsonby Staples, is in the possession of Mr. Edmund Gosse. A full-length portrait in water-colour was painted by A. Pellegrini ('Ape') for reproduction in 'Vanity Fair' in the summer of 1874; this drawing, which belonged to Lord Redesdale, was given by him to Mr. Gosse. Although avowedly a caricature, this is in many ways the best surviving record of Swinburne's general aspect and attitude.

[Personal recollections, extending in the case of the present writer over more than forty years; information about childhood kindly supplied by Miss Isabel Swinburne; the memories of contemporaries at school and college, particularly those kindly contributed by Sir George Young, by the poet's cousin Lord Redesdale, and by Lord Sheffield; the bibliographical investigations of Mr. Thomas J. Wise, principally embodied in *A Contribution to the Bibliography of Swinburne* (published in Robertson Nicoll & Wise's *Lit. Anecdotes of the Nineteenth Century*, 1896, ii. 291-364, and more fully in his privately printed *Bibliography of Swinburne*, 1897); and the examination of a very large unpublished correspondence are the chief sources of information. To these must be added the valuable notes on The Boyhood of Algernon Swinburne, published in the *Contemporary Review* for April 1910 by another cousin, Mrs. Disney Leith. The *Life of Jowett* has some notes, unfortunately very slight, of the Master of Balliol's lifelong salutary influence over the poet, who had been and never ceased to be his pupil, and something is guardedly reported in the *Life of Lord Houghton*. Mr. Lionel Tollemache contributed to the *Spectator* and to the *Guardian* in 1909 some pleasant recollections. The *Life of Edmund Clarence Stedman*, by his granddaughter (New York, 1911), contains some very important autobiographical letters, and there are mentions in the *Autobiography of William Bell Scott*, and the privately printed *Diary of Henry Adams* (quoted above). The name of Swinburne, with an occasional anecdote, occurs in many recent biographies, such as *The Autobiography of Elizabeth M. Sewell*, the *Recollections of Mr. A. G. C. Liddell*, the *lives of D. G. Rossetti*, *Edward Burne-Jones*, *Richard Burton*, *Whistler*, *John Churton Collins*, and *Ruskin*. R. H. Shepherd's *Bibliography of Swinburne* (1887) possesses little value. Swinburne left behind him a considerable number of short MSS., principally in verse. The prose tales have been recorded above, and

certain of the verse; his posthumous poems, none of which have yet been published, also include a series of fine Northumbrian ballads.]

E. G.

SYME, DAVID (1827-1908), Australian newspaper proprietor and economist, born on 2 Oct. 1827 at North Berwick, Haddingtonshire, Scotland, was youngest of five sons and two daughters of George Syme, parish schoolmaster of North Berwick, by his wife Jean Mitchell of Forfarshire. Of his brothers two died in early manhood and two, George and Ebenezer, reached middle age. The elder of these, George (M.A., Aberdeen), was successively a free-church minister in Dumfriesshire and a baptist pastor in Nottingham, while the younger, Ebenezer, who was educated at St. Andrews, also joined the baptist ministry, which he abandoned in 1850 to become sub-editor of the 'Westminster Review.' Both the brothers, George and Ebenezer, joined David in Melbourne, and died within a few years of their settlement there.

After education by his father, who died when David was sixteen, he visited his eldest brother, James, who was practising as a surgeon at Bathgate, Linlithgowshire. Accepting the doctrine of universal salvation promulgated by James Morison [q. v.] of Kilmarnock, he next studied theology with him, but in 1849 he went to Germany and to Vienna, and a year's study of philosophy in Heidelberg destroyed his faith in Christianity. On his return to Scotland he procured a situation as reader on a Glasgow newspaper, but hopeless of advancement he sailed at the end of 1851 for San Francisco, and went from Sacramento to the goldfields, where he had no luck and disliked his companions. The report of the discovery of gold in Australia brought him to Melbourne in 1852, after a perilous voyage in an unseaworthy ship. In the Australian goldfields he was no more prosperous than in California, although on one occasion his claim included what was afterwards the famous Mt. Egerton mine, but it was jumped, and Syme could obtain no redress from the government. Meanwhile David's brother Ebenezer, whose literary abilities were high, followed in his footsteps and settled in Melbourne. On 17 Oct. 1854 a newspaper, 'The Age,' was founded there by two local merchants, John and Henry Cooke, and Ebenezer was appointed one of the editors. The editors supported the cause of the miners at the time of the Ballarat riots, to the disgust of the proprietors, who gave

the paper up; the editors thereupon ran it for themselves, and in eighteen months the concern was nearly bankrupt. In 1856, on his brother's advice, David bought 'The Age' for 2000*l.*, which he had earned on the goldfields. In 1857, after eighteen months' trial, the paper proved unable to support both brothers, and David left it to Ebenezer's sole care, and turned with some success to road-contracting. Ebenezer, who was elected member for Mandurang in the first legislative assembly of the colony, but retired at the end of his term owing to inability to reconcile journalistic independence with party obligation, died of consumption in March 1860. David then took control of 'The Age,' mainly in the interest of his brother's wife and family, and for ten years worked it single-handed on independent lines which championed protection in the working-class interests, and vigorously challenged capitalist predominance. He attacked the distribution of 60,000,000 acres of land in Victoria among a thousand squatters, who paid a rent of 20*l.* apiece, and he denounced the monopoly of the importers, which made local industries impossible and denied work to skilled artisan immigrants. The diminution in the output of gold threatened in these circumstances to drive from the colony the poorer population. Syme in his paper boldly urged a programme which included the opening of the land to small farmers and a system of protective duties on imports, a policy which none in Australia suggested before him. Syme, through 'The Age,' soon became the admitted leader of the liberal party, but it was necessary to secure manhood suffrage and a diminution of the powers of the upper house before legal effect could be given to his proposals. A land act embodying Syme's policy was passed in 1869, and until his death he never ceased to urge drastic measures for the prevention of large estates. At the same time 'The Age' also demanded, and finally obtained, in addition to land and protective legislation, disestablishment, payment of members, and free compulsory secular education. Syme's enemies, the landowners and importers, ceased to advertise in 'The Age,' and in 1862 they persuaded the premier, (Sir) John O'Shanassy [q. v.], to withdraw the advertisements of the government. The price of the paper had been reduced in 1861 from 6*d.* to 3*d.* Now in 1862 Syme reduced it further to 2*d.*, and his attacks on the government redoubled. Meanwhile

the circulation increased. Popular anger prevented the premier, O'Shanassy, from carrying a libel bill designed in April 1863 to gag Syme, and in August 1864 a protectionist house was returned, with the result that a first tariff bill was passed in March 1866 by the ministry of (Sir) James McCulloch. In 1868 the importers, despite Syme's resolute adherence to his policy, renewed their advertisements in 'The Age'; he thereupon brought out the paper at 1d., and its circulation more than doubled in a week. In 1869 Syme went to England on his only holiday since 1860, and a fresh endeavour by the importers to boycott his paper in his absence failed.

Syme subsequently continued his campaign both on land and tariff questions with unabated vigour. His insistence on still higher duties led to a long conflict between the two houses in which supply was more than once refused. In critical situations Syme's advice was solicited and adopted by the governor and premier, and after 1881, when Syme forced (Sir) Graham Berry [q. v. Suppl. II], the premier, to withdraw the tariff measure which he had announced to the house the day before, but of which Syme disapproved, Syme claimed with justice to exercise until his death the deciding voice in the appointment of every Victorian premier and cabinet minister. In 1887, during a period of great prosperity, parliament, mainly yielding to the appeals of landjobbers and speculators, accepted a scheme for covering the whole colony with a network of non-paying railways under the direction of official railway commissioners. Syme attacked the movement in a series of articles which ultimately in 1892 forced the government to abandon its railway scheme and dismiss the commissioners. The chief commissioner, Mr. Richard Speight, claimed 25,000*l.* damages from Syme for libel. The litigation lasted from March 1890 to September 1894, and although Syme won, Speight's bankruptcy made him liable for his own costs, which amounted to 50,000*l.* The paper's prosperity was confirmed, and it became the fountain-head of all progressive legislation. To its suggestion the colony owed anti-sweating and factory acts, and it initiated the movement which issued in the levy of an income-tax. Syme sent Mr. J. L. Dow to America and Mr. Alfred Deakin to India at his own cost in order to study systems of irrigation. He supported Australian federation and first adopted the policy of conscription and the formation of an Australian navy. Towards the

end of his life he realised that protection, while it had destroyed the monopoly of the importers, was enriching the manufacturers at the expense of the workers. He thereupon advocated a 'new protection' system and persuaded parliament to pass measures to protect industry against rings and trusts.

Syme, who declined the offer of a knighthood, died of heart disease at Blythwood, Kew, near Melbourne, on 14 Feb. 1908, and was buried at Melbourne. On his deathbed he dictated an account of his career which was edited by Mr. Ambrose Pratt and published in 1908. By his will he left the sum of 50,000*l.* to various Victorian charities. In 1904 he had endowed an annual prize of 100*l.* for original Australian research in biology at Melbourne University.

On 17 August 1858 he married Annabella, daughter of John William Johnson of Yorkshire and Melbourne. He left five sons and two daughters.

Syme prepared interesting expositions of his economic, political, and philosophical principles. In 1877 he published 'Outlines of an Industrial Science,' an exposition of protection which has since become a text-book, and in 1882 'Representative Government in England,' a discussion of cabinet government and the party system, in which he advocates elective ministries and a system under which constituents should be able to dismiss their members without waiting for an election. At the end of his life he published two books on philosophy. The first, 'On the Modification of Organisms' (1890; 2nd edit. 1892), was an attack on Darwin's theory of natural selection. The second, 'The Soul: a Study and an Argument' (1903), continuing the earlier theme, attacked both materialism and the current argument for design, and described Syme's own belief as a kind of pantheistic teleology. Syme was also a contributor to the 'Westminster,' the 'Edinburgh,' and the 'Fortnightly' Reviews.

[Meynell's Dict. of Australas. Biog.; David Syme, by Ambrose Pratt (with several photographic reproductions); West Australian, Argus, Age, Herald, Adelaide Advertiser, and Adelaide Register, 15 Feb. 1908.] A. B. W.

SYMES-THOMPSON, EDMUND (1837-1906), physician, born in London on 16 Nov. 1837, was son of Theophilus Thompson [q. v.] by his wife Anna Maria, daughter of Nathaniel Walker of Stroud. The name Symes was adopted by his father on inheriting property from the Rev. Richard

Symes, the last surviving member of the Somerset branch of the Sydenhams, who were descended from Dr. Thomas Sydenham [q. v.]. Edmund received his early education at St. Paul's School, and in 1857 entered King's College. There he gained a gold medal and the Leathes and Warneford prizes for divinity, and prizes for general proficiency. His medical education was pursued at King's College Hospital, and whilst a student he took an active part in physiological investigations with Lionel Smith Beale [q. v. Suppl. II]. He graduated M.B. in 1859, gaining the scholarship in medicine, a gold medal and honours in surgery, botany, and midwifery; in 1860 he proceeded M.D.

In 1860 he was elected honorary assistant physician to King's College Hospital, and in 1863 to a similar post at the Hospital for Consumption, Brompton, to which his father had also been attached for many years. Having made up his mind to devote himself specially to consumption, he resigned his post at King's College Hospital in 1865. In 1869 he became honorary physician, and in 1889 honorary consulting physician to the Brompton Hospital. He was also honorary physician to the Royal Hospital for Consumption, Ventnor, and to the Artists' Benevolent and Artists' Annual funds. In 1867 he was elected professor of physic at Gresham College, and lectured regularly and with increasing efficiency to the end of his life. With his brother professors at the college, especially Benjamin Morgan Cowie, dean of Exeter [q. v. Suppl. I], and John William Burgon, dean of Chichester [q. v. Suppl. I], professor of geometry, he helped to develop the scheme of this old foundation and to popularise the lectures.

He became a member of the Royal College of Physicians in 1862, and a fellow in 1868. He was a fellow of the Royal Medical and Chirurgical and Medical societies, and a member of the Clinical and Harveian societies of London, acting as president in 1883 of the last society.

Symes-Thompson was specially interested in the value of climate and spa treatment for the relief of diseases, especially of the lungs, and travelled widely on the Continent, besides visiting Egypt, Algeria, and South Africa. He was one of the founders of the British Balneological and Climatological Society, and was president in 1903. It was largely through his influence and his pamphlet on 'Winter Health Resorts in the Alps' (1888) that Davos and St. Moritz became popular health resorts, and he was

an active mover in the establishment of the invalids' home at Davos (1895), and of the Queen Alexandra Sanatorium, which was opened there (1909) after his death. His most important contributions to medical literature were 'Lectures on Pulmonary Tuberculosis' (1863) and 'On Influenza: an Historical Survey' (1890), both being in part revision of books by his father. He was also closely concerned in the publication by the Royal Medical and Chirurgical Society of the book entitled 'The Climates and Baths of Great Britain and Ireland' (1895), besides contributing himself to its pages.

Life insurance also interested him greatly, and besides holding a prominent position amongst assurance medical officers in London as physician to the Equity and Law Life Assurance Society, he contributed an article on the subject to the two editions of Sir Clifford Allbutt's 'System of Medicine' (1896 and 1905).

Symes-Thompson, who had a large consulting practice amongst members of the church of England, cherished deep religious convictions, and he took active interest in many church institutions. He was a prominent worker in the guild of St. Luke, of which he was provost from 1893 to 1902, and he also assisted in establishing (1896) the annual medical service at St. Paul's Cathedral and the Medical Missionary College (1905). Both service and college were under the ægis of the guild of St. Luke. He was interested in the oral training for the deaf and dumb, writing a pamphlet on the subject, and being chairman for many years of the training college for teachers of the deaf and dumb at Ealing.

He lived first at 3 Upper George Street, and from 1878 to his death at 33 Cavendish Square. In 1899 he bought Fimmere House, Oxfordshire, where he spent much of his leisure and gratified an early love for botany and a country life.

He died on 24 Nov. 1906 at his house in Cavendish Square, London, and was buried in the parish churchyard at Fimmere. There is an oil portrait in possession of the family by Mr. A. Tennyson Cole, and crayon portraits in Gresham College and the Royal Society of Medicine. His coat of arms is on one of the windows of St. Paul's School. He married on 25 July 1872 Elizabeth, daughter of Henry George Watkins, vicar of Potter's Bar, who survived him with four sons and two daughters.

[Memories of Edward Symes-Thompson, M.D., F.R.C.P., 1908; information from Dr.

Henry Symes-Thompson (son); *Journal of Balneology and Climatology*, Jan. 1907 (with portrait from photograph); *Brit. Med. Journal and Lancet*, 1 Dec. 1906.] E. M. B.

SYMONS, WILLIAM CHRISTIAN (1845-1911), decorative designer, painter in oil and water-colours, was the elder son of William Martyn Symons by his wife Elizabeth White. The father, who came originally from Trevice, St. Columb, Cornwall, carried on a printing business in Bridge Street, Vauxhall, where Christian, his second child, was born on 28 Nov. 1845. There was one other son and two daughters, of whom the elder, Annie, survives. Symons was educated at a private school in Penzance until he was sent at an early age to the Lambeth Art School, then under the direction of a teacher of repute named Sparkes. In 1866 he entered the Royal Academy as a student for a short while, gaining that year a silver medal in the antique school. In 1869 for the first time one of his works (a portrait of his sister) was hung at the Academy Exhibition, to which he was an intermittent contributor until the year of his death, when he was represented by an 'Interior of Downside Abbey.' His easel pictures were also shown at the New English Art Club, the Institute of Painters in Oil, and various other galleries. In 1870 he was received into the Roman catholic church, and began his long connection with the firm of Lavers, Barraud and Westlake, for whom he designed a number of stained windows. He became a member of the Royal Society of British Artists in 1881, but seceded with James McNeill Whistler [q.v. Suppl. II] in 1888. He only came personally before the public in 1899, when he acted as secretary to the celebrated dinner organised in honour of Whistler on 1 May (cf. PENNELL, *Life of Whistler*, 2nd edit. p. 277). In 1899 he began the execution of his commission for certain mosaic decorations at Westminster Cathedral, the work by which he was chiefly known until the posthumous exhibition of his paintings and water-colours at the Goupil Gallery in 1912. He worked at Newlyn in Cornwall for some time, and though never a member of the school associated with that locality he contributed an account of it to the 'Art Journal' in April 1890. In later life he lived almost entirely in Sussex. He died at Udimore, near Rye, where he is buried, on 4 Sept. 1911.

He married at Hampstead in 1885 Cecilia, daughter of J. L. Davenport of Wildemlow, Derby. He left nine children,

two daughters and seven sons, all of whom survive him. The eldest, Mark Lancelot, a painter of portraits and subject pieces, exhibits occasionally at the New English Art Club.

Symons was better known to a limited circle as a decorator and designer than as a painter. His varied talents, though recognised by fellow artists, with all of whom he was personally very popular, were insufficiently appreciated by the public during his lifetime. A retiring, over-modest nature accounted in some measure for his ill-success. His mosaic work at Westminster Cathedral consists of the chapel of the Holy Souls, the altar-piece of 'St. Edmund blessing London' in the crypt, and the panel of the 'Veronica' in the chapel of the Sacred Heart, and that of 'The Blessed Joan of Arc' in the north transept. The unpleasant technique (*opus sectile*) employed for some of these, in accordance with Bentley's instructions, has hardly done justice to their fine design and courageous colour. They have been criticised for an over-emphasis of pictorial illusion, to which the medium of mosaic is unsuited. The defect was probably due to misapprehension, common among all modern ecclesiastical authorities, with regard to the functions of mosaic decoration. Another characteristic example of the artist's powers may be seen in the spandrels at St. Botolph's, Bishopsgate. One of his best oil pictures, 'The Convalescent Connoisseur,' is in the Dublin Municipal Gallery of Modern Art. In the Mappin Art Gallery at Sheffield are 'In Hora Mortis' and 'Home from the War.' 'The Squaw' belongs to the Contemporary Art Society. The British Museum, the Manchester City Art Gallery, and the Brighton Art Gallery possess characteristic examples of his water colours. His flower pieces are of particular excellence. Mr. Le Brasseur of Hampstead possesses the largest collection of his paintings. Symons was obviously influenced by Sargent and Brabazon, but preserved his own individuality and did not allow his art to be affected by his friendship for Whistler.

[Private information from the family; Mr. William Marchant: Catalogue of Posthumous Exhibition at the Goupil Gallery in 1912; Pennell's *Life of James McNeill Whistler*, 2nd edit.; *Tablet*, 16 Sept. 1911.] R. R.

SYNGE, JOHN MILLINGTON (1871-1909), Irish dramatist, born at Newtown Little, near Rathfarnham (a suburban village adjoining Dublin), on 16 April 1871 was youngest child (in a family of one

daughter and four sons) of John Hatch Synge, barrister-at-law, by his wife Kathleen, daughter of the Rev. Robert Traill, D.D. (d. 1847), of Schull, county Cork, translator of Josephus.

His father dying when he was a year old, his mother moved nearer Dublin to Orwell Park, Rathgar, which was his home until 1890, when he removed with his mother and brother to 31 Crosthwaite Park, Kingstown, which was his family home until shortly before his death.

After attending private schools, first in Dublin and then at Bray, he studied with a tutor between the ages of fourteen and seventeen. The main interest of his boyhood was an intimate study of nature. 'He knew the note and plumage of every bird, and when and where they were to be found.' In youth he joined the Dublin Naturalists Field Club, and later took up music, becoming a proficient player of the piano, the flute, and the violin. His summer vacations were spent at Annamoe, co. Wicklow, among the strange people of the glens.

On 18 June 1888 he entered Trinity College, Dublin, as a pensioner, his college tutor being Dr. Traill (now provost). He passed his little go in Michaelmas term, 1890 (3rd class), obtained prizes in Hebrew and in Irish in Trinity term, 1892, and graduated B.A. with a second class in the pass-examination in December 1892. His name went off the college books six months later (3 June 1893).

While at Trinity he studied music at the Royal Irish Academy of Music, where he obtained a scholarship in harmony and counterpoint in 1891. On leaving college he thought of music as a profession, and went to Germany to study that art and to learn the German language. He first visited Coblenz, and (in the spring of 1894) Würzburg. Before the end of 1894 he altered his plans, and, deciding to devote himself to literary work, settled by way of preparation as a student in Paris in January 1895. For the next few years his time was generally divided between France and Ireland, but in 1896 he stayed in Italy long enough to learn Italian. He had a natural gift for languages, and during these years he read much. From 1897 he wrote much tentative work, both prose and verse, in French and English, and contemplated writing a critical study of Racine and a translation from the Italian (either the 'Little Flowers,' or the 'Companions of St. Francis of Assisi'). In May 1898 he first visited the Aran Islands.

In 1899, when he was living at the Hôtel Corneille (Rue Corneille), near the Odéon theatre, in Paris, Synge was introduced to Mr. W. B. Yeats, one of the founders and the chief inspiration of the Irish Literary Movement. Mr. Yeats suggested that Synge should give up writing criticism either in French or English and go again to the Aran Islands off Galway, or some other primitive place, to study and write about a way of life not yet expressed in literature. But for this meeting it is likely that Synge would never have discovered a form in which he could express himself; his mind would have continued to brood without vitality upon questions of literary criticism. As a result of this meeting, Synge went again to the Aran Islands (September 1899); the visit was repeated in the autumns of 1900, 1901, and 1902. He lived among the islanders as one of themselves, and was much loved by them; his natural genius for companionship made him always a welcome guest. He took with him his fiddle, his conjuring tricks, his camera and penny whistle, and feared that 'they would get tired of him, if he brought them nothing new.'

During his second stay he began a book on the Aran Islands, which was slowly completed in France, Ireland, and London, and published in April 1907, with illustrations by Mr. Jack B. Yeats.

Meanwhile he wrote two plays, 'The Shadow of the Glen' and the 'Riders to the Sea,' both founded on stories heard in Aran, and both finished, but for slight changes, by the winter of 1902-3. 'The Shadow of the Glen' was performed at the Molesworth Hall, Dublin, on 8 Oct. 1903. 'Riders to the Sea' was performed at the same place on 25 Feb. 1904. They were published in a single volume in May 1905. 'Riders to the Sea' is the deepest and the tenderest of his plays. 'The Shadow of the Glen' is the first example of the kind of tragically hearted farce which is Synge's main contribution to the theatre. Of two other tragic farces of the same period, 'The Tinker's Wedding' (the first drama conceived by him), was begun in 1902, but not finished till 1906, and only published late in 1907; the more beautiful and moving 'The Well of the Saints' was written in 1903-4. 'The Tinker's Wedding,' the only play by Synge not publicly acted in Ireland, was produced after his death at His Majesty's Theatre, by the Afternoon Theatre, on 11 Nov. 1909.

In the winter of 1902-3 Synge lived for a few months in London (4 Handel Street,

W.C.). Afterwards he gave up his lodging in Paris (90 Rue d'Assas), and thenceforth passed much time either in or near Dublin, or in the wilds of Wicklow and Kerry, the Blasket Islands, and the lonely places by Dingle Bay. There he found the material for the occasional papers 'In Wicklow' and 'In West Kerry,' published partly, from time to time, in the 'Manchester Guardian' and the 'Shanachie,' and reprinted in the fourth volume of the 'Works.' From 3 June till 2 July 1905 he made a tour with Mr. Jack B. Yeats through the congested districts of Connemara. Some descriptions of the journey, with illustrations by Mr. Jack B. Yeats, were contributed to the 'Manchester Guardian.' Twelve of the papers are reprinted in the fourth volume of the 'Works.'

The Abbey Theatre was opened in Dublin 27 Dec. 1904, and Synge became one of its three literary advisers, helping to direct its destinies until his death. There on 4 Feb. 1905 was first performed, 'The Well of the Saints' (published in December following). There, too, was first acted (26 Jan. 1907) 'The Playboy of the Western World,' written in 1905-6. This piece excited the uproar and confusion with which the new thing is usually received, but was subsequently greeted with tumultuous applause both in Dublin and by the most cultured audience in England.

During his last years Synge lived almost wholly in Ireland, mostly in Dublin. His health, never very robust, was beginning to trouble him. His last months of life, 1908-9, were spent in writing and re-writing the unfinished three-act play 'Deirdre of the Sorrows,' which was posthumously published at Miss Yeats's Cuala Press, on 5 July 1910, and was acted at the Abbey Theatre on 13 Jan. 1910. He also worked at translations from Villon and Petrarch, wrote some of the strange ironical poems, so like the man speaking, which were published by the Cuala Press just after his death, and finished the study 'Under Ether,' published in the fourth volume of the 'Works.' He died unmarried at a private nursing home in Dublin on 24 March 1909. He was buried in a family tomb at the protestant Mount Jerome general graveyard at Harold's Cross, Dublin. His 'Poems and Translations'—the poems written at odd times between 1891 and 1908, but most of them towards the end of his life—was published on 5 June 1909 by the Cuala Press.

Synge stood about five feet eight or nine

inches high. He was neither weakly nor robustly made. He was dark (not black-haired), with heavy moustache, and small goatee on lower lip, otherwise clean-shaven. His hair was worn rather long; his face was pale, drawn, seamed, and old-looking. The eyes were at once smoky and kindling; the mouth had a great play of humour on it. His voice was very guttural and quick, and lively with a strange vitality. His manner was generally reserved, grave, courteous; he talked little; but had a bright malice of fun always ready. He gave little in conversation; for much of his talk, though often wise with the criticism seen in his prefaces, was only a reflection of things he had seen, and of phrases, striking and full of colour, overheard by him at sea or on shore; but there was a charm about him which all felt.

He brought into Irish literature the gifts of detachment from topic and a wild vitality of tragedy. The ironical laughter of his comedy is always most mocking when it covers a tragic intention. He died when his powers were only beginning to show themselves. As revelations of himself, his poems and one or two of the sketches are his best works; as ironic visions of himself, 'The Playboy,' 'The Shadow of the Glen,' and 'The Tinker's Wedding' are his best; but in 'The Well of the Saints,' in 'Riders to the Sea,' in the book on Aran, in the heart-breaking lyric about the birds, and in the play of Deirdre, he touches with a rare sensitiveness on something elemental. Like all men of genius he awakened animosity in those anxious to preserve old standards or fearful of setting up new ones.

Among the most important portraits (other than photographs) are: 1. An oil painting by Mr. J. B. Yeats, R.H.A., now in the Municipal Gallery in Dublin. 2. A drawing by Mr. J. B. Yeats, R.H.A. (the best likeness), reproduced in the 'Samhain' for December 1904. 3. A drawing by Mr. J. B. Yeats, R.H.A., 'Synge at Rehearsal,' reproduced as a frontispiece to 'The Playboy of the Western World,' and to the 'Works,' vol. ii. 4. A drawing by Mr. James Paterson (the frontispiece to the 'Works,' vol. iv.).

'The Works of John M. Synge' (4 vols. 1910), with four portraits (two from photographs), contain all the published books and plays, and all the miscellaneous papers which his literary executors thought worthy of inclusion. Much unpublished material remains in their hands, and a few papers contributed to the 'Speaker' during 1904-5 and to the 'Manchester Guardian' during 1905-6-7-8, and an early article in

'L'Européen' (Paris, 15 March 1902) on 'La Vieille Littérature Irlandaise,' have not been reprinted.

[Personal memories; private sources; Mr. W. B. Yeats's *Collected Works*, viii. 173; *Contemp. Rev.*, April 1911, p. 470; art.

by Mr. Jack B. Yeats in *New York Sun*, July 1909; *Manchester Guardian*, 25 March 1909; J. M. Synge: a *Critical Study*, by P. P. Howe, 1912; notes kindly supplied from M. Maurice Bourgeois's forthcoming study of the man and his writings; information from Mr. J. L. Hammond.] J. M.

T

TAIT, PETER GUTHRIE (1831-1901), mathematician and physicist, born on 28 April 1831 at Dalkeith, was only son in a family of three children of John Tait, secretary to Walter Francis Scott, fifth duke of Buccleuch [q. v.], by his wife Mary Ronaldson. John Ronaldson, an uncle, who was a banker at Edinburgh and an amateur student of astronomy, geology, and the recently invented photography, first interested Peter in science. At six his father died, and he removed with his mother to Edinburgh. From the grammar school of Dalkeith he passed to a private school (now defunct) in Circus Place, and thence at ten (in 1841) to Edinburgh Academy. Lewis Campbell [q. v. Suppl. II] and James Clerk Maxwell [q. v.] were his seniors there by a year. Fleeming Jenkin [q. v.] was one of his own contemporaries. During his first four years he showed promise in classics, of which he retained a good knowledge through life. But his mathematical bent soon declared itself. He was 'dux' of his class in each of his six years at the academy (1841-7). At sixteen, in 1847, he entered Edinburgh University, and joined the senior classes in mathematics and natural philosophy. Next year he left Edinburgh for Peterhouse, Cambridge, where William Hopkins [q. v.] coached him for the mathematical tripos. In January 1852 he graduated B.A. as senior wrangler—the youngest on record. He was also first Smith's prizeman. A friend and fellow countryman of his, William John Steele, also of Peterhouse, was second wrangler. The only previous Scottish senior wrangler was Archibald Smith [q. v.] of Jordanhill in 1836. In Edinburgh Tait's success evoked boundless enthusiasm. Obtaining a fellowship at Peterhouse immediately afterwards, he began 'coaching' and at the same time with his friend Steele commenced a treatise on 'Dynamics of a Particle.' Steele died before the book had progressed far, and it was completed by Tait, who

chivalrously published it in 1856 as the joint work of 'Tait and Steele' (MS. presented by Mrs. Tait, in Peterhouse library). A second and improved edition appeared in 1865, and a seventh edition, with further revision, in 1900. The book, which still holds its own, helped to re-establish Newton's proper position in the science of dynamics, from which the brilliant work of the French mathematicians half a century earlier had apparently displaced him.

Meanwhile Tait had removed to Belfast (September 1854) to become professor of mathematics in Queen's College. Here he remained six years, and made lasting and important friendships. These friends included his fellow professor, Thomas Andrews [q. v. Suppl. I], (Sir) Wyville Thomson, James Thomson (Lord Kelvin's brother), James McCosh (afterwards president of Princeton, U.S.A.) and above all Sir William Rowan Hamilton [q. v.], the inventor of quaternions. Tait had been fascinated by Hamilton's work on 'Quaternions' while he was an undergraduate, and he soon, to the delight of Hamilton, made great and fundamental additions to the theory, subsequently producing an 'Elementary Treatise on Quaternions' (1867; 2nd edit. 1873; 3rd edit. 1890). Still later he joined with Philip Kelland [q. v.] in a more formal 'Introduction' (1873; 2nd edit. 1881; 3rd edit. 1904). To the end of his life Tait returned, when he could find the leisure, to this early study. With his colleague Andrews, Tait meanwhile made researches on the density of ozone and the action of the electric discharge on oxygen and other gases, and published the results in several papers. At Belfast he married on 13 Oct. 1857 Margaret Archer, daughter of the Rev. James Porter. Two of her brothers were among Tait's friends at Peterhouse, and one of these, James, was master from 1876 to 1901.

In 1860 Tait was elected professor of natural philosophy at Edinburgh in suc-

cession to James David Forbes [q. v.]. The candidates included Clerk Maxwell and Edward John Routh [q. v. Suppl. II]. Tait's proclivity lay towards physical rather than purely mathematical work. On his arrival in Edinburgh he was elected a fellow of the Royal Society, and four years later became one of its secretaries. Henceforth his spare time was divided between literary work and criticism, and experimental research of exceptional note in the university laboratory, the results of which were presented to the Royal Society of Edinburgh or published in Journals of other societies. Unusual thoroughness characterised all his scientific work, whether expository or experimental. He was a good linguist, French, German, and Italian being equally at command, and he was quickly conversant with the scientific work of the continent. He contributed to British scientific journals translations of valuable foreign papers, including Helmholtz's famous papers on 'Vortex Motion' (*Phil. Mag.* 1867) and F. Mohr's 'Views on the Nature of Heat' (*ibid.* 1876).

Tait early came into contact with (Sir) William Thomson (afterwards Lord Kelvin) [q. v. Suppl. II], who had become fellow of Peterhouse in 1845, but had left Cambridge next year to become professor of natural philosophy at Glasgow. In that capacity Thomson first made Tait's acquaintance. In 1861 Tait was engaged on a book on mathematical physics, and had nearly completed arrangements for publication with the Cambridge firm of Macmillan, 'when Thomson to my great delight offered to join.' The result was Thomson and Tait's 'Natural Philosophy.' Two books were at first intended: a handbook for students and another, 'Principia Mathematica,' which Tait referred to as 'quite unique in mathematical physics,' and 'our great work'; but Thomson's other engagements threw the bulk of the writing on Tait, and only a single 'first' volume came to birth late in 1867. The earlier portion was written by Tait. Thomson's hand is more apparent in the later portion. The work was epoch-marking, and created a revolution in scientific development. For the first time 'T & T,' as the authors called themselves, traced to Newton (*Principia*, Lex iii., Scholium) the concept of the 'conservation of energy' which was just then obtaining recognition among physicists, and they showed once for all that 'energy' was the fundamental physical entity and that its 'conservation' was its predominating and all-controlling property. In Tait's

words, 'Thomson and he had rediscovered Newton for the world.' Their treatise takes rank with the 'Principia,' Laplace's 'Mécanique Céleste,' and Clerk Maxwell's 'Electricity and Magnetism.'

A second edition of 'Thomson and Tait' appeared in two parts, issued respectively in 1879 and 1883. No further opportunity of collaboration offered. The material which Tait had collected for the second section of the joint original design he worked up independently into volumes for students on 'Heat' (1884; new edit. 1892), 'Light' (1884; last edit. 1900), and 'Properties of Matter' (1885; 5th edit. 1907). In these educational handbooks Tait presented each subject as a connected whole, avoiding all examination methods of presentation, carrying on the student logically by experiment and general reasoning to the main truths, and only introducing mathematics when really necessary or useful to shorten some process of reasoning. 'Heat' and 'Properties of Matter' were soon translated into German.

Tait was a strenuous controversialist, especially where his friends were concerned. He actively defended his predecessor, James David Forbes, in his struggle with Tyndall, who asserted his priority to Forbes in his theory of the motion of glaciers. In Tait's second important work, 'Thermodynamics' (1868; 2nd edit. 1877), which still enjoys authority, he established against Julius Robert Mayer, the German physicist, the claim of James Prescott Joule [q. v.] to have first determined strictly the relationship between heat and work. Tait similarly defended Thomson (Lord Kelvin) against Clausius's claim in 1854 to prior discovery, both theoretically and experimentally, of the fact that Carnot's function was inversely proportional to the temperature as measured on the absolute dynamic scale (KNOTT'S *Life of Tait*, p. 223).

In the spring of 1874 Tait lectured before the Edinburgh Evening Club, a gathering of congenial friends, on 'Recent Advances in Physical Science.' Tait spoke from notes, but a shorthand transcript was published in 1876 (3rd edit. 1885). The book, which holds a high place in scientific literature, was translated into French, German, and Italian. Subsequently Tait, whose religious sentiment was always strong, joined his colleague Balfour Stewart [q. v.] in an endeavour 'to overthrow materialism by a purely scientific argument.' The result, 'The Unseen Universe, or Physical Speculation on a Future State,' appeared anonymously

in 1875 and greatly stirred public opinion. The fourth edition, which appeared within twelve months of the first, acknowledged the authorship. The tenth edition was translated into French (1883). In order to make clearer points which readers missed, the two authors produced in 1878 a sequel entitled 'Paradoxical Philosophy.' For the 'Encyclopædia Britannica' (9th edit. 1883) Tait wrote many articles, including one, 'Mechanics,' which he afterwards developed into an advanced treatise on 'Dynamics' (1895). Here, as he wrote to Cayley, he evolved a system, which he believed to be new, 'from general principles such as conservation and transformation of energy, least action, &c., without introducing either force, momentum, or impulse.' A small book on 'Newton's Laws of Motion' followed in 1899.

Tait's laboratory work was at the same time of a rarely equalled magnitude and importance. To his students his manner was always that of an elder brother. Although his laboratory was not a formal institution definitely housed in College buildings till 1868, nevertheless, following the example of his predecessors, he until then used for laboratory purposes his class-room and private room in college. At first he leaned to the chemical side. He continued his investigations on the properties of ozone, which he had begun with Andrews at Belfast, and in 1862 worked with James Alfred Wanklyn [q. v. Suppl. II] on the production of electricity by evaporation and during effervescence. In 1865 he dealt with the curious motion of iron filings on a vibrating plate in a magnetic field. In 1866 he began with Balfour Stewart [q. v.] the experimental investigation of the heating of a rapidly rotating disc in vacuo, a work extending continuously through two years, being resumed after three years and again six years later. Between 1870 and 1874 he worked out and verified with his students Thomson's (Lord Kelvin's) discovery of the 'latent heat of electricity,' and his theory of thermo-electricity, and he produced the first, and still the practical, working thermo-electric diagram on Thomson's lines. When he delivered the Rede lecture before the University of Cambridge in 1873 he chose thermo-electricity for his subject. His next great work was on knots, a theme which presented itself to him as the outcome of the simple proposition that two closed plane curves which intersect each other must do so an even number of times. Begun in

1876, this research occupied him, when time allowed, till 1885, and resulted in a remarkable series of masterly papers. In 1881 he dealt with the physical side of the 'Challenger' reports, especially with the effect of pressure on the readings of thermometers used in deep-sea soundings, and on the compressibility of water and alcohol. In 1886, on the suggestion of Lord Kelvin, he undertook a searching investigation into the foundations of the kinetic theory of gases, on which he was continuously engaged for five years (it still occupied his attention in 1896). His results were published in more than twenty papers, which form collectively a 'classic' contribution to the literature of the subject.

During the same period, Tait, who was an ardent votary of golf, closely studied the flight of a golf ball ('the path of a rotating spherical projectile'), which he saw was not that of a smooth heavy sphere through a resisting medium. After an endless series of experiments with the laws of impact and cognate points, he discovered the principle of the 'underspin' which gave a new development to the art of the game (cf. his paper in *Badminton Magazine*, 1896). Sir J. J. Thomson, in a Friday-evening discourse at the Royal Institution (18 March 1910), showed to his audience an ingenious experimental verification of Tait's general conclusions.

Tait's alertness of mind and versatile interests led to careful and abstract inquiry in every possible direction, often apparently playful, and constantly alien to his special studies. As director of the Scottish Provident Institution, he was drawn to investigate problems of life assurance. Although he had no sympathy with easy efforts to popularise science, he sought to bring true science home to the unlearned, either in articles in popular magazines like 'Good Words,' to which he contributed with Thomson a paper on 'Energy' and a series of articles on 'Cosmical Astronomy,' or in lectures to a general audience on 'Force,' 'Sensation and Science,' 'Thunderstorms,' 'Religion and Science,' 'Does Humanity require a New Revelation?' Tait's scientific papers were collected in 2 vols. (Cambridge, 1898-1900).

Tait's eminence was widely recognised. Although he was never a fellow of the Royal Society of England, he received a Royal medal from the society in 1886. He was made hon. LL.D. of Glasgow in 1901, and hon. Sc.D. of the University of Ireland in 1875. He twice received the Keith prize from the Royal Society of

Edinburgh as well as the Gunning Victoria Jubilee prize. He was fellow or member of the Danish, Dutch, Swedish, and Irish scientific academies. He was made hon. fellow of Peterhouse in 1885. Resigning his professorship early in 1901, Tait died at Edinburgh on 4 July 1901, and was buried there.

Sir George Reid painted three portraits of Tait: one is the property of the family; another, which has been engraved, hangs in the rooms of the Royal Society of Edinburgh, and the third is in the hall of his college, Peterhouse, Cambridge.

Two scholarships in scientific research were founded in Tait's memory at Edinburgh university, and a sum of money contributed to improve the apparatus in the natural philosophy department. A second ('Tait') chair in that department is also in process of foundation.

Of Tait's four sons the eldest, John Guthrie, is principal of the Government Central College at Mysore. The third son, FREDERICK GUTHRIE (1870-1900), born at Edinburgh on 11 Jan. 1870, after being educated at Edinburgh Academy and Sedburgh, entered Sandhurst as an Edinburgh University candidate. In 1890 he was gazetted to the Leinster regiment, and in 1894 was transferred to the Black Watch. In 1899 he volunteered for active service in South Africa. At Magersfontein (19 Dec. 1899) young Tait, 'in front of the front company,' was shot in the leg. After a few weeks in hospital he rejoined his company, and on the same day, 7 Feb. 1900, at Koodoosberg, leading a rush on the Boers' position, he was shot through the heart, and died instantly. Lieutenant Tait, known everywhere as 'Freddie Tait,' was from 1893 until he sailed for South Africa probably the most brilliant amateur golfer. He was champion golfer both in 1896 and in 1898 (Low's *F. G. Tait, a Record*, 1902, with characteristic portrait).

[Dr. Knott's Life and Scientific Work of P. G. Tait, Cambridge, 1911, with four portraits and bibliography enumerating some 365 papers, besides 22 vols.; family records and personal recollections.] J. D. H. D.

TALLACK, WILLIAM (1831-1908), prison reformer, born at St. Austell, Cornwall, on 15 June 1831, was son of Thomas Tallack (1801-65) by his wife Hannah (1800-76), daughter of Samuel Bowden, members of the Society of Friends. He was educated at the Friends' school, Sidcot (1842-5), and the Founders' College, Yorkshire (1852-4). He was engaged in teaching (1845-52 and

1855-8). An early friendship with the Quaker philanthropist Peter Bedford (1780-1864) determined his career. In 1863 he became secretary to the Society for the Abolition of Capital Punishment, exchanging this in 1866 for the secretariate of the Howard Association, which he held till 31 Dec. 1901. In pursuit of his duties as an agent in the cause of penal reform he visited not only the Continent, but Egypt, Australia, Tasmania, Canada, and the United States. His advocacy of the same cause found expression in numerous tracts, addresses, flyleaves, and articles in periodicals. He wrote much in the 'Friends' Quarterly Examiner'; 'The Times' in an obituary notice speaks of him as 'at one time a frequent contributor,' and justly characterises his writing as 'discursive and somewhat confused,' but emphasising 'wholesome principles,' keeping 'a grip on facts,' and exhibiting 'courtesy and tact.' His 'Penological and Preventive Principles' (1888, 2nd edit. 1896) may be considered a standard work on the subject. His religious writings and correspondence present a liberal type of evangelical religion in conjunction with broad sympathies.

He died at 61 Clapton Common on 25 Sept. 1908, and was buried in the Friends' cemetery, Winchmore Hill, Middlesex. He married on 18 July 1867, at Stoke Newington, Augusta Mary (b. 28 Dec. 1844; d. 24 Jan. 1904), daughter of John Hallam Catlin, and had by her several children.

A nearly complete bibliography of his writings to 1882 (including magazine articles) will be found in 'Bibliotheca Cornubiensis' (1874-82). The following may be specially noted: 1. 'Malta under the Phenicians, Knights and English,' 1861. 2. 'Friendly Sketches in America,' 1861 (noticed in John Paget's 'Paradoxes and Puzzles,' 1874, 405-7). 3. 'Peter Bedford, the Spitalfields Philanthropist,' 1865; 2nd edit. 1892. 4. 'A Common Sense Course for Diminishing the Evils of War,' 1867. 5. 'Thomas Shillitoe, the Quaker Missionary and Temperance Pioneer,' 1867. 6. 'George Fox, the Friends and the Early Baptists,' 1868. 7. 'Humanity and Humanitarianism. . . . Prison Systems,' 1871. 8. 'Defects of the Criminal System and Penal Legislation,' 1872 (circulated by the Howard Association). 9. 'Christ's Deity and Beneficent Reserve,' 1873. 10. 'India, its Peace and Progress,' 1877. 11. 'Howard Letters and Memories,' 1905 (autobiographical).

[The Times, 28 Sept. and 1 Oct. 1908; Annual Register, 1908; Howard Letters and Memories, 1905 (two portraits); Stuart J. Reid, Sir

Richard Tangye, 1908 ; Joseph Smith's Cat. of Friends' Books, 1867, ii. 690 seq. ; 1893, p. 18 ; Boase and Courtney's *Bibliotheca Cornubiensis*, 1878, ii. 700 seq. ; 1882, p. 1342.] A. G.

TANGYE, SIR RICHARD (1833-1906), engineer, born at Broad Lane, Illogan, Cornwall, on 24 Nov. 1833, was fifth son in a family of six sons and three daughters of Joseph Tangye, a quaker Cornish miner of Redruth, who afterwards became a small shopkeeper and farmer there, by Anne (*d.* 1851), daughter of Edward Bullock, a small farmer and engine driver. After attending the British school at Illogan, and helping his father on his farm, he was at the age of eight disabled for manual labour through fracturing his right arm, and spent three years (1844-7) at a school at Redruth kept by William Lamb Bellows, father of John Bellows [q. v. Suppl. II]; thence he went in February 1847 to the Friends' School, Sidcot, Somerset, where he formed a lifelong friendship with William Tallack [q. v. Suppl. II]. He remained there as pupil teacher and assistant until 1851; in that year he visited with his brother James the Great Exhibition in London.

Finding the teaching profession un congenial, Tangye at the end of 1852, in reply to an advertisement, went to Birmingham and entered the office of Thomas Worsdell, a quaker engineer, as clerk at 50*l.* a year. His younger brother George soon joined him as junior clerk; they were followed by two other brothers, James and Joseph, mechanical experts who had worked under Brunel for Mr. Brunton, engineer to the West Cornwall railway, and had made a hydraulic press which favourably impressed Brunel.

At Birmingham Tangye soon obtained a complete grasp of the commercial details of the engineering business, and he proved his interest in the welfare of the workmen by obtaining the firm's assent to a half-holiday on Saturdays, a concession to labour which was subsequently adopted in England universally. In 1855, owing to a difference with his employer, Richard left the firm. Soon he and three brothers, including Joseph, who had made himself an expert lathe-maker, began to manufacture tools and machinery on their own account, renting a room at 40 Mount Street, Birmingham, for 4*s.* a week. The brothers prospered, and took a large workshop for 10*s.* a week, bought an engine and boiler to supply their own motive power, and took one workman into their employ. In 1856 Brunel,

mindful of James and Joseph's earlier efforts, commissioned the brothers at Birmingham to supply him with hydraulic lifting jacks to launch the 'Great Eastern' steamship. The successful performance of this commission proved the first step in the firm's prosperity. In 1858 the brothers bought the sole right to manufacture differential pulley blocks, recently invented by Mr. J. A. Weston; but rival claims to the patent rights involved them in 1858 in a long and costly though successful lawsuit.

A fifth brother, Edward, joined them that year. The firm now devoted itself solely to the manufacture of machinery and every kind of power machine. The growth of the industry led to their removal in 1859 to new premises in Clement Street, Birmingham; three years later the firm acquired three acres of land at Soho, three miles from Birmingham, and built there the 'Cornwall Works.' Ultimately this factory through Richard's skill, energy, and business acumen absorbed thirty acres of surrounding land and gave employment to 3000 hands. Works in Belgium were established under Edward's management in 1863; a London warehouse was added in 1868, and branches were subsequently formed at Newcastle, Manchester, Glasgow, Sydney, Melbourne, and Johannesburg. One of the engineering successes of the firm was the use of their hydraulic jacks in placing Cleopatra's Needle (weighing over 186 tons) on its present site on the Thames Embankment on 12 Sept. 1878. The firm became a limited liability company, 'Tangyes Limited,' on 1 Jan. 1882.

The brothers were considerate employers. In 1872, in which year the three elder brothers, James, Joseph, and Edward, retired from the business, Richard permanently instituted the Saturday half-holiday which he had pressed on his first employer twenty years earlier, and he averted a strike by granting unasked a nine hours day. In 1876 Tangye instituted at the works a large dining-hall, educational classes, concerts, and lectures, with which his friend, Dr. J. A. Langford [q. v. Suppl. II], was closely associated.

In the religious, municipal, and political life of Birmingham Tangye took an active share. In his early days there he helped Joseph Sturge [q. v.] at the Friends' Sunday schools. A staunch liberal in politics, he supported John Bright in every election at Birmingham, but refused many invitations to stand for parliament himself. He was a firm free trader, and remained loyal to Gladstone after the home rule split of 1886,

keeping alive the principles of liberalism in the 'Daily Argus,' which he founded in association with Sir Hugh Gilzean Reid in 1891. He was knighted in 1894 on Lord Rosebery's recommendation. A member of the Birmingham town council from 1878 to 1882 and of the Smethwick school board, Tangye and his brothers were generous benefactors to the town. To the municipal art gallery (founded in 1867) the firm in 1880 gave 10,000*l.* for new buildings (opened by King Edward VII, then Prince of Wales, in 1885), as well as for the acquisition of objects of art; later they presented Albert Moore's 'The Dreamers'; Tangye also loaned his fine collection of Wedgwood ware, of which a handbook was published in 1885. The School of Art (founded in 1843), to which the Tangyes in 1881 contributed 12,000*l.*, was rebuilt in 1884.

Tangye cherished literary interests. His admiration for Oliver Cromwell led him from 1875 to collect literature and relics relating to the Protector, and in 1889 he bought the fine Cromwellian collection of J. de Kewer Williams, congregational minister, to which he made many additions. He embodied the results of his study of the period of the protectorate in 'The Two Protectors, Oliver and Richard Cromwell' (1899). A catalogue of his Cromwellian collection of MSS., miniatures, and medals, by W. Downing, was published in 1905.

Between 1876 (when Langford was his companion) and 1904 Tangye made eight extended voyages, visiting Australia, America, South Africa (where his firm had business branches), and Egypt. Tangye recounted his experiences in 'Reminiscences of Travel in Australia, America, and Egypt' (1883), and 'Notes on my Fourth Voyage to the Australian Colonies, 1886' (Birmingham, 1886).

On a short record of his early career contributed in 1889 to a series of biographies of self-made men in the 'British Workman' Tangye based his full autobiography 'One and All' (1890), which, reaching its twentieth thousand in 1905, was reissued in a revised form under the title of 'The Rise of a Great Industry.' Tangye also published 'Tales of a Grandfather' (Birmingham, 1897).

Tangye resided at Birmingham till 1894, spending his summers from 1882 at Glendorgal, a house which he had purchased near Newquay. In 1894 he removed to Kingston-on-Thames. He died at Coombe Bank, Kingston Hill, on 14 Oct. 1906, and was buried in Putney Vale cemetery. He

married on 24 Jan. 1859 Caroline, daughter of Thomas Jesper, corn merchant, of Birmingham. She survived him with three sons, of whom two, Harold Lincoln and Wilfrid, joined the business, and two married daughters. The son Harold, who was created a baronet in June 1912, is author of 'In New South Africa' (1896) and 'In the Torrid Sudan' (1910).

A portrait in oils, by E. R. Taylor, hangs in the Birmingham School of Art. A bronze memorial plate erected by public subscription, with relief portraits of Richard and George Tangye, is in the Birmingham Art Gallery.

[Stuart J. Reid, Sir Richard Tangye, 1908; Tangye, *The Rise of a Great Industry*, 1905; *The Times*, 15 Oct. 1906; *Biograph*, 1879, ii. 266.] W. B. O.

TARTE, JOSEPH ISRAEL (1848-1907), Canadian statesman and journalist, born on 11 Jan. 1848 at Lanoraie, Berthier county, Quebec, was son of Joseph Tarte, habitant farmer, by his wife Louise Robillard. Educated at L'Assomption College, he qualified himself as a notary in 1871, and settled in Quebec, but after two years drifted into journalism. He quickly made his mark as a journalist. He early edited 'Les Laurentides' (St. Lin), and subsequently accepted the editorship of 'Le Canadien' and 'L'Événement' of Quebec. He conducted 'L'Événement' for over twenty years, and represented 'Le Canadien' in the press galleries of Quebec and Ottawa. In 1891 he moved to Montreal, where he published for a time 'Le Cultivateur,' the weekly edition of 'Le Canadien.' In 1896 he transferred this paper to his sons, L. J. and E. Tarte, who in 1897 acquired 'La Patrie,' which presented Tarte's political views.

Tarte sat in the Quebec assembly for Bonaventure from 1877 until its dissolution in 1881. He belonged to the party of the 'bleus' or tories. In 1891 he was elected to the federal parliament at Ottawa in the conservative interest, and was closely associated with Sir Hector Langevin [q. v. Suppl. II]. But his part in politics, which was that of a 'stormy petrel,' contributed not a little to the wreck of the conservative party. Becoming cognisant of gross irregularities in the public administration in Quebec, he formulated his charges upon the floor of the house in 1891, and the conservative premier, Sir John Abbott, granted a committee of investigation. The charges were fully proved. The member for Quebec centre, Thomas

McGreevy, was expelled from parliament, and Sir Hector Langevin resigned his portfolio as minister of public works. The conservative party, which warmly resented these damaging exposures, grew thoroughly demoralised, and Tarte went over to Laurier and the liberal opposition. Unseated on petition in 1892, he remained out of parliament until 5 Jan. 1893, when he was returned for L'Islet at a bye-election. In the critical Manitoba education question, on which Sir Charles Tupper committed the conservatives to a policy of coercing the Manitoba legislature into granting special privileges to Roman catholic schools, Laurier was said to be wavering until Tarte persuaded him to declare for conciliation between the rival interests in Manitoba rather than for coercion in favour of the catholics. Tarte's organising ability proved to the liberal party a most valuable asset, especially in Quebec; the party came into power in 1896 and remained in office till 1911. Tarte was rewarded with the office of minister of public works in the Laurier administration (13 July 1896). Although he was defeated in the general election in Beauharnois, he was soon returned for St. John and Iberville. His administration of his department was most effective. Through his efforts the port of Montreal was equipped, and the St. Lawrence widened and deepened for twenty-five miles between Quebec and Montreal.

Unlike his liberal colleagues, Tarte was a strong protectionist. While he was the first leading French-Canadian openly to espouse the imperial federation cause, his policy of 'Canada for the Canadians' was hardly imperialistic, and he is said to have opposed the sending of Canadian contingents to take part in the South African war. In 1902 his public advocacy of higher tariffs for Canada compelled his retirement from the government. Thereupon he at once assumed the editorship of 'La Patrie.' He died in Montreal on 18 Dec. 1907, and was buried in the Côte des Neiges cemetery.

Tarte was twice married: (1) to Georgiana Sylvestre, by whom he had three sons and three daughters, who survive; and (2) to Emma Laurencelle, by whom he had one daughter.

[The Times, 19 and 23 Dec. 1907; Morgan, CANADIAN Men of the Time.] P. E.

TASCHEREAU, SIR HENRI ELZEAR (1836-1911), chief justice of Canada, born at St. Mary's in Beauce county, province of

Quebec, on 7 Oct. 1836, was eldest son of Pierre Elzéar Taschereau, a member of the Canadian Legislative Assembly, and Catherine Hénédine, daughter of the Hon. Amable Dionne, a member of the legislative council. The Taschereau family came from Touraine to Canada in the seventeenth century, and Taschereau was a co-proprietor of the Quebec seigniory of Ste. Marie de la Beauce, which had been ceded to his great-grandfather in 1746. The Taschereaus had been for two generations distinguished in the judicial and ecclesiastical life of Canada. Cardinal Elzéar Alexander Taschereau [q.v.] was Sir Henri's uncle.

Henri Elzéar was educated at the Quebec Seminary, was called to the Quebec bar in 1857, and practised in the city of Quebec. He became a Q.C. in 1867, and in 1868 was appointed clerk of the peace for the district of Quebec, but soon resigned. From 1861 to 1867 he represented Beauce county as a conservative in the Canadian Legislative Assembly, and supported Sir John Alexander Macdonald [q.v.] and Sir George Cartier [q.v.] on the question of federation. On 12 Jan. 1871 he became a puisne judge of the superior court of the province of Quebec, on 7 Oct. 1878 a judge of the supreme court of Canada, and in 1902 chief justice of Canada in succession to Sir Samuel Henry Strong [q.v. Suppl. II]. Knighted in 1902, he became in 1904 a member of the judicial committee of the privy council. In 1906 he resigned the chief justiceship, and was succeeded by Sir Charles Fitzpatrick. Twice in that capacity he administered the government as deputy to the governor-general.

Taschereau was a LL.D. both of Ottawa and of Laval universities. 'When a law faculty was established at Ottawa University he was appointed to a chair, and in 1895 became dean of the faculty in succession to Sir John Sparrow Thompson [q.v.].

Taschereau's extensive knowledge of Roman and French civil law, as well as of the English statute and common law, enabled him to render important service to Canadian jurisprudence. As a legal writer he made a reputation by publishing the 'Criminal Law Consolidation and Amendment Acts of 1869 for the Dominion of Canada with Notes, Commentaries, etc.' (vol. i. Montreal, 1874; vol. ii. Toronto, 1875, with later editions), and 'Le Code de Procédure Civile du Bas-Canada' (Quebec, 1876). He further published in 1896 a 'Notice Généalogique sur la Famille

Taschereau.' Tall in stature, he was a refined scholar and a cultured gentleman. He died at Ottawa on 14 April 1911. He married twice: (1) on 1 May 1857 Marie Antoinette (*d.* June 1896), daughter of R. U. Harwood, member of the legislative council of Quebec; by her he had five sons and three daughters; (2) in March 1897 Marie Louise, daughter of Charles Panet of Ottawa; she survived him.

SIR HENRI THOMAS TASCHEREAU (1841-1909), Canadian judge, first cousin of the chief justice, born in Quebec on 6 Oct. 1841, was son of Jean Thomas Taschereau, judge of the supreme court of Canada, by his first wife, Louise Adèle, daughter of the hon. Amable Dionne, a member of the legislative council. After education at the Quebec Seminary and at Laval University, where he graduated B.L. in 1861 and B.C.L. in 1862, and received the hon. degree of LL.D. in 1890, he was called to the Quebec bar in 1863 and practised there. While an undergraduate he edited in 1862 a journal, 'Les Débats,' in which he first reported verbatim in French the parliamentary debates. He was also one of the editors in 1863 of the liberal journal 'La Tribune.' In 1870 Taschereau was elected to the city council of Quebec, serving for some time as alderman, and he represented Quebec on the north shore railway board for four years. As a liberal he sat in the dominion parliament for Montmagny from 1872 to 1878, and actively supported Sir Antoine Aimé Dorion [q. v. Suppl. I] and Alexander Mackenzie [q. v.]. On 7 Oct. 1878 he was appointed a puisne judge of the superior court of the province of Quebec. On 29 Jan. 1907, on the resignation of Sir Alexander Lacoste, he was made chief justice of the king's bench for Quebec, and next year (on 26 June) he was knighted. Taschereau left Canada in May 1909 for a tour in England and France; he died suddenly at the residence of his daughter, Mrs. J. N. Lyon, at Montmorency, near Paris, on 11 Oct. 1909. Taschereau was twice married, and had four sons and five daughters (*Canadian Law Times*, 1909, xxix. 1045-6; *Quebec Daily Telegraph*, 12 Oct. 1909).

TATA, JAMSETJI NASARWANJI (1839-1904), pioneer of Indian industries, born on 3 March 1839 at Naosari, in Gujerat, was only son of five children of Nasarwanji Ratanji Tata, a Parsi of priestly family, by his wife (and cousin) Jiverbai Cowasjee Tata. When he was thirteen his father started business in Bombay, and after sending him to the Elphinstone College from 1855 to 1858, put him in his office. In 1859 the youth visited China and laid the foundations of the large export business in which, after some vicissitudes, the firm of Tata & Co. (later Tata & Sons) successfully engaged on an immense scale, forming branches in Japan, China, Paris, and New York, and agencies in London and elsewhere. Returning from China in 1863, Tata paid the first of many visits to England, mainly with a view to the establishment of an Indian bank in London. That scheme was frustrated by the financial crisis following the 'share mania' in Bombay. Tata's firm, which was brought to bankruptcy, was rehabilitated by contracts for army supplies in the Abyssinian war.

Turning his attention to the nascent cotton manufacturing industry in Bombay, Tata returned to England in 1872 to study the work and conditions of the Lancashire mills. Subsequently he fixed upon Nagpur as a site for a model mill, and his Empress mills were opened there on 1 Jan. 1877, the day of Queen Victoria's proclamation as Empress. He afterwards founded at Coorla, near Bombay, the Swadeshi ('own country') mills. These concerns were soon recognised to be the best managed of Indian-owned factories. Improvements were adopted to protect and advance the interests of operatives and to reduce the cost of production. At first Indian mills confined themselves almost entirely to coarse goods which the deteriorated country staple was alone capable of producing. Tata, resolved to spin finer 'counts,' not only initiated the importation of longer-stapled cotton, but perseveringly sought to acclimatise Egyptian cotton in spite of the discouragement of agricultural advisers of government. In 1896 Tata published a convincing pamphlet on 'Growth of Egyptian Cotton in India,' which was republished in 1903. Another pamphlet (1893) discussed methods of increasing the supply of skilled labour. In order to reduce the heavy freight charges between Bombay and the Far East, Tata helped to promote in 1893 the Nippon Yusen Kaisha (Japanese Steam Navigation Company) so as to break down

the monopoly of three allied steamship companies—the P. and O., the Austrian-Lloyd, and the Rubattino. The three companies met the new service with a war of freights. In a widely circulated pamphlet Tata protested against the employment by the P. and O. Company of its mail subsidy from Indian revenues in maintaining a monopoly injurious to Indian trade. After spending more than two lakhs of rupees in the fight, he in June 1896 aided in reaching an agreement for a permanent reduction of freights on a reasonable competitive basis. He vigorously opposed the imposition of excise duty on the products of Indian mills to countervail the cotton import duties in 1894 and 1896, and directed an elaborate statistical inquiry into the hampering effects of the duty on the industry (V. CHITROL'S *Indian Unrest*, p. 277).

Tata's greatest service to the cause of Indian economic development was the inauguration of a scheme whereby Indian iron ore, after numerous unsuccessful efforts from 1825 onwards, might be manufactured on a large capitalistic basis. Apart from the comparatively small works of the Bengal Iron and Steel Company at Barrakur [see MARTIN, SIR THOMAS ACQUIN, Suppl. II], iron had been manufactured only on a very small scale by peasant families of smelters. In 1901 Tata thoroughly investigated the problem; his expert English and American advisers prospected large tracts of country and made exhaustive experiments, a preliminary outlay of some 36,000*l.* being incurred. Good progress was made at the time of his death, and under the control of his two sons the Tata Iron and Steel Company was registered in Bombay on 26 Aug. 1907 with a rupee capital equivalent to 1,545,000*l.*, by far the largest amount raised by Indians for a commercial undertaking. The works since constructed have created a large industrial centre at Sakchi, in the Singbhum district, 153 miles west of Calcutta, 45 miles from the principal ore supplies in the Mhorbunj State, Orissa, and 130 miles from the collieries on the Jherria field. Connecting railways have been built, and there are two blast furnaces for an annual production of about 120,000 tons of pig-iron, and steel furnaces for an output of 70,000 tons. This great enterprise, which marks a new era in Indian economic development, will support 60,000 workers and dependants (see *Quinquennial Review of Mineral Production in India*, 1904-8 in *Reeds. of Geol. Surv.*, vol. 39, 1910). The

D.N.B. 1901-1911

manufacture was commenced at the end of 1911.

Another of Tata's great schemes was the utilisation of the heavy monsoon rainfall of the Western Ghats for electric power in Bombay factories. On 8 Feb. 1911 the Governor of Bombay laid the foundation stone of the works at Lanouli in the hills, 43 miles from Bombay, and the completion of the project is expected in 1913. Whole valleys are being dammed up to hold the water, creating lakes 2521 acres in extent. The capital of about 1½ millions sterling was subscribed by Indians.

Tata rendered many other services to Bombay. He built the fine Taj Mahal hotel, the best appointed hotel in Asia, at a cost of a quarter of a million. He did much to improve the architectural amenities of Bombay, and to provide healthy suburban homes. In these and other enterprises, such as the introduction of Japanese silk culture into Mysore, he showed 'first, broad imagination and keen insight, next a scientific and calculating study of the project and all that it involved, and finally a high capacity for organisation.' His personal tastes were of the simplest kind, and he scorned publicity or self-advertisement (L. FRASER'S *India under Curzon and After*, p. 322).

He endowed scholarships, originally confined to Parsis, but thrown open in 1894, to enable promising young Indians to study in Europe. He was a fellow of the Bombay University. His offer to government on 28 Sept. 1898 of real property worth 200,000*l.* (since increased in value) to found a post-graduate institute for scientific research, resulted in the establishment by Tata's sons, in accordance with his plans, of the Indian Institute of Science at Bangalore, which teaches, examines, and confers diplomas. Its aims include the fuller application of science to Indian arts and industries.

Taken seriously ill while in Germany in the spring of 1904, he died at Nauheim on 19 May 1904, and was buried in the Parsi cemetery, Brookwood, Woking. He married in 1855 a girl of ten—early marriages then being general among the Parsis—named Berabai (*d.* March 1904), daughter of Kharsetji Daboo, and they had issue a daughter who died at the age of twelve and two sons, Sir Dorabji Jamsetji (knighted 1910) and Ratan Jamsetji, of York House, Twickenham, and Bombay, upon whom the business of the firm has devolved. A three-quarter length painting by M. F. Pithawalla, a Bombay artist (1902), is in the Parsi

Gymkhana, Bombay; three copies are in the Elphinstone club there, in the Empress mills and the Parsi fire-temple, Nagpur, and a fourth belongs to R. J. Tata. An earlier portrait by E. Ward belongs to Sir Dorabji. A bronze statue by W. R. Colton, A.R.A., publicly subscribed, was unveiled on 11 April 1912 near the municipal office, Bombay.

F. H. B.

TAUNTON, ETHELRED LUKE (1857-1907), ecclesiastical historian, born at Rugeley, Staffordshire, on 17 Oct. 1857, was youngest son of Thomas Taunton of Rugeley, by his wife Mary, daughter of Colonel Clarke. His parents were Roman Catholics, and from the age of eleven to fourteen he was at St. Gregory's school, Downside, near Bath. Ill-health, which pursued him through life, precluded his admission to the Benedictine order. After a musical training at Lichfield, he joined the community of St. Andrew's, founded by Father Bampfild at Barnet, and remained there six years as professor of music. In 1880 he joined the oblates of St. Charles, Bayswater; and was ordained priest there on 17 Feb. 1883. In 1886 he was placed by Cardinal Manning in charge of the newly formed Stoke Newington mission. A church was opened in January 1888, and a congregation formed; but a few weeks later, Taunton's frail physique was permanently injured by the accidental fall upon him of a ladder in the church. During a two years' convalescence at Bruges he engaged in literary work, contributing articles to the '*Irish Ecclesiastical Record*' and to other Roman Catholic publications, and conducting a periodical called '*St. Luke's*.' On returning to England he devoted himself, in spite of physical weakness and scanty means, to historical research, ecclesiastical study, musical composition, and devotional writing. On liturgiology, church music, and ecclesiastical history he became a recognised authority. He died suddenly from

heart failure in London while on his way to a hospital in a police ambulance on 9 May 1907, and was buried at Kensal Green.

Taunton's chief works are: 1. '*The English Black Monks of St. Benedict*,' 2 vols. 1898, which embodied much original research for the last three centuries, depending for the early periods on the MS. collections of Mr. Edmund Bishop and those of Dom Allanson at Ampleforth. 2. '*The History of the Jesuits*,' 1901, presenting an independent outlook, which provoked some controversy. 3. '*Thomas Wolsey, Legate and Reformer*,' 1902, a favourable estimate of Wolsey. 4. '*The Little Office of Our Lady: a treatise, theoretical, practical, and exegetical*,' 1903, a compilation of much learning. 5. '*Law of the Church, a Cyclopædia of Canon Law for English-speaking Countries*,' 1906. Taunton left unfinished a '*Life of Cardinal Pole*' and a '*History of the English Catholic Clergy since the Reformation*.' A popular '*History of the Growth of Church Music*' (1887), which originally appeared in a Catholic paper, the '*Weekly Register*,' shows scholarly discrimination. Taunton himself composed motets and other pieces, besides musical settings to church hymns, some of which were printed. He was a finished organist.

[*Tablet*, 18 May 1907; *Downside Review*, July 1907; *The Times*, 20 May 1907 (gives Christian name wrongly); Taunton's works; *Brit. Mus. Cat.*; private information.]

G. LE G. N.

TAYLOR, CHARLES (1840-1908), Master of St. John's College, Cambridge, born in London on 27 May 1840, was son of William Taylor, tea-dealer, by Catherine his wife. The family had formerly been settled near Woburn in Bedfordshire. His grandfather, a man of energy and foresight, had come to London, where he acquired considerable property in Regent Street, then in course of construction. He is said to have been the first job-master in London. Charles Taylor lost his father at the age of five, when his mother, with her three young sons, went to live near Hampstead. He attended the grammar school of St. Marylebone and All Souls (in union with King's College), and, afterwards, King's College School itself, winning prizes at both schools. It was at King's College School that he began his lifelong friendship with Ingram Bywater, afterwards regius professor of Greek in the University of Oxford.

In October 1858 Taylor entered St. John's College, Cambridge, where at first he devoted himself mainly to mathematics.

In 1860 he was elected to one of the new foundation scholarships, and in 1862, a year in which St. John's had six wranglers out of the first ten, he was ninth wrangler. In the same year he was placed in the second class of the classical tripos; in 1863 he obtained a first class in the theological examination; and in 1864 the Crosse scholarship and the first Tyrwhitt scholarship, while in his college he vacated the Naden divinity studentship for a fellowship. On the river he was fond of sculling, and he also rowed in the college boat-races from 1863 to 1866. He was always a great walker.

In 1863 he published 'Geometrical Conics, including Anharmonic Ratio and Projection.' This was followed, in 1872, by a text-book entitled 'The Elementary Geometry of Conics,' which passed through several editions, and, in 1881, by a larger treatise, 'An Introduction to the Ancient and Modern Geometry of Conics,' including a brief but masterly sketch of the early history of geometry. He here lays special stress on the principle of geometrical continuity, usually associated with the name of Poncelet, and traces this principle back to Kepler. He returned to the subject in the memoir on 'The Geometry of Kepler and Newton,' which he contributed to the volume of the 'Transactions of the Cambridge Philosophical Society' published in honour of Sir George Gabriel Stokes's jubilee, and in the article on 'Geometrical Continuity' printed in the 'Encyclopædia Britannica' in 1902, and reprinted in 1910. He was one of the founders of the 'Oxford, Cambridge, and Dublin Messenger of Mathematics,' and continued to be an editor from 1862 to 1884. He joined the London Mathematical Society in 1872, and was president of the Mathematical Association in 1892. His mathematical writings include some thirty or forty papers, mostly on geometry, published in the 'Messenger,' the 'Quarterly Journal of Pure and Applied Mathematics,' and the 'Proceedings of the Cambridge Philosophical Society.' All of them are 'marked by elegance, conciseness, a rare knowledge of the history of the subject, and a veneration for the great geometers of the past' (Prof. A. E. H. LOVE in *Proceedings of the London Mathematical Society*, 1909).

He was ordained deacon in 1866 and priest in 1867, the year in which he obtained the Kaye University prize for an essay published in an expanded form under the title of 'The Gospel in the Law.' He had given a course of sermons on the subject as

one of the curates at St. Andrew's the Great. In 1873 he was appointed college lecturer in theology. He soon made his mark as a Hebrew scholar. In 1874 he issued 'The Dirge of Coheleth in Ecclesiastes xii. Discussed and Literally Interpreted.' This was followed in 1877 by his edition of the 'Sayings of the Jewish Fathers, in Hebrew and English, with Critical and Illustrative Notes' (2nd edit. 1897; appendix, 1900). This work was authoritatively pronounced to be 'the most important contribution to these studies made by any Christian scholar since the time of Buxtorf' (J. H. A. HART, in the *Eagle*, xxx. 71).

From 1870 to 1878 he was an energetic and indefatigable mountaineer, in spite of his bulky physique. He wrote for the 'Alpine Journal' (vi. 232-43) a record of a notable ascent of Monte Rosa from Macugnaga in 1872 (see also T. G. BONNEY, in the *Eagle*, xxx. 73-77). He was a member of the Alpine Club from 1873 till death.

In 1877-8, during the Cambridge University commission, Taylor took an active part in the discussions on the revision of the statutes of the college. In 1879 he was chosen, with the Master (Dr. Bateson) and Mr. Bonney, one of three commissioners to represent the college in conferring with the university commission. Before the new statutes came into force the Master (Bateson) died, on 27 March 1881, and on 12 April Taylor was chosen as his successor. On 14 June he was presented by the public orator for the complete degree of D.D. *jure dignitatis* (J. E. SANDYS' *Orationes et Epistolæ Academicæ*, p. 31). As Master, Taylor left details of administration to others, but he was not inactive. His college sermons, delivered in a quiet, level tone, with no rhetorical display, were marked by a solid grasp of fact and a patient elaboration of detail. His commemoration sermons of 1903 and 1907 mainly dealt with three college worthies, William Gilbert, Thomas Clarkson, and William Wilberforce (the *Eagle*, xxiv. 352 f.; xxviii. 279 f.).

While Master, Taylor published: 'The Teaching of the Twelve Apostles' (1886); 'An Essay on the Theology of the Didache' (1889); 'The Witness of Hermas to the Four Gospels' (1892); and 'The Oxyrhynchus Logia, and the Apocryphal Gospels' (1899).

Since November 1880 he had been a member of the council of the university. In the four years from 1885 to 1888 he presented the university with 200l. in each

year, to be applied to the increase of the stipend of the reader in Talmudic. In 1886, as vice-chancellor elect, he represented the university at the commemoration of the 250th anniversary of the founding of Harvard, Cambridge, U.S.A., where he received an honorary degree on 8 Nov. From New Year's Day, 1887, to the corresponding date in 1889 he filled with dignity the office of vice-chancellor. On 18 July 1888 (*Orationes et Epistolæ Academicæ*, pp. 72-75) the vice-chancellor invited more than eighty bishops attending the Lambeth Conference, and nearly seventy other guests, to a memorable banquet in the hall of St. John's. At the end of the year he presented to the university his official stipend of 400*l.* as vice-chancellor for the year, and the money was spent in providing the nine statues which adorn the new buildings of the university library. Taylor was one of the two university aldermen first chosen in 1889 as members of the borough council; he held the office till 1895.

Among further proofs of his generous temper was his gift to the university library of the Taylor-Schechter collection of Hebrew MSS., which, by the energy of Dr. Schechter, the university reader in Talmudic, and by the generosity of Dr. Taylor, had been obtained from the Genizah of Old Cairo, with the consent of the heads of the local Jewish community (letters of thanks in *Orationes et Epistolæ Academicæ*, pp. 250 f.). Taylor and Dr. Schechter published in 1899, under the title of 'The Wisdom of Ben Sira,' portions of Ecclesiasticus from Hebrew MSS. in this collection. In 1907 Taylor presented to the library a fine copy of the 'Kandjur,' which 'at once secured for Cambridge a first place among the repositories of Buddhist texts.' In his own college, the Lady Margaret mission in Walworth, the first of the Cambridge College missions in south London, found in him a generous supporter; he provided the Lady Margaret Club with the site for its boat-house, and sent the boat to Henley; while his gifts to the general funds of the college were constant and lavish.

'He had an intense church feeling, without the slightest appearance of ecclesiasticism, . . . and his moderation, which was no part of a policy, but was natural to the man, was an invaluable quality in the head of a large college containing many varieties of religious opinion.' Though reserved and stiff in manner, he was endeared to his friends by 'his practical

wisdom, sense of humour, detachment of view, and absolute freedom from petty enmities' (the *Eagle*, xxx. 78).

He died suddenly on 12 Aug. 1908, at the Goldner Adler, Nuremberg, while on a foreign tour. After a funeral service in the chapel of St. John's College his body was buried in St. Giles's cemetery on the Huntingdon Road, near Cambridge. He married on 19 Oct. 1907, at St. Luke's church, Chelsea, Margaret, daughter of the Hon. Conrad Dillon.

He is commemorated by a stained-glass window placed in the college chapel by his widow. A portrait by Charles Brock of Cambridge belongs to his widow. A bronze medallion by Miss Florence Newman was exhibited at the Royal Academy in 1909.

[Obit. notices in the *Guardian*, 20 Aug. 1908; and *Cambridge Review*, Oct. 1908; the *Eagle*, xxx. (1909), 34-85, 196-204 (with photographic portraits); *Alpine Journal*, Nov. 1908.] J. E. S.

TAYLOR, CHARLES BELL (1829-1909), ophthalmic surgeon, born at Nottingham on 2 Sept. 1829, was son of Charles Taylor by his wife Elizabeth Ann Galloway. His father and brother were veterinary surgeons in the town. After brief employment in the lace warehouse of his uncle, William Galloway, he apprenticed himself to Thomas Godfrey, a surgeon at Mansfield. He was admitted M.R.C.S.England in 1852, and a licentiate of the Society of Apothecaries in 1855. He graduated M.D. at the University of Edinburgh in 1854, and in 1867 he obtained the diploma of F.R.C.S.Edinburgh. In 1854 Taylor was pursuing his medical studies in Paris. He acted for some time as medical superintendent at the Walton Lodge Asylum, Liverpool, but in 1859 he returned to Nottingham, where he lived during the remainder of his life. In that year he joined the staff of the newly established Nottingham and Midland Eye Infirmary, and his attention was thus directed to a branch of the profession in which he gained renown.

A consummate and imperturbable operator, especially in cases of cataract, he soon enjoyed a practice that extended beyond Great Britain. He always operated by artificial light, held chloroform in abhorrence, never employed a qualified assistant, and had no high opinion of trained nurses.

Taylor died, unmarried, at Beechwood Hall, near Nottingham, on 14 April 1909, and was buried at the Nottingham general cemetery.

An uncompromising individualist, Taylor took a prominent, and professionally unpopular, part in securing the repeal of the Contagious Diseases Act; he was a determined opponent of vivisection and of compulsory vaccination. He held strong views on diet, was an abstainer not merely from alcohol and tobacco but even from tea and coffee, and took only two meals a day. Most of his estate of 160,000*l.* was distributed by will among the British Union for the Abolition of Vivisection; the London Anti-Vivisection Society; the British committee of the International Federation for the Abolition of the State Regulation of Vice; the National Anti-Vaccination League; and the Royal Society for the Prevention of Cruelty to Animals.

[Brit. Med. Journal, 1909, i. 1033; Ophthalmoscope, vol. ix. 1909, p. 376 (with portrait); Ophthalmic Review, xxviii. 133; The Times, 1 July 1909. some of his eccentricities are well described by Col. Anstruther Thomas, Master of the Pytchley, in his *Eighty Years' Reminiscences*; additional information kindly obtained by Mr. Charles Taylor, M.R.C.V.S., of Nottingham, his nephew.] D'A. P.

TAYLOR, HELEN (1831-1907), advocate of women's rights, born at Kent Terrace, London, on 27 July 1831, was only daughter and youngest of three children of John Taylor, wholesale druggist of Mark Lane, and his wife Harriet, daughter of Thomas Hardy of Birksgate, near Kirkburton, Yorkshire, where the family had been lords of the manor for centuries. Taylor, a man of education, early inspired his daughter with a lifelong love for history and strong filial affection. Helen's education was pursued desultorily and privately. She was the constant companion of her mother, who, owing to poor health, was continually travelling. Mrs. Taylor's letters to her daughter, shortly to be published, testify to deep sympathy between the two.

The father died in July 1849, and in April 1851 Helen's mother married John Stuart Mill [q. v.]. Mrs. Mill died on 3 Nov. 1858 at the Hôtel de l'Europe, Avignon, when on the way with her husband to the south of France. In order to be near his wife's grave Mill bought a house at Avignon, which subsequently passed to Miss Taylor. Miss Taylor now devoted herself entirely to Mill, and became his 'chief comfort.' She not only took entire charge of practical matters and of his heavy correspondence,

answering many of his letters herself, but also co-operated in his literary work, especially in 'The Subjection of Women' (1869), much of which had already been suggested by her mother. Mill used to say of all his later work that it was the result not of one intelligence, but of three, of himself, his wife, and his step-daughter. Mill died in 1873. Miss Taylor, who had edited in 1872, with a biographical notice, the miscellaneous and posthumous works of H. T. Buckle, a devoted adherent of Mill's school of thought, edited in 1873 Mill's 'Autobiography'; and in 1874 she issued, with an introduction, his essays, 'Nature, The Utility of Religion, Theism.'

Mill's death left Miss Taylor free to enter public life and so further the social and political reforms in which her step-father had stirred her interest. Possessed of ample means, which she generously employed in public causes, she made her home in London, while spending her holidays at the house at Avignon which Mill left her. On all subjects her opinions were advancedly radical. Her principles were at once democratic and strongly individualist, but she favoured what she deemed practicable in the socialist programme. A fine speaker in public, she fought hard for the redress of poverty and injustice. Mill had refused, in 1870, through lack of time, the invitation of the Southwark Radical Association to become its candidate for the newly established London School Board. In 1876 Miss Taylor accepted a like request, and was returned at the head of the poll after a fierce conflict. Although a section of liberals opposed her on account of her advanced opinions, her eloquence and magnetic personality won the support of all shades of religious and political faith. She was again returned at the head of the poll both in 1879 and 1882. She retired in 1884 owing to ill-health. During her nine years' service she scarcely missed a meeting. Her educational programme included the abolition of school fees, the provision of food and shoes and stockings to necessitous children, the abolition of corporal punishment, smaller classes, and a larger expenditure on all things essential to the development of the child and the health of the teacher. While she was a member of the board, she provided at her own expense, through the teachers and small local committees, a midday meal and a pair of serviceable boots to necessitous children in Southwark. She was a prominent member of the endowment committee of the board, and was

successful in inducing the charity commissioners to restore some educational endowments to their original purposes. A zealous advocate of the reform of the industrial schools, she brought to public notice in 1882 certain scandals imputed to St. Paul's Industrial School. The home secretary instituted an inquiry, and the school was ordered to be closed. In June 1882 Thomas Scrutton, a member of the school board and chairman of its industrial schools sub-committee, brought an action for libel against Miss Taylor. Sir Henry Hawkins was the judge, (Sir) Edward Clarke was Miss Taylor's counsel, (Sir) Charles Russell, afterwards Lord Russell of Killowen, was for the plaintiff. On the fourth day, 30 June, Miss Taylor's case broke down on the plea of justification, and Miss Taylor paid the plaintiff 1000*l.* by consent. The judge acknowledged Miss Taylor's public spirit and exonerated her from any personal malice (cf. *The Times*, 28, 29, 30 June, 1, 4 July 1882). Her action brought about a drastic reform of the London industrial schools.

At the same time Miss Taylor threw herself with equal energy into political agitation. She was active in opposition to the Irish coercion policy of the liberal government of 1880-5, and was one of the most energetic supporters of the English branch of the Irish Ladies' Land League, frequently presiding at its meetings both in England and Ireland. Anna Parnell was often her guest. The causes of land nationalisation and the taxation of land values powerfully appealed to her. She was a leading member of the Land Reform Union, and of the League for Taxing Land Values, addressing in their behalf large audiences, chiefly of working men, both in England and Ireland. Her enthusiasm for land nationalisation brought her the acquaintance of Henry George, the American promoter of the policy. He stayed at her house in South Kensington in 1882. In his opinion she was 'one of the most intelligent women I ever met, if not the most intelligent' (cf. HENRY GEORGE, JUNIOR, *Life of Henry George*, 1900).

In 1881 Miss Helen Taylor's faith in the practicability of certain socialist proposals led her to take part in the preliminary meetings for the establishment of the Democratic Federation, the forerunner of the Social Democratic Federation. She joined the first executive committee. Already, in anticipation of the federation's aims, she had given practical support to labour candidates for parliament. She

personally attended on George Odger [q. v.], the first labour candidate, during his last illness in 1877. Miss Taylor consistently advocated female suffrage, believing that it would improve the morals of the people. But on 15 Aug. 1878, writing from Avignon, she positively denied a rumour that she intended to seek nomination as a parliamentary candidate for Southwark. In 1885, however, special circumstances led her to essay a parliamentary candidature. Mr. W. A. Coote, the secretary of the Vigilance Association, with the objects of which Miss Taylor closely associated herself, sought nomination as liberal candidate for North Camberwell, but was finally set aside by the party organisers. By way of protest Miss Taylor took Mr. Coote's place. Her programme included just and better laws for women, the prevention of war, and 'less work and better pay' for the working classes. A letter of support from Henry George advocating her candidature was widely circulated during her campaign. George Jacob Holyoake [q. v. Suppl. II] was an active worker for her. She carried on her campaign amid much turbulence until the nomination day, when the returning officer refused to receive either the nomination papers or the cash deposit for his expenses. In her electoral contest Miss Taylor attempted what no woman had done before.

Soon afterwards she relinquished public work, owing to age and failing health, and retired for some nineteen years to her house at Avignon, where she had invariably spent her holidays and where she endeared herself to the people by her generous benefactions. Stress of work told on her appearance as well as on her health. Although she had been beautiful as a girl, she acquired in middle life an aspect of sternness. But in old age some of her youthful beauty reappeared. At the end of 1904 she returned to England, and under the care of her niece, Miss Mary Taylor, settled at Torquay. She died there on 29 Jan. 1907, and was buried in the Torquay cemetery.

The laconic words on her tombstone, 'She fought for the people,' well sum up her work. Outspoken in criticism, and an untiring fighter, she never spared her opponents, but her earnestness and sincerity gained her friends not only among liberals and radicals, but among Tories and even clericals, though she was hostile to the church. The Irish Roman Catholics who formed the larger part of her Southwark constituents regarded her with affec-

tion. She was an admirable popular speaker, was generous to all around her, and subscribed largely to the associations in which she was interested. At the instance of Lord Morley of Blackburn, Miss Taylor, in 1904, presented Mill's library to Somerville College, Oxford.

[The Times, 31 Jan. 1907; Justice, 2 Feb. 1907; Le Mistral, 6 Feb. 1907; J. S. Mill, Autobiography, 1873; Note on Mill's private life by Mary Taylor in Letters of J. S. Mill, ed. Hugh S. R. Elliot, 1910; private information.] E. L.

TAYLOR, ISAAC (1829-1901), archaeologist and philologist, born on 2 May 1829 at Stanford Rivers, Essex, was eldest son and second child in the family of eight daughters and three sons of Isaac Taylor (1787-1865) [q. v.] by his wife Elizabeth (1804-1861), daughter of James Medland of Newington. His grandfather and great-grandfather were also named Isaac Taylor and were well known for literary or artistic talent [see TAYLOR, ISAAC (1730-1807), and TAYLOR, ISAAC (1759-1829)]. His aunts Ann and Jane Taylor and uncle Jefferys Taylor, writers for children, are likewise noticed in this Dictionary.

Isaac, brought up in an atmosphere of plain living and high thinking, was early accustomed to help his father in minor literary tasks. He was educated at private schools, and was from 1847 to 1849 at King's College, London. In 1849 he passed to Trinity College, Cambridge, where he carried off many college prizes, including the silver oration cup. He graduated B.A. in 1853 as nineteenth wrangler. On leaving Cambridge, he went as a master to Cheam school until 1857, when he proceeded M.A. and was ordained to the curacy of Trotterscliffe, Kent. He was curate of St. Mary Abbots, Kensington, in 1860-1, and of St. Mark's, North Audley Street, from 1861 to 1865, when he became vicar of St. Matthias, Bethnal Green.

The difficulties of serving a parish of 7000 people of the poorest class without funds or helpers were intensified by the outbreak of cholera in 1866. In 1867, at Highgate, Taylor preached a sermon on behalf of East London charities. It was published at the expense of one who heard it, under the title of 'The Burden of the Poor,' and made a deep impression throughout the country. The vivid account which Taylor gave of the conditions of the Spitalfields silk-weavers and child workers in and about his parish brought him subscriptions to the amount of over 4000l.

But the strain of administration was severe, and an attack of typhoid fever finally compelled his retirement. In 1869 Bishop Jackson nominated him vicar of Holy Trinity, Twickenham, and in 1875 he was presented by Earl Brownlow to the living of Settrington, Yorkshire, which he held until his death. In 1885 he was made canon of York and prebend of Kirk Fenton.

Taylor's family tradition, which combined puritan piety with philosophic thought, drew him to the broad church party. A lover of controversy and of paradoxical statement through life, he roused much opposition in 1860 by a pamphlet, 'The Liturgy and the Dissenters,' in which he advocated the revision of the Prayer Book 'as an act of justice to the Dissenters.' In 1887 a paper on Islam, at the Wolverhampton Church Congress, in which he pleaded for a more tolerant comprehension of 'the second greatest religion in history,' excited indignation. He developed his views on Islam in 'Leaves from an Egyptian Note-book' (1888), and he did not conciliate his opponents by his stringent criticisms in the 'Fortnightly Review' (Nov. and Dec. 1888) on the methods of missionary societies. He was a member of the Curates' Clerical Club, or 'C.C.C.,' and counted among his friends in London F. D. Maurice, Dean Stanley, Farrar, Stopford Brooke (a fellow curate at Kensington), Haweis, and J. R. Green.

Taylor's chief interest lay in philological research, his pursuit of which gave him a wide reputation. In 1854 he produced an edition of Becker's 'Charicles.' In 1864 there followed 'Words and Places,' which went through several editions, and was adopted as a text-book for the Cambridge higher examination for women. The book was practically the first attempt in English to apply the results of German scientific philology to the derivation of local names. It was followed in 1867 by 'The Family Pen, Memorials of the Taylor Family of Ongar,' 2 vols. Later, a winter in Italy led him to study the remains of ancient Etruria, and in 1874 he published 'Etruscan Researches,' in which he propounded the now accepted theory that the Etruscan language was not Aryan, but was probably akin to the Altaic or agglutinative family of speech.

The problem of the origin of letters had always attracted him, and he recalled how, when learning the alphabet, he used to wonder why certain shapes should represent certain sounds. About 1875 he took up the subject in earnest, and in 1883 he

published 'The Alphabet' (2 vols.; 2nd edit. 1899). He was one of the first to apply the principle of selection—in this case he called it the Law of Least Effort—to the evolution of written symbols, a discovery which led a critic to call him 'the Darwin of philology.' His scientific reputation rests mainly on this book, which, though now partially superseded by subsequent researches, remains a scholarly and exhaustive inquiry, set forth in admirably lucid English.

His studies of the alphabet led Taylor to the problem of the Runes, and his conclusion that they were derived from Greek sources he embodied in a separate volume, 'Greeks and Goths' (1879). In 1889 he wrote 'The Origin of the Aryans' for the 'Contemporary Science' series. It assailed the hitherto accepted theory of Max Müller as to a Central Asian cradle of the Aryans, and maintained that kinship of race cannot be postulated from kinship of speech. A French translation was published at Paris in 1895. Taylor took a prominent part in the Domesday celebration of 1886, and contributed three essays to the memorial volume (1888). Notes for a revised and enlarged version of 'Words and Places,' which his health disabled him from completing, appeared as an alphabetically arranged handbook of historical geography—'Names and their Histories' (1896; 2nd edit. 1897). He wrote many articles for the new edition of 'Chambers's Encyclopædia,' and was a frequent contributor to the 'Academy,' the 'Athenæum,' and 'Notes and Queries.' In 1879 the University of Edinburgh conferred on him the honorary degree of LL.D., and in 1885 he was made doctor of letters by his own University of Cambridge.

Taylor's versatile interests embraced the practice of photography and the study of botany, entomology, geology, and archæology. He was an original member of the Alpine Club, joining in 1858; he retired in 1891. He died on 18 Oct. 1901 at Settrington, Yorkshire, and was buried there. He married, on 31 July 1865, Georgiana Anne, daughter of Henry Cockayne Cust, canon of Windsor. His only child, Elizabeth Eleanor, married in 1903 Mr. Ernest Davies.

[Personal knowledge; The Biograph and Review, April 1881; Athenæum and Literature, 26 Oct. 1901; York Diocesan Mag., Dec. 1901.]

TAYLOR, JOHN EDWARD (1830-1905), art collector and newspaper proprietor, second son of John Edward Taylor [q. v.], founder of the 'Manchester

Guardian,' was born at Woodland Terrace, Higher Broughton, on 2 Feb. 1830. He received a desultory education under Dr. Beard, the unitarian minister, at Higher Broughton, Dr. Helderemayer at Workop, and Daniel Davies at Whitby, and at the University College School, London. In 1848-9 he went through some journalistic routine at Manchester and was for some months a student at the university of Bonn. He entered the Inner Temple on 25 Jan. 1850, and was called to the bar on 6 June 1853 (FOSTER, *Men at the Bar*, p. 459). His father's death in 1844, and that of his elder brother, Russell Scott Taylor, B.A., a young man of great promise, on 16 Sept. 1848, left him sole proprietor of the 'Manchester Guardian,' which in 1855 he transformed from a bi-weekly to a daily, and which he reduced in price from two-pence to one penny. In the interval he made an effort—at first unsuccessful—to obtain independent reports of parliamentary proceedings, the provincial press being then and for some years afterwards entirely dependent on the often inadequate and inaccurate reports supplied by news agencies. After an agitation which lasted some years, and in which Taylor took a very prominent part, the Press Association was started in 1868 and obtained a footing in the gallery of the House of Commons (W. HUNT, *Then and Now*, pp. 11-12, 129, 132).

In 1868 he acquired the 'Manchester Evening News,' which had been started by Mitchell Henry [q. v. Suppl. II]; in 1874 he was, with Peter Rylands, an unsuccessful candidate in the liberal interest for S.E. Lancashire. An early supporter of Owens College, he was appointed one of its trustees in 1864, and a life governor in 1874. From 1854 till death he was a trustee of Manchester College, a unitarian college, which had been transferred to London in 1853, and thence to Oxford in 1889. He became a member of the Manchester Literary and Philosophical Society on 22 Jan. 1856. An ardent educationalist, he helped to found in 1863 the Manchester Education Aid Society. He advocated temperance and free trade, and was deeply interested in the British and Foreign Bible Society. A liberal contributor to party funds, he refused a baronetcy offered him by Lord Rosebery in 1895. At the time of his death he was head of the firm of Taylor, Garnett & Co., newspaper proprietors, senior partner of W. Evans & Co., proprietors of the 'Manchester Evening News,' and a director

of the Buenos Ayres Great Southern Railway Co.

Taylor was best known to the public as a connoisseur. He was one of the guarantors of the Manchester Art Treasures Exhibition in 1857. For many years he collected pictures and objects of art, some few of which he lent to the Manchester Exhibition of 1887, to the old masters at Burlington House, and to the Burlington Fine Arts Club (of which he was a member). The sale of his collection in 1545 lots occupied twelve days at Christie's in July 1912, and realised 358,499*l.* 1*l.* 3*d.* (works of art, 231,937*l.* 13*s.*; pictures, 103,891*l.* 8*s.* 6*d.*; silver, 15,418*l.* 17*s.* 3*d.*; and engravings and books, 7251*l.* 12*s.* 6*d.*), a total only exceeded in this country by the Hamilton Palace sale in 1882 (*The Times*, 17 July; *Nineteenth Century*, August 1912).

Taylor presented a large number of pictures and drawings by modern English artists, notably twenty-four drawings by Turner, to the Manchester Whitworth Institute (official catalogue, 1909); in 1893 he was largely instrumental in raising funds for the purchase of a magnificent carpet from the mosque at Ardebil in Persia, for the Victoria and Albert Museum; and he gave a complete set of Turner's 'Liber Studiorum' to the British Museum.

Taylor lived for some time at Platt Cottage, Rusholme, and built The Towers, Didsbury, but never lived there. A few years after his marriage in 1861 he removed to London, and resided at 20 Kensington Palace Gardens. He died at Eastbourne on 5 Oct. 1905, and was buried at Kensal Green. The net value of his estate was provisionally sworn at 354,130*l.* He married in 1861 Martha Elizabeth, youngest daughter of R. W. Warner of Thetford. She continued to occupy Taylor's London house till her death on 10 May 1912. Many of Taylor's legacies then became payable, including 20,000*l.* to Owens College.

[Manchester Guardian, 6 Oct. 1905 and 24 July 1912; Manchester Courier, Westminster Gazette, and The Times, 6 Oct. 1905; Sell's Dictionary of the World's Press, 1906, pp. 58-60.] W. R.

TAYLOR, LOUISA (*d.* 1903), novelist. [See PARR, MRS. LOUISA.]

TAYLOR, WALTER ROSS (1838-1907), Scottish ecclesiastic, born 11 April 1838 in the manse of Thurso, was only son in a family of five children of Walter Ross Taylor, D.D., minister of the parish,

who at the disruption of the Church of Scotland in 1843 joined the Free Church and became moderator of its general assembly in 1884. Taylor's mother was Isabella, daughter of William Murray of Geannes, Ross-shire. Educated at the Free Church school at Thurso, he in 1853 entered Edinburgh University, where he won prizes in Greek and natural philosophy, the medal in moral philosophy, and the Stratton scholarship. Leaving without a degree, he entered the ministry of the Free Church, studying theology at New College, Edinburgh. In 1861 he was licensed to preach by the presbytery of Caithness. In the following year he became minister of the Free Church at East Kilbride, and in 1868 was translated to Kelvinside Free Church, Glasgow, where he ministered until his death.

Taylor played a leading part in denominational affairs. As convener of the sustentation fund (1890-1900) and joint-convener of the sustentation and augmentation funds (1900-7), he sought to raise ministerial stipends within his church to a minimum of 200*l.* A powerful advocate and practical organiser of the union of the Free and United Presbyterian Churches of 1900, he was elected, May 1900, moderator of the last general assembly of the Free Church, and in October he constituted the first general assembly of the United Free Church.

Taylor steadily favoured a conciliatory attitude towards those who were opposed to the union, and with Robert Rainy [q. v. Suppl. II] he shared the burden of the work connected with the crisis of 1904, when a judgment of the House of Lords handed over the whole property of the undivided Free Church to a small minority who resisted the union. At meetings throughout the country he eloquently defended the amalgamation, and was largely responsible for the passing of the Act of Parliament of 1905, which aimed at an equitable division of the property of the Free Church between the majority and the dissentient minority.

Taylor was made hon. D.D. of Glasgow University in 1891. He died, after a protracted illness, at his residence in Glasgow, on 6 Dec. 1907, and was buried in Glasgow necropolis three days later. In 1876 he married Margaret, daughter of Dr. Joshua Paterson, Glasgow, who survived him with three sons and two daughters. A full-length portrait of Taylor hangs in the United Free Church assembly buildings in Edinburgh. He published a volume of addresses, 'Religious Thought

and Scottish Church Life in the Nineteenth Century' (Edinburgh, 1900).

[Glasgow Herald, 7 Dec. 1907; Scottish Review, 12 Dec. 1907; British Monthly, July 1904; Life of Principal Rainy, by P. C. Simpson, M.A., 1909, vol. ii.; private information.] W. F. G.

TEARLE, OSMOND (1852-1901), actor, whose full name was GEORGE OSMOND TEARLE, born at Plymouth on 8 March 1852, was son of George Tearle, colour-sergeant in the royal marines. After serving in the Crimea and China wars his father retired on pension to Liverpool. Educated there at St. Francis Xavier's College, Tearle took part in amateur theatricals, and in 1868 in 'penny readings' with Mr. T. Hall Caine. Inspired by Barry Sullivan's acting, he took to the stage, making his debut at the Adelphi Theatre, Liverpool, on 26 March 1869, as Guildenstern to Miss Adelaide Ross's Hamlet. In 1870, on Sullivan's recommendation, he became leading man at the Theatre Royal, Aberdeen. At Warrington in 1871 he appeared for the first time as Hamlet, a character which he played in all some 800 times. Early in 1874 he was a prominent and popular member of the Belfast stock company. After six years' stern provincial probation he made his first appearance in London at the Gaiety on 27 March 1875 as George de Buiisy in Campbell Clarke's unsuccessful adaptation of 'Rose Michel,' subsequently playing there Charles Courtly in 'London Assurance.' Beginning on 17 May following, he acted 'Hamlet' at the Rotunda Theatre, Liverpool, for eighteen successive nights. Afterwards he toured with Mrs. John Wood's old comedy company as Charles Surface and Young Marlow.

At Darlington in 1877 Tearle started with his own travelling company. On 30 Sept. 1880 he made his American debut at Wallack's Theatre, New York, as Jaques in 'As You Like It,' and he remained there as leading actor of the stock company. After spending the summer of 1882 in England, he reappeared on 31 April 1883 at the Star Theatre, New York, as Hamlet, and subsequently toured in the United States as Wilfred Denver in 'The Silver King.' In 1888 he returned to England and organised his Shakespearean touring company. In 1889, and again in 1890, he conducted the festival performances at Stratford-on-Avon, producing in the first year 'Julius Caesar' and 'King Henry VI,' pt. i. (in which he acted Talbot), and in the second year 'King John' and

'The Two Gentlemen of Verona.' His travelling company changed its bill nightly, and had a repertory of thirteen plays. It was deemed an excellent training ground for the stage novice. Tearle last appeared in London at Terry's Theatre on 4 July 1898 as Charles Surface to Kate Vaughan's Lady Teazle. His last appearance on the stage was at Carlisle on 30 Aug. 1901, as Richelieu. He died on 7 Sept. following at Byker, Newcastle-on-Tyne, and was buried beside his second wife at Whitley Bay, Northumberland.

As a Shakespearean actor Tearle combined the incisive elocution of the old school and the naturalness of the new. A man of commanding physique and dignified presence, he was well equipped for heroic parts. In later life he subdued his declamatory vigour, and played Othello and King Lear with power and restraint. He gained no foothold in London, but in America and the English provinces he won a high reputation.

Tearle was twice married: (1) to Mary Alice Rowe, an actress, who divorced him; and (2) in 1883 to Marianne Levy, widow and actress, daughter of F. B. Conway, the New York manager, and granddaughter of William Augustus Conway, the tragedian [q. v.]. His second wife died on 9 Oct. 1896. His three sons, one by his first wife and two by his second, took to the stage. An only daughter by his first wife did not join the profession.

W. J. L.

TEMPLE, FREDERICK (1821-1902), archbishop of Canterbury, born 30 Nov. 1821, at Santa Maura, was son of Octavius Temple (d. 1834), major in 4th foot, sub-inspector of militia in the Ionian Islands, and resident at Santa Maura. William Johnstone Temple [q. v.] was his grandfather. Archbishop Temple claimed to belong to the Stowe branch of the Temple family, of which Richard Grenville, third duke of Buckingham and Chandos [q. v.], was the head. Temple's mother was Dorcas, daughter of Richard Carveth, of Probus, Cornwall, who traced his descent through the Le Despensers to Guy de Beauchamp, second earl of Warwick.

Temple was thirteenth and youngest survivor of fifteen children, seven of whom

died young. On the death of his father, on 13 Aug. 1834, at Sierra Leone, where he was made governor the year before, the mother resided with her eight children at Culmstock, Devonshire. In narrow circumstances, she herself educated her boys until the time of their going to school, and thus exercised an unusual influence over all her children, especially the youngest, who never forgot his debt to her for his early training, and as soon as he had a home to offer, he shared it with her until her death at Rugby, 8 May 1866. On 29 Jan. 1834 he entered Blundell's School, Tiverton, and remained there till 5 March 1839. From the first he gave proof of great ability and industry. In half a year he passed through the lower to the upper school, two years being the usual period required. In 1838 he won the Blundell scholarship, and entered Balliol College, Oxford, 9 April 1839, an anonymous gift of 50*l.* enabling him to avail himself of the scholarship. Throughout his undergraduate days he practised of necessity the strictest economy. He came up to Oxford a first-rate mathematician, but during the three years following he so much improved his smaller stock of classics that he was 'proxime accessit' for the Ireland university scholarship in March 1842. In May 1842 he obtained without the help of any private tuition (owing to the kindness of his tutors) a double first class in classics and mathematics. He had the great advantage of having as his tutors men of real distinction, such as Scott, joint author with Liddell of the Greek lexicon; Tait, afterwards archbishop of Canterbury, to whose friendship and wisdom he owed much; Jowett, who was only four years his senior, and became one of his most intimate friends; and W. G. Ward, who was his mathematical tutor. Among his friends and contemporaries were A. H. Clough, A. P. Stanley, J. D. (afterwards Lord) Coleridge, Matthew Arnold, and Lingen (afterwards Lord Lingen). He was much attracted by the deep religious tone of Newman and Pusey, and though naturally much interested in the theological discussions arising out of the publication of the 'Tracts for the Times' and the 'Ideal of a Christian Church,' he was never carried away by them. He came up to Oxford a tory, and so remained while he was an undergraduate. But Oxford enlarged his outlook, and his views gradually settled into the liberalism which characterised him through life. When W. G. Ward's case came before convocation at Oxford, Temple voted in the minority

against the censure and also against his degradation; and later, in 1847, he gave his name to the memorial against Bishop Hampden's condemnation. In November 1842 he was appointed lecturer, and was afterwards elected fellow of Balliol, and in 1845 junior dean of his college. He was ordained deacon in 1846, and in 1847 priest, by Bishop Wilberforce of Oxford.

When Tait left Balliol for Rugby in 1842, he had vainly offered Temple a mastership there. Temple then felt that his first duty was to his college, but in the spring of 1848 he left Oxford to undertake work under the committee of education, first as examiner in the education office at Whitehall to the end of 1849, then as principal of Kneller Hall, Twickenham, a training college for workhouse schoolmasters. In 1855, when Kneller Hall was closed, Temple was made inspector of training colleges for men. For some years previously he had been looked upon as an authority on educational matters. He was invited by the Oxford University Commission of 1850 to give evidence in writing, and he proposed several reforms, which were afterwards carried into effect. To 'Oxford Essays' of 1856 he contributed an essay on 'National Education,' and in 1857, in conjunction with (Sir) Thomas Dyke Acland [q. v. Suppl. I], he was mainly instrumental in persuading the University of Oxford to institute the associate-in-arts examination, which later developed into the Oxford and Cambridge local examinations.

On 12 Nov. 1857 he was appointed headmaster of Rugby School. His success there was undoubted. He exercised influence both on masters and boys, as a stimulating intellectual teacher, and as an earnest religious man. Some necessary reforms, which he introduced, were to increase the staff, to enlarge and systematise the teaching of history, to make the English language and literature a 'form' subject throughout the school, and to introduce natural science, music, and drawing into the regular curriculum. Before he left, he had obtained money for the building of a new quadrangle, containing a music school and drawing school, two science lecture-rooms, and six good classical class-rooms. The chapel was also enlarged to meet the increased numbers. While headmaster of Rugby, he gave evidence, in 1860, before the Popular Education Commission, of which the duke of Newcastle was chairman, and when a new commission was appointed in December 1864 to inquire into the schools which had not been the subject of inquiry under either the Popular

Education Commission, or the Public Schools Commission, Temple became a member of it, and was a leading spirit. Their report was issued in 1868; chapter ii. on the kinds of education desirable, and chapter vii., containing the recommendations of the commissioners, were written by him. These chapters, together with his Oxford essay, give Temple's mature views on secondary education.

In July 1869 Gladstone offered him the deanery of Durham. This was refused, but in September of the same year he was offered the see of Exeter, which he accepted. His appointment raised a storm of opposition on the ground that he had been a contributor to the notorious 'Essays and Reviews' (1860; 12th edit. 1865). His contribution, 'The Education of the World,' was little open to exception, but he had associated himself with writers two of whom were tried and condemned, the one, Rowland Williams [q. v.], for denying the inspiration of scripture, the other, Henry Bristow Wilson [q. v.], for denying the doctrine of the eternity of punishment; both sentences, however, were on appeal reversed by the privy council. The book had also been censured by the convocation of Canterbury. The earl of Shaftesbury and Dr. Pusey united to oppose his consecration, and it was doubtful beforehand whether the dean and chapter of Exeter would act on the *congé d'élire*. Ultimately, of the twenty-three members entitled to vote, thirteen were in favour, six against, and four were absent. When the confirmation took place in Bow church, two of the beneficed clergy of the diocese appeared in opposition. Urged on many sides by friends and opponents to make some declaration as to his orthodoxy, he refused, with characteristic firmness, to break silence till after his consecration, which took place on St. Thomas' Day in Westminster Abbey. The consecrating bishops were the bishops of London (Jackson), acting for Archbishop Tait, who was ill, St. David's (Thirlwall), and Ely (Browne). After his consecration he withdrew his essay from future editions of 'Essays and Reviews.' To quote the words of Lightfoot, 'he was courageous in refusing to withdraw his name when it was clamorously demanded, and not less courageous in withdrawing it when the withdrawal would expose him to the criticism of his advanced friends.'

In his change from youthful toriyism to liberalism two main ideas possessed his mind: first, the need of raising the condition of the working classes, and secondly,

the conviction that their amelioration could only be effected by enabling them to help themselves. A strong advocate of educational reform, he was also a social reformer, as evidenced, among other things, by his strong and persistent advocacy of temperance; but all his experience strengthened his conviction that neither education nor temperance could have its perfect work apart from religion. As bishop of Exeter he had an early opportunity of putting his views into practice.

Forster's Education Act was passed in 1870. It was necessary for church people to improve and add to their schools, and at a meeting at Exeter, by his words and his example in subscribing 500*l.*, he induced the diocese to raise a large sum for the purpose. It was also necessary to deal with schools of higher rank in the diocese of Exeter. His letter to the mayor on the endowed schools commissioners' proposals carried such weight that the main points for which he contended were eventually adopted. They embodied a system of exhibitions, furnishing a ladder by which the poorest child might rise from the elementary to the highest class of school and so to the university, and the establishment of two good schools for the secondary education of girls. In short, as stated by a member of a subsequent royal commission thirty years later, 'there are more boys and girls per thousand of population receiving secondary education in Exeter than in any other city in this country, due in no small measure to the improvements carried out largely under Dr. Temple.' The same might be said in its degree of Plymouth, where he was instrumental in founding secondary schools.

At Rugby he had already taken part in the temperance movement, which had come into prominence partly owing to the report of the committee of convocation of Canterbury in 1869. When as bishop he took the chair in Exeter in 1872 at a meeting of the United Kingdom Alliance, the proceedings were so unruly as to require the intervention of the police, and a bag of flour aimed at the bishop struck him full in the chest. In a short time, however, he was always enthusiastically received, whenever he addressed public meetings (as he frequently did) on the subject. 'He was so much impressed,' he once said, 'with the importance of the movement, that he felt at times he could wish to divest himself of other duties and devote himself entirely to it.'

Notwithstanding the huge extent of a

diocese comprising Devon and Cornwall, he visited most of the parishes, in many of which a bishop had not been seen for long, but he early felt the need of the division of the diocese. The donation by Lady Rolle in 1875 of 40,000*l.* gave a great impetus to the scheme, and in 1876 a bill to create the diocese of Truro was passed [see BENSON, EDWARD WHITE, Suppl. I].

In 1874 he was petitioned by the chancellor of the diocese to inquire into the legality of the erection of a new reredos in the cathedral. As visitor and ordinary he gave sentence for its removal. The dean of arches reversed this judgment, but the privy council on appeal reversed the judgment of the court of arches, in so far as it limited the bishop's visitatorial jurisdiction over the cathedral, but maintained it on two points, viz. the non-requirement of a faculty and the legality of the figures. When a similar question was raised in regard to the reredos in St. Paul's, April 1888, by the Church Association, circumstances had changed. The privy council had ruled there was nothing illegal in the figures, and the legislature had granted to the bishops discretionary power to stop proceedings. Accordingly, as bishop of London he refused to allow the case to proceed. His speeches while bishop of Exeter, in the House of Lords on the university tests bill (1870) and the bill for opening churchyards to non-conformists (1880), showed him true to his liberal principles. While bishop of Exeter he became a member of the governing body of Rugby School, and for the last ten years of his life was its chairman. He was also governor of Sherborne School. In 1884 he delivered at Oxford the Bampton lectures, on 'the relation between religion and science.' Among his hearers on one occasion were Matthew Arnold and Robert Browning; many younger men who heard him never forgot the impression which he made, partly by his vigorous arguments and still more by his native strength, simplicity, and sincerity.

On 25 Feb. 1885 he was called to the see of London. A public meeting in the Guildhall at Exeter and the testimonials that emanated from it proved how entirely the bishop had won his way. The clergy of the diocese, who had protested against his election in 1869, almost unanimously signed a memorial of regret at his departure. He was enthroned in St. Paul's in April 1885. He threw himself with his accustomed vigour into the work of the diocese and into all the great social questions of the day. In accordance with his views on

self-government he introduced the plan of allowing the clergy to elect their own rural deans. Besides delivering his episcopal charges, he gave addresses in turn at the several ruridecanal chapters. He took such subjects as 'relation of the church to the poor in London,' 'the growth of scepticism and indifference,' and in 1892 he dealt with the archbishop's judgment in the bishop of Lincoln's case. On this case, with four other bishops, he had been assessor to Archbishop Benson [q. v. Suppl. I]. In 1887 it was mainly due to his energy and advocacy that the church's memorial of Queen Victoria's jubilee took the permanent form of the Church House now in Dean's Yard, Westminster. The Pluralities Act amendment bill was carried through the House of Lords by the bishop, and became an Act of Parliament in 1885. The Clergy Discipline Act passed in 1892 owed much to his efforts. In 1888 he was a member of the royal commission on education presided over by Lord Cross, and never missed a sitting. In the summer of 1889 he tendered evidence of great value before a commission presided over by Lord Selborne with reference to a teaching university for London, and before the secondary education commission of 1894, of which Mr. James Bryce was chairman. While bishop of London, he gave land to enlarge Bishop's Park, Fulham, which was opened by the chairman of the London county council on 2 Dec. 1893. Later, when archbishop of Canterbury, he handed over a field adjoining Lambeth Palace for a recreation ground. This was put in order by the London county council and opened on 24 Oct. 1901.

At the time of the dockers' strike in the autumn of 1889 the bishop of London's return to town from his holiday led the lord mayor to intervene and form the conciliation committee by means of which an arrangement was ultimately reached.

At the request of senator G. F. Hall of Massachusetts, backed by the principal Antiquarian Societies of America, the bishop had agreed to hand over to U.S.A. the 'Bradford MS.,' incorrectly termed the 'Log of the Mayflower,' then in the library of Fulham Palace. Bishop Creighton carried out the wish of his predecessor by delivering the MS. to the American ambassador on 29 May 1897.

In October 1896 he was nominated by Lord Salisbury to the archbishopric of Canterbury. A meeting took place at the Guildhall on 18 Jan. 1897 to commemorate his London episcopate, when the lord

mayor and corporation of the City of London attended in state and at least 1500 persons were present, and many presentations were made to the archbishop. The 'Morning Post' stated that 'the history of church work in London since Dr. Temple entered upon the diocese has scarcely a parallel in the history of church work during the century.' He was enthroned in Canterbury Cathedral in 1897. With the consent of the ecclesiastical commissioners he sold Addington Park, the country residence of the archbishops since its purchase by Archbishop Manners Sutton, and with part of the proceeds of the sale he bought a house in the precincts at Canterbury known as the Old Palace, which he converted into a suitable residence. On 21 June 1897 the archbishop attended in state the great service in St. Paul's to commemorate the sixtieth year of Queen Victoria's reign, and on the following Tuesday he was the principal figure on the steps of St. Paul's, when Her Majesty made her progress through the city. Immediately after he presided at the fourth Lambeth Conference of bishops of the Anglican communion. On 3 July he received in Canterbury Cathedral the members of the conference at an inaugural service, and delivered an address from the chair of Augustine. The summary of the resolutions arrived at by the conference, called the encyclical letter, was drafted in the course of a night entirely by himself, and with but slight exceptions it was adopted by the conference and published. In 1898, at the invitation of Dr. James Paton, convener of the committee on temperance of the Church of Scotland, the archbishop paid a visit to the general assembly, and delivered an address chiefly on temperance. He visited Scotland a second time in 1902 at the request of Bishop Wilkinson for the dedication of the chapter house added to St. Ninian's Cathedral, Perth, in memory of Bishop Charles Wordsworth. During the six years of his archbishopric he made two visitations of his diocese. In his first charge in 1898 he dealt with the questions of 'the doctrine of the eucharist,' 'improper objects of worship,' and 'prayers for the dead.' The second charge was entirely devoted to the education bill of 1902.

In 1899 the lawfulness of the use of incense and of processional lights was referred to the archbishops of the two provinces for judgment. The 'hearing' took place at Lambeth on 8, 9, and 10 May, and their decision was delivered by Temple at Lambeth, 31 July 1899. They decided

that the two practices were neither enjoined nor permitted by the law of the Church of England. A third question, viz. the reservation of the Blessed Sacrament, referring only to the southern province, was brought before the archbishop of Canterbury alone, and he decided that the Church of England does not at present allow reservation in any form.

Temple, who had been made hon. LL.D. of Cambridge on 20 Jan. 1897, received the honorary freedom of the city of Exeter on 22 Jan. 1897, and of the borough of Tiverton on 3 Oct. 1900. In January 1901 he officiated at the funeral of Queen Victoria in St. George's Chapel, Windsor. He crowned King Edward VII in Westminster Abbey on 9 Aug. 1902, and received the collar of the Victorian order.

He spoke for the last time in the House of Lords on 4 Dec. 1902, when Mr. Balfour's education bill came up for the second reading. Earl Spencer, as the leader of the opposition, spoke against the bill, and the archbishop followed in its favour, but before he had completed his speech he was seized with illness and had to leave the house.

He died at Lambeth Palace on 22 Dec. 1902, and was buried in the cloister of Canterbury Cathedral.

Great as was the work which Archbishop Temple was able to accomplish owing to his unusual vigour of mind and body, the man was greater even than his work. He had a rugged force of character and a simplicity which distinguished him from his most able contemporaries. No one ever less 'beat about the bush': he went straight to his point with a directness which sometimes earned for him the reputation of brusqueness, or even of want of consideration for other people's feelings. This, however, was a superficial view of his character, as those who worked with him and knew him well soon came to acknowledge. With his strength he combined a tenderness of feeling and warmth of affection which not unfrequently were noticeable, in spite of himself, in his public utterances. His devotion to his mother, who lived with him till the day of her death, and to whose opinion he always reverently deferred, was a marked trait in his character. As a preacher, he was not eloquent in the usual sense of the word; any tricks of oratory were utterly alien to his nature, but his sermons in Rugby School chapel (of which three volumes were published) are eloquent from their force and terseness, their earnestness and genuine feeling. The effect of them on the boys was, by the testimony of many

men of mark, both masters and pupils, far-reaching and abiding. As a speaker he carried weight by his evident sincerity as well as by his vigorous language. In the latter part of his life he spoke most frequently on foreign missions, temperance, and the education controversy. On these subjects the fire of his younger days never died away.

He married, on 24 Aug. 1876, Beatrice Blanche, fifth daughter of William Saunders Sebright Lascelles and Lady Caroline Georgiana Howard, daughter of George sixth Earl of Carlisle. He had two sons, Frederick Charles, born in 1879, appointed in 1908 district engineer under Indian government; William, born in 1881, fellow and tutor of Queen's College, Oxford, 1908-1910, headmaster of Repton School, 1910.

A portrait by G. F. Watts is at Rugby, another by Prynné is in the Palace at Exeter, a third by Sir Hubert von Herkomer, R.A., is at Fulham Palace; of the last, replicas are at Lambeth Palace and in possession of Mrs. Temple, and the picture was engraved by the artist. A bust by Woolner is at Rugby in the Temple reading-room; a medallion by Brock in the chapel, Rugby; and a bust by Frampton at Sherborne School, with a replica in bronze in the Temple speech-room, Rugby. A monument by F. W. Pomeroy was erected in St. Paul's Cathedral in 1903. The new speech-room at Rugby, mainly a memorial to Archbishop Temple, was opened by King Edward VII in 1909. Cartoon portraits appeared in 'Vanity Fair' in 1869 and 1902 (by 'Spy').

Temple's chief published works were: 1. 'Sermons preached in Rugby School Chapel,' three series, the first 'in 1858-9-60' (1861; 3rd ed. 1870); the second 'in 1862-7' (1871; reprinted 1872, 1876); the third 'in 1867-9' (1871; reprinted 1873, 1886). 2. 'Quiet Growth, a Sermon preached in Clifton College Chapel, Sunday, 16 June 1867.' 3. 'The Three Spiritual Revelations, a Sermon preached in the Cathedral Church of Exeter on Wednesday, 29 Dec. 1869, by Frederick, Lord Bishop of the Diocese, on that Day enthroned,' 1870. 4. 'Episcopal Charges, Exeter,' 1883, 1884. 5. 'The Relations between Religion and Science,' eight Bampton lectures, 1884; reprinted 1885, 1903. 6. Charge delivered at his First Visitation, Canterbury, 1898. 7. 'On the Reservation of the Sacrament, Lambeth Palace, 1 May 1900.' 8. 'Five of the Latest Utterances of Frederick Temple, Archbishop of Canterbury,' 1903.

[Memoirs of Archbishop Temple by Seven Friends, edited by E. G. Sandford, Archbishop

of Exeter, 2 vols. 1906; A. C. Benson, *Life of Edward White Benson*, 1899; Mrs. Creighton, *Life of Mandell Creighton*, 1904; L. Campbell and E. Abbott, *Life of Benjamin Jowett*, 1897.] H. M. S.

TEMPLE, SIR RICHARD, first baronet (1826-1902), Anglo-Indian administrator, born at Kempsey, near Worcester, on 8 March 1826, was elder son of the six children of Richard Temple (1800-1874) of the Nash, Worcestershire, a country squire, by his first wife Louisa (d. 1837), youngest daughter of James Rivett Carnac, governor of Bombay, and sister of Sir James Rivett Carnac [q. v.]. From a private school at Wick near his home Temple proceeded to Rugby under Thomas Arnold in August 1839. His contemporaries included the headmaster's son, William Delafield Arnold [q. v.] (1828-1859), Lord Stanley, afterwards the fifteenth earl of Derby [q. v.], M. W. D. Waddington, subsequently prime minister of France, and John Conington [q. v.]. In 1844 his education at Rugby was cut short by the offer and acceptance of a writership in the East India Co.'s service. Passing out head of Haileybury College, he reached Calcutta in January 1847.

Transferred to the North West Provinces, he was sent to Muttra and thence to Allahabad, where he gained some experience of settlement work, and came under the favourable notice of the lieutenant-governor, James Thomason [q. v.]. On 27 Dec. 1849 he married the sister-in-law of his collector, Charlotte Frances, daughter of Benjamin Martindale. History was then in the making in the adjoining province of the Punjab, and he secured in 1851 a second transfer to that newly annexed province in which, under the immediate eye of Lord Dalhousie [q. v.], the board, including the brothers Henry and John Lawrence [q. v.], was reducing chaos to order and establishing a settled government. From 1851 Temple laboured as the disciple, the assistant, and the official reporter of the views and work of John Lawrence, who was appointed chief commissioner in February 1853, unfettered by any colleagues. At first Temple was entrusted with settlement work, and at the close of the period he had executive charge of a division as commissioner. But the appointments which enabled him to assimilate the unrivalled experiences of Lawrence, and win his patronage, were those of special assistant to the board

(1852-3), and then secretary to the chief commissioner from July 1854. The historic reports on Punjab administration were penned by him, and Lord Dalhousie so appreciated his strenuous activities that, when it was proposed in 1853 to take Temple into the government of India's secretariat from Lahore, he remarked that 'it would be setting an elephant to draw a wheelbarrow.' So Temple worked on, until the death of his first wife in 1855 and the strain of public duties compelled him to take furlough in the following year. Everything seemed quiet, and there was 'not the faintest sound of warning, not the slightest breath of suspicion regarding the storm about to burst' (*TEMPLE'S Story of My Life*, i. 78). When he returned at the end of 1857, it was the 'White mutiny,' and not the rebel Sepoys, with which he was confronted as commissioner.

Soon after his return to duty an unexpected opportunity of gaining a new experience presented itself. In November 1859, when James Wilson [q. v.], the finance minister, was sent out to inaugurate a new system of financial administration, Temple accepted Wilson's invitation to aid him, and remained with him until Wilson's untimely death, 11 Aug. 1860. The assistant not only profited by his master's experience, but by this appointment he became known to Lord Canning [q. v.], who deputed Temple to visit and confer with the authorities in Burma and Hyderabad. On 25 April 1862 he was promoted to act as chief commissioner of the central provinces, in which post with some brief interludes he remained until April 1867. This was Temple's first independent essay in the responsibilities of high administration. Everything was new to him in the province, but by persistent inquiry and verification he acquired local knowledge, and visited every part of his large charge. He poured out a stream of comprehensive reports, which attracted notice at Calcutta, and indulged to his heart's content his favourite relaxation of sketching and painting in water-colours. The district entrusted to him had only lately, 11 Dec. 1861, been constituted into a chief commissioner's province, and the foundation of its future administration had to be laid. The American civil war, fortunately for all parties, created a brisk demand for cotton and other agricultural produce, which benefited the rural population. An education department was organised,

and more than a thousand schools brought under it. From 1863 the cadastral survey of village lands was pushed on, and long-term settlements of revenue for thirty years in thirteen of the districts were introduced. Lease-holding tenants were converted into freehold proprietors. A municipality was established in Nagpur in 1864, leading the way for smaller bodies elsewhere. District local boards were created, but in all cases under the fostering and necessary care of officials. Eighteen dispensaries broke the ground for the hospitals which his successors were to build. His Punjab experience had taught him the value of picked subordinates, and no chief commissioner was ever served by better assistants than Alfred Lyall, Charles Elliott, and Charles Bernard. The connection at length established with Bombay by the Great Indian Peninsula railway system in 1867 enabled Temple to leave Nagpur in full confidence to his successor, upon whom frowning times of famine were to fall. The belated honour of C.S.I. was conferred upon him in 1866, and he was made K.C.S.I. next year.

A brief interval was filled up by short appointments as resident at Hyderabad, 5 April 1867, where the relations between the Nizam and his able minister, Sir Salar Jung, were strained, and then as foreign secretary to the government of India. In April 1868, on the resignation of William Nathaniel Massey [q. v.], Temple became financial member of council and undertook the financial business of the supreme government. From 1868 to 1874 he thus served first as a colleague of his old chief, Sir John Lawrence, then throughout the administration of Lord Mayo, 1869-72, and for a time with Lord Northbrook. The shock given by the Mutiny to the credit of India had not been spent, and the needs of administrative progress were increasing. Naturally, therefore, the period was one of experiment, sometimes premature, and of recourse to unpopular measures to maintain solvency. In 1867 a tax on profits from professional trades and offices had been imposed, being followed in 1868 by the certificate tax, assessed at a lower rate but more productive. In 1869 came the income tax with a duty of one per cent. on companies and a sliding scale on private incomes. In November the rates were increased, and the zeal of collectors stimulated. Much indignation was expressed, and for the next two years

the rates were restored to a point below that of 1869, the limit of exemption being also raised. Temple showed firmness in a critical time, and preserved the direct tax, while in the management of provincial assignments and in discussions about a gold standard and state insurance he left valuable suggestions for his successors. During his tenure of the office of financial member he married on 28 Jan. 1871 his second wife, Mary Augusta, daughter of Charles R. Lindsay of the chief court in the Punjab, a lady of great personal attractions and intellectual gifts.

From charge of the finances of India, Temple was sent in January 1874 to conduct the campaign against famine in Behar which embarrassed and almost overtaxed the powers of the government of Bengal. He averted a catastrophe by his personal energy in providing transport and supplying food for the famished, but his expenditure was on too liberal a scale—a mistake which he avoided in later years. Having performed this task, he was lieutenant-governor of Bengal from 9 April 1874 to 8 Jan. 1877. His term of office was uneventful, but his literary and administrative activity was proved by the minutes which he penned and printed. He was made a baronet in 1876, and at the close of the year, owing to the grave anxiety felt by Lord Lytton [q. v.] in regard to the severe famine prevailing in southern India, he was appointed special commissioner to inspect and suggest measures of relief to the governments concerned. Although the scale of expenditure was less lavish than in Bengal, the operations entailed an expenditure and a remission of taxes aggregating eleven millions sterling. Having completed his task, Temple proceeded to Bombay and took over charge of the government from Sir Philip Wodehouse [q. v. Suppl. I.] on 30 April 1877. He was promoted G.C.S.I., and was created C.I.E. when that order was instituted on 1 Jan. 1878.

At Bombay he was assisted in the government by a council of three members, and, as he admitted, he found a progressive administration in excellent order. But there was work to be done for which a single head was needed, and Temple provided the driving power. The despatch of Indian troops to Malta in 1878, and the Afghan war which followed, 1878–80, involving the employment of 65,000 British and 135,000 native troops,

required strenuous exertions. Sailing ships had to be adapted for the work of transports, and stores despatched in the former case, while in the latter the Kandahar force was supplied from Bombay, and the railway aligned and constructed after careful inspection of various routes. Temple was equal to the occasion, and received the thanks of government. On the civil administration he left his mark not only by improving the port of Bombay but also by extensive, indeed almost excessive, additions to the forest area. His frequent tours and conferences with the local officials soon made him familiar with the special conditions of the presidency. But his thoughts had constantly of late been turned towards England, and calculating on the probable fall of Lord Beaconsfield's government he, without awaiting the arrival of his successor, Sir James Fergusson [q. v.], hurried home on 13 March 1880, to stand for parliament. Disappointment awaited him. Contesting East Worcestershire in the conservative interest, he was defeated. Thereupon he took to literature, producing 'India in 1880,' of which a third edition was published in 1881, 'a vivid picture of the condition of India as he left it' (*Quarterly Review*, No. 303). This was followed by 'Men and Events of My Time' (1882) and several contributions to reviews and magazines, some of which were republished in 'Oriental Experience' (1883) and others as 'Cosmopolitan Essays' (1886). He gratified his insatiable desire for travel and his taste for painting by the publication of 'Palestine Illustrated' (1888), and performed a pious duty to his three chief patrons by writing monographs on 'James Thomason' (1893) for the Clarendon press series of Rulers of India, and 'John, Lord Lawrence' (1889) for Macmillan's 'English Men of Action,' and by delivering a panegyric on 'Bartle Frere' at the Mansion House (1884). The universities conferred upon him the hon. degrees of D.C.L., 1880 (Oxford), LL.D., 1883 (Cambridge), and LL.D., 1884 (McGill University, Montreal), when he visited Canada as president of the section of economic science and statistics of the British Association. But he longed for a more active part in affairs, and in 1884 he joined the London school board, of which he remained a member till 1894, serving as vice-chairman for four years and for many years as

chairman of its finance committee. In 1885 he was returned as conservative member for Evesham, in which division of Worcestershire his own property lay. He sat for the constituency until 1892, when he was elected for the Kingston division of Surrey, which he represented until 1895. Although he knew more about India than any other member, he was heard with impatience by the House of Commons, and did not take there the place to which his abilities entitled him. On retiring from parliament he was sworn a member of the privy council on 8 Feb. 1896, an honour which led to his election in March following as a fellow of the Royal Society.

In 1896 he published 'The Story of My Life.' 'Character Sketches from the House of Commons 1886-7' appeared posthumously in 1912. He died at Heath Brow, Hampstead Heath, on 15 March 1902, and was buried at Kempsey on 19 March. His second wife, Lady Temple, C.I., survived him, with two sons by his first marriage, Colonel Richard Carnac Temple, C.I.E., formerly chief commissioner Andamans, who succeeded him in the baronetcy, and Colonel H. M. Temple, consul-general at Meshed, and one son by his second marriage. Temple's personal appearance was ungraceful and lent itself to caricature, which he accepted with characteristic good temper. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1881.

A statue of him, executed by Sir Thomas Brock, was erected in Bombay, shortly after he left that presidency.

W. Lucy, *Salisbury Parliament, 1892, and Balfourian Parliament, 1906.*]

W. L-W.

TENNANT, SIR CHARLES, first baronet (1823-1906), merchant and art patron, born in Glasgow on 4 Nov. 1823, was elder of the two sons of John Tennant of St. Rollox, Glasgow. The family settled as tenant-farmers near Ayr in the fifteenth century, and descends in unbroken line from John Tennant of Blairston Mill, Maybole, who was born in 1635 (see ROGERS's *Book of Robert Burns*, ii. 265). A later John Tennant (1725-1810) was

appointed factor of the Ochiltree estate, belonging to the Countess of Glencairn, in 1769, when he settled at Glenconner in the parish of Ochiltree. He was the intimate friend of the father of Robert Burns, and was one of the first to recognise the poet's genius. In his 'Epistle to James Tennant,' second son of this John, the poet refers in detail to all the members of that family. Charles (1768-1838) [q.v.], fourth son of John (referred to by Burns as 'Wabster Charlie'), was the grandfather of Sir Charles, and was the founder of the chemical works at St. Rollox. His elder son, John Tennant (1796-1878), Sir Charles's father, succeeded to these works and developed the business extensively.

Charles Tennant was educated at the High School, Glasgow, and was trained commercially at St. Rollox works, after a brief experience at Liverpool. In 1846 he was admitted as a partner in the concern, and was soon known as an exceptionally enterprising and farseeing man of business. In 1900 the St. Rollox chemical works were combined with many similar works throughout the kingdom to form the United Alkali Co., of which Sir Charles became chairman. At the same time he resigned his control of St. Rollox to his two sons. From the outset Tennant also interested himself in other of his father's ventures, which included the Tharsis Sulphur and Copper Co. and the Steel Company of Scotland. He succeeded in transforming the Tharsis Co. into the British Metal Extracting Co. Subsequently he became chairman of the Union Bank of Scotland, and engaged in many further mercantile ventures of great importance. He was concerned in several of the most extensive gold-mining companies in India; he was director of the Assam Oil Co. and of the Assam Railways and Trading Co.; and he acquired interests in the Chicago Great Western Railway Co., Nobel's Explosives Co., and the British South Africa Explosives Co. His keen business instinct, which enabled him to accumulate vast wealth, helped to rescue some of these companies from impending disaster and to set them on the road to prosperity.

In 1854 Tennant purchased the mansion and estate of The Glen, in Traquair parish, Peeblesshire. Here he found ample scope for his taste for landscape-gardening, and he lived to witness the fruition of his arboricultural plans. He also developed artistic tastes, and gradually acquired a collection of notable pictures. He bought Millais's portrait of Gladstone (presented to the

National Portrait Gallery in 1898); a group of portraits by Sir Joshua Reynolds, including 'Lady Crosbie,' 'Collina' (Lady Gertrude Fitzpatrick), 'Sylvia' (Lady Anne Fitzpatrick), and 'The Fortune-teller' (portraits of Lord Henry and Lady Charlotte Spencer-Churchill); and he owned masterpieces of portraiture by Gainsborough and Romney. In 1894 Sir Charles was made a trustee of the National Gallery. His private collection, which descended to his eldest son, now known as the Tennant gallery, is housed at 34 Queen Anne's Gate, London, S.W., and is open to the public on Wednesdays and Saturdays.

Tennant was till near the close of his life a liberal in politics. He was elected for Glasgow at a bye-election in 1879, and at the general election in 1880 won Peebles and Selkirk from the conservative member, Sir Graham Graham Montgomery, by 32 votes. He retained the seat till 1886, when he was defeated by the liberal-unionist, Mr. Walter Thorburn, by 50 votes. In 1890 he unsuccessfully contested the Partick division of Lanarkshire against Mr. Parker Smith, and made no further attempt to enter the House of Commons, in which he played no prominent part. In July 1885, on Gladstone's recommendation, he was created a baronet. By 1904 his economic views had undergone a change, and he became in that year a member of Mr. Chamberlain's tariff reform commission. He died at Broad Oaks, Byfleet, Surrey, on 4 June 1906, and was buried in Traquair churchyard.

Tennant married twice: firstly, on 1 Aug. 1849, Emma (*d.* 1895), daughter of Richard Winsloe of Mount Nebo, Taunton, Somerset, by whom he had six sons and six daughters; his eldest surviving son, Edward Priaux Tennant (*b.* 31 May 1859), succeeded to the baronetcy in 1906, and was raised to the peerage in 1911 as Baron Glenconner; the youngest son, Harold John Tennant, was elected M.P. for Berwickshire in 1895, and served in minor posts in the liberal administrations of Sir Henry Campbell-Bannerman and Mr. Asquith; Emma Alice Margaret, the youngest daughter, became in 1894 second wife of Mr. Asquith, prime minister from 1909. Sir Charles married secondly, in Nov. 1898, Marguerite, youngest daughter of Colonel Charles W. Miles of Burton Hill, Malmesbury, by whom he had four daughters.

A portrait in oils, painted by W. W. Oulless in 1900, and a bust by McAllum in 1870 are in the possession of Lord Glenconner at The Glen, Traquair.

[Scotsman, Glasgow Herald, and Dundee Advertiser, 5 June 1906; Blair's Sketches of Glasgow Necropolis, 1857; A Hundred Glasgow Men, 1886; Who's Who, 1905; Catalogue of Pictures in Tennant Gallery; private information.]

A. H. M.

TENNANT, SIR DAVID (1829-1905), speaker of the House of Assembly of the Cape of Good Hope, born at Cape Town on 10 Jan. 1829, was the eldest son of Hercules Tennant, sometime civil commissioner and resident magistrate of Uitenhage and author of 'Tennant's Notary's Manual for the Cape of Good Hope,' by his first wife Aletta Jacoba, daughter of Johannes Hendricus Brand, member of the court of justice at the Cape, and sister of Sir Christoffel Brand, first speaker of the Cape House of Assembly. His grandfather, Alexander Tennant, who belonged to an Ayrshire family, landed on his way to India at the Cape, where he eventually decided to settle.

After being educated at a private school in Cape Town young Tennant was admitted on 12 April 1849 attorney at law of the supreme court, and practised also as a notary public and conveyancer and in the vice-admiralty court of the colony, with much success. For many years he was registrar of the diocese of Cape Town and legal adviser to the bishop; during his tenure of office there took place the prolonged litigation concerning Bishop Colenso.

In May 1866 he was returned to the House of Assembly of the Cape of Good Hope as member for the electoral division of Piquetberg, which he continued to represent until his retirement in 1896. On 18 June 1874 he was unanimously elected speaker of the House of Assembly in succession to his uncle, Sir Christoffel Brand, and was re-elected unopposed in 1879, 1884, 1889, and 1894, holding the position for nearly twenty-two years. During this long period his rulings were seldom questioned and his personal influence in the house was very great. At the close of the session of 1893, when he was accorded a special vote of thanks for his services in the chair, the prime minister, Cecil Rhodes, bore witness to 'the firmness and impartiality with which he had maintained the dignity and rights of the house' (*Debates of the House of Assembly*, 1893, p. 368). He retired on a pension on 26 Feb. 1896, when he again received the thanks of the house for his services in the chair.

Tennant was closely identified with the educational life of the colony, and for some years was a member of the council of the

university of the Cape and chairman of the South African College Council. He was justice of the peace for Cape Town, Wynberg, and Simon's Town, and served on several government commissions. He was knighted by patent on 4 Oct. 1877, and was created K.C.M.G. on 25 May 1892. On his retirement from the speakership he acted for five years as agent-general for the colony in London. But his previous career had given him small opportunity of acquiring the requisite business aptitude for the position. He resigned on 31 Dec. 1901. He died on 29 March 1905 at 39 Hyde Park Gardens, London, and was buried in Brompton cemetery.

In 1856 he published a second and revised edition of his father's 'Notary's Manual for the Cape of Good Hope.'

Tennant was twice married: (1) on 3 May 1849 to Josina Hendrina Arnoldina, daughter of Jacobus François du Toit of Stellenbosch, a descendant of one of the French refugee families who settled at the Cape after the Revocation of the Edict of Nantes in 1685 (she died on 19 April 1877, leaving two sons and one daughter); (2) on 8 Oct. 1885, in London, to Amye Venour, elder daughter of Lieutenant-general Sir William Bellairs, K.C.M.G., C.B., of Strawberry Hill, Twickenham, by whom he had no issue.

A portrait of Tennant in oils, three-quarter length, by W. Gretor, a Danish artist, is in the possession of his widow.

[The Times, 31 March and 3 April 1905; Cape Argus, 30 March 1905; Cape Times, 31 March 1905; Burke's Peerage, 1905; Cape Argus Annual, 1896; Colonial Office Records; information supplied by relatives.] C. A.

THESIGER, FREDERIC AUGUSTUS, second **BARON CHELMSFORD** (1827-1905), general, born on 31 May 1827, was eldest son of Frederick Thesiger, first baron [q. v.], by Anna Maria, youngest daughter of William Tinling. Educated at Eton, he was commissioned as second-lieutenant in the rifle brigade on 31 Dec. 1844, and exchanged to the grenadier guards as ensign and lieutenant on 28 Nov. 1845. He was promoted lieutenant and captain on 27 Dec. 1850. He went to Ireland in February 1852 as A.D.C. to the lord-lieutenant (the earl of Eglinton), and from January 1853 to August 1854 he was A.D.C. to Sir Edward Blakeney, commanding the forces there. He joined his battalion in the Crimea on 31 May 1855, and served there till the end of the war, being A.D.C. to General Markham, com-

manding second division, from 18 July to 29 Sept. 1855, and deputy assistant quartermaster-general from 8 Nov. 1855 to 24 June 1856. He was made brevet-major (2 Nov. 1855) and received the medal with clasp, the Sardinian and Turkish medals, and the Mejidie (5th class).

He was promoted captain and lieutenant-colonel on 28 Aug. 1857, and exchanged into the 95th (Derbyshire) regiment on 30 April 1858, to take part in the suppression of the Indian Mutiny. He joined the regiment in November, and was present at the last action in which it was engaged, the capture of Man Singh's camp at Koondrye, where he commanded the infantry of Michael Smith's brigade of the Rajputana field force. He received the medal. From 13 July 1861 to 31 Dec. 1862 he was deputy adjutant-general of the British troops in the Bombay presidency. He became brevet-colonel on 30 April 1863. He was employed in the Abyssinian expedition of 1868 as deputy adjutant-general, and Lord Napier spoke of his 'great ability and untiring energy' in his despatch (*Lond. Gaz.* 30 June 1868). He received the medal, and was made C.B. and A.D.C. to the queen.

Thesiger was adjutant-general in the East Indies from 17 March 1869 to 15 March 1874. In a lecture at Calcutta in 1873 on the tactical formation of British infantry he maintained that much less change was needed than most people supposed, and that the two-deep line still met the case (*Journal of the United Service Institution*, xvii. 411-23). Having returned to England, he commanded the troops at Shorncliffe as colonel on the staff from 1 Oct. 1874 to 31 Dec. 1876, and then a brigade at Aldershot. He received a reward for distinguished service on 22 May 1876, and was promoted major-general on 15 March 1877. In February 1878 he went to South Africa, to command the troops, with the local rank of lieutenant-general. He took over the command from Sir Arthur Cunynghame [q. v.] at King William's Town on 4 March. A Kaffir war was in progress in that neighbourhood, the Gaikas having invaded Cape Colony and established themselves in the Perie bush. On 12 June Thesiger was able to report that this war had been brought to an end, thanks mainly to Colonel (Sir) Evelyn Wood and Major (Sir) Redvers Buller (*Lond. Gaz.* 15 July 1878). But there was a general ferment among the natives of South Africa, and he went to Natal in August

to make arrangements for an expedition against Sekukuni, who had been giving trouble in the north-east part of the newly annexed Transvaal. The expedition, under Colonel Rowlands, V.C., reached Fort Burgers, on Steelpoort river, at the end of September, but owing to want of water operations had to be suspended, to be resumed a year later.

A more serious business claimed attention. The Zulu king, Cetuywayo, had an army of 40,000 men, well trained, well armed, and eager to 'wash their spears.' He was a standing menace to Natal and the Transvaal, as Sir Garnet (now Lord) Wolseley had pointed out three years before. It was difficult to guard a frontier of 200 miles against so mobile an enemy, and the high commissioner, Sir Bartle Frere [q. v.], thought it best to bring matters to a head by presenting an ultimatum, in which Cetuywayo was called upon to break up his military system. On 11 Jan. 1879, the term allowed for acceptance having expired, the invasion of Zululand began. Lord Chelmsford, as Thesiger had become by his father's death on 5 Oct. 1878, had over 5000 European troops available and nearly 8000 armed natives. He decided to operate in three columns of nearly equal strength. The centre column (which he accompanied) crossed the Buffalo at Rorke's drift; the right, under Colonel Pearson, crossed the Tugela near its mouth, eighty miles to the south-east; the left, under Colonel (Sir) Evelyn Wood, had already crossed the Blood river, thirty-five miles to the north of Rorke's drift. All three were to converge on Ulundi, the king's kraal, fifty to sixty miles off.

On 22 Jan. came the disaster of Isandhlwana. The centre column had encamped under the hill so named, and Chelmsford, learning that his scouting troops, ten miles ahead, were in need of support, joined them on that morning with more than half his force, leaving six companies of the 24th with two guns and some native troops to guard the camp. The cavalry vedettes were to be far advanced, but the infantry outposts to be drawn in closer, and the force was to act on the defensive if attacked. At mid-day this camp-guard was suddenly attacked, enveloped and annihilated by a body of 10,000 Zulus. Of the six companies only three men escaped; the total number of Europeans killed was 860. Chelmsford had been warned by Kruger and others that laagers should be formed, but that precaution was not taken; and the troops, relying on the effect of their

fire, fought in too open formation. 'We have certainly been seriously underrating the power of the Zulu army,' was Chelmsford's own confession (VERNER, ii. 148).

In addition to the loss of men and the moral effect of such a blow, the transport and camp equipment of the column were lost and the natives deserted in large numbers. The invasion of Zululand was brought to a standstill; the right column entrenched itself at Etshowe, the left at Kambula, and the remains of the centre column recrossed the Buffalo at Rorke's drift. The successful defence of the post there, held by one company of the 24th against 3000 Zulus on the night of the 22nd, discouraged the Zulus from pushing on into Natal. Reinforcements, which had been refused in the autumn of 1878, were now sent out from England to the number of 10,000 men, but took some months to arrive. On 3 April Chelmsford relieved Colonel Pearson's force at Etshowe, having on the previous day beaten off 10,000 Zulus, who attacked his laager at Gingihlovo. Wood had won a similar victory at Kambula on 29 March.

In June Chelmsford resumed the convergent advance on Ulundi, which had failed in January. The first division, under General Crealock, marched near the coast to Port Durnford, and established a new base there. The second division, under General Newdigate, was joined by Wood's flying column, and by 1 July they reached the White Umvolosi near Ulundi, Chelmsford being with them. They met with little resistance on their march, but there was one deplorable incident: the death of the Prince Imperial on 1 June. He had been allowed to join headquarters as a spectator, and was put in charge of a small scouting party, which was surprised by a few Zulus. Five of the party rode off, but four, including the prince, were killed. On 4 July Chelmsford crossed the Umvolosi with 4166 white and 958 native troops, twelve guns and two gatlings. Formed in a hollow rectangle, they marched on Ulundi. The Zulu army, estimated at 20,000, attacked in its usual enveloping fashion, but was soon driven off and suffered severely from the cavalry in its flight. The Zulu power was broken, Cetuywayo's kraal was burnt, and he became a fugitive (*Lond. Gaz.* 19 Aug. 1879).

Before this battle was fought Chelmsford had ceased to be the commander of the forces in South Africa. Isandhlwana had caused much murmuring in England, and the government had been blamed for

'replacing the able Thesiger by the incompetent Chelmsford.' There had been friction between him and Sir Henry Bulwer, the lieutenant-governor of Natal, as to the raising and employment of native levies; and the government decided to send out Sir Garnet Wolseley to supersede them both. Wolseley landed at Durban on 28 June, and joined the first division at Port Durnford on 7 July. He disapproved of the plan of operating with two widely separated forces. Chelmsford accordingly moved southward to St. Paul's mission station, and met Wolseley there on 15 July. On the 27th he left Durban for England. He was mentioned in Wolseley's despatch (*Lond. Gaz.* 10 Oct. 1879) as entitled to all the merit of the victory of Ulundi. He had been made K.C.B. on 11 Nov. 1878, and received the G.C.B. on 19 Aug. 1879, also the medal with clasp.

He became lieutenant-general on 1 April 1882, and general on 16 Dec. 1888. From 4 June 1884 to 29 March 1889 he was lieutenant of the Tower of London. On 7 June 1893 he was placed on the retired list. He had been made colonel of the 4th (West London) volunteer battalion of the king's royal rifle corps on 27 Aug. 1887. He was given the colonelcy of his old regiment (the Derbyshire) on 30 Jan. 1889, and was transferred to the 2nd life guards on 27 Sept. 1900. He was made G.C.V.O. in 1902. He died on 9 April 1905, at the United Service Club, having had a sudden seizure while playing billiards there. He was buried with military honours at Brompton cemetery, his grave being next to his father's. He was well described by the duke of Cambridge in 1879 as 'a gallant, estimable and high-principled man, generous to others, unsparing of himself, and modest withal.' (VERNER, ii. 165.)

A portrait of him by Harris Brown is in the mess of the 2nd life guards, and another by the same artist is in the possession of his widow. A cartoon portrait appeared in 'Vanity Fair' in 1881.

He married on 1 Jan. 1867 Adria Fanny, eldest daughter of Major-general John Heath of the Bombay army. She survived him, and he left four sons, of whom the eldest, Frederick John Napier, third Baron Chelmsford, was governor of Queensland (1905-9) and afterwards of New South Wales.

E. M. L.

THOMAS, WILLIAM MOY (1828-1910), novelist and journalist, born in Hackney, Middlesex, on 3 Jan. 1828, was younger son of Moy Thomas, a solicitor. William's uncle, J. H. Thomas, co-author with the boy's father, of 'Synopsis of the Law of Bills of Exchange and Promissory Notes' (1814), and also editor of 'Coke upon Littleton' (3 vols. 1818), took charge of the boy's education. But William soon left the study of the law to follow literature as a profession. He became private secretary to Charles Wentworth Dilke [q. v.], proprietor of the 'Athenæum.' In 1850 he was introduced by Sir Thomas Noon Talfourd [q. v.] to Charles Dickens, who engaged him next year as a writer on 'Household Words,' to which he contributed down to 1858. He commenced to write criticisms in political philosophy for the 'Athenæum' in 1855, and contributed on literary history and political economy to 'Chambers's Journal,' the 'North British Review,' the 'Economist,' and other journals. His first book was an edition of the 'Poetical Works of William Collins' (1858), with notes and a useful biography. In the same year a series of able papers by him in 'Notes and Queries' established the facts about the biography of Richard Savage [q. v.]. In 1861 appeared his valuable edition of 'The Letters and Works of Lady Mary Wortley Montagu, edited by Lord Wharmcliffe; third edition, with additions and corrections derived from the original MSS., illustrative notes and a new memoir' (2 vols.; reprinted in Bohn's Series, 1887, 2 vols., and in 1893). In 1866-7 he was London correspondent of the New York 'Round Table' under the signature of 'Q,' and in 1868 he joined the staff of the 'Daily News,' writing the weekly article 'In the Recess' and the dramatic criticisms. He also wrote leading articles, reviews, and descriptive sketches for that newspaper down to 1901. He was the first editor of 'Cassell's Magazine,' in which appeared 'A Fight for Life' (3 vols. 1868), an excellent novel, which was dramatised. He was honorary secretary of the Authors' Protection Society (1873), and was instrumental in procuring the royal commission on copyright which reported in 1878 (JOHN HOLLINGSHEAD, *My Lifetime*, 1895, ii. 54-56). He was dramatic

critic for the 'Academy' from 1875 to 1879, and for the 'Graphic' from 1870 until his active journalistic career closed some nine years before his death. He died after a long illness at Eastbourne on 21 July 1910.

He married Sara Maria, daughter of Commander Francis Higginson, R.N., who survived him, and by whom he had eight children, of whom two married daughters and one son, Frederick Moy Thomas, are living.

He also wrote: 1. 'When the Snow falls,' 2 vols. 1859 (1861 and other editions; stories republished from 'Household Words'). 2. 'Pictures in a Mirror,' 1861 (tales). 3. 'Golden Precepts, or the Opinions and Maxims of Prince Albert,' 1862. 4. 'Toilers of the Sea,' by Victor Hugo, authorised English translation, 1866, 3 vols.

[Allibone's Dict. of Engl. H. R. T.

THOMPSON, D'ARCY WENTWORTH (1829-1902), Greek scholar, elder son of John Skelton Thompson, shipmaster, by his wife Mary Mitchell, both of Maryport, Cumberland, was born at sea on board his father's barque Georgiana, off Van Diemen's Land, on 18 April 1829. Nearly all his male relatives for generations had followed the sea. D'Arcy Thompson, after twelve years (1835-47) at Christ's Hospital, London, matriculated from Trinity College, Cambridge, at Michaelmas 1848, afterwards migrating to Pembroke College. At Cambridge he read chiefly with Augustus Arthur Vansittart and with Joseph Barber (afterwards Bishop) Lightfoot, both of Trinity; his closest friends were James Lemprière Hammond of Trinity and Peter Guthrie Tait [q. v. Suppl. II] of Peterhouse. Thompson gained a medal for Latin verse in 1849 with an ode 'Maurorum in Hispania Imperium,' and was placed sixth in the first class in the classical tripos of 1852, being bracketed with William Jackson Brodribb [q. v. Suppl. II]. After graduating B.A. in 1852 he became classical master in the Edinburgh Academy, where R. L. Stevenson was, in 1861-2, one of his pupils, a fact recorded by Stevenson in his song called 'Their Laureate to an Academy Class Dinner Club' and beginning 'Dear

Thompson Class.' In 1863, after twelve years' service, he left the school for the chair of Greek in Queen's College, Galway. In 1867 he delivered the Lowell lectures at Boston. He died at Galway on 25 Jan. 1902, a few hours after lecturing on Thucydides.

He married twice: (1) in Edinburgh, in 1859, Fanny (d. 1860), daughter of Joseph Gamgee and sister of Joseph Sampson Gamgee [q. v.], by whom he had one son, D'Arcy Wentworth; and (2) in Dublin, in 1866, Amy, daughter of William B. Drury, of Boden Park, co. Dublin, by whom he had two sons and four daughters.

D'Arcy Thompson's reputation mainly rests on his 'Day Dreams of a Schoolmaster' (Edinburgh, 1864, 1865), a pathetic and humorous record of his schooldays at 'St. Edward's,' and of his teaching years at the 'Schola Nova' of 'dear Dunedin.' Interwoven with a thread of autobiography, the book is a plea for the sympathetic teaching of the ancient languages, a protest against the then narrow education of women, and a passionate defence of the dignity of the schoolmaster's calling. Some skilful translations, chiefly of Tennyson, are included.

In 1865 followed three sets of little essays, 'Wayside Thoughts of an Asophophilosopher,' the first part containing 'Rainy Weather, or the Philosophy of Sorrow,' 'Goose-skin, or the Philosophy of Horror,' and 'Te Deum Laudamus, or the Philosophy of Joy.' In 1867 he published his Lowell lectures under his old title of 'Wayside Thoughts'; they dealt, after the manner of the 'Day Dreams,' with school and college memories and with the practice and philosophy of education.

D'Arcy Thompson, whose classical scholarship was literary and poetic, possessed a rare power of easy and eloquent translation. Many of his renderings from the Greek appeared in the 'Museum'; others in a volume called 'Ancient Leaves' (1862), which also comprises some 'paraphrases,' or original poems on classical models. 'Sales Attici' (1867) collects 'the maxims, witty and wise, of the Athenian Tragic Drama.'

For his eldest son in childhood D'Arcy Thompson wrote 'Nursery Nonsense, or Rhymes without Reason' (1863-4), and 'Fun and Earnest, or Rhymes with Reason' (1865). These books, admirably illustrated by Charles H. Bennett, and now scarce, were the delight of a past generation of children. Of a third volume, cancelled before publication, 'Rhymes Witty and Whymiscal' (Edinburgh, 1865), a copy was sold in Sir T. D. Brodie's sale at Sotheby's in 1904.

Thompson also contributed, chiefly to the 'Scotsman' and to 'Macmillan's Magazine,' a few essays and fugitive poems.

[Autobiographical details in Thompson's works; family information; Galway Express, 1 Feb. 1902; T. P. O'Connor, M.P. (Thompson's pupil at Galway) in M.A.P., 8 Feb. 1902, and in T.P.'s Weekly, 17 June 1904.]

D. W. T.

THOMPSON, EDMUND SYMES- (1837-1906), physician. [See SYMES-THOMPSON.]

THOMPSON, FRANCIS (1859-1907), poet and prose-writer, was born on 18 Dec. 1859 at 7 Winckley Street, Preston. His father, Charles Thompson (1824-1896), a native of Oakham, Rutland, practised homœopathy at Preston and Ashton-under-Lyne, and married Mary Morton. Francis's uncles, Edward Healy Thompson (b. 1813) and John Costall Thompson, were both authors. Edward, who was professor of English literature at the catholic university in Dublin (1853-4) and sub-edited the 'Dublin Review' (1862-4), wrote devotional works, which were widely circulated; John published a volume of poems, 'The Vision of Liberty,' which won the approval of Sir Henry Taylor and of Gladstone. Like these uncles, Francis's father and mother were converts to the Roman catholic church. Francis was their second child, but the elder son died in infancy. Three sisters were born later.

Francis, who was brought up in the catholic faith, was sent in 1870 to Ushaw College, there to receive a fair classical education and to be prepared, if he and his mentors saw fit, for the priesthood. A frail and timid child of studious tastes, Thompson nurtured at Ushaw his life-long allegiance to the doctrines and liturgy of the church. At seventeen he left to study medicine by his father's wish at Owens College, Manchester. Medical study was repugnant to him, and after six years' trial, in the course of which he thrice failed in examination for a degree, he attempted in a helpless fashion humble means of livelihood. He made no plea in favour of a literary career, but he had read with ardent sympathy the works of Æschylus and Blake, while the gift from his mother of De Quincey's 'Confessions of an Opium Eater' gave his thought a perilous direction. His father's reproaches at his failure to earn a livelihood led him suddenly in Nov. 1885 to seek his fortune in London. There he filled for a time some small posts, among them that of a publisher's 'collector.' But,

tormented by neuralgia and other ills, he fell a prey to opium, and soon passed through every phase of destitution, sleeping in the open, and seeking a few pence by selling matches or newspapers. During this period a Leicester Square bootmaker, accosting him in the street, gave him for a time light employment in his shop, and—what proved a more enduring gift—old account books for scribbling paper. Sustained through his sufferings by opium, he developed poetical powers, and at the end of two years of outcast life he copied out on ragged scraps of paper in the spring of 1888 two poems, 'The Passion of Mary' and 'Dream Tryst,' and a prose essay, 'Paganism Old and New.' These compositions he sent, giving Charing Cross Post Office as his address, to 'Merry England,' where the work of his uncle, Edward Healy Thompson, had already appeared. They were accepted by the editor, Mr. Wilfrid Meynell, and were duly published in the numbers for April, May, and June respectively. Browning read them shortly before his death, and pronounced their author to be a poet capable of achieving whatever his ambition might suggest. At the time opium eating and privation had ruined Thompson's health. Having been traced with difficulty, he was induced to enter a hospital, and afterwards to recruit at Storrington, Sussex. His recovery largely depended on the breaking of the opium habit. During this painful process his literary sense gathered fresh strength, and he wrote the 'Ode to the Setting Sun' and other verse and the 'Essay on Shelley.'

In 1893 he published his first volume of 'Poems,' chiefly written at Storrington. Coventry Patmore was among the earliest and most enthusiastic admirers of the book. The chief poem, 'The Hound of Heaven,' found wide popularity despite its somewhat recondite theme, which treated in the spirit of the strictest catholic dogma of conflict between human and divine love (cf. BURNES-JONES's *Life*, ii. 240). Of the first section of the poems called 'Love in Dian's Lap' Patmore wrote that these were 'poems of of which Laura might have been proud' (*Fortnightly Review*, lxi.). There followed in 1895 'Sister Songs' (new edit. 1908), dedicated to Monica and Madeline Meynell, children of his friend and protector. There he described with subtlety and ingenuous calmness the days of his outcast experience, but the profuse imagery and visionary obscurity of his style rendered a cool reception for the moment inevitable.

From 1893 till 1897 Thompson lived, with short intervals, near the Franciscan monastery in Pantasaph, North Wales. There he wrote nearly all the 'New Poems,' which he published in 1897, and dedicated to Coventry Patmore, whose death spoilt the pleasures of publication. The book shows the powerful influence of older mystical poets, but the 'Mistress of Vision,' of which he himself said that it contained as much science as mysticism, takes with the 'Anthem of Earth' a place in the forefront of English verse.

In prose Thompson also gave proof of notable power. To the 'Academy,' under Mr. C. L. Hind's editorship, and, during the last years of his life, to the 'Athenæum,' he contributed a large body of literary criticism. In 1905 he issued 'Health and Holiness: a Study of the Relations between Brother Ass the Body and his Rider the Soul' (with a preface by Father George Tyrrell). There were published posthumously the 'Life of St. Ignatius Loyola' (1909), 'The Life of John Baptist de la Galle' (1911), and the 'Essay on Shelley' (1909), with a preface by Mr. George Wyndham, who pronounced it 'the most important contribution to pure letters written in English during the last twenty years.'

Despite his ascetic temper and his mystical prepossessions, Thompson found recreation in watching cricket matches, and wrote odds and ends of verse in honour of the game. During his last months he lodged in London and also paid a visit to an admirer, Mr. Wilfrid Scawen Blunt, at Newbuildings Place near Horsham. There Mr. Neville Lytton painted his portrait. In the summer of 1907 he was prevailed upon to enter the Hospital of St. Elizabeth and St. John, St. John's Wood, where he died from consumption on 13 Nov. 1907, fortified by the rites of the catholic church. He was buried in the catholic cemetery, Kensal Green, where his tomb is inscribed with his own words 'Look for me in the nurseries of Heaven.'

THOMPSON, SIR HENRY, first baronet (1820-1904), surgeon, born at Framlingham, Suffolk, 6 Aug. 1820, was only son of Henry Thompson, a general dealer, by his wife Susannah, daughter of Samuel Medley [q. v.], the artist. Thompson was educated under Mr. Fison, a nonconformist minister at Wrentham. He early engaged in mercantile pursuits, as his parents, who were uncompromising baptists, disliked the idea of a profession. Coming to London, he was, however, apprenticed to George Bottomley, a medical practitioner at Croydon, in January 1844, and in October he entered University College, London, as a medical student. He obtained the gold medal in anatomy at the intermediate examination at the London University in 1849, and the gold medal for surgery at the final M.B. examination in 1851. From June 1850 he acted as house surgeon at University College Hospital to (Sir) John Erichsen [q. v. Suppl. I], who was newly appointed surgeon. Joseph Lister, afterwards Lord Lister, was one of his first dressers, and on his advice Lister went to Edinburgh to work under James Syme [q. v.]. In January 1851 Thompson entered into partnership at Croydon with Bottomley, his former master, but after a few months he returned to London, and took the house 35 Wimpole Street where he lived during the rest of his life.

At the Royal College of Surgeons of England Thompson was admitted a member in 1850 and a fellow in 1853. He gained the Jacksonian prize in 1852 for his dissertation 'On the Pathology and Treatment of Stricture of the Urethra,' and he had the unusual distinction of obtaining the prize a second time in 1860 with his essay 'On the Healthy and Morbid Conditions of the Prostate Gland.' In 1833 he was appointed Hunterian professor of surgery and pathology.

Thompson acted for a short time as surgeon to the St. Marylebone Infirmary, but in 1853 he was appointed assistant surgeon to University College Hospital, becoming full surgeon in 1863, professor of clinical surgery in 1866, consulting surgeon and emeritus professor of clinical surgery in 1874.

Thompson early showed his predilection for the surgery of the urinary organs, and in July 1858 he visited Paris to study the subject still further under Jean Civiale

(1792-1867), who first removed a stone from the bladder by the operation of crushing. Beginning life as a pupil of Civiale, Thompson at first crushed stones in the bladder at repeated intervals, leaving it to nature to remove the fragments. When Henry Jacob Bigelow (1818-1890) recommended crushing at a single sitting and removal of the fragments by operative measures, Thompson improved the technique of the operation. Later, about 1886, when the discredited operation of suprapubic cystotomy was revived, Thompson became its advocate.

Thompson's successful crushing operations at University College soon attracted attention, and in 1863 he operated at Brussels upon Leopold I, King of the Belgians, completing the work which had been begun by Civiale eighteen months previously. In July and December 1872 Thompson treated Napoleon III, Emperor of the French, at Camden Place, Chislehurst. He performed the operation of lithotripsy under chloroform on 2 Jan. 1873, and again on 7 Jan. A third sitting was arranged for noon on 9 Jan., but the emperor died of sudden collapse an hour before.

Thompson's attainments and interests were exceptionally versatile. He not merely came to be facile princeps in his own branch of surgery; his zeal for hygiene made him a pioneer of cremation; he was at the same time an authority on diet, a devoted student of astronomy, an excellent artist, a collector of china, and a man of letters.

To the subject of cremation Thompson first drew attention in England by an article in the 'Contemporary Review' in 1874. Experiments had been recently made in Italy, but a cremation society, the first of its kind in Europe, was founded in London, chiefly by Thompson's energy, in 1874. From that time onwards he acted as the president, and did all in his power to promote the practice both in England and on the Continent. A crematorium was built at Woking in 1879. Its use was forbidden by the home secretary, and it was not employed until March 1885, after the government had brought a test case against a man who had cremated his child in Wales, and Sir James Stephen had decided that the practice was not illegal if effected without causing a nuisance. Thompson also took a leading part in 1902 in the formation of the company which erected the crematorium at Golder's Green, near London, and the rules laid down for the guidance of that company have proved

a model for cremation societies throughout the world. The introduction of cremation drew Thompson's attention incidentally to the unsatisfactory nature of the law in regard to death certification. The Cremation Act of 1902 (2 Ed. VII. c. 8) was an attempt to remedy some of the evils to which Thompson directed attention.

Astronomy occupied much of Thompson's leisure. He long worked at an observatory of his own, which he erected at his country house at Molesey. But his chief services to the science were his gifts to Greenwich observatory of some magnificent instruments, including a fine photo-heliograph of 9-inch aperture, a 30-inch reflecting telescope, and a large photographic telescope of 26-inch aperture and 2½ feet focal length; the last telescope, twice the size of any previously at Greenwich, was offered in March 1894, and being manufactured by Sir Howard Grubb of Dublin, was erected in April 1897.

Thompson doubtless inherited artistic power from his maternal grandfather, Samuel Medley. His original talent was improved by study under Edward Elmore, R.A., and Sir Lawrence Alma Tadema, R.A. Paintings by him were exhibited at the Royal Academy in 1865, 1870, annually from 1872 to 1878, and again in 1881, 1883, and 1885. Two of these pictures were afterwards shown in the Paris salon, and to this exhibition he contributed a landscape in 1891. Thompson was also an eminent collector of china. He acquired many fine specimens of old white and blue Nankin. A catalogue illustrated by the owner and James McNeill Whistler [q. v. Suppl. II] was issued in 1878. The collection was sold at Christie's on 1 June 1880.

Besides numerous articles in magazines, Thompson wrote two novels under the name of 'Pen Oliver.' 'Charlie Kingston's Aunt,' published in 1885, presents the life of a medical student some fifty years before. 'All But: a Chronicle of Laxenford Life' (1886), is illustrated by twenty full-page drawings by the author, in one of which he portrayed himself as he was in 1885.

Cultured society had great attractions for Thompson. As a host he was famous for his 'octaves,' which were dinners of eight courses for eight people at eight o'clock. They were commenced in 1872, and the last, which was the 301st, was given shortly before his death. The company was always as carefully selected as the food, and for a quarter of a century the

most famous persons in the worlds of art, letters, science, politics, diplomacy, and fashion met at his table in Wimpole Street. King George V, when Prince of Wales, attended Thompson's 300th 'octave.'

Thompson, who was knighted in 1867, was created a baronet on 20 Feb. 1899. He died at 35 Wimpole Street on 18 April 1904, and was cremated at Golder's Green. He married, on 16 Dec. 1861, Kate Fanny, daughter of George Loder of Bath. His wife, a well-known pianist, long suffered from paralysis, but survived her husband, dying on 30 Aug. 1904, leaving issue a son, Henry Francis Herbert, who became second baronet, and two daughters.

A three-quarter length portrait, painted by Sir J. E. Millais, R.A., in 1881, hangs in the National Gallery. There is also a bust by F. W. Pomeroy, A.R.A., at Golder's Green. A cartoon portrait by 'Ape' appeared in 'Vanity Fair' in 1874.

Thompson's chief works are: 1. 'The Pathology and Treatment of Stricture of the Urethra both in the Male and Female,' 1854; 4th edit., London and Philadelphia, 1885; translated into German, München, 1888. 2. 'The Enlarged Prostate, its Pathology and Treatment,' 1858; 6th edit. London and Philadelphia, 1886; translated into German, Erlangen, 1867. 3. 'Practical Lithotomy and Lithotripsy,' 1863; 3rd edit. 1880; translated into German, Kassel und Berlin, 1882. 4. 'Clinical Lectures on Diseases of the Urinary Organs,' 1868; 8th edit. 1888; also American editions; translated into French, 1874 and again in 1889; translated into German, Berlin, 1877. 5. 'The Preventive Treatment of Calculous Disease,' 1873; 3rd edit. 1888. 6. 'Cremation,' 1874; 4th edit. 1901. 7. 'Food and Feeding,' 1880; 12th edit. enlarged, 1910. 8. 'On Tumours of the Bladder,' 1884. 9. 'Lectures on some Important Points connected with the Surgery of the Urinary Organs,' 1884. 10. 'Diet in Relation to Age and Activity,' 1886, 12mo; 4th edit. 1903; revised edit. 1910. 11. 'On the Suprapubic Operation of opening the Bladder for the Stone and for Tumours,' 1886. 12. 'Modern Cremation, its History and Practice,' 1889; 4th edit. 1901.

Thompson was also part author of the article on cremation in the 11th edition of the 'Encyclopædia Britannica.' 'Traité pratique des maladies des voies urinaires,' a collected edition of Thompson's surgical works, was published at Paris in 1880.

[Lancet, 1904, i. 1167 (with portrait); Brit. Med. Journal, 1904, i. 1191 (with portrait); private information.] D'A. P.

THOMPSON, LYDIA (1836-1908), actress, was born in London on 19 Feb. 1836. Her father died during her childhood, her mother remarried, and she was compelled early to earn her living. Having a taste for dancing, she took to the stage, and was joined there by her younger sister, Clara. In 1852 Lydia made her début in the ballet at Her Majesty's Theatre. In the Christmas of 1853 she was engaged to play Little Silverhair at the Haymarket in the pantomime of 'Little Silverhair, or Harlequin and the Three Bears.' Her performance won the praise of Professor Henry Morley in the 'Examiner.' In 1854 she danced delightfully for sixty nights at the same house in Planché's Easter extravaganza, 'Mr. Buckstone's Voyage round the Globe,' and appeared on 18 Oct. at the St. James's in the burlesque of 'The Spanish Dancers,' in which she mimicked Señora Perea Nana. At Christmas she returned to the Haymarket, in the leading character of 'Little Bopeep who lost her Sheep,' and was again highly praised by Morley. At the close of 1856 it was announced that she was dancing her way through the theatres of Germany with pleasant success. In the winter season of 1859-60 she made a hit at the St. James's by her dancing in a succession of light pieces. At the Lyceum on 9 April 1861 she acted in the Savage Club burlesque of 'The Forty Thieves,' and played, among other rôles, Norah in the first production of Falconer's comedy of 'Woman, or Love against the World' (19 Aug. 1861).

By this period she had begun to make excursions into the country, where she long maintained her popularity. On 31 Oct. 1864, at the opening of the new Theatre Royal, Birkenhead, by Alexander Henderson (whose second wife she subsequently became), she sustained the title character in Burnand's 'Ixion,' the first modern burlesque in more than one act. Afterwards she fulfilled several engagements under Henderson at the Prince of Wales's, Liverpool. Here, in Dec. 1864, she played Mary in 'Used up' to the Sir Charles Coldstream of Sothern and the Ironbrace of Mr. (now Sir) Squire Bancroft. Here, also, on Whit Monday 1866 she was seen as the title character in the burlesque of 'Paris,' to the Cænone of (Sir) Henry Irving. Meanwhile, early in 1865, she had fulfilled a successful engagement at Drury Lane.

On 15 Sept. 1866 Lydia Thompson made her first appearance at the new Prince of Wales's Theatre, Tottenham Court Road, in the afterpiece of the 'Pas de Fascination,' and on 10 Oct. played with acceptance the

chief character in Byron's poor burlesque of 'Der Freischütz.' In 1868, after performing at the Strand Theatre in William Brough's extravaganza 'The Field of the Cloth of Gold,' she sailed for America, where she was the pioneer of latter-day English burlesque and was the first 'star' to bring a fully organised company across the Atlantic. She was out of England six years. Her New York début at Wood's Museum (28 Sept.) in 'Ixion,' which ran 102 nights, was encouraging. A tour of the leading American cities in 1870 included a successful visit to the Californian Theatre, San Francisco. At New York, during the winter season of 1870-1, began Lydia's association with Willie Edouin [q. v. Suppl. II]. Her troupe subsequently voyaged to Australia and India.

Lydia Thompson reappeared in London on 19 Sept. 1874 at the Charing Cross Theatre under the management of W. R. Field. Farnie's famous burlesque of 'Blue Beard,' already performed 470 times in America, formed the opening bill. Thanks to the acting of Lydia Thompson, Willie Edouin, and Lionel Brough, this poor piece proved a remarkable success alike in London and the provinces.

In 1877 Lydia Thompson and her husband took another burlesque company to America, opening 20 Aug. at Wallack's Theatre, New York, in 'Blue Beard.' The engagement terminated on 12 Jan. 1878. Lydia Thompson reappeared at the Gaiety, London, on 13 Feb. as Morgiana in the famous amateur pantomime of 'The Forty Thieves.' On 25 Jan. 1879 she played Carmen at the Folly in Reece's new burlesque of 'Carmen, or Sold for a Song.' After some two years in retirement, she reappeared at the Royalty on 12 Nov. 1881 as Mrs. Kingfisher in the farcical comedy of 'Dust.'

On 1 Feb. 1886 Alexander Henderson, her husband, died at Caen. (For details of his managerial career see *Dramatic Notes*, 1887, p. 15.) On 17 May following she began a new engagement at the Fourteenth Street Theatre, New York, and was seen again in New York in the winter seasons of 1888-9 and 1891. Meanwhile, on 21 Sept. 1886, she opened the Strand Theatre, under her own management, with 'The Sultan of Mocha,' then first given in London, and on 26 Jan. 1888 was heartily welcomed on making her reappearance there as Antonio the page in the comic opera 'Barbette.' Thenceforth her vivacity showed signs of decay. In the autumn of 1896 she was touring in England as Rebecca Forrester in Appleton's farcical comedy 'The

Co-respondent.' In May 1899 a testimonial performance of 'London Assurance' was given at the Lyceum on her behalf. Her last appearance on the stage was at the Imperial in December 1904 as the Duchess of Albuquerque in John Davidson's adaptation of 'A Queen's Romance.' She died on 17 Nov. 1908, at 48 Westminster Mansions, London, and was buried in Kensal Green cemetery, leaving a daughter, Mrs. L. D. Woodthrope, professionally known as Zeffie Tilbury. Portraits of her, in character, are reproduced in Laurence Hutton's 'Curiosities of the American Stage' and in the 'Theatre' (Jan. 1886).

[Pascoe's *Dramatic List*; Prof. Henry Morley's *Journal of a London Playgoer*; Broadbent's *Annals of the Liverpool Stage*; The Bancroft Memoirs; H. P. Phelps's *Players of a Century*; Col. T. Allston Brown's *History of the New York Theatres*; John Hollingshead's *Gaiety Chronicles*; New York *Dramatic Mirror* for 28 Feb. 1891; Daily Telegraph, 20 Nov. 1908; Green Room Book, 1909.] W. J. L.

THOMPSON, WILLIAM MARCUS (1857-1907), journalist, born at Londonderry, Ireland, on 24 April 1857, was second son in a family of four sons and four daughters of Moses Thompson, a customs official, by his wife Elizabeth Smith. His family was of intensely Orange and anti-nationalist sympathies. After education at a private school, Thompson was for a time clerk in the office of James Hayden, solicitor. At the age of sixteen he contributed verses to the 'Derry Journal' and developed an aptitude for journalism. He found employment on the 'Belfast Morning News,' and then in 1877, at the age of twenty, through the influence of Sir Charles Lewis, baronet, M.P. for Derry, he joined the staff of the conservative 'Standard' in London, writing chiefly on non-political themes. In 1884 he became parliamentary reporter to the paper, which he served till 1890. Meanwhile he had outgrown his inherited political principles, and developed a sturdy radicalism and an aggressive sympathy with the Irish nationalists.

Thompson had entered as a student at the Middle Temple on 6 April 1877, and was called to the bar on 26 Jan. 1880. He formed a practice as the leading professional advocate of trade societies and of persons of advanced opinions charged with political offences. As a member from 1886 of the democratic club in Chancery Lane he became intimate with leading democrats, including Mr. John Burns, Mr. Robert Bon-

tine Cunninghame Graham, and Mr. Bennet Burleigh. On 3 March 1886 he successfully defended Mr. Burns at the Old Bailey on the charge of inciting the mob to violence at Trafalgar Square in February of that year. In Jan. 1888 he again defended Mr. Burns, for similar conduct in November 1887; the latter was then sentenced to six weeks' imprisonment. Thompson also appeared for the defence in the Walsall conspiracy case (March–April 1892). He represented many trade unions in the arbitration over the prolonged Grimsby fishing dispute (November 1901). During the same period he contributed to the 'Radical' newspaper (started in 1880), and on its death to 'Reynolds's Newspaper,' the weekly Sunday paper, for which he wrote most of the leading articles as well as general contributions under the pseudonym of 'Dodo.' He succeeded Edward Reynolds as editor of the paper in February 1894, and held the post until his death. The uncompromising warfare on privilege and rank, which had always characterised 'Reynolds,' lost nothing of its force at Thompson's hand.

Thompson, who was a powerful platform speaker, was elected to the London county council as radical member for West Newington in 1895, but was defeated in his attempt to enter parliament for the Limehouse division of Tower Hamlets in July of that year. To his initiative was due the establishment in 1900 of the National Democratic League, of which he was first president. He was original member and promoter of the National Liberal Club (1882).

Thompson died of bronchitis and pneumonia on 28 Dec. 1907 at his residence, 14 Tavistock Square, London, and was buried at Kensal Green cemetery. He married on 3 April 1888, Mary, only daughter of Thomas Crosbie, editor and afterwards proprietor of the 'Cork Examiner.' She survived him with one daughter. A portrait of Thompson, painted by J. B. Yeats (father of W. B. Yeats), belongs to the widow.

W. B. O.

THOMSON, JOCELYN HOME (1859–1908), chief inspector of explosives, born at Oxford on 31 Aug. 1859, was the second of four sons of William Thomson, provost

of Queen's College, Oxford, afterwards archbishop of York [q. v.]. Educated at Eton and the Royal Academy, Woolwich, Thomson entered the royal artillery in 1878, and engaged the following year in the Zulu war. Subsequently he was transferred to India, and thence he proceeded to Egypt, where he served in the royal horse artillery.

From an early age he was an earnest student of astronomy, and when twenty-three years of age he was nominated by the Royal Society an observer of the transit of Venus in the island of Barbados, receiving commendation for his accurate and painstaking work. From 1887 to 1892 he served on the staff of the Department of Artillery and Stores, and from 1892 to 1893 was second assistant to the director-general of ordnance factories. Meanwhile in 1888 he acted as secretary to the war office explosives committee, of which Sir Frederick Abel [q. v. Suppl. II] was president. The smokeless powder 'cordite,' recommended to the government in 1890 for adoption, received its name from Thomson. His comprehensive grasp of the characteristics of explosive substances enabled him to render conspicuous services to the committee. In 1891 he went to Canada to conduct tests on cordite when exposed to the influence of a cold climate.

Thomson was appointed an inspector of explosives under Sir Vivian Majendie in 1893, and in 1899 he succeeded Majendie as chief inspector.

In 1901 the Belgian government conferred upon him the Order of Leopold. He was made C.B. in 1907.

From 1900 to 1902 Thomson by official leave acted as consulting engineer in connection with the undertaking for transmitting electrical power from the Cauvery Falls to the Mysore gold fields. Afterwards he acted in a similar capacity to the Jhelum Valley electrical transmission scheme. In each his efforts met with signal success.

Thomson displayed versatile gifts in mechanical invention. Among useful apparatus which he devised were a mercury vacuum pump, a petroleum testing appliance, and a 'position-' or 'range-finder.' For the last named he received a grant of 500*l.* from the war department.

Suffering from nervous breakdown, Thomson shot himself on 13 Feb. 1908 at his residence in Draycott Place, Chelsea. He was buried in Brompton cemetery. He married in 1886 Mabel Sophia, fourth daughter of Thomas Bradley Paget, of Chipping Norton, Oxfordshire, vicar of

Welton, East Yorkshire. He had no issue.

He was the author of a useful compendium, 'Guide to the Explosives Act, 1875,' and wrote many valuable official reports. He collaborated with Sir Boverton Redwood in 'Handbook on Petroleum; with Suggestions on the Construction and Use of Mineral Oil Lamps' (1901; 2nd edit. 1906); and 'The Petroleum Lamp, its Choice and Use' (1902).

THOMSON, SIR WILLIAM, first BARON KELVIN OF LARGS (1824-1907), man of science and inventor, born on 26 June 1824 in College Square East, Belfast, was second son and fourth child of James Thomson (1786-1849) [q. v.], professor of mathematics in the Royal Academical Institution of Belfast, by his wife Margaret, eldest daughter of William Gardiner of Glasgow. The elder brother, James (1822-1892) [q. v.], was professor of engineering, first in Belfast, then in Glasgow. When William was six years old his mother died, and the father himself taught the boys, who never went to school. In 1832, when William was eight, his father moved to Glasgow as professor of mathematics in the university there. In 1834, in his eleventh year, William matriculated in the University of Glasgow. He loved in later life to talk of his student days and of his teachers, William Ramsay, Lushington, Thomas Thomson, Meikleham, and John Pringle Nichol. He early made his mark in mathematics and physical science; and in 1840 won the university medal for a remarkable essay, 'On the Figure of the Earth.' During his fifth year as a student at Glasgow (1839-40) he received a notable impulse toward physics from the lectures of Nichol and of David Thomson, who temporarily took the classes in natural philosophy during the illness of Meikleham. At the same time he systematically studied the 'Mécanique Analytique' of Lagrange, and the 'Mécanique Céleste' of Laplace, and made the acquaintance—a notable event in his career—of Fourier's 'Théorie Analytique de la Chaleur,' reading it through in a fortnight, and studying it during a three months' visit to Germany. The effect of reading Fourier dominated his whole career. During his last year at Glasgow (1840-1) he communicated to the

'Cambridge Mathematical Journal' (ii. May 1841), under the signature 'P.Q.R.,' an original paper 'On Fourier's Expansions of Functions in Trigonometrical Series,' which was a defence of Fourier's deductions against some strictures of Professor Kelland. The paper is headed 'Frankfort, July 1840, and Glasgow, April 1841.'

He left Glasgow after six years without taking his degree; and on 6 April 1841 entered as a student at Peterhouse, Cambridge, where he speedily made his mark. An undergraduate of seventeen, he handled methods of difficult integration readily and with mastery, and proved his power in a paper entitled 'The Uniform Motion of Heat in Homogeneous Solid Bodies, and its Connection with the Mathematical Theory of Electricity,' published in the 'Cambridge Mathematical Journal,' vol. iii. 1842. In other papers he announced various important theorems, in some of which he found, however, that he had been anticipated by Sturm, Gauss, and George Green [q. v.], all of them master minds in mathematics. At Cambridge he rowed in the college races of 1844, and won the Colquhoun silver sculls. He also helped to found the Cambridge University Musical Society, and in its first concert, and afterwards in others, played the French horn. His love of good music he retained to the end of his life. He read mathematics with William Hopkins [q. v.]. In January 1845 he came out second wrangler in the mathematical tripos, but he beat the senior wrangler, Stephen Parkinson [q. v.], in the severer test of the competition for Smith's prize.

On leaving Cambridge he visited Faraday's laboratory at the Royal Institution in London. Faraday and Fourier were the chief heroes of his youthful enthusiasm. Then he went to Paris University to work in the laboratory of Regnault with a view to acquiring experimental skill. There he spent four months, and there also he made the acquaintance of Biot, Liouville, Sturm, and Foucault. Returning to Cambridge, he was elected fellow of his college in the autumn of 1845, and became a junior mathematical lecturer and editor of the 'Cambridge Mathematical Journal.'

Thomson at twenty-one years had gained experience in three universities—Glasgow, Cambridge, and Paris—had published a dozen original papers, and had thus established for himself a reputation in mathematical physics. In 1846, at twenty-two, he became professor of natural philosophy in Glasgow on the death of Meikle-

ham. The subject of his inaugural dissertation (3 Nov. 1846) was 'De Motu Caloris per Terræ Corpus.' He held this professorship till 1899. Admittedly a bad expositor, he proved himself to be a most inspiring teacher and a leader in research. With the slenderest material resources and most inadequate room, he created a laboratory of physics, the first of its kind in Great Britain, where he worked incessantly, gathering around him a band of enthusiastic students to collaborate in pioneering researches in electric measurement and in the investigation of the electrodynamic and thermoelectric properties of matter. In the lecture theatre his enthusiasm won for him the love and respect of all students, even those who were unable to follow his frequent flights into the more abstruse realms of mathematical physics. Over the earnest students of natural philosophy he exercised an influence little short of inspiration, which extended gradually far beyond the bounds of his own university.

From his first days as professor Thomson worked strenuously with fruitful results. By the end of four years (1850), when he was twenty-six, he had published no fewer than fifty original papers, most of them highly mathematical in character, and several of them in French. Amongst these researches there is a remarkable group which originated in his attendance in 1847 at the meeting at Oxford of the British Association, where he read a paper on electric images. But a more important event of that meeting was the commencement of his friendship with James Prescott Joule [q. v.] of Manchester, who had for several years been pursuing his researches on the relations between heat, electricity, and mechanical work. Joule's epoch-making paper, which he presented on this occasion, on the mechanical equivalent of heat, would not have been discussed at all but for Thomson's observations. Thomson had at first some difficulty in grasping the significance of the matter, but soon threw himself heart and soul into the new doctrine that heat and work were mutually convertible. For the next six or eight years, partly in co-operation with Joule, partly independently, he set himself to unravel those mutual relations.

Thomson was never satisfied with any phenomenon until it should have been brought into the stage where numerical accuracy could be determined. He must measure, he must weigh, in order that he might go on to calculate. 'The first step,' he wrote, 'toward numerical reckoning of prop-

erties of matter . . . is the discovery of a continuously varying action of some kind, and the means of observing it definitely, and measuring it in terms of some arbitrary unit or scale division. But more is necessary to complete the science of measurement in any department, and that is the fixing on something *absolutely* definite as the unit of reckoning.' It was in this spirit that Thomson approached the subject of the transformation of heat.

Sadi Carnot in 1824 had anticipated Joule in his study of the problem in his 'Réflexions sur la Puissance Motrice du Feu,' where was discussed the proportion in which heat is convertible into work, and William John Macquorn Rankine [q. v.] had carried the inquiry a stage farther in 1849; while Helmholtz in 'Die Erhaltung der Kraft' (1847)—'On the Conservation of Force' (meaning what we now term Energy)—denied the possibility of perpetual motion, and sought to establish that in all the transformations of energy the sum total of the energies in the universe remains constant. Thomson in June 1848 communicated to the Cambridge Philosophical Society a paper 'On an Absolute Thermometric Scale founded on Carnot's Theory of the Motive Power of Heat, and calculated from Regnault's Observations.' There he set himself to answer the question: Is there any principle on which an absolute thermometric scale can be founded? He arrived at the answer that such a scale is obtained in terms of Carnot's theory, each degree being determined by the performance of equal quantities of work in causing one unit of heat to be transformed while being let down through that difference of temperature. This indicates as the absolute zero of temperature the point which would be marked as -273° on the air thermometer scale. In 1849 he elaborated this matter in a further paper on 'Carnot's Theory,' and tabulated the values of 'Carnot's function' from 1°C. to 231°C. Joule, writing to Thomson in December 1848, suggested that probably the values of 'Carnot's function' would turn out to be the reciprocal of the absolute temperatures as measured on a perfect gas thermometer, a conclusion independently enunciated by Clausius in February 1850.

Thomson zealously continued his investigation. He experimented on the heat developed by compression of air. He verified the prediction of his brother, Professor James Thomson, of the lowering by pressure of the melting-point of ice. He gave a thermodynamic explanation of

the non-scalding property of steam issuing from a high-pressure boiler. He formulated between 1851 and 1854, with scientific precision, in a long communication to the Royal Society of Edinburgh, the two great laws of thermodynamics—(1) the law of equivalence discovered by Joule, and (2) the law of transformation, which he generously attributed to Carnot and Clausius. Clausius, indeed, had done little more than put into mathematical language the equation of the Carnot cycle, corrected by the arbitrary substitution of the reciprocal of the absolute temperature; but Thomson was never grudging of the fame of independent discoverers. 'Questions of personal priority,' he wrote, 'however interesting they may be to the persons concerned, sink into insignificance in the prospect of any gain of deeper insight into the secrets of nature.' He gave a demonstration of the second law, founding it upon the axiom that *it is impossible by means of inanimate material agency to derive mechanical effect from any portion of matter by cooling it below the temperature of the coldest of the surrounding objects.* Further, by a most ingenious use of the integrating factor to solve the differential equation for the quantity of heat needed to alter the volume and temperature of unit mass of the working substance, he gave precise mathematical proof of the theorem that the efficiency of the perfect engine working between given temperatures is inversely proportional to the absolute temperature. In collaboration with Joule, he worked at the 'Thermal Effects of Fluids in Motion,' the results appearing between 1852 and 1862 in a series of four papers in the 'Philosophical Transactions,' and four others in the 'Proceedings of the Royal Society.' Thus were the foundations of thermodynamics laid. In later years he rounded off his thermodynamic work by enunciating the doctrine of available energy.

This brilliant development and generalisation of the subject did not content Thomson. He inquired into its applications to human needs and to the cosmic consequences it involved. Thus he not only suggested the process of refrigeration by the sudden expansion of compressed cooled air, but propounded the doctrine of the dissipation of energy. If the availability of the energy in a hot body be proportional to its absolute temperature, it follows that as the earth and the sun—indeed, the whole solar system itself—cool down towards one uniform level of temperature, all life must perish and all energy become un-

available. This far-reaching conclusion once more suggested the question of a beginning of the Cosmos, a question which had arisen in the consideration of the Fourier doctrine of the flow of heat. 'His note-books of this time show that he had also been applying Fourier's equations to a number of outlying problems capable of similar mathematical treatment, such as the diffusion of fluids and the transmission of electric signals through long cables.'

In 1852 Thomson married his second cousin Margaret, daughter of Walter Crum, F.R.S., and resigned his Cambridge fellowship. His wife's precarious health necessitated residence abroad at various times. In the summer of 1855, while they stayed at Kreuznach, Thomson sent to Helmholtz, whose acquaintance he desired to make, an invitation to come to England in September to attend the British Association meeting at Glasgow. On 29 July Helmholtz arrived at Kreuznach to make Thomson's acquaintance before his journey to England. On 6 August Helmholtz wrote to his wife of the deep impression that Thomson, 'one of the first mathematical physicists of Europe,' made on him. 'He far exceeds all the great men of science with whom I have made personal acquaintance, in intelligence, and lucidity, and mobility of thought, so that I felt quite wooden beside him sometimes.' A year later Helmholtz again met Thomson at Schwalbach and described him as 'certainly one of the first mathematical physicists of the day, with powers of rapid invention such as I have seen in no other man.' Subsequently Helmholtz visited Thomson in Scotland many times, and his admiration grew steadily.

The utilisation of science for practical ends was Thomson's ambition through life. 'There cannot,' he said in a lecture to the Institution of Civil Engineers in May 1883, 'be a greater mistake than that of looking superciliously upon practical applications of science. The life and soul of science is its practical application; and just as the great advances in mathematics have been made through the desire of discovering the solution of problems which were of a highly practical kind in mathematical science, so in physical science many of the greatest advances that have been made from the beginning of the world to the present time have been made in the earnest desire to turn the knowledge of the properties of matter to some purpose useful to mankind' (see *Popular Lectures and Addresses*, i. 79).

Hitherto Thomson's work had lain mainly in pure science; but while still engaged on his thermodynamic studies, he was drawn toward the first of those practical applications that made him famous. Early in 1853 he had communicated to the Glasgow Philosophical Society a paper 'On Transient Electric Currents,' in which he investigated mathematically the discharge of a Leyden jar through circuits possessing self-induction as well as resistance. He founded his solution on the equation of energy, ingeniously building up the differential equation and then finding the integral. The result was remarkable. He discovered that a critical relation occurred if the capacity in the circuit was equal to four times the coefficient of self-induction divided by the square of the resistance. If the capacity was less than this the discharge was oscillatory, passing through a series of alternate maxima and minima before dying out. If the capacity was greater than this the discharge was non-oscillatory, the charge dying out without reversing. This beautiful bit of mathematical analysis passed almost unnoticed at the time, but it laid the foundation of the theory of electric oscillations subsequently studied by Oberbeck, Schiller, Hertz, and Lodge, and forming the basis of wireless telegraphy. Feddersen in 1859 succeeded in photographing these oscillatory sparks, and sent photographs to Thomson, who with great delight gave an account of them to the Glasgow Philosophical Society.

At the Edinburgh meeting of the British Association in 1854 Thomson read a paper 'On Mechanical Antecedents of Motion, Heat, and Light.' Here, after touching on the source of the sun's heat and the energy of the solar system, Thomson reverted to his favourite argument from Fourier according to which, if traced backwards, there must have been a beginning to which there was no antecedent.

In the same year, in the 'Proceedings of the Royal Society,' appeared the result of Thomson's investigation of cables under the title 'On the Theory of the Electric Telegraph.' Faraday had predicted that there would be retardation of signals in cables owing to the coating of gutta-percha acting like the glass of a Leyden jar. Forming the required differential equation, and applying Fourier's integration of it, Thomson drew the conclusion that the time required for the current at the distant end to reach a stated fraction of its steady value would be proportional both to the resistance and to the capacity; and as both of these are proportional to the length of

the cable, the retardation would be proportional to the square of the length. This famous law of squares provoked much controversy. It was followed by a further research, 'On Peristaltic Induction of Electric Currents,' communicated to the British Association in 1855, and afterward in more complete mathematical form to the Royal Society.

Submarine telegraphy was now becoming a practical problem of the day [see BRIGHT, SIR CHARLES TILSTON, Suppl. I]. Sea cables were laid in 1851 between England and France, in 1853 between Holyhead and Howth, and in 1856 across the Gulf of St. Lawrence. In the last year the Atlantic Telegraph Company was formed, with capital mostly subscribed in England, with a view to joining Ireland to Newfoundland. Bright was engineer; Whitehouse (a retired medical practitioner) was electrician; Thomson (of 2 The College, Glasgow) was included in the list of the directors. In a pamphlet issued by the company in July 1857 it was stated that 'the scientific world is particularly indebted to Professor W. Thomson, of Glasgow, for the attention he has given to the theoretical investigation of the conditions under which electrical currents move in long insulated wires, and Mr. Whitehouse has had the advantage of this gentleman's presence at his experiments, and counsel, upon several occasions.' As a matter of fact Whitehouse had previously questioned Thomson's 'law of squares' at the British Association meeting of 1856, declaring that if it was true Atlantic telegraphy was hopeless. He professed to refute it by experiments. Thomson effectively replied in two letters in the 'Athenæum.' He pointed out that success lay primarily in the adequate section of the conductor, and hinted at a remedy (deduced from Fourier's equations) which he later embodied in the curb signal transmitter. Thomson steadily tested his theories in practice. In December 1856 he described to the Royal Society his device for receiving messages, namely a sort of tangent galvanometer, with copper damper to the suspended needle, the deflections being observed by watching through a reading telescope the image of a scale reflected from the polished side of the magnet or from a small mirror carried by it. Subsequently he abandoned this subjective method for the objective plan in which a spot of light from a lamp is reflected by the mirror upon a scale. It is probably true that the idea of thus using the mirror arose from noticing the reflection of light

from the monocle which Thomson, being short-sighted, wore round his neck on a ribbon.

The first attempt to lay the Atlantic cable was made in 1857 and failed, and in subsequent endeavours Thomson played a more active part. His discovery that the conductivity of copper was greatly affected—to an extent of 30 or 40 per cent.—by its purity led him to organise a system of testing conductivity at the factory where the additional lengths were being made, and he was in charge of the test-room on board the *Agamemnon*, which in 1858 was employed in cable-laying in the Atlantic. Whitehouse was unable to join the expedition, and Thomson, at the request of the directors, also undertook the post of electrician without any recompense, though the tax on his time and energies was great.

After various mishaps, success crowned the promoters' efforts. Throughout the voyage Thomson's mirror galvanometer was used for the continuity tests and for signalling to shore, with a battery of seventy-five Daniell's cells. The continuity was reported perfect, and the insulation improved on submersion. On 5 Aug. the cable was handed over to Whitehouse and reported to be in perfect condition. Clear messages were interchanged, but the insulation was soon found to be giving way, and on 20 Oct., after 732 messages had been conveyed, the cable spoke no more. The cause of the collapse was the mistaken use in defiance of Thomson's tested conclusions, by Whitehouse, of induction coils working at high voltage. Thomson's self-abnegation and forbearance throughout this unfortunate affair are almost beyond belief. He would not suffer any personal slight to interfere with his devotion to a scientific enterprise.

During the next eight years Thomson sought to redeem the defeat. Throughout the preparations for the cables of 1865 and 1866, the preliminary trials, the interrupted voyage of 1865 when 1000 miles were lost, the successful voyage of 1866, when the new cable was laid and the lost one recovered and completed, Thomson was the ruling spirit, and his advice was sought and followed. On his return from the triumphant expedition he was knighted. He had in the meantime made further improvements in conjunction with Cromwell Fleetwood Varley [q. v.]. In 1867 he patented the siphon recorder, and, in conjunction with Fleeming Jenkin [q. v.], the curb-transmitter. He was consulted on practically every submarine cable project from that time forth. In 1874 Thomson

was elected president of the Society of Telegraph Engineers, of which, in 1871, he had been a foundation member and vice-president. In 1876 he visited America, bringing back with him a pair of Graham Bell's earliest experimental telephones. He was president of the mathematical and physical section of the British Association of that year at Glasgow.

In the winter of 1860–1 Thomson had met with a severe accident. He fell on the ice when curling at Largs, and broke his thigh. The accident left him with a slight limp for the rest of his life.

Meanwhile much beside the submarine cable occupied Thomson's fertile mind, and his researches were incessant. In 1859–60 he was studying atmospheric electricity. For this end he invented the water-dropping collector, and vastly improved the electrometer, which he subsequently developed into the elaborate forms of the quadrant instrument and other types. He also measured electrostatically the electromotive force of a Daniell's cell, and investigated the potentials required to give sparks of different lengths in the air. At the same time he urged the application of improved systems of electric measurement and the adoption of rational units. In 1861 he cordially supported the proposal of Bright and Clark to give the names of ohm, volt, and farad to the practical units based on the centimetre-gramme-second absolute system, and on his initiative was formed the Committee of Electrical Standards of the British Association, which afterwards went far in perfecting the standards and the methods of electrical measurement. He was largely responsible for the international adoption of the system of units by his advocacy of them at the Paris Congress in 1881. He was an uncompromising advocate of the metric system, and lost no opportunity of denouncing the 'absurd, ridiculous, time-wasting, brain-destroying British system of weights and measures.'

A long research on the electrodynamic qualities of metals, thermoelectric, thermo-elastic, and thermomagnetic, formed the subject of his Bakerian lecture of 1856, which occupies 118 pages of the reprinted 'Mathematical and Physical Papers.' He worked long also at the mathematical theory of magnetism in continuation of Faraday's labours in diamagnetism. Thomson set himself to investigate Faraday's conclusions mathematically. As early as 1849 and 1850, with all the elegance of a mathematical disciple of Poisson

and Laplace, he had discussed magnetic distributions by aid of the hydrodynamic equation of continuity. To Thomson are due the now familiar terms 'permeability' and 'susceptibility' in the consideration of the magnetic properties of iron and steel. In these years Thomson was also writing on the secular cooling of the earth, and investigating the changes of form during rotation of elastic spherical shells. At the same time he embarked with his friend Professor Peter Guthrie Tait [q. v. Suppl. II] on the preparation of a text-book of natural philosophy. Though the bulk of the writing was done by Tait, the framework of it thought and its most original parts are due to Thomson. The first part of the first volume of Thomson and Tait's 'Treatise on Natural Philosophy' was published in 1867, the second part only in 1874. No more was published, though the second edition of the first part was considerably enlarged. The book had the effect of revolutionising the teaching of natural philosophy.

Thomson's contributions to the theory of elasticity are no less important than those he made to other branches of physics. In 1867 he communicated to the Royal Society of Edinburgh a masterly paper 'On Vortex Atoms'; seizing on Helmholtz's proof that closed vortices could not be produced in a liquid perfectly devoid of internal friction, Thomson showed that if no such vortex could be artificially produced, then if such existed it could not be destroyed, but that being in motion and having the inertia of rotation, it would have elastic and other properties. He showed that vortex rings (like smoke-rings in air) in a perfect medium are stable, and that in many respects they possess qualities essential to the properties of material atoms—permanence, elasticity, and power to act on one another through the medium at a distance. The different kinds of atoms known to the chemist as elements were to be regarded as vortices of different degrees of complexity. The vortex-atom theory was linked to his other important researches on gyrostatic problems. Though he came to doubt whether the vortex-atom hypothesis was adequate to explain all the properties of matter, the conception bears witness to his great mental power.

In 1870 Lady Thomson, whose health had been failing for several years, died. In the same year the University of Glasgow was removed to the new buildings on Gilmore Hill, overlooking the Kelvin River.

Thomson had a house here in the terrace assigned for the residences of the professors, adjoining his laboratory and lecture-room.

On 17 June 1874 he married Frances Anna, daughter of Charles F. Blandy of Madeira, whom he had met on cable-laying expeditions. In 1875 he built at Netherhall, near Largs, a mansion in the Scottish baronial style; and in his later life, though he had a London house in Eaton Place, Netherhall was his chief home. From his youth he had been fond of the sea, and had early owned boats on the Clyde. For many years his sailing yacht the *Lalla Rookh* was conspicuous, and he was an accomplished navigator. His experiences at sea in cable-laying had taught him much, and in return he was now to teach science in navigation. Between 1873 and 1878 he reformed the mariners' compass, on which he undertook to write a series of articles in 'Good Words' in 1873; he lightened the moving parts of the compass to avoid protracted oscillations, and to facilitate the correction of the quadrantal and other errors arising from the magnetism of the ship's hull. At first the Admiralty would have none of it. Even the astronomer royal condemned it. 'So much for the astronomer royal's opinion,' he ejaculated. But the compass won its way; and until recently was all but universally adopted both in the navy and in the mercantile marine (see, for Thomson's contributions to navigation, his *Popular Lectures*, vol. iii., and the Kelvin Lecture (1910) of Sir J. A. EWING).

Dissatisfied with the clumsy appliances used in sounding, when the ship had to be stopped before the sounding line could be let down, Thomson devised in 1872 the well-known apparatus for taking flying soundings by using a line of steel piano wire. He had great faith in navigating by use of sounding line, and delighted to narrate how, in 1877, in a time of continuous fog, he navigated his yacht all the way across the Bay of Biscay into the Solent trusting to soundings only. He also published a set of Tables for facilitating the use of Sumner's method at sea. He was much occupied with the question of the tides, not merely as a sailor, but because of the interest attending their mathematical treatment in connection with the problems of the rotation of spheroids, the harmonic analysis of their complicated periods by Fourier's methods, and their relation to hydrodynamic problems generally. He invented a tide-predicting machine, which will predict for any given port the rise and

fall of the tides, which it gives in the form of a continuous curve recorded on paper; the entire curves for a whole year being inscribed by the machine automatically in about four hours. Further than this, adopting a mechanical integrator, the device of his ingenious brother, James Thomson, he invented a harmonic analyser—the first of its kind—capable not only of analysing any given periodic curve such as the tidal records and exhibiting the values of the coefficients of the various terms of the Fourier series, but also of solving differential equations of any order.

Wave problems always had a fascination for Thomson, and he was familiar with the work of the mathematicians Poisson and Cauchy on the propagation of wave-motion. In 1871 Helmholtz went with him on the yacht *Lalla Rookh* to the races at Inverary, and on some longer excursions to the Hebrides. Together they studied the theory of waves, 'which he loved,' says Helmholtz, 'to treat as a race between us.' On calm days he and Helmholtz experimented on the rate at which the smallest ripples on the surface of the water were propagated. Almost the last publications of Lord Kelvin were a series of papers on 'Deep Sea Ship Waves,' communicated between 1904 and 1907 to the Royal Society of Edinburgh. He also gave much attention to the problems of gyrostatics, and devised many forms of gyrostatis to elucidate the problems of kinetic stability. He held that elasticity was explicable on the assumption that the molecules were the seat of gyrostatic motions. A special opportunity of practically applying such theories was offered him by his appointment as a member of the admiralty committee of 1871 on the designs of ships of war, and of that of 1904-5 which resulted in the design of the Dreadnought type of battleship.

In 1871 he was president of the British Association at its meeting in Edinburgh. His presidential address ranged luminously over many branches of science and propounded the suggestion that the germs of life might have been brought to the earth by some meteorite. With regard to the age of the earth he had already from three independent lines of argument inferred that it could not be infinite, and that the time demanded by the geologists and biologists for the development of life must be finite. He himself estimated it at about a hundred million of years at the most. The naturalists, headed by Huxley, protested against Thomson's conclusion, and a prolonged

controversy ensued. He adhered to his propositions with unrelaxing tenacity but unwavering courtesy. 'Gentler knight there never broke a lance,' was Huxley's dictum of his opponent. His position was never really shaken, though the later researches of John Perry, and the discovery by R. J. Strutt of the degree to which the constituent rocks of the earth contain radioactive matter, the disgregation of which generates internal heat, may so far modify the estimate as somewhat to increase the figure which he assigned. In his presidential address to the mathematical and physical section of the British Association at York in 1881 he spoke of the possibility of utilising the powers of Niagara in generating electricity. He also read two papers, in one of which he showed mathematically that in a shunt dynamo best economy of working was attained when the resistance of the outer circuit was a geometric mean between the resistances of the armature and of the shunt. In the other he laid down the famous law of the economy of copper lines for the transmission of power.

Thomson's lively interest in the practical—indeed the commercial—application of science, led him to study closely the first experiments in electric lighting. Such details as fuses and the suspension pulleys with differential gearing by which incandescent lamps can be raised or lowered absorbed some of his attention. He gave evidence before the parliamentary committee on electric lighting of 1879, and discussed the theory of the electric transmission of power, pointing out the advantage of high voltages. The introduction into England in 1881 of the Faure battery accumulator by which electricity could be economically stored excited him greatly. Thomson's various inventions—electrometers, galvanometers, siphon-recorders, and his compasses were at first made by James White, an optician of Glasgow. In White's firm, which became Kelvin & White, Limited, he was soon a partner, taking the keenest commercial interest in its operations, and frequenting the factory daily to superintend the construction. To meet demands for new measuring instruments he devised from time to time potential galvanometers, ampere gauges, and a whole series of standard electric balances for electrical engineers. His patented inventions thus grew very numerous. Up to 1900 they numbered fifty-six. Of these eleven related to telegraphy, eleven to compasses and navigation apparatus, six to dynamo machines or electric lamps,

twenty-five to electric measuring instruments, one to the electrolytic production of alkali, and two to valves for fluids. Helmholtz, visiting Thomson in 1884, found him absorbed in regulators and measuring apparatus for electric lighting and electric railways. 'On the whole,' Helmholtz wrote, 'I have an impression that Sir William might do better than apply his eminent sagacity to industrial undertakings; his instruments appear to me too subtle to be put into the hands of un instructed workmen and officials. . . . He is simultaneously revolving deep theoretical projects in his mind, but has no leisure to work them out quietly.' But he shortly added 'I did Thomson an injustice in supposing him to be wholly immersed in technical work; he was full of speculations as to the original properties of bodies, some of which were very difficult to follow; and, as you know, he will not stop for meals or any other consideration.'

Thomson's teaching was always characterised by a peculiar fondness for illustrating recondite notions by models. The habit was possibly derived from Faraday; but he developed it beyond precedent. 'I never satisfy myself,' he wrote, 'until I can make a mechanical model of a thing. If I can make a mechanical model, I can understand it. As long as I cannot make a mechanical model all the way through I cannot understand it.' He built up chains of spinning gyrostats to show how the rigidity derived from the inertia of rotation might illustrate the property of elasticity. The vortex-atom presented a dynamical picture of an ideal material system. He strung together little balls and beads with sticks and elastic bands to demonstrate crystalline dynamics. Throughout all his mathematical speculation his grip of the physical reality never left him, and he associated every mathematical process with a physical significance.

In 1893 Lord Kelvin astonished the audience at the Royal Institution by a discourse on 'Isoperimetrical Problems,' endeavouring to give a popular account of the mathematical process of determining a maximum or minimum, which he illustrated by Dido's task of cutting an ox-hide into strips so as to enclose the largest piece of ground; by Horatius Cocles' prize of the largest plot that a team of oxen could plough in a day; and by the problem of running the shortest railway line between two given points over uneven country. On another occasion he entertained the Royal Society with a discourse on the

'Homogeneous Partitioning of Space,' in which the fundamental packing of atoms was geometrically treated, and he incidentally propounded the theory of the designing of wall-paper patterns.

In 1884 Thomson delivered at Baltimore twenty lectures 'On Molecular Dynamics and the Wave Theory of Light.' His hearers, mostly accomplished teachers and professors, numbered twenty-six. The lectures, reported verbatim at the time, were issued with many revisions and additions in 1904. They show Thomson's speculative genius in full energy and brilliance. Ranging from the most recondite problems of optics to speculations on crystal rigidity, the tactics of molecules and the size of atoms, they almost embody a new conception of the ultimate dynamics of physical nature. Thomson accepted little external guidance. He never accepted Maxwell's classical generalisation that the waves of light were essentially electromagnetic displacements in the ether, although in 1888 he gave a nominal adhesion to the theory, and in his preface in 1893 to Hertz's 'Electric Waves,' he used the phrase 'the electromagnetic theory of light, or the undulatory theory of magnetic disturbance.' But later he withdrew his adhesion, preferring to think of things in his own way. Yet to the last he took an intense interest in the most recent discoveries. He discussed the new conception of electrons—or 'electrions,' as he called them—and read again and again Mr. Ernest Rutherford's book on 'Radioactivity' (1904). He objected, however, *in toto* to the notion that the atom was capable of division or disintegration. In 1903, in a paper called 'Æpinus Atomized,' he reconsidered the views of Æpinus and Father Bosovich from the newest standpoint, modifying the theory of Æpinus to suit the notion of 'electrions.'

Honours fell thickly on Thomson in his later life. He was thrice offered and thrice declined the Cavendish professorship of physics at Cambridge. He had been made a fellow of the Royal Society in 1851, and in 1883 had been awarded the Copley medal. He was president from 1890 to 1894. He was raised to the peerage in 1892 under the style and title of Baron Kelvin of Largs in the county of Ayr. On 15-17 June 1896 the jubilee of his Glasgow professorship was impressively celebrated by both the town and university in the presence of guests who included the chief men of science of the world. He resigned his professorship in 1899. He was one of the original members

of the Order of Merit founded in 1902, was a grand officer of the Legion of Honour, and held the Prussian Order Pour le Mérite. In 1902 he was named a privy councillor. In 1904 he was elected chancellor of the University of Glasgow and published his installation address. He was a member of every foreign academy, and held honorary degrees from almost every university.

After taking part in the British Association meeting of 1907 at Leicester, where he lectured on the electronic theory of matter and joined with keenness in discussions of radioactivity and kindred questions, he went to Aix-les-Bains for change. He had barely reached his home at Largs in September when Lady Kelvin was struck down with a paralytic seizure. Lord Kelvin's misery at her helpless condition was intense, and his vitality was greatly diminished. He had himself suffered for fifteen years from recurrent attacks of facial neuralgia, and a year before underwent a severe operation. A chill now seized him, and after a fortnight's prostration he died on 17 Dec. He was buried in Westminster Abbey on 23 Dec. 1907. Lady Kelvin survived him.

In politics he was, up to 1885, a broad liberal; but as an Ulsterman he became an ardent unionist on the introduction of the home rule bill in 1886, and spoke at many political meetings in the West of Scotland in the years which followed. In religion Kelvin was an Anglican—at least from his Cambridge days—but when at Largs attended the Presbyterian Free Church. A simple, unobtrusive, but essential piety was never clouded. He had a deep detestation of ritualism and sacerdotalism, and he denounced spiritualism as a loathsome and vile superstition. But his studies led him again and again to contemplate a beginning to the order of things, and he more than once publicly professed his belief in creative design. Kindly hearted and exceptionally modest, he carried through life intense love of truth and insatiable desire for the advancement of natural knowledge. His high ideals led him to underrate his achievements. 'I know,' he said at his jubilee, 'no more of electric and magnetic force, or of the relation between ether, electricity, and ponderable matter, or of chemical affinity, than I knew and tried to teach to my students in my first session.' He strove whole-heartedly through life to reach a great comprehensive theory of matter. If he failed to find in the equations of dynamics an adequate and necessary

foundation for the theories of electricity and magnetism, or to assign a dynamical constitution to the luminiferous ether, it is because the physical nature of electricity and of ether is probably more fundamental than that of matter itself. But he never allowed his intellectual grasp of physical matters to be clouded by metaphysical cobwebs, and insistently strove for precision of language.

Lord Kelvin's portrait was painted by Lowes Dickinson in 1869 for Peterhouse. Another portrait by (Sir) Hubert von Herkomer, R.A., was presented to Glasgow University in 1892. A third portrait by Sir W. Q. Orchardson was presented to the Royal Society by the fellows in 1899. A fourth portrait, by Mr. W. W. Oulless, R.A., was exhibited at the Royal Academy in 1902. A statue was erected in Belfast in 1910. A Kelvin lectureship in his memory was founded in 1908 at the Institution of Electrical Engineers, and lectures have been given by S. P. Thompson (1908), Sir J. A. Ewing (1910), and H. G. J. Du Bois (1912).

To scientific societies' proceedings or journals Kelvin contributed 661 papers between 1841 and 1908. In 1874 he collected his papers in 'Electrostatics and Magnetism.' In 1882 he began to collect and revise his scattered mathematical and physical papers. Three volumes were issued before his death, and the collection was completed in five volumes (1882-1911) under the editorship of Sir Joseph Larmor. Thomson also wrote for the 'Encyclopædia Britannica' of 1879 the long and important articles on Elasticity and on Heat.

THOMSON, SIR WILLIAM (1843-1909), surgeon, born at Downpatrick, Ireland, on 29 June 1843, was youngest son (in a family of three sons and two daughters) of William Thomson of Lanark, Scotland, by his wife Margaret, daughter of Thomas Patterson of Monklands, Lanarkshire. His father died in Thomson's infancy, and his mother married Mr. McDougal, proprietor of the 'Galway Express' newspaper. While a lad he worked in the editorial office of this paper, and in 1864, without giving up his journalistic work, he entered as a student of Queen's College, Galway, then a constituent college of the Queen's University. He graduated B.A. in 1867. Having obtained a post on the Dublin 'Daily Express,' Thomson began to attend lectures at the Carmichael School of Medicine, and in 1872 he graduated M.D. and M.Ch. of the Queen's University, receiving the hon. M.A. in 1881, and in 1874 he became F.R.C.S. Ireland.

On obtaining his medical degrees he became house surgeon to the Richmond Hospital, Dublin, and demonstrator of anatomy in the Carmichael School. Next year he was elected visiting surgeon to the Richmond Hospital, a post he held to his death. In 1873 he was also appointed lecturer in anatomy in the Carmichael School. In 1882 he became the first general secretary of the newly formed Royal Academy of Medicine in Ireland, his principal duty being to edit its 'Transactions.' From 1896 to 1906 he was direct representative of the Irish medical profession on the General Medical Council. From 1896 to 1898 he was president of the Royal College of Surgeons in Ireland, and in 1897 was knighted. In December 1899 he was invited by Lord Iveagh to organise a field hospital for service in South Africa. In February 1900 he set out and accompanied Lord Roberts in his march to Pretoria. He proved his powers of rapid organisation by establishing, immediately on entering that capital, a hospital of 600 beds in the Palace of Justice, and it was in great part due to him and his

colleagues that Pretoria escaped the outbreak of enteric fever which proved disastrous elsewhere. Lord Roberts mentioned his services in despatches. He returned home in November 1900, and he and his colleagues were entertained at a public banquet at the Royal College of Surgeons, Dublin (24 Nov.).

While in South Africa he was appointed surgeon in ordinary to Queen Victoria in Ireland, and in 1901 he became honorary surgeon to King Edward VII. For his services in the South African war he was mentioned in despatches and received the Queen's medal with three clasps. He was also made C.B. From 1895 to 1902 he was surgeon to the lord-lieutenant, Earl Cadogan. He was from 1906 to his death inspector of anatomy for Ireland.

Thomson was a surgeon of considerable ability. In 1882 he ligatured the innominate artery, and published an important paper on the subject. In later years he devoted attention to the surgery of the genito-urinary organs, and was the first among Dublin surgeons to remove an enlarged prostate. He wrote clearly and well, and edited several books, notably the third edition of Power's 'Surgical Anatomy of the Arteries' (1881), and Fleming's 'Diseases of the Genito-Urinary Organs' (1877), as well as the 'Transactions of the Royal Academy of Medicine in Ireland' from 1882 to 1896. For several years he acted as Dublin correspondent to the 'British Medical Journal.' In 1901 he delivered the address in surgery at the annual meeting of the British Medical Association held at Cheltenham, choosing as his subject 'Some Surgical Lessons from the South African Campaign' (*British Medical Journal*, 1901, vol. ii.). His most notable publication was an exhaustive and judicial report on the poor law medical service of Ireland, undertaken in 1891 at the request of Ernest Hart, editor of the 'British Medical Journal.' The report must form the basis of any inquiry into, or reform of, the poor law medical service. As an organiser, Thomson was at his best. He had a large share in the reorganisation of the school of the Royal College of Surgeons of Ireland during 1880-90, and in the organisation of the Royal Academy of Medicine in Ireland, formed in 1882 by the amalgamation of several old societies, whose interests and aims were not always concordant.

Thomson, who was a polished speaker and ready debater, died at his residence, 54 St. Stephen's Green, Dublin, on 13 Nov.

1909. He was buried at Mount Jerome cemetery, Dublin. A mural tablet has been erected in the Richmond Hospital, to commemorate his thirty-six years' services as surgeon, and his share in the rebuilding of the hospital in 1899. He married on 27 June 1878 Margaret Dalrymple, younger daughter of Abraham Stoker, chief clerk in the office of the chief secretary, Dublin Castle, and sister of Sir William Thornley Stoker, first baronet (1845-1912), surgeon, and of Bram Stoker (1848-1912), novelist. He left a son and daughter.

R. J. R.

THORNTON, SIR EDWARD (1817-1906), diplomatist, born in London on 13 July 1817, was only surviving son of Sir Edward Thornton, G.C.B. [q. v.]. Educated at King's College, London, and at Pembroke College, Cambridge, he graduated B.A. among the senior optimes in 1840, proceeding M.A. in 1877. He was appointed attaché at Turin, April 1842, paid attaché at Mexico in February 1845, and secretary of legation there December 1853. He witnessed the occupation of Mexico by the United States forces in 1847, and rendered some secretarial assistance in the peace negotiations. He served as secretary to Sir Charles Hotham's special mission to the River Plate (1852-3), which resulted in the conclusion of a convention for the free navigation of the Parana and Uruguay rivers. He was appointed chargé d'affaires and consul-general at Monte Video in 1854, and minister plenipotentiary at Buenos Ayres in 1859. He was made C.B. in 1863 and was accredited to the republic of Paraguay in the same year. In July 1865 he was sent on a special mission to Brazil for the renewal of diplomatic relations (which had been broken off by the Brazilian government in 1863), and received shortly afterwards the definitive appointment of British envoy at Rio de Janeiro. In September 1867 he was nominated British envoy at Lisbon, but within a few days was selected for the difficult post of minister at Washington on the death of Sir Frederick W. A. Bruce [q. v.]. Thornton remained at Washington for over thirteen years. During the earlier period a state of tension existed between the two countries which at times almost threatened an open rupture. The American public resented the recognition by Great Britain of the

southern states as belligerents. English sympathy for the South and the depredations of the Alabama and other confederate cruisers, which had escaped from or been received in British ports, increased the soreness of feeling. Other causes of dispute included questions of boundary between the United States and Canada, especially in the Straits of San Juan de Fuca to the south of Vancouver Island, and the exclusion of United States citizens from fishing privileges in the coastal waters of Canada which had been secured to them by the Reciprocity Treaty of 1814, but had been withdrawn in consequence of the denunciation of that treaty by the United States in 1865. Thornton brought to his work much patience and the spirit of calm, fair-minded moderation. But although some of the difficulties were settled, others persisted, and the irritation in the United States tended rather to augment than to diminish. Eventually a joint commission was instituted at Washington in February 1871 for the discussion and settlement of existing differences. Thornton's British colleagues were Earl de Grey (afterwards marquess of Ripon), Sir Stafford H. Northcote (subsequently earl of Iddesleigh), Sir John Alexander Macdonald [q. v.], prime minister of Canada, and Dr. Mountague Bernard [q. v.]. The result was the conclusion of the celebrated Treaty of Washington of 8 May 1871, by which the various outstanding questions and claims were referred to arbitration under specified conditions. Thornton, who was made K.C.B. in 1870, was created a privy councillor in August 1871. Further serious misunderstandings threatened during the progress of the arbitrations, but these were removed, and the eventual settlement did much to lead to more cordial feelings on the part of the United States towards this country. The United States government fully recognised that Thornton had effectively contributed to this result, and paid a tribute to his impartiality and judgment by selecting him in 1870 to act as arbitrator on the claim made on the Brazilian government for compensation on account of the loss of the American merchant vessel *Canada* on the coast of Brazil; and again from 1873 to 1876 on claims of United States and Mexican citizens. He was warmly thanked for these services, but declined offers of remuneration.

On 26 May 1881 Thornton succeeded Lord Dufferin [q. v. Suppl. II] as British ambassador at St. Petersburg. Here he again found

himself faced by a situation of increasing gravity. England had watched with growing anxiety the rapid advance of Russia on the east of the Caspian Sea towards the northern frontiers of Persia and Afghanistan. In February 1884 Merv was annexed, notwithstanding repeated assurances given in 1881 that Russia had no such intention and without any previous notice of a change of policy. Thereupon Thornton, in accordance with his instructions, arranged for the delimitation of the northern frontier of Afghanistan by a joint commission. Before the boundary commissioners got to work a Russian and an Afghan force found themselves face to face at Penjdeh, a debatable point on the frontier, and on 30 March 1885, notwithstanding the assurances of the Russian foreign minister, General Komaroff drove the Afghan troops off with considerable loss. A period of extreme tension followed. But in the end an agreement was arrived at by the two governments, a protocol as to the general line of the frontier being signed by Lord Salisbury (who had succeeded Lord Granville as foreign secretary) and by the Russian ambassador, M. de Staal, on 10 Sept. 1885. Thornton had been appointed on 1 Dec. 1884 to succeed Lord Dufferin at Constantinople, but he remained at St. Petersburg during the whole of this trying episode, his place at Constantinople being temporarily filled by Sir William White [q. v.].

Thornton's arrival at Constantinople was delayed until February 1886, in order to leave in White's hands the negotiations consequent on the revolution in Eastern Roumelia, which broke out in September 1885, and the subsequent war between Serbia and Bulgaria. A settlement was arrived at, but a fresh serious crisis was created by the abduction and abdication of Prince Alexander in August and September 1886. The cabinet were desirous that White, who had a unique knowledge of Balkan questions, should resume charge of the embassy. Thornton, despite some feeling of mortification, procured the Sultan's acceptance of White's appointment, placed his own resignation in the hands of the government, receiving their thanks for his public spirit, and returned to England. As no embassy was vacant to which he could be appointed, he retired on pension in January 1887. He declined the government's offer of a baronetcy. He had been promoted in 1883 to be G.C.B. He received honorary degrees of D.C.L. and LL.D. respectively

from the universities of Oxford and Harvard, U.S.A., and was made hon. fellow of Pembroke. He had inherited on the death of his father in 1852 the title of Count de Cassilhas, which had been conferred on his father by King John VI of Portugal for three lives.

On his return to England Thornton took a considerable part in various commercial undertakings, and was also a member of the council of foreign bondholders, where his experience of South America was of much service. He died at his residence in Chelsea on 26 Jan. 1906.

He married on 15 Aug. 1854 Mary, daughter of John Maitland, and widow of Andrew Melville, by whom he had a son and two daughters. His widow died on 6 Jan. 1907. The son, Edward Thornton (1856-1904), a young diplomatist of great promise, graduated B.A. from Trinity College, Cambridge, in 1878, and after serving in Eastern Europe rose to be British minister in Central America, where he succumbed to the climate.

A cartoon portrait of Thornton by 'Ape' appeared in 'Vanity Fair' in 1886.

[The Times, 27 Jan., 6 Feb. 1906; Foreign Office List, 1907, p. 401; Papers laid before Parliament.] S.

THRING, GODFREY (1823-1903), hymnologist, born at Alford, Somerset, on 25 March 1823, was third son of John Gale Dalton Thring, rector and squire of Alford, by his wife Sarah, daughter of John Jenkyns, vicar of Evercreech, and sister of Richard Jenkyns [q. v.], Master of Balliol. Henry Thring, Lord Thring [q. v. Suppl. II], and Edward Thring [q. v.], headmaster of Uppingham, were elder brothers. Educated at Shrewsbury school, he matriculated at Balliol College, Oxford, in 1841, graduating B.A. in 1845. After his ordination in 1846 he held successively the curacies of Stratfield-Turgis (1846-50), of Strathfieldsaye (1850-3), of Euston, Norfolk (1856), and of Arborfield, Berkshire (1857), and in 1858 succeeded his father as rector of Alford, becoming in 1876 prebendary of Wells. He resigned his living in 1893, and died at Shamley Green, Surrey, on 13 September 1903. Thring published 'Hymns and other Verses' (1866); 'Hymns, Congregational and Others' (1866); and 'Hymns and Sacred Lyrics' (1874). He also edited in 1880 'A Church of England Hymn Book, adapted to the Daily Services of the Church throughout the Year' (a revised edition appeared in 1882; 3rd edit. 1891).

The literary standard of this collection is very high, but its practical use has been limited. Thring wrote many hymns which have attained popularity. Among them are 'The radiant morn hath passed away'; 'Fierce raged the tempest'; 'Saviour, blessed Saviour'; and 'Thou, to whom the sick and dying.' He produced what is generally admitted to be the best translation for singing of Luther's 'Ein feste Burg,' 'A Fortress sure is God our King'; this is No. 245 in 'Church of England Hymn Book' (1882).

[Julian's Dictionary of Hymnology; W. Garrett Horder's *The Hymn Lover*; Duncan Campbell's *Hymns and Hymn Writers*, with particulars supplied by the author.]

J. C. H.

THRING, SIR HENRY, first **BARON THRING** (1818-1907), parliamentary draftsman, born at Alford, Somerset, on 3 Nov. 1818, was second son of the Rev. John Gale Dalton Thring by Sarah, daughter of John Jenkyns, vicar of Evercreech, Somerset. His father was both squire and rector of Alford; his mother was a sister of Richard Jenkyns [q. v.], Master of Balliol College, Oxford. He came of a long-lived stock. His father died at the age of ninety, his mother lived to be 101. Of his younger brothers Edward Thring [q. v.] was headmaster of Uppingham school, and Godfrey Thring [q. v. Suppl. II] acquired reputation as a writer of hymns.

Henry Thring was educated at Shrewsbury school under Benjamin Hall Kennedy [q. v.], to whose teaching, and that of his brother George, Thring used in after years to attribute that nice sense of the exact meaning of words which he rightly considered essential to the work of a good draftsman. From Shrewsbury Thring went to Magdalene College, Cambridge, was in 1841 third classic in the classical tripos, and was subsequently elected to a fellowship at his college. He occasionally examined for the classical tripos, but does not seem to have taken any other part in university or college work. He went to London, studied law, and on 31 Jan. 1845 was called to the bar as a member of the Inner Temple. He worked at conveyancing, 'the driest of all earthly studies,' as he describes it in the autobiographical introduction to his little book on 'Practical Legislation.' Having much leisure, and finding that the task of a conveyancer was neither profitable nor attractive, he passed to the study of the statute law, and there found the work of his future life. He read the English statute book critically from its

earliest pages downwards, extolled Stephen Langton as 'the prince of all draftsmen,' and contrasted the draftsman of Magna Charta favourably with his wordy successors. He convinced himself that a radical departure ought to be made from the conveyancing models then followed by the draftsmen of Acts of parliament. He sought for better principles and a better type of drafting in Coode's book on legal expression (1845) and in the American codes, especially those of David Dudley Field, which then enjoyed a high reputation. In 1850 he tried his hand as an amateur in framing for Sir William Molesworth [q. v.] a colonial bill in which he endeavoured to simplify and shorten the expression of legal enactments. In 1851 he published portions of this bill as an appendix to a pamphlet which he entitled 'The Supremacy of Great Britain not inconsistent with Self-Government of the Colonies.' In this pamphlet he carefully enumerated and analysed the powers exercisable by the home government and the colonial government respectively, and distributed them on lines which foreshadowed the lines of the Irish home rule bill drawn at the end of his official life. Sir William Molesworth's bill did not become law, but drew attention to its draftsman, who soon obtained employment from the government on the lines in which he had specialised. Thring drew the Succession Act of 1853 which formed part of Gladstone's great budget of that year. At the same time he was engaged on a more comprehensive piece of legislative work. Edward (afterwards Lord) Cardwell [q. v.] was then president of the board of trade, and desired to recast the body of merchant shipping law administered by his department. Accordingly, under Cardwell's instructions, and in co-operation with Thomas Henry (afterwards Lord) Farrer [q. v. Suppl. I], Thring drew the great Merchant Shipping Act of 1854 which for forty years was the code of British merchant shipping law. In the preparation of this measure he found an opportunity for putting into practice those principles of draftsmanship which he afterwards expounded in his 'Instructions to Draftsmen.' He divided the bill into parts, divided the parts under separate titles, arranged the clauses in a logical order, and constructed each clause in accordance with fixed rules based on an analysis of sentences. From merchant shipping law Thring passed to another branch of law with which the board of trade is intimately concerned, that relating to joint-stock companies, and

drew the series of bills which culminated in the Companies Act of 1862. His treatise on this Act went through three editions. Thring's work on these measures began when he was still in private practice at the bar, but in 1860 he was appointed to the important office of home office counsel. This office had been created in 1837, when, as a consequence of the Reform Act of 1832, the responsibility of the government for current legislation had been largely increased, and had devolved mainly on the home secretary. John Elliot Drinkwater Bethune [q. v.] was the first holder of the post, and, on his appointment in 1845 to the governor-general's council at Calcutta, his successor, Walter Coulson [q. v.], was entrusted with the wider duties of preparing under the direction of the home secretary bills originating from any department of the government, and of revising and reporting on any other bills referred to him by the home office. These were the duties taken over by Thring, and in his performance of them he appears to have drawn all the most important cabinet measures of the time. In his introduction to 'Practical Legislation' (1902) he described how he drew for Lord Derby's government the famous 'ten minutes' bill, the bill which, after radical alterations in parliament, became law as the Representation of the People Act, 1867. The story illustrates the conditions in which the work of drafting parliamentary bills is sometimes performed. On 3 March 1867 (November in Thring's account is an obvious slip) Spencer Walpole [q. v.], the home secretary, sent for Thring and asked him to read a bill which had been prepared by (Sir) Philip Rose, a parliamentary agent who acted for Disraeli in election matters. Thring expressed to Walpole, and on the following day to Lord Derby, an unfavourable opinion on the draft. He was asked to put himself in communication with the draftsman, and was engaged in doing so when he received from Disraeli, through his private secretary Montagu Corry (afterwards Lord Rowton), a message saying that the bill was to be entirely redrafted on different lines, and must be ready on Saturday the 17th. On Friday 16 March Thring took the bill in hand, and, working with two shorthand writers from ten to six, completed it. It was printed during the night, laid before the cabinet on Saturday, considered by Disraeli on Monday, and circulated to the House of Commons on Tuesday. This *tour de force* in draftsmanship could not, as

Thring explains, have been accomplished if he had not been saturated with his subject. He had drawn for the government the franchise bill of 1866, which did not become law, and had prepared in connection with it a series of memoranda and notes which bore fruit in the following year.

At the end of 1868 Disraeli was succeeded as prime minister by Gladstone, with Lowe as chancellor of the exchequer. One of Lowe's first steps was to improve the machinery for the preparation of government bills. The most important of them were, at that time, prepared by the home office counsel, but some departments continued to employ independent counsel to draw their bills, and other bills were drawn by departmental officers without legal aid. The result of this system, or absence of system, was unsatisfactory. The cost was great, for counsel charged fees on the parliamentary scale. There was no security for uniformity of language, style, or arrangement in laws which were intended to find their places in a common statute book. There was no security for uniformity of principle in measures for which the government was collectively responsible. And, lastly, there was no check on the financial consequences of legislation, nothing to prevent a minister from introducing a bill which would impose a heavy charge on the exchequer and upset the budget calculations for the year. The remedy which Lowe devised was the establishment of an office which should be responsible for the preparation of all government bills, and which should be subordinate to the treasury, and thus brought into immediate relation, not only with the chancellor of the exchequer, but with the first lord of the treasury, who was usually prime minister. The office was constituted by a treasury minute dated 8 Feb. 1869. The head of the office was to be styled parliamentary counsel to the treasury, and was given a permanent assistant, and a treasury allowance for office expenses and for such outside legal assistance as he might require. The whole of the time of the parliamentary counsel and his assistant was to be given to the public, and they were not to engage in private practice. The parliamentary counsel was to settle all such departmental bills and draw all such other government bills (except Scotch and Irish bills) as he might be required by the treasury to settle and draw. The instructions for the preparation of every bill were to be in writing or sent by the head of the department concerned to the

parliamentary counsel though the treasury, to which latter department he was to be considered responsible. On the requisition of the treasury he was to advise on all cases arising on bills or Acts drawn by him and to report in special cases referred to him by the treasury on bills brought by private members. Thring was appointed head of the office, and was given as his assistant (Sir) Henry Jenkyns, who succeeded to the office on Thring's retirement.

Thring held the office of parliamentary counsel during Gladstone's first ministry of 1868 to 1874, during Disraeli's ministry of 1874 to 1880, and until the close of Gladstone's third brief ministry of 1886.

This period was one of great legislative activity. The first important measure prepared by him as parliamentary counsel was the Irish Church Act of 1869; the last was Gladstone's Irish home rule bill of 1886. In the interval, among a host of other bills which did or did not find their way to the statute book, but which absorbed the time of the parliamentary counsel and his office, were the Irish Church Act of 1869, the Irish Land Act of 1871, and the Army Act of 1871, which was based on instructions given to Thring by Cardwell in 1867, and the labours on which, as its draftsman has remarked, lasted longer than the siege of Troy. The preparation of many bills relating to Ireland, which strictly lay outside the scope of his office, is accounted for by the circumstance that Irish bills always involve finance, and in practice the work of preparing them is apt to fall mainly on the office which works immediately under the treasury. It may be added that Thring's experience of Irish legislation made him a convinced home ruler.

Thring will be remembered as a great parliamentary draftsman. He broke away from the old conveyancing traditions, and introduced a new style, expounded and illustrated in the 'Instructions to Draftsmen,' which were used for many years by those working for and under him, and were eventually embodied in his little book on 'Practical Legislation' (1902, with an interesting autobiographical introduction). His drafting was criticised by the bench and elsewhere, often without regard for the difficulties inherent in parliamentary legislation, but the value of the improvements which he introduced into the style of drafting was emphatically recognised by the select committee on Acts of parliament which sat in 1875.

Thring was not merely a skilful drafts-

man. He was also 'a great legislator, so far as his duties and functions allowed, in the constructive sense. The quickness of his mind and the force of his imagination, controlled and restrained as they were by his rare technical skill, his vast knowledge of administrative law, and his instinctive insight into the nature, ways, and habits of both houses of parliament, enabled him at once to give effect to the views and wishes of the ministers who instructed him in a form best adapted to find the line of least parliamentary resistance' (*The Times*, 6 Feb. 1907). He thought in bills and clauses, and knew by instinct whether suggestions presented to him were capable of legislative expression, and if so how they should be expressed and arranged.

Improvement of the statute law was the object to which Thring persistently devoted the energies of his long and active life. He endeavoured to effect this object, not merely by introducing a better style of drafting new laws, but by throwing light upon the contents, diminishing the bulk, and reducing to more orderly arrangement the vast and chaotic mass of existing statute law. He was an original member of the statute law committee which was first appointed by Lord Cairns [q. v.] in 1868; he was for many years, and until his death, chairman of that committee and the last survivor of its original members. The work done by this committee fell under four heads:—(1) indexing; (2) expurgation; (3) republication; (4) consolidation. The chronological table of and index to the statutes, now annually published, were prepared in accordance with a plan and in pursuance of detailed instructions carefully framed by Thring. The contents of the statute book having been thus ascertained, the next step was to purge it of dead matter. This has been done by a long succession of statute law revision bills, most of which were framed under the directions of the statute law committee at a time when Thring was its most active member. Then came the republication of the living matter under the title of the statutes revised. The first edition of these statutes substituted eighteen volumes for 118 volumes of the statutes at large, the second comprised in five volumes the pre-Victorian statutes which had formerly occupied seventy-seven volumes. In the process of consolidation, although a great deal still remains to be done, much was done in Thring's time and under his guidance, and his name takes the first place in the history of this important task.

It was to Thring's initiative that was due the valuable publication of state trials from 1820, when Howell's series ended, to 1858. Its preparation arose out of a memorandum which he wrote in 1885, while he was parliamentary counsel, and he was an unfailing attendant at the meetings of the committee which supervised the publication.

Thring was made a K.C.B. in 1873, and was created a peer in 1886, on his retirement. In 1893 he seconded the address to the crown, but he was not a frequent speaker in the House of Lords, though, when he did speak, he could express himself clearly, cogently, and incisively. His quick mind and constructive intellect made him a valuable member of many public bodies, especially after his retirement from office in 1886. He had a country house at Englefield Green, in Surrey, and discharged his local duties by active membership of the Surrey county council and of the governing body of Holloway College. He also took a large part in the work of the council of the Imperial Institute and of the Athenæum club, where he was a well-known and popular figure.

Thring was a keen, vivacious little man, with a sharp tongue, which was often outspoken in its criticism of those whom he efficiently and loyally served. Robert Lowe seems to be responsible for the story that Cardwell said one day, at the outset of a cabinet committee, 'Now, Thring, let us begin by assuming that we are all d—d fools, and then get to business.'

Thring's published writings arose out of his professional or official work. Besides those mentioned he contributed an article to the 'Quarterly Review' of January 1874 which was republished in 1875 as a pamphlet under the title 'Simplification of the Law.' He superintended the compilation of the first edition of the war office 'Manual of Military Law,' and contributed to it four chapters, one of which, on the laws and customs of war on land, was made by Sir Henry Maine [q. v.] the text of some lectures on international law.

Thring died in London on 4 Feb. 1907, and was buried at Virginia Water. He married on 14 Aug. 1856 Elizabeth (*d.* 1897), daughter of John Cardwell of Liverpool and sister of Lord Cardwell. He left one daughter, but no son, and the peerage became extinct on his death.

A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1893.

[Practical Legislation introd.; The Times, 6 Feb. 1907; personal knowledge.]

C. P. I.

THRUPP, GEORGE ATHELSTANE (1822–1905), author of 'History of the Art of Coachbuilding,' born in Somerset Street, Portman Square, on 16 July 1822, was second son of Charles Joseph Thrupp, coachbuilder, by his wife Harriet Styan [see THRUPP, FREDERICK, and THRUPP, JOHN]. A younger brother was Admiral Arthur Thomas Thrupp (1828–1889). Educated privately at Clapham, George entered at an early age the family coach-making business in Oxford Street, which his great-grandfather had founded, and on the death of his father in 1866 he carried on the business with George Henry Maberly, who joined the firm in 1858 and died in December 1901. As a coachmaker Thrupp enjoyed a high reputation both in this country and on the continent, and did much to promote the general welfare of the trade. He was one of the founders in 1881 of the Institute of British Carriage Manufacturers, and of the Coach Makers' Benevolent Institution in 1856; he also took a leading part in establishing the technical schools for coach artisans in George Street (now Balderton Street), which were in 1884 taken over by the Regent Street Polytechnic. He became a liveryman of the Coachmakers' Company in 1865, a member of the court of assistants in 1879, and served as master in 1883.

In 1876 Thrupp delivered a series of lectures on coachbuilding before the Society of Arts. Published in 1877 as a 'History of the Art of Coachbuilding,' the volume became a standard work. He also published with William Farr a volume on 'Coach Trimming' (1888), and edited in the same year (2nd edit. 1894) William Simpson's 'Hand Book for Coach Painters.' Thrupp retired from business about 1889, and residing at Maida Vale divided his interests between local affairs and foreign travel. He died at his residence in Maida Vale on 1 Sept. 1905, and was buried in Paddington cemetery, Willesden Lane.

He married in August 1858 Elizabeth, daughter of Thomas Massey, by whom he had an only child, George Herbert Thrupp, who is now sole member of the firm of Thrupp & Maberly.

[City Press, 9 Sept. 1905, p. 5; Journ. Soc. Arts, 1904–5, vol. 53, pp. 1038, 1144; private information.] C. W.

THUILLIER, SIR HENRY EDWARD LANDOR (1813–1906), surveyor-general of India, born at Bath on 10 July 1813, was youngest of eleven children (five sons

and six daughters) of John Pierre Thuillier, merchant, of Cadiz and Bath, by his wife Julia, daughter of James Burrow of Exeter. An elder sister, Julia, married Walter Savage Landor [q. v.] in 1811. He descended from Huguenots who, on the revocation of the Edict of Nantes in 1685, first settled in Geneva. Educated at the East India Company's military academy, Addiscombe, Thuillier was gazetted to the Bengal artillery on 14 Dec. 1832, and was stationed at the headquarters, Dum Dum. Transferred to the survey department in Dec. 1836, he first served with parties in Ganjam and Orissa, and later was in charge of the revenue surveys in the Bengal districts of Cachar, Sylhet, Cuttack, and Patna. In Jan. 1847, ten months before receiving his captaincy, he was appointed deputy surveyor-general and superintendent of revenue surveys. That post he held for seventeen years, in the course of which he much improved the survey system and rendered the results more readily accessible to the public. He 'followed in the track of the different trigonometrical series, and thus had the advantage of fixed stations on which to base his detailed surveys' (*Memoir on Ind. Surveys*, 1878). In 1854 he prepared in his office in Calcutta the postage stamps first used in India, receiving the special thanks of government. He was joint author with Captain R. Smythe of 'The Manual of Surveying in India' (Calcutta, 1851; 3rd edit. 1885). There he discussed the difficult question of Indian orthography, which was officially standardised while he had charge of the department.

Succeeding Sir Andrew Scott Waugh [q. v.] as surveyor-general on 13 March 1861, he was promoted lieutenant-colonel in the same year, colonel on 20 Sept. 1865, and major-general on 26 March 1870. The survey of the more settled parts of India had been completed, and many of the surveys under Thuillier were over mountainous and forest-clad regions or sandy deserts, and frequently in parts never before visited by Europeans. In every branch he showed organising and administrative talent. In 1868 he transferred the preparation of the Atlas of India from England to Calcutta, selecting a staff of engravers there for the purpose, and encouraging John Bobanau Nicklerlieu Hennessey [q. v. Suppl. II] to introduce the photo-zincographic process. Under Thuillier's superintendence 796,928 square miles, or more than half the dependency, were dealt with. He was elected a fellow of the Royal Society in 1869,

made a C.S.I. in May 1870, and knighted in May 1879. In July 1876 he was awarded a good service pension. He retired on 1 Jan. 1878, and the secretary of state, in a despatch dated 18 July 1878, highly commended the energy and perseverance of his forty-one years' service, and congratulated him on the results. He was gazetted lieutenant-general on 10 July 1879, general on 1 July 1881, and (a rare distinction for an officer with little actual military service) colonel commandant of the royal artillery on 1 Jan. 1883. Settling at Richmond, he was long a useful member of the Royal Geographical Society's council, and came to be looked upon as the father of the East India Company's service. Of fine presence and genial temper, he retained his faculties till his death on 6 May 1906 at Richmond, where he was buried.

He married (1) in 1836 Susanne Elizabeth (d. 1844), daughter of the Rev. Haydon Cardew of Curry Malet, Somerset, by whom he had a son (Colonel Sir Henry Ravenshaw Thuillier, K.C.I.E., also Indian surveyor-general 1887-95), and a daughter; and (2) in 1847 Annie Charlotte, daughter of George Gordon Macpherson, Bengal medical service, by whom he had six sons (three of them became officers in the Indian army) and two daughters.

There are three portraits in oils: (1) by Mr. Beetham (1846), belonging to Sir Henry Thuillier; (2) by Mr. G. G. Palmer (1885), now in the surveyor-general's office, Calcutta; and (3) by Mrs. Rowley (1896), presented by her to his eldest daughter, Mrs. Westmoreland.

F. H. B.

THURSTON, MRS. KATHERINE CECIL (1875-1911), novelist, born at Wood's Gift, Cork, on 18 April 1875, was only child of Paul Madden, banker, of Wood's Gift by his wife Catherine Barry. The father was chairman and director of the Ulster and Leinster bank and an intimate friend of Charles Stewart Parnell [q. v.]. He was elected mayor of Cork and took a leading part in local politics on the nationalist side. Katherine's early life was passed at her father's house, where she was privately educated. Of a vivacious temperament, she became devoted to riding and swimming. But it was not till after her marriage in 1901 to Ernest Charles Temple

Thurston, the novelist, that she evinced literary ability.

Her career as a writer began with 'The Circle' (1903), which, if less sensational than her subsequent novels, showed originality. In 1904 she acquired wide fame through the publication of 'John Chilcote, M.P.', which appeared simultaneously in America under the title of 'The Masquerader.' Mrs. Thurston handled an improbable story of impersonation and mistaken identity with much skill and force. None of her subsequent works attained the same degree of popularity. 'The Gambler' (1906), a brightly written study of Irish life and scenery, was followed by 'The Mystics' (1907) and 'The Fly on the Wheel' (1908), novels of a more conventional type. In 'Max' (1910) Mrs. Thurston repeated with less success a story of impersonation. In all her work a genuine gift for story-telling is combined with a fluent style and signs of intellectual insight.

Meanwhile domestic disagreements arose with her husband, and on 7 April 1910 she obtained a decree nisi. Mrs. Thurston, who was of delicate health, suffered periodically from fainting fits. She died from asphyxia during a seizure at Moore's Hotel, Cork, on 5 Sept. 1911. She was buried in the family grave at Cork. The bulk of her property passed to her executor, A. T. Bulkeley Gavin, M.D.

[The Times, 8 April 1910 and 7 Sept. 1911; Athenæum, 9 Sept. 1911; private information.] G. S. W.

TINSLEY, WILLIAM (1831-1902), publisher, born in 1831, was the son of a Hertfordshire gamekeeper. He was educated at a dame's school, and as a child worked in the fields. He came to London in 1852 and obtained employment at Notting Hill. He joined his younger brother Edward in the publishing business of Tinsley Brothers in Holywell Street, Strand, in 1854. They afterwards moved to Catherine Street, Strand. After issuing some small volumes of essays by W. B. Jerrold and J. E. Ritchie, their first serious venture was G. A. Sala's novel 'The Seven Sons of Mammon' (1861). The next success of the firm was with Miss Braddon's (Mrs. Maxwell) 'Lady Audley's Secret' (1862) and 'Aurora Floyd' (1863). They published 'The New Quarterly Review' (1854-9), but lost money in supporting 'The Library Company,' founded to rival Messrs. Mudie's and Messrs. W. H. Smith & Son's circulating libraries. Edward Tinsley died at a little over the age of

thirty in 1866 (*Athenæum*, 22 Sept. 1866). In 1868 Tinsley started 'Tinsley's Magazine,' which was for some time edited by Edmund Yates and afterwards by the publisher himself; it continued till 1881. For many years the firm was the chief producer of novels and light literature in London. Among the authors whose works were issued by the Tinsleys were Ouida (Louise de la Ramée), William Black, Thomas Hardy, Sir W. H. Russell, J. S. Le Fanu, Joseph Hatton, Tom Hood, Blanchard Jerrold, Justin McCarthy, Andrew Halliday, Mrs. Cashel Hoey, Sir Walter Besant, Viscount Morley, Benjamin Leopold Farjeon, George Meredith, G. A. Lawrence (Guy Livingstone), Mrs. Henry Wood, Edmund Yates, Henry Kingsley, Mrs. Lynn Linton, Mrs. Riddell, Rhoda Broughton, Jean Ingelow, Mrs. Oliphant, Florence Marryat, Anthony Trollope, Mortimer Collins, Wilkie Collins, James Payn, Sir Richard Burton, George MacDonald, Captain Mayne Reid, W. Harrison Ainsworth, Amelia B. Edwards, George A. Henty, G. Manville Fenn, and Alfred Austin.

In 1878 Tinsley failed, with liabilities amounting to about 33,000*l.* He published in 1900 his reminiscences of the authors and actors he had known, under the title of 'Random Recollections of an Old Publisher,' 2 vols., with a photogravure after a photograph. He died at Wood Green, Middlesex, on 1 May 1902.

[The Bookseller, 8 May 1902; The Times, 3 May 1902; The Publishers' Circular, 10 May 1902; H. Sutherland Edwards, Personal Recollections, 1900, pp. 134-42 (doubtful accuracy); G. A. Sala, Life, 1895, i. 425; E. Yates, Recollections, 1884, ii. 87-88; S. M. Ellis, W. H. Ainsworth and his Friends, 1911, passim.] H. R. T.

TODD, SIR CHARLES (1826-1910), government astronomer and postmaster-general of the colony of South Australia, born at Islington, London, on 7 July 1826, was elder son of George Todd, a grocer at Greenwich. Charles in 1841, at the age of fifteen, obtained employment in the Royal Observatory as a supernumerary computer under Sir George Airy, the astronomer royal. He held the post, except for a few months' interval, until the end of 1847. Early next year he became assistant astronomer at the Cambridge University observatory, where, being in charge of the large telescope, the Northumberland equatorial, he was one of the earliest observers of the planet Neptune discovered in 1846), and with the same

instrument took a daguerreotype picture of the moon, this being one of the first attempts in astronomical photography. The electric telegraph was then first being applied to astronomic observation, and Todd whilst at the University Observatory helped in the operations of determining telegraphically the difference of longitude between Cambridge and Greenwich. In 1854 he was recalled to the Royal Observatory to take charge of the electro-galvanic apparatus which had just been introduced for the transmission of time signals, and in the following year Airy recommended him to the colonial office for the post of superintendent of the telegraphs to be established in South Australia, and director of the Adelaide observatory, which it was just decided to create. Todd landed in Australia on 5 Nov. 1855. He remained in charge of the colonial observatory at Adelaide until 31 Dec. 1906. The varied calls of official work prevented him from personally undertaking any extensive research. But in 1868 he co-operated with the government astronomers of Victoria and New South Wales in the determination of a more accurate position of the 141st meridian, which was to be adopted as the common boundary of South Australia and New South Wales. In 1874, during the transit of Venus, a large number of micrometric measures of the planet were made at the observatory. On the occasion of the transit in 1882 Todd journeyed to Wentworth for its observations. Long series of observations of the phenomena of Jupiter's satellites, most of them made by Todd himself, with notes on the physical appearance of the planet, were published in the 'Royal Astronomical Society's Monthly Notices,' vols. xxxvii., xxxix. and xl. He observed the Great Southern Comet of 1880 and other comets, and under his direction his assistants effected a considerable amount of observation with the transit-circle which was provided by the government of South Australia at Todd's instigation about 1880. The routine meteorological work of the observatory he directed with characteristic thoroughness, and he organised an extensive meteorological service, extending over the whole state.

But his chief energies were absorbed as soon as he reached Australia in 1855 with designs for a great telegraphic system on the Australian continent. Private enterprise had made a first effort in telegraphy in South Australia with a short line from the city of Adelaide to the port. But immediately on

his arrival Todd set up a government line over the same route, which was opened on 21 Feb. 1856. Its success was immediate and the private line was bought up and dismantled. In the same year Todd proposed to the South Australian government the establishment of an intercolonial telegraph line joining Adelaide and Melbourne, and after negotiation with the government of Victoria he brought the service between the two capitals into use in July 1858. The telegraph systems in the adjoining states, New South Wales and Queensland, had been developing contemporaneously with that in South Australia. In proposals for connecting Brisbane and Sydney with Melbourne and Adelaide Todd effectively co-operated. The line between Sydney and Melbourne was opened in 1858, and was extended to Brisbane in 1861.

Before he left England Todd had recognised the desirability of bringing Australia into closer connection with the mother country by means of the telegraph. As early as 1859 Todd submitted to Sir Richard MacDonnell [q. v.], governor of South Australia, a scheme for a line to cross the continent from Adelaide to Port Darwin, in the extreme north. This proposal, which he embodied in a despatch to the colonial secretary, was greatly helped by the exploration in the interior of John McDouall Stuart [q. v.]. Meanwhile an English company (afterwards the Eastern Extension Company) were planning a cable from Singapore via Java to Port Darwin, where a connection could be made with an Australian land line and the Australian continent could be thus united telegraphically with the rest of the world. Todd pressed his scheme with pertinacity in official quarters, and the internal line was authorised in 1870. In 1869 the telegraph and postal departments of South Australia had been amalgamated, and Todd became postmaster-general next year. The colony bore the whole charge of constructing the internal telegraph line, which was nearly two thousand miles long, mostly across unknown country. Todd supervised the difficult work, and in August 1872, being at Mount Stuart, in the centre of the Australian continent, he had the satisfaction of telegraphing by means of a portable instrument in both directions to Port Darwin and to Adelaide. The cable from Port Darwin to Singapore was in working order a little later, and complete communication was established between Adelaide and England on 21 Oct. Three weeks later banquets

were held in London, Adelaide, and Sydney to celebrate the event, and Todd was made C.M.G. The subsequent construction of the telegraph line under Todd's direction, joining West Australia to the Eastern colonies, practically completed the system for the continent, which finally extended over 5000 miles. The whole came into being in less than forty years after Todd had landed in Australia.

Todd, who was made K.C.M.G. in 1893, retained his offices till June 1905, although the Commonwealth Act of 1901 introduced slight changes into his duties and title. So long as he remained in the public service the state parliament declined to pass an Act for the compulsory retirement of septuagenarians. He joined the Royal Astronomical Society on 8 April 1864, and was elected F.R.S. in 1889. The University of Cambridge conferred on him the honorary degree of M.A. in 1886. He was a fellow of the Royal Meteorological Society and of the Society of Electrical Engineers. He died at Adelaide on 29 Jan. 1910, and was buried there.

He married on 5 April 1855 Alice Gillam (*d.* 1898), daughter of Edward Bell of Cambridge, and left one son, Dr. C. E. Todd, and four daughters.

[Adelaide journals: *The Advertiser* and *The Register*, 30 Jan. 1910; *Monthly Notices R.A.S.*, Feb. 1911; *Heaton's Australian Dict. of Dates*; *Burke's Colonial Gentry*; private information.] H. P. H.

TOMSON, ARTHUR (1859-1905), landscape painter, born at Chelmsford, Essex, on 5 March 1859, was sixth child of Whitbread Tomson by his wife Elizabeth Maria. From a preparatory school at Ingatestone in Essex he went to Uppingham. As a lad he showed an artistic bent, and on leaving school he studied art at Düsseldorf. Returning to England in 1882, he settled down to landscape painting, working chiefly in Sussex and Dorset. His landscapes were poetic, and rather similar in sentiment to the art of George Mason and Edward Stott. Although he was at his best in landscape, cats were favourite subjects of study, and he occasionally painted other animals. At the New English Art Club, of which he was an early member and in whose affairs he took warm interest, he was a regular exhibitor, but he also showed at the Royal Academy from 1883 to 1892 and at the New Gallery. An excellent and characteristic example of his refined art is the canvas called 'The Chalk Pit,' which was presented by his

widow to the Victoria and Albert Museum. He was also an interesting writer on art, and his book on 'Jean-François Millet and the Barbizon School' (1903; reissued in 1905) is sympathetic and discriminating. For some years he was art critic for the 'Morning Leader,' under the pseudonym of Verind, and he contributed to the 'Art Journal' descriptions of places in the southern counties, illustrated by his own drawings. He illustrated 'Concerning Cats,' poems selected by his first wife 'Graham R. Tomson' (1892).

He died on 14 June 1905 at Robertsbridge, and was buried in Steeple churchyard, near Wareham, in Dorset.

Tomson married in 1887 his first wife Rosamund (1863-1911), writer of poetry, youngest child of Benjamin Williams Ball, whom he divorced in 1896, and who afterwards married Mr. H. B. Marriott Watson. Tomson married secondly in 1898 Miss Hastings, a descendant of Warren Hastings, who survived him with a son.

[*Art Journal*, 1905; *Grave's Roy. Acad. Exhibitors*, 1906; private information.]

F. W. G.-N.

TOOLE, JOHN LAWRENCE (1830-1906), actor and theatrical manager, born at 50 St. Mary Axe, London, on 12 March 1830, and baptised in the church of St. Andrew Undershaft on 25 July, was younger son of James Toole by his wife Elizabeth (*Parish Reg.*). His father at the time was an India House messenger, but afterwards combined the offices of City toast master and usher in the Central Criminal Court at the Old Bailey. As toast master he enjoyed an extended fame. 'An Ode to Toast Master Toole' appeared in 'Punch' on 11 Nov. 1844. In 1846 Dickens wrote of him as 'the renowned Mr. Toole, the most emphatic, vigorous, attentive, and stentorian toast master in the Queen's dominions.' Thackeray, in his 'Roundabout Paper' on 'Thorns in the Cushion,' describes 'Mr. Toole' bawling behind the lord mayor's chair. Educated at the City of London School, young Toole began life as a wine merchant's clerk, and while so employed became a member of the City Histrionic Club, which gave performances in the Sussex Hall, Leadenhall Street, making his first appearance as Jacob Earwig in 'Boots at the Swan.' Encouraged by Dickens, who saw him in a monologue entertainment at the Walworth Literary Institute in 1852, Toole made one or two experimental appearances that year for benefits in town and country, notably

at the Haymarket on 22 July, when he played Simmons in 'The Spitalfields Weaver' at the end of a long programme, terminating at two o'clock A.M. Finally, on 8 Oct., he made his professional début in the same character at the Queen's Theatre, Dublin, where he was engaged by Charles Dillon as stock low comedian at a salary of 2*l.* per week, and, becoming an immediate favourite, remained six months. Here, for his benefit on 30 Nov., he played his popular rôle of Paul Pry for the first time. On 9 July 1853, tempted by a better offer, he transferred his services to the Theatre Royal, Edinburgh, making his first appearance as Hector Timid in 'A Dead Shot.' At Edinburgh, where he delighted his audiences by imitations of popular actors, he appeared for the first time on 7 March 1854 in his droll embodiment of the Artful Dodger in 'Oliver Twist,' singing 'The Dodger's Lament,' specially written for him by Hill, a member of the company. Returning to London for Passion Week, he gave his entertainment 'Toole at Home, or a Touch at the Times,' at the Southwark, Hackney, Walworth, and Beaumont Institutions. On 18 May 1854 he had a farewell benefit at Edinburgh, playing, *inter alia*, young Master Willikind in Hill's new burlesque 'The Loves of Willikind and his Dinah.'

On 2 Oct. Toole began his first professional engagement in London by originating at the St. James's Theatre the poorly drawn character of Samuel Pepys in Taylor and Reade's ineffective comedy, 'The King's Rival,' and the more congenial rôle of Weazle, the disguised sheriff's officer, in Selby's farce, 'My Friend the Major.' But the engagement proved disquieting, and on 26 March 1855 he returned with relief to the Edinburgh stock company. On 2 Oct. he was seen as Lord Sands in an elaborate revival of 'King Henry VIII,' and on 3 Dec. as Bottom in 'A Midsummer-Night's Dream.' For his benefit on 15 April 1856 he played Felix Rosemary in 'Toole's Appeal to the Public,' and on 29 August following concluded his Edinburgh engagement. Transferring his services for two seasons to the Lyceum in London under Charles Dillon, he first appeared there on 15 Sept. as Fanfaronade in Webb's adaptation of 'Belphegor the Mountebank,' to the Belphegor of Dillon and the Henri of Marie Wilton (Lady Bancroft), who then made her metropolitan début. The afterpiece was Brough's new burlesque 'Perdita, or the Royal Milk-maid,' in which Toole was the Autolycus,

In the succeeding summer he started provincial starring with a small company of his own, a custom he followed annually, with great pecuniary advantage, till his retirement. During a three months' sojourn at Edinburgh in the summer of 1857 he made the acquaintance of Henry Irving, playing Adolphus Spanker to his Dazzle in 'London Assurance.' A warm and lifelong friendship between the two followed.

At the Lyceum in London he was seen for the first time on 10 March 1858 in his long popular characterisation of Tom Cranky in Hollingshead's sketch 'The Birthplace of Podgers.'

Engaged by Benjamin Webster [q. v.] of the New Adelphi on the strength of a warm recommendation from Charles Dickens, Toole made his first appearance at that house on 27 Dec. 1858, and remained there nine years. At the Adelphi he succeeded Edward Richard Wright [q. v.] in many of his parts, and inherited much of Wright's fame. On 9 May he was the original Spriggins in T. J. Williams's farce, 'Ici on parle Français,' an eccentric embodiment that maintained perpetual vogue. The revival of 'The Willow Copse' in September was notable for Toole's rendering of Augustus de Rosherville, a character formerly deemed the vehicle for the broadest kind of humour, but now rationalised by the genius of the actor. Toole created leading parts in many ephemeral farces, and was also the first Brutus Toupet in Watts Phillips's 'The Dead Heart' (10 Nov. 1859). At Christmas he made an effective Bob Cratchit in 'The Christmas Carol.' He did justice to Enoch Flicker, a powerfully drawn semi-serious character in Phillips's spectacular 'A Story of '45' (12 Nov. 1860), which Webster produced at Drury Lane; and was Wapshot in the first performance in England of Boucicault's 'The Life of an Actress' (Adelphi, 1 March 1862). On 14 April following Toole showed his full power in his delicate embodiment of old Caleb Plummer, the toymaker, in 'Dot' (Boucicault's version of 'The Cricket on the Hearth'), an impersonation in which he combined irresistibly humour and pathos. Toole's Caleb Plummer undoubtedly ranks among the histrionic masterpieces of his century. Among succeeding triumphs in drama or burlesque are to be noted his rendering of Azucena in Byron's burlesque 'Ill-treated Il Trovatore' (21 May), and of Mr. Tetterby in 'The Haunted Man' at the Adelphi (27 June 1863).

Toole had now attained a salary of 35*l.*

per week. On 7 March 1864 he was the original policeman in Brough and Halliday's farce 'The Area Belle' to the soldier of his ally Paul Bedford. In this he first sang E. L. Blanchard's ditty 'A Norrible Tale.' For his annual benefit on 14 Sept. he produced Oxenford's adaptation of 'Le Père Goriot' entitled 'Stephen Digges,' which had been written specially to suit his capacity for serio-comic acting of the Robsonian order. After seeing this masterly performance Dickens wrote to Forster that Toole had shown 'a power of passion very unusual indeed in a comic actor, as such things go, and of a quite remarkable kind.' But the play proved unattractive and was not revived. On 26 June 1865 he originated with acceptance another semi-serious plebeian character, Joe Bright, in Walter Gordon's comedy-drama 'Through Fire and Water,' and surprised his audience in the opening act by a grimly realistic exhibition of drunken savagery. In the summer of 1866 he went on tour with Henry Irving.

On 25 Nov. 1867, after Toole's association with the Adelphi ended, he produced at the Alexandra, Liverpool, Byron's comedy 'Dearer than Life,' in which the character of Michael Garner had been specially designed for his serio-comic capabilities. On its production in London at the Queen's Theatre, Long Acre, on 8 Jan. 1868, Toole was supported by a new cast, comprising Charles Wyndham, Henry Irving, Lionel Brough, and Henrietta Hodson, and the harmony of the acting concealed the defective construction of the play. Toole's mingled exhibition of grief, passion, and humour as the brave old man who could endure starvation with a pleasant face raised him higher in critical estimation. In association with Henry Irving, he subsequently fulfilled an engagement of seven weeks at the Standard Theatre. After his usual autumn tour he returned to the Queen's, Long Acre, on 26 Dec., and on 13 Feb. 1869 originated Jack Snipe in Watts Phillips's drama 'Not Guilty.'

On 13 Dec. 1869 Toole began his long and varied association with the Gaiety under John Hollingshead [q. v. Suppl. II], by producing there Byron's drama 'Uncle Dick's Darling,' in which his half-pathetic, half-comic acting as Dick Dolland, the Cheap Jack, delighted Dickens. Seven nights later Toole played the title-character in Sala's new burlesque 'Wat Tyler, M.P.,' and was well supported by Nellie Farren [q. v. Suppl. II] and Marie Litton. In his autumn tours of 1869 and 1870 Toole was accompanied by Henry Irving, the two

playing, *inter alia*, Jacques Strop and Robert Macaire, characters in which they were afterwards seen at the Lyceum on 15 June 1883. For some time from 16 April 1870 Toole had the Grimaldian experience of acting nightly at two theatres. After appearing in 'Uncle Dick's Darling' at the Standard he finished the evening as Cabriolo in Offenbach's opera-bouffe 'The Princess of Trebizonde,' at the Gaiety. At the latter house in the following Christmas he contributed materially to the success of Alfred Thompson's opera-bouffe 'Aladdin II,' by his whimsicality as Ko-Kli-Ko. There also on 24 Jan. 1871 he appeared as Sergeant Buzfuz in Hollingshead's sketch 'Bardell v. Pickwick,' for the benefit of the Royal Dramatic College Fund. At Christmas he performed acceptably as Thespis in Gilbert and Sullivan's first extravaganza, 'Thespis, or the Gods Grown Old.' In September 1872 he revelled in the title-character of Reece's burlesque 'Ali Baba.' Burlesque chiefly occupied him at the Gaiety, but he was seen there in Liston's character of Billy Lackaday in 'Sweethearts and Wives' (3 April 1873), as Mawworm in 'The Hypocrite,' to Phelps's Doctor Cantwell (15 Dec.), as Dennis Brulgruddery in 'John Bull' to Charles Mathews's Hon. Tom Shuffleton (21 Dec.), and as Bob Acres in association with Phelps and Mathews (14 Feb. 1874). His salary at the Gaiety at this period was 100*l.* per week.

On 6 April 1874 Toole opened the Globe Theatre for ten weeks, first producing there Albery's new domestic drama 'Wig and Gown,' in which he originated the extravagant character of Hammond Cooté the barrister. After being banqueted at Willis's Rooms by a distinguished gathering under the presidency of Lord Rosebery on 24 June, Toole sailed for a first and last visit to America, accompanied by his wife and family and four supporting players. On 17 August he made his first appearance at Wallack's Theatre, New York, acting in 'Wig and Gown' and 'The Spitalfields Weaver.' The American public gave him a lukewarm reception, and condemned his humour as Cockneyfied. Returning to London after a year's absence, he reappeared at the Gaiety on 8 Nov. 1875, and on 3 Dec. was seen there in Reece's absurdity 'Toole at Sea.' He subsequently originated the title-character in Byron's comic drama of 'Tottles,' and created Professor Muddle in Reece's 'A Spelling Bee, or the Battle of the Dictionaries,' in which he sang 'The Two Obadiahs.' The last new production

of importance in which he appeared at the Gaiety was Burnand's farcical comedy 'Artful Cards' (24 Feb. 1877), in which, as Mr. Spicer Rumford, his humour had full scope.

Taking the Globe for a season, Toole produced there on 17 Dec. 1877 his own farcical sketch 'Trying a Magistrate,' and exactly a month later he originated the congenial rôle of Charles Liquorpond, the retired footman, in Byron's successful comedy 'A Fool and his Money.' At the end of 1879 Toole leased for a term ultimately extending to sixteen years the Folly (formerly the Charing Cross) Theatre, a little house in King William Street, Strand. He inaugurated his management on 17 Nov. 1879 with 'A Fool and his Money' and 'Ici on parle Français.' At the Folly, where he maintained a small permanent stock company, some members of which, such as John Billington and Eliza Johnstone, remained with him for years, he mainly relied on farcical comedies or burlesques by Byron or Reece. His production of Byron's comedy 'The Upper Crust' on 31 March 1880, with himself as Barnaby Doublechick, the soap-boiler, proved remarkably successful. Early in 1882 he took the Folly on a long lease, and re-opened it as Toole's Theatre on 16 Feb., when he was seen as Paul Pry. After producing Law and Grossmith's musical farce 'Mr. Guffin's Elopement,' at the Alexandra, Liverpool, on 29 Sept., with himself as Benjamin Guffin, he transferred it to Toole's on 7 Oct., and was very successful in his singing of 'The Speaker's Eye.' At the close of the month he originated Solomon Protheroe, the village cobbler-pedagogue in Pinero's unconventional comedy 'Girls and Boys'; but the play was puzzling and proved a failure. Subsequently he brought out from time to time several travesties of popular plays by Burnand, himself amusingly caricaturing Charles Coghlan as Loris Ipanoff in 'Stage Dora' (26 May 1883), Wilson Barrett as Claudian in 'Paw Clawdian' (14 Feb. 1884), and Irving as Mephistopheles in 'Faust and Loose' (4 Feb. 1886).

On 24 Nov. 1886 Toole produced at the Theatre Royal, Manchester, Mr. and Mrs. Herman Merivale's domestic comedy 'The Butler,' in which he was admirably fitted as David Trot. On its transference to Toole's on 6 Dec. the new piece proved very successful. Of equal popularity was the same authors' comedy 'The Don,' as produced at the King William Street house on 7 March 1888, with Toole as Mr. Milliken, M.A.

Domestic distress caused his retirement during 1888 and 1889. In Feb. 1890, shortly after his return to the stage, he accepted an offer to visit Australia, where he was warmly welcomed and remained longer than he had intended. He re-appeared at Toole's on 23 April 1891 in 'The Upper Crust.' On 30 May he appeared as Ibsen, wonderfully made up, in J. M. Barrie's sketch 'Ibsen's Ghost; or Toole up to Date.' The most noteworthy production of his declining years was Barrie's comedy 'Walker, London,' brought out at Toole's on 25 Feb. 1892 with himself as Jasper Phipps, the fugitive bridegroom and barber. Gout now began to make serious inroads on his health, and from this time onwards his acting became a painful spectacle. On 28 Sept. 1895 his lease of the theatre expired and his London career ended. The theatre was pulled down at the end of the year to afford extension to Charing Cross Hospital. For a few months Toole lagged superfluous on the provincial stage, making his last appearance at the Theatre Royal, Rochdale, on 19 Dec. 1896, when he was seen as Caleb Plummer and Tom Cranky. Degeneration of the spinal cord soon rendered Toole a helpless invalid. Retiring to Brighton, he died there on 30 July 1906. He was buried in Kensal Green cemetery beside his wife and children, who all predeceased him. Toole's later life was marked by severe domestic distresses. He married in 1854 Susan Kaslake, a young widow unconnected with the stage, with whom he lived very happily, and who almost invariably accompanied him while on tour. By her he had a son and a daughter. On 4 Dec. 1879 the son, Frank Lawrence Toole, died, aged 23. The daughter, Florence, died on 5 Nov. 1888, and his wife a few months later.

He left a fortune of 79,964*l.* By his will he made numerous legacies to friends and to charities. In 1889 there was published his 'Reminiscences,' which were compiled by Joseph Hutton [q.v. Suppl. II].

Toole's eccentric drollery was the outward expression of a frolicsome, boyish, sunny nature, which otherwise manifested itself in ebullitions of practical joking, wholly void of offence. Simple in his tastes and domestic in his habits, he was entirely lovable, never making an enemy or losing a friend. Although he was fundamentally an artist, with high personative qualities and considerable gifts of pathos, the preponderance of his work was of the laughter-making order. But his Caleb Plummer and Michael Garner showed

a capacity for higher things. As a low comedian he was a disciple of the school of Liston and Wright, a school that believed in establishing so complete an understanding with the public that liberties might be taken with it. Where the author failed, the comedian made fun on his own account. Toole had all Wright's propensities for 'gagging,' and (especially in the provinces) gratified them to the full. If his humour was neither so rich nor so spontaneous as Wright's, it at least lacked his coarseness and lubricity. The last great low comedian of the old school, Toole was certainly the cleanest. A portrait of him by the Hon. John Collier, presented in 1895 by Sir Henry Irving, hangs in the Garrick Club (No. 340). Several other portraits of the comedian in character were sold at the auction of his effects at Sotheby's on 8 Nov. 1906. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1896.

W. J. L.

TORRANCE, GEORGE WILLIAM (1835-1907), musician and divine, born at Rathmines, Dublin, in 1835, was eldest son of George Torrance, merchant tailor, and was a chorister in Christ Church Cathedral from 1847 to 1851, under Sir Robert Prescott Stewart [q. v.]. He was organist for a short time at Blackrock, and then at St. Andrew's in 1852 and at St. Ann's in 1854. A 'Te Deum' and 'Jubilate' which he composed in early youth showed promise, and in 1854 he composed an oratorio, 'Abraham,' which was performed—with Sir Robert Stewart at the organ—at the Antient Concert Rooms, Dublin, next year. In order to complete his musical studies he went to Leipzig in 1856, returning to Dublin in 1858. A second oratorio, 'The Captivity' (words by Gold-

smith), was given at the Antient Concert Rooms on 19 December 1864. Meanwhile drawn towards the ministry, he entered Trinity College in 1859, and graduated B.A. in 1864, proceeding M.A. in 1867. Ordained deacon in 1865 and priest in 1866, he was curate of St. Michael's, Shrewsbury (1865-7), and of St. Ann's, Dublin (1867-9).

In 1869 Torrance went in search of health to Australia, holding successively the curacies of Christ Church, Melbourne (1870-1); St. John's, Melbourne (1871-7); and the incumbencies of All Saints, Geelong (1877-8); Holy Trinity, Balaclava (1878-94); and St. John's, Melbourne (1894-7). In 1879 he received the degree of Mus.D. from Dublin University, and in 1880 Melbourne University conferred on him a similar honour. His third oratorio, 'The Revelation,' was produced at Melbourne in June 1882.

In 1897 Torrance returned to Ireland, and was appointed chaplain to the bishop of Ossory, being made in 1899 bishop's vicar choral and librarian of St. Canice's Cathedral library, and in 1900 prebendary of Killamery and canon of St. Canice's. He was also registrar for the united dioceses of Ossory, Ferns, and Leighlin. He continued to compose much sacred and secular music. In January 1902 he won the prize of ten guineas offered by the 'School Music Review' for the best coronation song for school singing, namely, 'Come, raise we now our voices,' published as No. 676 of Novello's 'School Songs.' In 1903 his madrigal 'Dry be that tear' obtained the Molyneux prize and the society's medal, offered by the Madrigal Society (London). Two of his anthems, 'Who shall roll us away' and 'I will pray the Father,' were published in Novello's 'Octavo Anthems,' and ten of his hymns are included in the 'Church Hymnal' (Ireland)—'Euroclydon' being still a favourite. He died on 20 Aug. 1907. He was married, and his wife died two days before him.

W. H. G. F.

TOWNSEND, MEREDITH WHITE (1831-1911), editor of the 'Friend of India' and the 'Spectator,' born in London on 1 April 1831, was the only son (in the family of three children) of William Townsend, one of the sixteen children of Charles Townsend of Ferriers, Bures St. Mary, on the borders of Essex and Suffolk. The family had been long settled in North Essex, both at Coggeshall and Bures, and

William Townsend inherited a few hundred acres, which he farmed himself. His wife Alicia was daughter of John Sparrowe of 'The Ancient House' or 'Sparrowe House,' Ipswich. On the death in early middle age of William Townsend, who was unsuccessful in business, his widow returned to Ipswich with her three children.

Meredith Townsend was educated at Queen Elizabeth's grammar school, Ipswich, where he had for schoolfellow Edward Byles Cowell [q. v. Suppl. II], the orientalist, and distinguished himself greatly in classics, but left at sixteen in 1847 to become assistant in a school in Scotland. From this work, on which he looked back with something like horror, he was speedily rescued by an invitation from a friend of the family, John Clark Marshman [q. v.], to come out and assist him in the editing of the 'Friend of India' (founded in 1835) at Serampore, near Calcutta. Townsend left the Scotch school on the day on which he received the message, and sailed in 1848 for India. He lived with the Marshmans at Serampore, and sent home the whole of his first year's salary to his mother. From the first he threw himself into his work with such energy and ability that at twenty-one he was already editor of the 'Friend of India,' and in 1853 he became proprietor. His knowledge of native affairs was largely derived from an old pundit who taught him Bengali. Amongst others who contributed to the 'Friend' was Dr. George Smith, but it was essentially a one-man paper in Townsend's time. In later years he used to say that he often wrote the whole paper 'except the advertisements.' The influence he exerted and the value of his support were attested by Lord Dalhousie and Lord Canning. The former, whose policy Townsend stoutly defended, writing on the eve of his departure, 3 March 1856, thanked Townsend for the fairness 'with which you have always set your judgment of my public acts before the community whose opinions are largely subject to your influence,' and again on 28 Dec. 1857 for standing by him 'at a time when, literally fettered and gagged, I am deprived of all power of defending myself.' Lord Canning, in a letter dated 2 April 1857, expressed his special satisfaction with the service Townsend had rendered to the army and the state by an article on the officers of native regiments. Besides his work on the 'Friend,' Townsend also undertook temporarily the editorship of 'The Calcutta Quarterly Review' and the 'Annals of Indian Administration.' He further edited

a vernacular journal, 'Satya Pradip' formerly 'Sumachar Durpun' (or 'Mirror of News') and acted as correspondent of 'The Times.' Returning to England to recruit his health, he was summoned back to India by the outbreak of the Mutiny. Townsend remained at his post at Serampore throughout this trying period, in which the influence of the 'Friend of India' reached its zenith, but his health broke down under the strain, which was aggravated by domestic trouble. In 1859 he was peremptorily ordered home by the doctors. Dr. George Smith succeeded him as editor.

Rapidly regaining his health on his return to England, Townsend bought the 'Spectator' in 1860 from Mr. Scott, the successor of Robert Stephen Rintoul [q. v.], and a few months later took into partnership Richard Holt Hutton, to whom he had been introduced by Walter Bagehot. The terms of the agreement made them joint-editors and co-proprietors, but the ultimate control rested with Townsend. Their relations were defined by Townsend in the 'Spectator' (11 Sept. 1897) after Hutton's death as 'an unbroken friendship of thirty-six years and a literary alliance which at once in its duration and completeness is probably without a precedent.' During the first few years of their alliance the 'Spectator,' which had declined in prestige after Rintoul's death, was worked at a loss. The editors ran counter to the opinion of the well-to-do classes in England by their unflinching support of the unpopular side in the American civil war. They upheld and prophesied victory for the North all along; their excellent military critic, George Hooper, was quick to seize the immense significance of Sherman's famous 'March to the Sea'; and as the tide of war turned, so also did the fortunes of the paper.

Townsend, though he contributed freely to all departments of the paper, wrote chiefly on foreign politics and always on India. He brought to bear on his special subject an immense store of illustrative information, not invariably accurate, for he was an omnivorous reader, and had a picturesque and even romantic outlook on the future. He wrote with the utmost ease and unflinching zest in a clear, vigorous, natural style and never qualified his statements. He dogmatised freely, but was never pedantic. His habitual indulgence in prophecy occasionally led him astray. Thus his accurate prediction of the danger to Cavagnari's mission to Kabul in 1879 was neutralised by his unfounded pessimism—

which he frankly owned afterwards—in regard to the expedition of Lord Roberts.

The peculiar quality of the 'Spectator' under the Townsend and Hutton régime was due to the fact that it was written mainly by two men of remarkable ability, whose equipments were supplementary to each other, and who devoted their entire energies to the paper. They enlisted, however, the occasional assistance of many able men, among them Walter Bagehot, Charles Henry Pearson, afterwards minister of education in Victoria, Sir Robert Giffen, Mr. H. H. Asquith, and Mr. W. F. Monypenny, the biographer of Lord Beaconsfield. Townsend's journalistic activity extended over a period of exactly sixty years, during which time he must have written close on 10,000 articles. Besides his work on the 'Spectator,' for many years he contributed the political article in the 'Economist.' In 1898 Townsend resigned his editorial control of the paper on its sale to Mr. St. Loe Strachey, who had been assistant-editor since 1886, but he continued to contribute to its columns with little abatement of his powers though in diminished volume for another ten years. His last article appeared in the issue of 16 May 1908, and bore the characteristic title 'The Unrest of Asia.' In 1909 his health failed rapidly, and after a long illness he died on 21 Oct. 1911 at the Manor House, Little Bookham, in Surrey. He had removed thither in 1899 from the house in Harley Street which he had occupied since 1864. He was buried in Little Bookham churchyard.

Townsend was married thrice: (1) in 1853, to his cousin, Miss Colchester, who died in the same year; (2) in 1857, to Isabel Collingwood, who died shortly after the birth of a son in 1858; and (3) shortly after his final return to England, in January 1861, to Ellen Frances, daughter of John Francis Snell of Wentford House, Clare, Suffolk; she survived him till May 1913 with a son and two daughters.

Townsend wrote little except for the press. But he collaborated with his friend John Langton Sanford [q. v.] in 'The Great Governing Families of England' (2 vols. 1865), which gives in a condensed but animated form 'the leading ascertained facts in the history of our great families.' In August 1901 he republished a number of articles contributed to various reviews besides the 'Spectator' under the title 'Asia and Europe.' The volume, which contains an interesting study of Mahomet, is somewhat pessimistic in tone. Townsend

expresses the view that the Indian peoples will almost certainly become Mohammedan, and the general drift of his conclusions is summed up in the sentence 'The fusion of the continents has never occurred, and in the author's best judgment will never occur.' His only non-political essay outside the 'Spectator' was an appreciative study in the 'Cornhill' of the novels of Mrs. Oliphant, whom he attached to the 'Spectator,' and who for some time wrote for it 'A Commentary from an Easy Chair.'

Townsend went little into society, and never belonged to a club, but received his friends regularly at Harley Street on Mondays. In private life he was remarkable for his genial old-fashioned courtesy and brilliant paradoxical talk. He was generous beyond ordinary experience; no master of his craft was kinder or more helpful to the raw apprentice.

[Obituary notices in The Times, Manchester Guardian, and Glasgow Herald, 24 Oct. 1911, and in British Weekly; personal knowledge; information supplied by the family.]

C. L. G.

TRACEY, SIR RICHARD EDWARD (1837-1907), admiral, son of Commander Tracey of the royal navy, was born on 24 Jan. 1837, and entered the navy in 1852. He served during the Baltic campaign of 1854 as a midshipman of the Boscawen, and received the medal; he passed his examination in Jan. 1858 while serving in the Harrier, sloop, on the south-east coast of America, and was promoted to lieutenant on 28 June 1859. After studying on board the Excellent he was appointed in July 1860 to the Conqueror in the Channel squadron, and two years later received a supernumerary appointment to the Euryalus, flagship of Sir Augustus Leopold Kuper [q. v.] on the East Indies and China station. While in her he took part in the active operations in Japan, especially the engagement with the forts at Kagosima in Aug. 1863, and the attack on the batteries in the Straits of Simonoseki in Sept. 1864. For these services he was mentioned in despatches, and on 21 Nov. 1864 was promoted to commander. The Japanese government under the Tokugawa Shōgurata having asked that English naval officers might be lent for training purposes to their newly formed modern navy, the request was granted and Tracey placed in charge of the mission. He and his companions set about organising and superintending the naval school at Tsukiji during 1867-8,

and while thus employed he was borne on the books of the flagship. But a new Japanese administration interrupted Tracey's work, which was not resumed till 1873, when Commander (Sir) Archibald Douglas took out to Japan a second naval mission. Tracey, however, for a short time rendered similar services to the Chinese navy, for which he was decorated by the emperor with the order of the Double Dragon, and in Nov. 1869 was appointed to command the gun-vessel *Avon*, in which he remained on the China station until his promotion to captain on 29 Nov. 1871. In July 1876 he was appointed to the *Spartan*, corvette, which he commanded for four years on the East Indies station, and particularly on the east coast of Africa, where he cruised for the suppression of the slave trade. In Jan. 1881 he became flag captain in the Iron Duke to Sir George Ommanney Willes [q. v. Suppl. II], commander-in-chief on the China station, and returning home early in 1884 was appointed to the *Sultan*, which he commanded for a year in the Channel squadron. In April 1885 Tracey became an aide-de-camp to Queen Victoria, and in July was appointed to Portsmouth dockyard. He reached flag rank on 1 Jan. 1888.

Tracey first hoisted his flag as second-in-command of the fleet under Sir George Tryon [q. v.] in the manœuvres of 1889, and in Sept. of that year was appointed in the same capacity to the Channel Squadron. In Jan. 1892 he was made admiral superintendent at Malta, and on 23 June 1893 was promoted to vice-admiral. In 1896 he was an umpire for the naval manœuvres, and for three years from Oct. 1897 was president of the Royal Naval College at Greenwich. He was awarded the K.C.B. in May 1898, was promoted to admiral on 29 Nov. following, and retired on 24 Jan. 1901. He died in London on 7 March 1907, and was buried at Kensal Green.

Tracey was twice married: (1) in 1865 to Janet (*d.* 1875), daughter of the Rev. W. Wingate; (2) on 30 Nov. 1887 to Adelaide Constance Rohesia, only daughter of John Constantine de Courcy, 29th Baron Kingsale in the Irish peerage.

TRAFFORD, F. G. (pseudonym). [See RIDDELL, MRS. CHARLOTTE ELIZA LAWSON (1832-1906), novelist.]

TRAILL-BURROUGHS, SIR FREDERICK WILLIAM (1831-1905), lieutenant-general. [See BURROUGHS.]

TREVOR, WILLIAM SPOTTISWOODE (1831-1907), major-general, royal (Bengal) engineers, born in India on 9 Oct. 1831, was second son of Captain Robert Salusbury Trevor, 3rd Bengal cavalry, by his wife Mary, youngest daughter of William Spottiswoode, laird of Glenferne, Perthshire, N.B. His father was one of the party of three murdered with Sir William Macnaghten [q. v.] at Kabul in 1841. The widow and children were detained in captivity by Akbar Khan for nine months in Afghanistan. After their release and return to England William was educated at the Edinburgh Academy and at the East India Company's military seminary at Addiscombe. He obtained a commission as second-lieutenant in the Bengal engineers on 11 Dec. 1849. While under professional instruction at Chatham, he was for some months on special duty at the Great Exhibition of 1851. He arrived in India in 1852 in time to take part in the Burmese war; was severely wounded in the escalade and capture of the White House Picquet stockade in the operations before Rangoon on 12 April 1852, and was mentioned in despatches. In the autumn he had sufficiently recovered to join the force under Sir John Cheape [q. v.] in the Donabew district, and was present in several actions, ending with the attack on the entrenched position at Kym Kazim on 19 March 1853. For his conduct on this occasion, when he was again wounded, Trevor received the thanks of government in a 'notification' dated 22 April 1853 and the medal with clasp. He was promoted lieutenant on 1 August 1854.

After the conclusion of the Burmese war he was employed on the Pegu survey, and later on the Bassein river in Burma, with a view to constructing a sanatorium at the mouth of the river. The country was in an unsettled state and Trevor's position most insecure. Transferred in October 1857 to Bengal, he accompanied the Darjeeling field force, to intercept the mutineers of the 75th native infantry from Dacca, and engaged them at Cherabandar on the Bhutan frontier. Promoted captain on 27 Aug. 1858, Trevor was employed in the construction of the Ganges and Darjeeling road. In 1861 he was appointed garrison engineer at Fort William, Calcutta, and converted a tract of waste land on the bank of the Hooghly into the pleasure resort

known as the Eden Gardens. In Feb. 1862 he officiated as superintending engineer of the northern circle, and completed the Ganges and Darjeeling road to the foot of the mountains. In May 1863 he was appointed controller of accounts, and improved the method of keeping them.

In Feb. 1865 Trevor joined the Bhutan field force as field engineer under Major-general (Sir) Henry Tombs [q. v.]. At the attack on Dewan-Giri on 30 April following, Trevor and a brother officer, James Dundas [q. v.], greatly distinguished themselves in forcing their way alone ahead of their Sikh soldiers into a barely accessible blockhouse, the key of the enemy's position, in which some 180 to 200 of the enemy had barricaded themselves after the rest of the position had been carried. His gallantry was rewarded by the V.C. He was suffering from illness at the time, and was five times wounded in the desperate encounter. After being treated at Gauhati he went on long leave of absence, and on his return became superintending engineer at the Bengal Presidency. He was made brevet major on 15 May 1866, and received the medal and clasp for his services in the campaign.

Promoted lieutenant-colonel on 19 Aug. 1874, Trevor was appointed special chief engineer for the famine relief works north of the Ganges. He received the thanks of the government for his work. After serving as inspector-general of military works he was transferred as chief engineer to Central India, and in Dec. 1875 was appointed chief engineer of British Burma. In this post, which he held for five years, he helped to draft a scheme for the reorganisation of the engineer establishment, for which he was again thanked by the government. He attained the rank of brevet colonel on 19 Aug. 1879. From Feb. 1882 to Feb. 1887 Trevor was secretary to the government of India in the public works department. He retired with the honorary rank of major-general on 20 Feb. 1887. He was a steady shot with a revolver, to which on several occasions he owed his life, an expert swordsman, and a daring rider. He died on 2 Nov. 1907 at 58 Victoria Street, London, and was buried at Kensal Green.

He married on 19 June 1858, at Darjeeling, India, Eliza Ann, daughter of the Rev. H. Fisher, Indian chaplain. She died in 1863, leaving two daughters, the elder of whom died in 1878. The younger daughter, Florence Mary, married in 1882 Colonel Maule Campbell Brackenbury, C.S.I., royal engineers.

A painting by Miss G. Brackenbury (1901) belongs to his daughter.

R. H. V.

TRISTRAM, HENRY BAKER (1822-1906), divine and naturalist, born at Eglingham, Northumberland, on 11 May 1822, was eldest son of Henry Baker Tristram, vicar of Eglingham, by Charlotte, daughter of Thomas Smith. A younger brother, Thomas Hutcheson (b. 25 Sept. 1825), an ecclesiastical lawyer, became chancellor of London and many other dioceses, and died on 8 March 1912.

Educated first at Durham school, Henry matriculated on 9 Nov. 1839 as a scholar of Lincoln College, Oxford, and graduated B.A. with a second class in classics in 1844, proceeding M.A. in 1846. He was ordained deacon in 1845 and priest in 1846, and was curate of Morchard Bishop (1845-6). Threatened with lung trouble, he went to Bermuda, where he was secretary to Sir William Henry Elliott [q. v.], the governor, acting also as naval and military chaplain, 1847-9. There he took up the study of birds and shells. In 1849 he became rector of Castle Eden, co. Durham, and held the living till 1860; but ill-health drove him to Algeria for the winters of 1855-6, 1856-7. He penetrated far into the desert, made an ornithological collection, and gathered material for his first book, 'The Great Sahara' (1860). The following winter he visited Palestine and Egypt, and, on returning, became master of Greatham Hospital and vicar of Greatham, co. Durham. Revisiting Palestine in 1863-4, he produced on his return the first of his books on the Holy Land. In 1868 he received from Edinburgh University the hon. degree of LL.D., and was elected F.R.S. In 1870 Tristram was made hon. canon of Durham and canon residentiary in 1874, when he left Greatham.

In 1879 Tristram declined Lord Beaconsfield's offer of the Anglican bishopric in Jerusalem, although he visited Palestine again in 1880-1, in 1894, and in 1897. During 1891 he travelled in Japan, China, and North-West America. In ritual controversy at home, while his convictions were strongly protestant, he associated himself with the moderate evangelicals. But his chief interest lay in the work for the Church Missionary Society, and he acted for forty years as its representative in the county of Durham. An enthusiastic

freemason, Tristram was in 1884 appointed grand chaplain of England, and in 1885 deputy provincial grand master for Durham. In 1891 he visited Japan, where a daughter was a missionary. In 1893 he presided over the biological section of the British Association at Nottingham. He retained his vigour of mind and body till his death at Durham on 8 March 1906. Tristram married in 1850 Eleanor Mary, daughter of Captain P. Bowlby, 4th King's Own (d. 1903), by whom he had one son and seven daughters.

As a traveller and a naturalist, Tristram was a close observer and diligent collector. His knowledge of the geology, topography, and natural history of Palestine was unrivalled. His study of the larks and chats of North Africa led him, before the issue of the 'Origin of Species' in Nov. 1859, to support (*The Ibis*, 1859, p. 429) 'the views set forth by Messrs. Darwin and Wallace in their communication to the Linnæan Society' (1 July 1858), though he afterwards modified his language. His collection of 20,000 birds, of which he published a catalogue (Durham, 1889), he sold to the public museum of Liverpool; his collection of birds' eggs ultimately passed to the Natural History Museum.

Tristram's scientific accuracy and picturesque style rendered his writings at once valuable and popular. In addition to contributions to periodical literature and much work in Smith's 'Dictionary of the Bible,' he published: 1. 'The Land of Israel: a Journal of Travel with Reference to its Physical History,' 1865; 3rd ed. 1876. 2. 'The Natural History of the Bible,' 1867. 3. 'The Topography of the Holy Land,' 1872—later entitled 'Bible Places, or the Topography of the Holy Land,' 5th ed. 1897. 4. 'The Land of Moab: Travels and Discoveries on the East Side of the Dead Sea and the Jordan,' 1873. 5. 'Pathways of Palestine: a Descriptive Tour through the Holy Land,' 1881-2. 6. 'The Fauna and Flora of Palestine,' 1884. 7. 'Eastern Customs in Bible Lands,' 1894. 8. 'Rambles in Japan,' 1895.

[Proc. Roy. Soc., B. vol. lxxx.; Field, 17 March 1906; Record, 16 March 1906; Church Missionary Intelligencer, April 1906; private information.] A. R. B.

TRUMAN, EDWIN THOMAS (1818-1905), dentist and inventor, born on 20 Dec. 1818, was the son of Thomas Truman, a descendant of Sir Benjamin Truman, the founder of the firm of brewers, Truman, Hanbury and Buxton. He was educated at King's College School, London, and

King's College Hospital. On 28 Feb. 1855 he was appointed dentist to the royal household, holding this appointment until his death, a period of fifty years. He became M.R.C.S.England in 1859. His dental work led him to study the varied properties and uses of gutta-percha. His chief claim to notice is his invention of an improved method of preparing gutta-percha as the protective covering for the Atlantic cable. The failure of the first cable of 1858 and those subsequently laid was due to imperfect insulation, which a committee of inquiry appointed by the privy council attributed to the improper preparation of the gutta-percha employed. Truman discovered that gutta-percha could be purified in any quantity by mechanical means without injury, and after his discovery had been satisfactorily tested by the committee, the invention was patented, on 25 Aug. 1860, the rights were sold to the Gutta-Percha Company, and all subsequent cables which were laid were covered with gutta-percha prepared by Truman's process. In 1860 he invented a machine for the preparation of crude gutta-percha, and established a factory at Vauxhall Cross, and between that year and 1889 took out many patents for perfecting processes connected with the use of gutta-percha. He pursued his investigations with a view to expediting the making of the insulating material and to reducing its porosity and cost; after thirty years of experiment he succeeded in producing a perfectly insulated conductor possessing, according to Lord Kelvin, ten times the insulation of the French Atlantic cable. The general post office adopted Truman's process, and he received until shortly before his death a minimum annual royalty of 500*l*. In his profession as a dentist he acquired a wide repute by his success in correcting cleft palate. He was the inventor of gutta-percha stoppings for dental work, receiving royalty from every dentist making use of his patent.

From the age of fifteen he was an enthusiastic collector of books and prints, and an habitu   of Sotheby's sale rooms. The intimate friend of George Cruikshank, he made a special hobby of collecting Cruikshank's satirical prints and caricatures as well as books illustrated by him, eventually forming the largest collection known. This collection, with his general library and historical and other portraits, was dispersed by Messrs. Sotheby in 1906, the sale occupying twenty-one days and realising nearly 15,000*l*. Truman also busied himself with religious and social

questions, on which he wrote with sense and conviction. He died at Home Field, Putney, on 8 April 1905.

Truman married in 1845 Mary Ann, daughter of Robert Cooper of Eastbourne, and at his death was succeeded as dentist to the royal household by his only son, Charles Edwin Truman.

Truman was author of: 1. 'On the Construction of Artificial Teeth with Gutta-Percha,' 1848. 2. 'The Necessity of Plasticity in Mechanical Dentistry,' 1861. 3. 'The Strength and Beauty of Mineral Teeth,' 1862. He also contributed to the 'Archives of Dentistry,' of which he was editor, 'On the Importance of Dental Knowledge to the Medical Profession,' and 'Papers on Mechanical Dentistry.'

[Information supplied by Mr. Charles Edwin Truman; The Times, 18 April 1881 and 10 April 1905; Lancet, 22 April 1905; Sotheby's Sale Catalogues of the Truman Collections; personal knowledge.] H. W. B.

TUCKER, HENRY WILLIAM (1830-1902), secretary of the Society for the Propagation of the Gospel, born at Exeter on 17 Aug. 1830, was only son of William Tucker of Exeter, barrister-at-law, by Sophia, daughter of Colonel Cole of Pedmore, Worcestershire. He entered Exeter grammar school on 1 Feb. 1841, and matriculated at Magdalen Hall, Oxford, in Dec. 1850. He graduated B.A. in 1854 and M.A. in 1859. Ordained deacon in 1854 and priest in 1855, he was successively curate of Chantry, Somerset (1854-6), West Buckland, Devonshire (1856-60), and Devoran, Cornwall (1860-5). At Chantry he came under the notice of Richard William Church [q. v. Suppl. I], then rector of Whatley, Somerset, and afterwards dean of St. Paul's. In 1865 Tucker was appointed an assistant secretary of the Society for the Propagation of the Gospel. He brought to his work zeal, industry, a remarkable memory and a strong will. In 1875 he undertook additional work in the secretaryship to the associates of Dr. Bray, an organisation allied in origin to the S.P.G. In 1879 he succeeded W. T. Bullock as principal secretary of the S.P.G., becoming also hon. secretary of the colonial bishoprics fund. In 1881 the bishop of London (Jackson) made him a prebendary of St. Paul's.

Tucker well served the S.P.G. for thirty-six years, notably promoting the colonial and missionary work of the society. When he joined the society's staff there were only forty-seven colonial and missionary sees;

when he resigned there were 103. He was consulted by successive primates as to the church's work abroad (cf. A. C. BENSON'S *Edward White Benson*, ii. 450-2). Archbishop Benson described Tucker as one of two persons 'for whom I have as much respect as I have for any people in this world' (*Report of the Missionary Conference of the Anglican Communion*, 1894, p. 15). Tucker's methods, often autocratic, created resentment, especially in his later years. He resigned in July 1901, when the society acknowledged his 'invaluable assistance and unexampled services.' He declined the deanery of Salisbury, and died at Florence on 3 Jan. 1902, being buried in the English cemetery there. He married in 1860 his second cousin, Jeannetta, daughter of William Tucker of Exeter, and left one daughter.

Tucker published: 1. 'Under His Banner,' 1872. 2. 'Memoirs of the Life and Episcopate of Edward Field, D.D., Bishop of Newfoundland, 1844-1876,' 1877. 3. 'Memoir of the Life and Episcopate of G. A. Selwyn, Bishop of New Zealand, 1867-1878,' 1879. 4. 'The English Church in Other Lands,' 1886. He also edited 'A Classified Digest of the Records of the S.P.G.,' 1893.

[The Times, 7 Jan. 1902; Guardian, 8 and 15 Jan. 1902; Mission Field, Nov. 1901; Foster's Alumni Oxonienses; private information.] A. R. B.

TUPPER, SIR CHARLES LEWIS (1848-1910), Anglo-Indian official and author, born in London on 16 May 1848, was elder son of Capt. Charles William Tupper, 7th fusiliers, by his wife Frances Letitia, sister of Sir Charles F. D. Wheeler-Cuffe, 2nd bart. Rear-Admiral R. G. O. Tupper, C.V.O., is his younger brother. He went to Harrow in the midsummer term 1861, was in the football eleven of 1865, and passed out in the following year as Neeld scholar. He became a scholar of Corpus Christi College, Oxford, graduating B.A. in 1870. He took fourth place in the Indian civil service examination of 1869, and arrived in India on 1 Nov. 1871.

Posted to the Punjab, he, after serving as assistant commissioner and assistant settlement officer, was appointed under-secretary to the local government in April 1877. He was under-secretary in the revenue department of the government of India from September 1878; junior secretary to the Punjab government from March 1882; secretary from November 1888; and chief secretary from March 1890.

Tupper brought to his official work an

aptitude for minute literary research. In 1880 he compiled, with great care under official authority, 'The Customary Law of the Punjab' (3 vols.), while in 'Our Indian Protectorate' (1893) he laboriously classified and co-ordinated for the first time the rich store of materials concerning the relations between the British government and its Indian feudatories. Somewhat discursive and at times conjectural, the latter volume proved of administrative service and remains of value, though for practical purposes it has been superseded by Sir William Lee-Warner's more compact 'Protected Princes' (1894, revised as 'The Native States of India,' 1910). Owing to his historical knowledge, Tupper was placed on special duty in the foreign department of the government of India in 1893-4, and from April 1895 he was engaged in drawing up for confidential official use a body of leading cases, illustrating the political relationship of the paramount power to the native states. Therein he fully maintained his reputation as an historian.

Tupper reached the grade of commissioner and superintendent in September 1895, and in November 1899 he was appointed financial commissioner of the Punjab. In 1900 he served on both the provincial and the supreme legislatures, and from April to October 1905, and again from April to September 1906, acted as a member of the governor-general's executive council. He had been made a C.S.I. in January 1897, and was created K.C.I.E. in January 1903. His last service in India was to preside over the telegraph committee which devised the scheme whereby the department was reorganised so as to meet expanding needs. Tupper helped to create the Punjab university in Oct. 1882, and was vice-chancellor in 1900-1. His addresses to the students dealt elaborately with questions of constitutional law and jurisprudence. He also was one of the founders of the Punjab Law Society in 1903, and gave the inaugural address as first president. A warm love of justice distinguished his relations with the Indian people and with his subordinates.

After retirement from India in 1907, Tupper settled in East Molesey, and devoted himself to literature and to local and national affairs. He was a strong advocate of imperial federation from the first inception of the movement, and of the National Service League. He died at his residence, East Molesey, on 20 July 1910, and was buried in West Molesey cemetery. A bust

of Tupper by Henry Bain Smith was exhibited at the Royal Academy in 1892. Tupper married on 2 Oct. 1875 Jessie Catherine, daughter of Major-general Henry Campbell Johnstone, C.B., by whom he had two sons and a daughter.

[Tupper's writings; India List; Indian Financial Statement for 1908-9; Civil and Military Gazette, Lahore, 24 July 1910; Pioneer, Allahabad, 25 July 1910; The Times, 22 July 1910; Surrey Advertiser, 23 July 1910; The Harrovian, Nov. 1910; information kindly supplied by Lady Tupper; personal knowledge.] F. H. B.

TURNER, CHARLES EDWARD (1831-1903), Russian scholar, second son of John Alderson Turner of the legacy office, was born at King's Lynn on 21 Sept. 1831. He entered St. Paul's School on 9 Feb. 1843, and remained till August 1850. On 29 March 1854 he was admitted commoner at Lincoln College, Oxford. Although shy and reserved until he was drawn out in congenial company, he took a prominent part in his College Debating Society, where he showed an exceptional knowledge of European politics. On leaving Oxford without graduating he worked for three years as a schoolmaster. In 1859 he went to Russia, and in 1862 was elected, after competitive examination, professor of English literature at the Imperial Alexander Lyceum in St. Petersburg. In 1864 he was, again by competitive examination, appointed lector of the English language in the Imperial University of St. Petersburg. That post he held for life. On occasional visits to England he frequently lectured on Russian literature. He was highly respected both by the British colony in St. Petersburg and by Russian friends and colleagues. He died at St. Petersburg on 14 Aug. 1903, and was buried in the Smolensk cemetery, St. Petersburg. A monument to his memory, raised by public subscription, was unveiled by his successor, Mr. William Sharpe Wilson, in 1905. He was married, but had no issue.

Turner became intimately acquainted with Russian life and literature, and in his writings on Russian literature showed sound critical judgment and a grasp of its history. In 1881 he lectured at the Royal Institution in London on 'Famous Russian Authors,' which he published in 1882 in amplified form as 'Studies in Russian Literature.' Other courses of lectures at the same place treated of 'Russian Life' (in 1883) and of 'Count Tolstoi as Novelist and Thinker' (in 1888). The latter course

was published in amplified form in the same year. In 1889 he lectured at the Taylorian Institute in Oxford on 'The Modern Novelists of Russia,' which he amplified for publication in 1890. In 1893 he issued a translation of C. A. Behrs' 'Recollections of Count Leo Tolstoy,' and in 1899, simultaneously in London and St. Petersburg, a volume of excellent 'Translations from Pushkin in Memory of the Hundredth Anniversary of the Poet's Birthday.' Besides these works he published in St. Petersburg: 1. 'Our Great Writers, a Course of Lectures on English Literature,' two volumes, 1865. 2. 'Lessons in English Literature,' two parts, 1870. 3. 'Principal Rules of English Grammar,' 1879. 4. 'English Reading Book,' 1891. 5. 'Robert Burns,' 1896. 6. 'English Writers of the Nineteenth Century: Wordsworth, Byron, Shelley, Coleridge, Keats, Moore, Crabbe,' 1897. 7. 'Robert Browning's "Sordello,"' 1897. The three last appeared only in Russian translations from Turner's English MSS. A translation of Turgénev's 'On the Eve' appeared in 1871.

[Athenæum, 29 Aug. 1903; Foster's Alumni Oxon.; Lincoln College Register; private information.] N. F.

TURNER, JAMES SMITH (1832-1904), dentist, born at Edinburgh on 27 May 1832, was son of Joseph Turner and Catherine Smith, his wife. His father, a hatter, was well known as a political speaker against the corn laws. At the age of fourteen Turner was apprenticed as a mechanic to a dentist named Mien of Edinburgh. He came to London in 1853, just after the failure of an appeal to the Royal College of Surgeons of England to give dentists a professional status. In 1857 Turner became a member of the college of dentists, and in August 1863 he was admitted M.R.C.S. of England and a licentiate in dental surgery of this body, the first examination for the L.D.S. having been held in May 1860.

He was appointed assistant dental surgeon to the Middlesex Hospital 19 July 1864; dental surgeon 16 April 1874; lecturer on dental surgery 2 Feb. 1881, and consulting dental surgeon 22 Feb. 1883. In succession to Robert Hepburn he was lecturer on dental surgery mechanics at the Royal Dental Hospital from 1871 until 1880, becoming consulting dental surgeon in 1896. He was an examiner on the dental board of the Royal College of Surgeons of England 1886-8.

In association with (Sir) John Tomes [q. v.] and a few other public-spirited men

Turner succeeded in converting the trade of dentistry into an organised profession. In 1872 he visited the United States to study the conditions of dental practice there, and in 1875 he began work as secretary of the executive council of the dental reform committee. The object of the committee was to obtain an act of parliament to regulate dental practice and to provide for a dentists' register, admittance to and removal from which should be under the supervision of the general medical council. Much opposition was experienced, but was overcome largely by Turner's untiring energy. The Dentists Act was passed by the help of Sir John Lubbock (Lord Avebury), and received the royal assent on 22 July 1878. On 15 August the dental register was opened, (Sir) John Tomes's name being the first to be inscribed. The British Dental Association was founded early in 1879, and Smith Turner was for many years the president of its representative board. He also held office at the Odontological Society of Great Britain from 1873 until 1884, when he was chosen president.

He died at Ealing, 22 Feb. 1904, and was buried at St. George's cemetery, Ealing.

A scholarship in practical dental mechanics was established in his memory. It is awarded by the British Dental Association and is tenable at any school.

Turner married (1) in Nov. 1866 Annie, daughter of Richard Whitbourn of Godalming, by whom he left five sons and three daughters; (2) in Dec. 1900 Agnes, daughter of the Rev. Henry Ward, M.A.

A portrait—a good likeness—was painted by Sidney Hodges in 1890 for the British Dental Association, and a replica by the same artist was presented to Turner during the annual meeting of the British Dental Association at Exeter in 1891.

[British Dental Journal, vol. xxv. 1904, p. 153 (with two portraits); Lancet, 1904, i. 519; private information.] D'A. P.

TURPIN, EDMUND HART (1835-1907), organist and musical composer, eldest son of James Turpin, lace manufacturer, of Nottingham, was born there 4 May 1835. The Turpins were descended from an Huguenot family. Edmund's father, an amateur musician, gave him his first lessons, after which he took up organ study with Charles Noble, at St. Mary's church, Nottingham, studying later with John Hullah and Ernst Pauer. In 1847, before he was twelve, he was appointed organist of Friar Lane congregational church, Nottingham. In 1850, at the age

of fifteen, he became organist of St. Barnabas Roman Catholic cathedral, Nottingham and retaining that post for fifteen years, brought the music to a degree of excellence hitherto unknown in the Midlands. He was also bandmaster of the Nottingham corps of volunteers known as the 'Robin Hood Rifles.' Meanwhile he was drawn to London, where he gave an organ recital at the Great Exhibition of 1851; though only sixteen, he created a notable impression. Six years later he settled in London, though still maintaining his professional connection with Nottingham. In 1860 he was appointed organist and choir director of the Catholic Apostolic church in Gordon Square, Bloomsbury, a post which he practically, by himself or by deputy, retained till his death. In 1869 he went to St. George's, Bloomsbury, where he remained until his last appointment at St. Bride's, Fleet Street, in 1888.

Turpin was honorary secretary of the Royal College of Organists from 1875 onwards, and rendered splendid service as an administrator and examiner. The college commemorates him by a prize fund instituted in 1911. He received the degree of Mus. Doc. from the archbishop of Canterbury in 1889, and in 1892 was appointed warden of Trinity College of Music, London. Turpin died in London on 25 October 1907. He married (1) in 1857 Sarah Anne, daughter of Robert Watson of Whitemoor, Nottinghamshire, by whom he had a daughter; (2) in 1905 Miss Sarah Hobbs.

Turpin was widely known as an organist, and inaugurated many new organs; he was also a good pianist, and could play most of the orchestral instruments. He was a successful lecturer on musical subjects, and was intimately associated with London musical journalism, editing the 'Musical Standard' from 1880 to 1886, and again from 1889 to 1890. For some years he was co-editor of 'Musical News,' and he had connections also with the 'Musical World' and the 'Academic Gazette.' He edited the 'Student's Edition' of classical pianoforte music (Weekes), with marginal analyses; completed Mr. W. T. Best's edition of Bach's organ works (Augener), and prepared numerous organ arrangements and voluntaries. His own compositions include a Stabat Mater, two oratorios, two cantatas, a symphony, various concert overtures, church music of different kinds, pianoforte music, and about twenty organ pieces.

[Biographical Sketch of Edmund Hart Turpin, by Charles W. Pearce, with bibliography, 1911; Musical Herald, Dec. 1907 (with portrait); Brit. Musical Biog.; Grove's Dict. of Music, 1906, v. 188.] J. C. H.

TWEEDMOUTH, second BARON. [See MARJORIBANKS, EDWARD (1849-1909), politician.]

TYABJI, BADRUDDIN (1844-1906), Indian judge and reformer, born at Bombay on 10 Oct. 1844, was fifth of the six sons of Tyabji Bhaimai, a Sulimani Bhora, by his wife Aminabibi. (The Bhoras are Gujarati Musalmans converted from various Hindu castes, and the Sulimanis seceded from the general body in the sixteenth century.) Tyabji's father, a native of Cambay, was the first of his family to settle in Bombay, and, building up a large business there, he became both the secular and religious head of his community. At a time when the Indian Mahomedans held aloof from Western influence, he sent all his sons to be trained in Europe. The third son, Camruddin, the first Indian to come to England for a professional education, was the first Indian to be admitted a solicitor in England (25 Nov. 1858), and established a lucrative business in Bombay.

Badruddin received his early education at the Elphinstone Institution (now College), Bombay, and in April 1860 came to England and studied at the Newbury Park high school. He entered the Middle Temple as a student 27 April 1863, and matriculated at the London University in the same year. Returning to India in October 1864, owing to eye-trouble, he was not called to the English bar till 30 April 1867; he was the first Indian to attain that honour.

Settling in Bombay, he became the first native barrister of an Indian high court, and soon built up a prosperous practice. About 1879 he first engaged in public affairs outside his professional work. At a town meeting in May 1879 he urged a memorial to parliament against the abolition of the import duties on Manchester goods. In 1882 he was nominated by government to the Bombay legislative council, and served for the customary period of two years. In December 1885 he associated himself with the first Indian National Congress, which met at Bombay, and he was president of the third annual session held in Madras in December 1887. His presidential speech was moderate and sensible. Unlike Syed (afterwards Sir) Ahmed Khan, who largely influenced Mahomedan feeling, he deprecated the aloofness of Mahomedans from the

movement. A warm supporter of the Syed in establishing the Mahomedan and Anglo-Oriental College at Aligarh, Tyabji took a keen interest in the annual Mahomedan educational conferences, presiding over the session held in Bombay in 1903. He was an ardent advocate of higher education for Indian women, and gave three of his daughters advanced training—one in England and two in Bombay. A fellow of the Bombay University, he took a prominent part in debates of the senate. He was a founder of the most progressive Moslem institution of Western India, the Anjuman-i-Islam (Islamic Society), serving first as hon. secretary and from 1890 till death as president.

In June 1895 Tyabji was made a judge of the Bombay high court, being the first Indian Moslem and the third Indian of any race to reach this dignity. He sat chiefly on the 'original' (as distinct from the appellate) side. His courtesy was notable, but he proved a strong judge, who was more of a practical than a scientific lawyer (*Times of India Weekly*, 1 Sept. 1906). In 1903 he acted for some months as chief justice. Unlike many educated Indians, he did not Anglicise his attire. He reprobated the extreme nationalism in Indian politics of his closing years.

He died suddenly in London of heart failure on 19 Aug. 1906, and was buried in the Sulimani Bhora cemetery at Bombay on 10 Oct. 1906. Memorial meetings were held in London and Bombay. In January 1907 the governor of Bombay, Lord Lamington, presided at a large public meeting at the town hall to promote a permanent memorial, the form of which has not been decided. A painting of Tyabji, by Mr. Haite, subscribed for by the Bombay bar, hangs in the Bombay high court.

Tyabji married in 1865 Rahat Unnafs, daughter of Sharafali Shujatali of Cambay. She took a prominent part in the ladies' branch of the National Indian Association, Bombay, and similar movements for the advancement of Indian women and for the relaxation of the purdah restrictions. There were five sons, of whom one, the eldest, joined the Indian Civil Service, and two the legal profession, and seven daughters.

F. H. B.

TYLER, THOMAS (1826–1902), Shakespearean scholar, was born in London in 1826. An evening student (1857–8) at King's College, London, he there distinguished himself in scripture and classics. Matriculating at London University in 1857, he graduated B.A. in classics in 1859 and M.A. in 1871, obtaining prizes for Hebrew and for New Testament Greek. He soon engaged in biblical research. An article contributed to the 'Journal of Sacred Literature' in January 1854 was expanded in 1861 into a volume called 'Jehovah the Redeemer God: the Scriptural Interpretation of the Divine name "Jehovah".' The New Testament interpretation of the name was discussed in a second volume, 'Christ the Lord, the Revealer of God, and the Fulfilment of the Prophetic Name "Jehovah".' In 1872 he joined the newly formed Society of Biblical Archæology, and in a small pamphlet, 'Some New Evidence as to the Date of Ecclesiastes' (1872), he first indicated exclusively from the literary point of view (as Zirkel had urged in 1792 on philological grounds) the influence of Greek, especially Stoic, philosophy on the teaching of the author, and assigned the composition of the work to the second century B.C. Tyler developed his view in his exhaustive 'Ecclesiastes, a Contribution to its Interpretation; with Introduction, Exegesis, and Translations with Notes' (1874; 2nd edit. 1879; new revised edit. 1899). Professor Ewald praised the work, but questioned Tyler's conclusions as to the date (*Göttingische gelehrte Anzeiger*, 23 Oct. 1872). Tyler was also a student of Hittite antiquities, on which he lectured at the British Museum, and his lectures and writings helped to stimulate in England the study of the Hittite language.

Tyler made many suggestive contributions to Shakespearean study. He published in 1874 'The Philosophy of "Hamlet,"' and took part in the proceedings of the New Shakspeare Society from its foundation in 1874. In the introduction to the facsimile edition of 'Shakespeare's Sonnets, the first quarto, 1609,' which Tyler edited in 1886, he with the assistance of the Rev. W. A. Harrison, vicar of St. Anne's, Lambeth, first propounded the theory that Mary Fitton [q. v.] was the 'dark lady' of the sonnets. He elaborated his argument in his interesting edition of 'Shakespeare's Sonnets' (1890). By way of

confutation Lady Newdigate-Newdegate in 'Gossip from a Muniment Room' (1897; 2nd edit. 1898) showed from extant portraits at Arbury that Mary Fitton was of fair complexion, and (Sir) Sidney Lee contested Tyler's view in his 'Life of Shakespeare' (1898). Tyler answered her critics in 'The Herbert-Fitton Theory: a Reply' (1898), disputing the authenticity of the Arbury portraits. He also edited in 1891 the facsimile issue of 'The True Tragedy. The First Quarto, 1595.'

Tylor, who suffered from birth from a goitrous disfigurement, was for nearly half a century an habitual frequenter of the British Museum reading-room. He died in London, unmarried and in straitened circumstances, on 27 Feb. 1902.

[The Times, 6 March 1902; Athenæum, 26 July 1890 and 1 March 1902; Standard, 27 Oct. 1897; Lady Newdigate-Newdegate's Gossip from a Muniment Room, 2nd edit. 1898, Appendix A.] W. B. O.

TYLOR, JOSEPH JOHN (1851-1901), engineer and Egyptologist, born at Stoke Newington on 1 Feb. 1851, was eldest child (of two sons and four daughters) of Alfred Tylor [q. v.], brass founder and geologist, and Isabella Harris (both of the Society of Friends). Sir Edward Burnett Tylor, the anthropologist, was his uncle. Joseph, after being educated at the Friends' school, Grove House, Tottenham, matriculated at London University in June 1868, and then turning to engineering, studied at the Polytechnic School at Stuttgart, 1868-70. On returning home he entered the Bowling ironworks in Yorkshire. In February 1872 he became partner in the family firm of J. Tylor & Sons, brass founders, 2 Newgate Street, E.C., which had been founded by his grandfather, John Tylor; on his father's death in 1884 he became senior partner. He was elected A.M.I.C.E. on 1 May 1877, and patented many successful inventions, particularly in connection with hydraulic meters. A liberal in politics, he was associated with his brother-in-law, William Leatham Bright, and with Arthur Williams in founding the National Liberal Club in 1882.

In 1891 failing health prevented him from following his profession, and he turned to Egypt and Egyptology in search of health and occupation. Here he experimented with the pictorial reproduction of the ancient sculptures and paintings of tombs and temples. His method was to divide up a wall (often irregular in form and surface) into equal spaces with stretched threads, and having photographed these

without distortion to enlarge the negatives and print them faintly. The essential outlines were then strengthened with pencil, the injuries, dirt-marks, &c., on the original eliminated, and the result re-photographed for publication. In conjunction with Mr. Somers Clarke, Tylor selected El Kab in Upper Egypt as a field for his labours, and began a series of monographs under the general title of 'Wall Drawings and Monuments of El Kab.' The separate monographs were: 'The Tomb of Pakeri' (1895); 'The Tomb of Sebeknekt' (1896); 'The Temple of Amenketep III' (1898); and 'The Tomb of Renni' (1900). He died at his winter residence, Villa la Guerite, La Turbie, Alpes-Maritimes, on 5 April 1901, and was buried at Beaulieu. He married on 15 Sept. 1887 Marion (d. 1889), third daughter of George, Lord Young [q. v. Suppl. II], and had two sons, Alfred and George Cunyngham.

His portrait as a boy of thirteen by W. Hay, and an oil portrait by Charles Vigor, 1894, are in possession of his son, Alfred Tylor, 34 Palace Gardens Terrace, London, W.

[The Times, 12 April 1901; private information.] F. LL. G.

TYRRELL, GEORGE (1861-1909), modernist, born at 91 Dorset Street, Dublin, on 6 Feb. 1861, was younger and posthumous son of William Henry Tyrrell, a Dublin journalist of some repute, by his second wife, Mary Chamney. Dr. Robert Yelverton Tyrrell of Trinity College, Dublin, was his first cousin. At Rathmines School, George, unlike his brother William, whose brilliant career as a scholar was cut short by death, gave no promise of future distinction. His religious training was of the evangelical type, but from his brother he early imbibed sceptical ideas. In 1875, however, he came under the influence of Dr. Maturin of Grangegorman, whose moderate and devout high churchmanship sowed in him a seed that was afterwards quickened by Father Robert Dolling [q. v. Suppl. II]. Dolling did not oppose Tyrrell's eventual predilection for the Roman communion. He was received into that church on 18 May 1879, and forthwith became a postulante for admission into the Society of Jesus. After a year's probation in their college at Malta, he entered the novitiate at Manresa House, Roehampton, in September 1880, and in 1882 took the first vows. After a course of scholastic philosophy at Stonyhurst

College, he emerged in 1885 an ardent Thomist, and returned to the college at Malta, where he was employed as a school-master. Then followed, at St. Beuno's College, North Wales, the usual four years' theological course; which ended, he was ordained priest on 20 Sept. 1891, and served his tertianship at Manresa House in 1891-2. The next two years he spent in mission work at Oxford, Preston, and St. Helens; after which he lectured on philosophy at St. Mary's Hall, Stonyhurst, until his transference in 1896 to the literary staff at Farm Street, London. During his residence in London he produced three works of unimpeachable orthodoxy, viz. 'Nova et Vetera: Informal Meditations' (1897; 3rd edit. 1900); 'Hard Sayings: a Selection of Meditations and Studies' (1898); and 'External Religion: its Use and Abuse' (1899). His views, no doubt, had been gradually broadening, but an article on Hell, entitled 'A Perverted Devotion,' which he contributed to the 'Weekly Register,' 16 December 1899, was the first unmistakable indication of the change. It raised a storm which compelled his retirement to the Mission House of his order at Richmond, Yorkshire, where he continued to reside in great seclusion so long as he remained a Jesuit. There he completed 'Oil and Wine' (1902; new edit. 1907) and 'Lex Orandi' (1903), the latter, the last of his works that bears the *imprimatur*, being an expansion of a pamphlet written under the pseudonym Dr. Ernest Engels and entitled 'Religion as a Factor of Life.' A sequel, 'Lex Credendi,' also appeared in 1906. In these two volumes the influence of the pragmatic school of philosophy is apparent, though Tyrrell resented being classed with the Pragmatists. 'The Church and the Future,' a translation privately printed about this time of an essay of a strongly liberal character, which he had written in French under the pseudonym Hilaire Bourdon, retained its pseudonymity until after Tyrrell's death; but the wide circulation incautiously given to a privately printed 'Letter to a Professor of Anthropology,' in which he dealt with the relations between faith and culture, brought about the final crisis in Tyrrell's relations with his order. Some passages from the 'Letter,' not altogether accurate but substantially authentic, were printed in the 'Corriere della Sera' of Milan, 1 Jan. 1906. The authorship of the 'Letter' was imputed to Tyrrell, and as the passages in question amounted to an

acknowledgment of the total untenability of the position of conservative catholicism, and Tyrrell was unable to disavow them, he was dismissed from the Society of Jesus (February 1906). The subsequent publication of the peccant opuscle under the title 'A much abused Letter' (1906), with copious annotations by Tyrrell, completed his estrangement from the church. Unable to obtain episcopal recognition, he thenceforth resided chiefly at Storrington, Sussex, immersed in literary work. In 1907 the Vatican fulminated against modernism in the decree 'Lamentabili' (2 July) and the encyclical 'Pascendi' (8 Sept.), to which Tyrrell replied in two powerful and pungent letters to 'The Times' (30 Sept., 1 Oct.). This temerity brought upon him the minor excommunication, with reservation of his case to Rome. Meanwhile he recorded the development of his religious opinions in 'Through Scylla and Charybdis; or the Old Theology and the New' (1907), a work which thus corresponds to Newman's 'Apologia.' In 1908 Cardinal Mercier, archbishop of Malines, made modernism and Tyrrell as its protagonist the subject of an attack in his Lenten pastoral, which Tyrrell repelled with great animation in a volume entitled 'Medievalism' (1908). This work was followed by 'Christianity at the Cross-Roads' (1909), in which he essayed to vindicate his essential fidelity to the 'idea' of catholicism. It was hardly finished, when he was disabled by a severe illness, which terminated in his death at Storrington on 15 July 1909. As his case was reserved to Rome, and he had made no sign of retraction, the bishop of Southwark prohibited his interment with catholic rites. The funeral therefore took place on 21 July at the parish cemetery, Storrington, where his friend, Abbé Brémond, officiated, paid an eloquent tribute to his great qualities of mind and character, and blessed his grave.

The cardinal principle of Tyrrell's modernism is the strict delimitation of the contiguous provinces of revelation and theology. By revelation he means the evolution of religious experience as such. In his view that evolution, initiated by the deeper self-reflection commonly called mysticism, by man's recognition of himself as a being transcending space and time, and by his consequent inability to 'rest but in a conscious relation to the Universal and Eternal,' reached its final consummation in the spiritual life which Christ communicated to His apostles, and

which in a lesser degree has been and still is shared by all the saints. The truth of revelation being thus 'not the truth of theological statement, but that of fact and experience,' it is, in Tyrrell's view, 'a patent fallacy to speak of a "development" of revelation as though it were a body of statements or theological propositions,' and the sole legitimate function of theology is 'the protection and preservation of revelation in its original form and purity.' Even to the dogmatic decisions of councils he therefore allows only a 'protective' value, as reassertive, by no means as ampliative, of revelation (*Through Scylla and Charybdis*, pp. 200 seq., 273-4, 291-3 seq.).

The actual doctrinal system of the church he regards as a 'pseudo-science' begotten of the 'dogmatic fallacy' by which the 'figurative,' 'artless,' 'symbolic' and rather 'pragmatical' than 'speculative' utterances of revelation are tortured into a spurious logical exactitude and then employed as premisses of deductive reasoning. This system, 'full blown in all its hybrid enormity,' he dubs theologism (*ib.* pp. 204, 210-12, 231, 234 et seq.). Nor does he shrink from affirming that in regard to the mysteries of the Trinity in unity, the Incarnation and the Real Presence, the refinements of scholastic metaphysics are even further from the truth than the simple faith of the peasant (*ib.* pp. 97-103).

But after all Tyrrell finds himself unable to dispense with development. Some measure of doctrinal development he admits, but it is determined not by the subtle speculations of the schools, but by 'the spirit of Holiness' (*Lex Orandi*, pp. 209-13; *Lex Credendi*, pp. 1-3, 9-10). He also recognises a development, not dialectical but morphological, of the Christian idea as distinguished from the Christian revelation; and thereby, in common with Newman and M. Loisy, he maintains the essential identity of the modern catholic church with the church of the apostles; while as against the liberal protestant view of Jesus as merely the ideally just man, and of the Kingdom of Heaven as merely the reign of righteousness in men's hearts, he insists on the predominance of the 'otherworldly' over the ethical elements in the gospel. Neither in his ethics nor in his 'otherworldliness' was Christ, indeed, original. The ethics were common to 'the prophets, psalmists, and saints of the Jewish people, not to speak of the pagan moralists and saints,' the 'otherworldliness' was but 'the religious idea in a certain stage of

development along a particular line,' i.e. the line of Jewish apocalyptic eschatology, e.g. the Book of Enoch (*Christianity at the Cross-Roads*, pp. 30-51, 65 et seq., 91). It is the emphasis that Jesus laid on the otherworldly idea, and his sense of oneness with God that effectually distinguish Him from all other religious teachers (*ib.* pp. 66, 80, 81). Moreover, the Christian idea, as conceived by Tyrrell, has in it the potentiality not only of indefinite development but inexhaustible symbolism, for he contends that 'its meaning' is to be 'rendered by each age in its own terms' (*ib.* pp. 137, 214). And in such 'rendering' he makes some rather startling experiments. Thus the Messiahship of Christ is symbolic of certain spiritual experiences of Jesus and His followers, 'transcendent realities' that defy theological definition. Hence it follows that the atonement is a corollary of the communion of saints (*ib.* pp. 178-184 et seq., 199 et seq.). And again, though the belief in the physical resurrection and ascension of Christ was founded only on certain phenomena of the subjective order which the apostles in accordance with their apocalyptic prepossessions misconstrued and 'intercalated into those of the physical series,' yet the subjective phenomena thus fallaciously objectified were 'signs and symbols of Christ's spiritual transformation, of the fullness of His eternal and transcendent life,' and by consequence 'of the eternity and plenary expansion of that super-individual life that lies hid in the depths of our being' (*ib.* pp. 145-6, 150-3).

As to the character of the future life Tyrrell is in the main faithful to the idea in its traditional form. He prefers 'the conception of eternal life as a super-moral life, as a state of rest after labour, of ecstatic contemplation of the face of God' to the Tennysonian 'glory of going on,' and regards even 'the bric-à-brac, rococo Heaven of the Apocalypse of St. John' as 'a truer symbol of man's spiritual aspirations than the cold constructions of intellectualism' (*ib.* pp. 78, 150, 207).

'The compendium of all heresies' was the pope's sorrowful verdict on modernism; and the apophthegm is no less just than felicitous; for, as frankly avowed by Tyrrell himself, modernism is but the critical spirit of the age in the specific form in which it has tardily manifested itself within the Roman church (*ib.* p. 10).

By Tyrrell's untimely death, modernism suffered a serious if not irreparable loss. He was unquestionably the leader of the

movement, and a leader not readily to be replaced; for, much as he owed to Newman's inspiration, in learning, critical acumen, and mystical depth the disciple far surpassed the master.

Besides the works mentioned above Tyrrell was author of 'Versions and Perversions of Heine and others' (1909); and joint author with Miss Maude D. Petre of 'The Soul's Orbit' (1904). A reprint of 'The Church and the Future' appeared in 1910.

The more important of Tyrrell's contributions to periodical literature are collected in 'The Faith of the Millions' (1901-2, 2 vols.) and 'Through Scylla and Charybdis' (1907). Many others appeared in 'The Month' between Feb. 1886 and Dec. 1903; in the 'Weekly Register,' 1899; the Catholic Truth Soc. Publ. ser. 1

and 2, 1905-6; 'Quarterly Review,' 1909; 'The Mystical Element of Religion' (posthumous); 'Contemporary Review,' 1909; 'The Quest,' 1909; 'Grande Revue,' 1909; 'Hibbert Journal,' 1908-9; 'Il Rinascimento' (Milan), 1907; 'Home and Foreign Review,' 1908-9; 'Nova et Vetera' (Rome), 1906-8; 'Harvard Theological Review,' 1908.

R.

U

UNDERHILL, EDWARD BEAN (1813-1901), missionary advocate, born at St. Aldate's, Oxford, on 4 Oct. 1813, was one of seven children of Michael Underhill, a grocer of Oxford, by his wife Eleanor Scrivener. After education at the school in Oxford of John Howard Hinton [q. v.], baptist minister, Underhill engaged in business as a grocer in Beaumont Street, Oxford, from 1828 until 1843. Owing to the ill-health of his wife he then removed to Avening, near Stroud, Gloucestershire, where he devoted himself to the study of ecclesiastical history from the baptist point of view. In 1845 he founded the Hanserd Knollys Society for the publication of works by early baptist writers. Of the ten volumes which appeared Underhill edited seven, two with elaborate introductions on the Tudor history of the sect. In 1848 he became proprietor and editor of the 'Baptist Record,' to which he contributed historical papers. After the cessation of the magazine in June 1849 Underhill became joint secretary of the Baptist Missionary Society (July 1849). He was sole secretary from 1869 to 1876, and honorary secretary from 1876 until death. The society's work grew rapidly under his guidance. He visited the missionary centres of the society, and during a long stay in India and Ceylon from October 1854 to February 1857 acquired a full knowledge of Indian problems, which he placed at the disposal of the committee of the House of Commons on the affairs of India in 1859.

After visiting the West Indies, Trinidad, and Jamaica in 1859, Underhill published 'The West Indies: their Social and Religious Condition' (1862). Subsequently he took part in the violent controversy over the treatment of the native population in Jamaica. Under the title of 'The Exposition of Abuses in Jamaica' he published in 1865 a letter, exposing the cruelty of the planters, which he had addressed to Edward Cardwell, the colonial secretary (5 Jan. 1865). A rising of the natives followed in October. The governor, Edward John Eyre [q. v. Suppl. II], denounced Underhill's pamphlet as an incitement to sedition, and with his champions vehemently impugned Underhill's accuracy.

In 1869 Underhill went to the Cameroons, and settled differences among the baptist missionaries. On his return he devoted himself to missionary organisation and literary work, writing, besides magazine articles and accounts of baptist missions, biographies of J. M. Philippo (1881), Alfred Saker (1884), and J. Wenger, D.D. (1886).

In 1873 he became president of the Baptist Union; in 1876 he was made treasurer of the Bible Translation Society, and in 1880 treasurer of the Regent's Park Baptist College, of the committee of which he had been a member since 1857; in 1886 he was president of the London Baptist Association. In 1870 the honorary degree of LL.D. was conferred on him by the Rochester University, U.S.A. He died at Hampstead on 11 May 1901, and was buried

at Hampstead cemetery. He married thrice: (1) in 1836 Sophia Ann, daughter of Samuel Collingwood, printer to Oxford University, by whom he had three daughters; she died on 25 Oct. 1850; (2) on 17 Nov. 1852 Emily, eldest daughter of John Lee Benham of London; she died in the Cameroons on 22 Dec. 1869; (3) on 17 July 1872 Mary, daughter of Alfred Pigeon, distiller, of London. She survived Underhill till 2 Dec. 1908.

The works which Underhill edited for the Hanserd Knollys Society were: 1. 'Tracts on Liberty of Conscience and Persecution, 1614-1661,' 1846. 2. 'The Records of a Church of Christ meeting in Broadmead, Bristol, 1640-1687,' 1847. 3. 'The Bloudy Tenent of Persecution discussed: by Roger Williams [1644],' 1848. 4. 'A Martyrology of the Baptists during the Era of the Reformation: translated from the Dutch of T. J. Van Braght [1660], 2 vols. 1850. 5. 'Records of the Churches of Christ gathered at Fenstanton, Warboys, and Hexham, 1644-1720,' 1854. 6. 'Confessions of faith and other Public Documents illustrative of the History of the Baptist Churches of England in the Seventeenth Century,' 1854. Other works include 'Distinctive Features of the Baptist Denomination' (1851) and 'The Divine Legation of Paul the Apostle' (1889). He also contributed an article on Bible translation to the Baptist Missionary Society's centenary volume, 1892.

[The Times, 14 May 1901; In Memoriam volume with appreciation by Rev. D. J. East (with portrait); Baptist Magazine, November 1886 (with portrait); J. S. Dennis, Christian Missions and Social Progress, 3 vols. 1897-9; private information.] W. B. O.

URWICK, WILLIAM (1826-1905), nonconformist divine and chronicler, born at Sligo on 8 March 1826, was second son of William Urwick [q. v.], nonconformist divine, by his wife Sarah (1791-1852), daughter of Thomas Cooke of Shrewsbury. His early education was under his father. He graduated at Trinity College, Dublin, B.A. in 1848, M.A. in 1851. From Dublin he proceeded to the Lancashire Independent College, Manchester, where he studied (1848-51) under Robert Vaughan [q. v.] and Samuel Davidson [q. v. Suppl. I]. On 19 June 1851 he was ordained minister at Hatherlow, Cheshire, where he remained for twenty-three years, doing good work as pastor, as district secretary (later, president) of the Cheshire Congregational Union, and as a translator of German theological works. Here, too, he began the

series of his contributions to nonconformist annals. Removing to London, he filled (1874-7) the chair of Hebrew and Old Testament exegesis at New College. Still living in London, he became in 1880 minister of Spicer Street chapel, St. Albans, where he rebuilt the Sunday schools, improved the church premises, and took an active part in temperance and other social works, resigning in 1895. On a visit to his sisters in the old home at Dublin, he died there on 20 Aug. 1905. He married on 1 June 1859 Sophia (1832-1897), daughter of Thomas Hunter of Manchester, by whom he had four sons and five daughters.

Urwick's account of Cheshire nonconformity in 1864, an unequal medley of papers by local ministers and laymen, is not his best work. His own workmanship in it is sharply criticised by H. D. Roberts in 'Matthew Henry and his Chapel' (1901). His book on Hertfordshire nonconformity (1884) is distinctly the best, so far, of the nonconformist county histories. Good in its way is his book on Worcester nonconformity (1897); still better is his very valuable little book on the early annals of Trinity College, Dublin (1892). He is, however, essentially an annalist, with no historical breadth of view.

He published, besides the works cited: 1. 'Historical Sketches of Nonconformity in the County Palatine of Chester,' 1864. 2. 'Life and Letters of William Urwick, D.D.' (his father), 1870. 3. 'Ecumenical Councils,' 6 pts. 1870. 4. 'Errors of Ritualism,' Manchester, 1872 (lectures). 5. 'The Nonconformists and the Education Act,' 1872. 6. 'The Papacy and the Bible,' Manchester, 1874 (in controversy with Kenelm Vaughan). 7. 'The Servant of Jehovah,' 1877 (commentary on Isaiah lii. 13-liii. 12). 8. 'Indian Pictures,' 1881. 9. 'Bible Truths and Church Errors,' 1888 (embodies argument to prove Bunyan not a baptist). He translated from the German: H. Martensen's 'Christian Dogmatics' (1886); J. Müller's 'Christian Doctrine of Sin' (1868, 2 vols.); F. Bleek's 'Introduction to the New Testament' (1869-70, 2 vols.); H. Cremer's 'Biblico-theological Lexicon of New Testament Greek' (1872). He edited his father's 'Biographic Sketches of J. D. Latouche' (1868), and T. A. Urwick's 'Records of the Family of . . . Urwick' (1893).

[The Times, 28 Aug. 1905; Lancashire Independent College Report, 1905; Congregational Year Book, 1906 (portrait); Records of the Family of Urwick, 1893; Cat. of Graduates, Univ. Dublin, 1869.] A. G.

V

VALLANCE, WILLIAM FLEMING (1827-1904), marine painter, born at Paisley, on 13 Feb. 1827, was youngest son in the family of six sons and one daughter of David Vallance, tobacco manufacturer, by his wife Margaret Warden. William, whose father died in William's childhood, was sent at a very early age to work in a weaver's shop; but on the family's subsequent removal to Edinburgh he was apprenticed in 1841 as a carver and gilder to Messrs. Aitken Dott. During his apprenticeship he began to paint, and made a little money by drawing chalk-portraits; but he was twenty-three before he received any proper instruction. He then worked for a short time in the Trustees' Academy under E. Dallas, and later, from 1855, studied under R. S. Lauder [q. v.]. Vallance commenced to exhibit at the Royal Scottish Academy in 1849, but it was not until 1857 that he took up art as a profession. His earlier work had been chiefly portraiture and genre. After 1870 he painted, principally in Wicklow, Connemara, and Galway, a series of pictures of Irish life and character, humorous in figure and incident, and fresh in landscape setting. But a year or two spent in Leith in childhood had left its impress on his mind, and it was as a painter of the sea and shipping that he was eventually best known. His first pictures of this kind hovered between the Dutch convention and the freer and higher pitched art of his own contemporaries and countrymen. Gradually the influence of the latter prevailed, and in such pictures as 'Reading the War News' (1871), 'The Busy Clyde' (1880), and 'Knocking on the Harbour Walls' (1884) he attained a certain charm of silvery lighting, painting with considerable, if somewhat flimsy, dexterity. Probably, however, his feeling for nature found its most vital expression in the water-colours, often in body-colour, which he painted out-of-doors. Vallance was elected associate of the Royal Scottish Academy in 1875, and became academician in 1881. He died in Edinburgh on 30 Aug. 1904. On 2 Jan. 1856 he married in Edinburgh Elizabeth Mackie, daughter of James Bell, and by her had issue two sons and six daughters. His widow possesses a chalk portrait of him as a young man by John Pettie, R.A.

VANDAM, ALBERT DRESDEN (1843-1903), publicist and journalist, born in London in March 1843, was son of Mark Vandam, of Jewish descent, district commissioner for the Netherlands state lottery. Before he was thirteen he was sent to Paris, where he was privately educated and remained fifteen years. According to his own story, he was looked after in boyhood by two maternal great-uncles, who had been surgeons in Napoleon's army, had set up after Waterloo in private practice at Paris, enjoyed the *entrée* to the court of the second empire, and entertained at their house the leaders of Parisian artistic society. Vandam claimed that his youth was passed among French people of importance, and that he, at the same time, made the acquaintance of the theatrical and Bohemian worlds of the French capital (VANDAM, *My Paris Note-Book*, pp. 1-3). He began his career as a journalist during the Prusso-Austrian war of 1866, writing for English papers, and he was correspondent for American papers during the Franco-Prussian war of 1870-71. Settling in London in 1871, he engaged in translation from the French and Dutch and other literary work, occasionally going abroad on special missions for newspapers. From 1882 to 1887 Vandam was again in Paris as correspondent for the 'Globe,' subsequently making his home anew in London.

Vandam's 'An Englishman in Paris,' which was published anonymously in 1892 (2 vols.), excited general curiosity. It collected gossip of the courts of Louis Philippe and the second empire of apparently a very intimate kind. Vandam wrote again on French life and history, often depreciatingly, in 'My Paris Note-Book' (1894), 'French Men and French Manners' (1895), 'Undercurrents of the Second Empire' (1897), and 'Men and Manners of the Second Empire' (1904), but he did not repeat the success of his first effort.

He translated for the first time into English, under the title of 'Social Germany in Luther's Time,' the interesting autobiography of the sixteenth-century Pomeranian notary, Bartholomew Sastrow, which he published in 1902 (with introduc-

tion by H. A. L. Fisher). He died in London on 25 Oct. 1903. He married Maria, daughter of Lewin Moseley, a London dentist.

Other of Vandam's works, apart from translations, included: 1. 'Amours of Great Men' (2 vols.), 1878. 2. 'We Two at Monte Carlo,' 1890, a novel. 3. 'Masterpieces of Crime,' 1892. 4. 'The Mystery of the Patrician Club,' 1894. 5. 'A Court Tragedy,' 1900.

VANSITTART, EDWARD WESTBY (1818-1904), vice-admiral, born at Bisham Abbey, Berkshire, on 20 July 1818, was third son (in a family of five children) of Vice-admiral Henry Vansittart [q. v.] of Eastwood, Canada, by his wife Mary Charity, daughter of the Rev. John Pennefather. He entered the navy as a first-class volunteer in June 1831, and passed through the course at the Royal Naval College, Portsmouth. As a midshipman of the *Jaseur* he served on the east coast of Spain during the Carlist war of 1834-6, and having passed his examination on 2 Aug. 1837, served as mate in the *Wellesley*, flagship on the East Indies station, being present at the reduction of Karachi in Feb. 1839 and at other operations in the Persian Gulf. In Dec. 1841 he was appointed to the *Cornwallis*, flagship of Sir William Parker [q. v.] on the East Indies and China station, and in her took part in the operations in the Yangtse-kiang, including the capture of the *Woo-sung* batteries on 16 June 1842. He received the medal, was mentioned in despatches, and was promoted to lieutenant on 16 Sept. 1842. In Feb. 1843 he was appointed to the sloop *Serpent*, and remained in her in the East Indies for three years, and, after a short period of service on board the *Gladiator* in the Channel, joined in Dec. 1846 the *Hibernia*, flagship of Sir William Parker in the Mediterranean. During the Portuguese rebellion of 1846-7 he acted as aide-de-camp to Sir William Parker, and was present at the surrender of the Portuguese rebel fleet off Oporto. On 1 Jan. 1849 he was appointed first lieutenant of the royal yacht, and on 23 Oct. of that year was promoted to commander.

In August 1852 Vansittart commissioned the *Bittern*, sloop, for the China station, where he was constantly employed in the suppression of piracy, for which he was mentioned in despatches. During the

Russian war the *Bittern* was attached to the squadron blockading De Castries Bay in the Gulf of Tartary. In Sept. and Oct. 1855 Vansittart destroyed a large number of piratical junks and the pirate stronghold of Sheipoo, and rescued a party of English ladies from the hands of the pirates. For these services he was thanked by the Chinese authorities, and received a testimonial and presentation from the English and foreign merchants. On 9 Jan. 1856 he was promoted to captain. In Nov. 1859 he was appointed to the *Ariadne*, frigate, which in 1860 went out to Canada and back as escort to the line of battleship *Hero*, in which the Prince of Wales (afterwards King Edward VII) visited the North American colonies (see T. BUNBURY GOUGH, *Boyish Reminiscences of the visit, passim*). The *Ariadne* then returned to the American station for a full commission. In Sept. 1864 Vansittart was appointed to the *Achilles* in the Channel squadron, and remained in command of her for four years. He was made a C.B. in March 1867, and awarded a good service pension in Nov. 1869. In September 1871 he commissioned the *Sultan* for the Channel squadron, in which he was senior captain, and continued in her until retired for age on 20 July 1873. In the *Sultan* he saluted at Havre in 1872 M. Thiers, president of the new French republic. He was promoted to rear-admiral, retired, on 19 Jan. 1874, and to vice-admiral on 1 Feb. 1879. He died at Worthing on 19 Oct. 1904.

VAUGHAN, DAVID JAMES (1825-1905), honorary canon of Peterborough, and social reformer, born at St. Martin's vicarage, Leicester, on 2 Aug. 1825, was sixth and youngest son of Edward Thomas Vaughan, fellow of Trinity College, Cambridge, and vicar of St. Martin's, Leicester, by his second wife Agnes, daughter of John Pares of The Newarke, Leicester. Charles John Vaughan [q. v.], master of the Temple, and General Sir John Luther Vaughan, G.C.B., were elder brothers. James Vaughan, a physician of Leicester and one of the founders of the Leicester Infirmary, was his grandfather, and his uncles included Sir Henry (who took the name of Halford) [q. v.], physician; Sir John Vaughan [q. v.], baron of the exchequer and father of Henry Halford Vaughan [q. v.]; and Sir Charles Richard Vaughan [q. v.], diplomatist.

David James was educated first at the

Leicester Collegiate School, under W. H. Thompson, afterwards Master of Trinity College, Cambridge, and in August 1840 he went to Rugby, first under Arnold and then under Tait. In 1844 he won a scholarship at Trinity College, Cambridge, and next year the Bell university scholarship, along with John Llewelyn Davies. In 1847 he was Browne medallist for Latin ode and epigrams; and in 1847 and 1848 he obtained the members' prize for a Latin essay. In 1848 he was bracketed fifth classic with his friend Llewelyn Davies, and he was twenty-fourth senior optime. He graduated B.A. in 1848, proceeded M.A. in 1851, and was a fellow of Trinity College from 1850 to 1858.

Vaughan, Davies, and Brooke Foss Westcott [q. v. Suppl. II], all fellows of Trinity, formed at Cambridge a lifelong friendship. The three were amongst the earliest members of the Cambridge Philological Society. In 1852 Vaughan and Llewelyn Davies brought out together a translation of Plato's 'Republic,' with introduction, analysis, and notes. Davies undertook the first five books, and Vaughan the last five, each author submitting to the other his work for correction or amendment. The analysis was the work of Vaughan, whilst Davies was responsible for the introduction. In 1858 a second edition was issued, and in 1860 a new edition, without the introduction, in the 'Golden Treasury' series. This was stereotyped, and has since been frequently reprinted. An edition de luxe in two quarto volumes appeared in 1898. The translators sold their copyright for 60*l*. (information from J. L. Davies). The translation is exact and scholarly. Despite the superiority of Jowett's translation in respect alike of English style and of the presentation of Plato's general conceptions, Davies and Vaughan's rendering excels Jowett's in philological insight, and indicates with far greater fidelity the construction of difficult passages.

In 1853 Vaughan was ordained deacon, and began his pastoral work in Leicester, living on his fellowship, and serving as honorary curate, first to his eldest brother at St. Martin's, and then at St. John's church. In 1854 he was ordained priest, and in 1856 he succeeded his friend Llewelyn Davies as incumbent of St. Mark's, Whitechapel. In 1860 he was appointed vicar of St. Martin's, Leicester, and master of Wyggeston's Hospital. The living was then in the gift of the crown, and had been held by his father and two of his brothers

continuously since 1802, save for a short interval of twelve years. In the case of each of the three sons the appointment was made at the urgent request of the parishioners. Vaughan refused all subsequent offers of preferment, including a residentiary canonry at Peterborough and the lucrative living of Battersea, which Earl Spencer offered him in 1872. He accepted an honorary canonry of Peterborough in 1872, and he was rural dean of Leicester from 1875 to 1884 and from 1888 to 1891. In June 1894 he was made hon. D.D. of Durham University.

In early life Vaughan was influenced by the liberal theology of John Macleod Campbell [q. v.], and while in London he, like his friend Llewelyn Davies, came under the influence of Frederick Denison Maurice [q. v.]. Maurice's example as social and educational reformer largely moulded his career. His teaching on the atonement and inspiration was at the outset called in question, but Vaughan soon concentrated his interests in social questions, to which he brought a broad public spirit and sympathy. His efforts to elevate the working classes by means of education were no less earnest and successful than those of Maurice and his colleagues in London. In 1862 he started in Leicester, on the lines of the Working Men's College founded by Maurice in London in 1854, a working men's reading-room and institute in one of the parish schools. He arranged for classes and lectures, and the numbers attending them grew steadily, the teachers being all volunteers. In 1868 there were four hundred adults under instruction, and the name of the institute was changed to 'college' as being in Vaughan's words 'not only a school of sound learning, but also a home for Christian intercourse and brotherly love.' At one time the Leicester Working Men's College was educating 2300 students. In addition to Sunday morning and evening classes, night classes, and advanced classes, there were established a provident society, sick benefit society, and book club. Some of the students became leading manufacturers in Leicester, and several have filled the office of mayor. The college still holds an important place among the educational institutions of the town.

On Sunday afternoons, Vaughan gave in St. Martin's church addresses on social and industrial as well as religious themes to working men, including members of the great friendly societies in Leicester, and students of the college. The first was

delivered on 13 Feb. 1870, on 'The Christian Aspect and Use of Politics.' Some of his Sunday afternoon addresses were published in 1894 as 'Questions of the Day.'

Vaughan was chairman of the first Leicester school board in 1871, and exercised a moderating influence over stormy deliberations. During an epidemic of small-pox in 1871, he constantly visited the patients in the improvised hospital, and from that time to near the end of his life he regularly ministered to the staff and patients of the borough isolation hospital.

In 1893 failing health compelled him to resign his parish, and he retired to the Wyggeston Hospital on the outskirts of the town. He continued to act as chairman of the Institution of District Nurses, president of the Working Men's College, and honorary chaplain to the isolation hospital. He died at the master's house at Wyggeston's Hospital on 30 July 1905, and was buried at the Welford Road cemetery, Leicester. He married, on 11 Jan. 1859, Margaret, daughter of John Greg of Escowbeck, Lancaster; she died on 21 Feb. 1911 and was buried beside her husband.

To commemorate Vaughan's work at St. Martin's, as well as that of his father and two brothers, all former vicars, a new south porch was erected at St. Martin's church in 1896-7 at the cost of 3000*l*. After his death, a new Vaughan Working Men's College, situate in Great Central Street and Holy Bones, Leicester, was erected as a memorial to him at the cost of 8000*l*. The building was formally opened by Sir Oliver Lodge on 12 Oct. 1908.

Besides the works already mentioned, Vaughan published: 1. 'Sermons preached in St. John's Church, Leicester,' 1856. 2. 'Three Sermons on the Atonement,' 1859. 3. 'Christian Evidences and the Bible,' 1864; 2nd edit. 1865. 4. 'Thoughts on the Irish Church Question,' 1868. 5. 'Sermons on the Resurrection,' 1869. 6. 'The Present Trial of Faith,' 1878.

G. D. F.

VAUGHAN, HERBERT ALFRED (1832-1903), cardinal, born in Gloucester on 15 April 1832, was eldest son of Colonel John Francis Vaughan (1808-1880) of Courtfield, by his first wife, Louisa Elizabeth, third daughter of John Rolls of the Hendre. His mother's nephew was John Allan Rolls, first Lord Llangattock (1837-1912). Always royalists and catholics, the Vaughans of Courtfield suffered for generations in fines and imprisonment and double land tax. The cardinal's uncle, William Vaughan (1814-1902), was catholic bishop of Plymouth. His mother, a convert from Anglicanism, used to pray every day that all her children should become priests or nuns. Of her eight sons, six became priests—three of them bishops—and all her five daughters entered convents. The cardinal's next brother, Roger William Bede Vaughan, catholic archbishop of Sydney, is already noticed in the Dictionary. His third brother, Kenelm (1840-1909), was for a time private secretary to Cardinal Manning and was a missionary in South America.

Herbert was educated at Stonyhurst from 1841 to 1846. Thence he went for three years to a Jesuit school at Brugellette in Belgium. Later, after a year with the Benedictines at Downside, he passed to Rome in the autumn of 1851 to study for the priesthood. His school career was undistinguished. His natural tastes were those of an ordinary country gentleman, and he has left it on record that when, at the age of sixteen, he definitely made up his mind to give himself to the church he chiefly regretted dissociation from the gun and the saddle.

During his stay in Rome his work was constantly hindered by ill-health. It was thought that he could not live to be ordained. A special rescript was obtained from Pius IX to enable him to receive priest's orders eighteen months before he was of the canonical age. He was ordained at Lucca on 28 Oct. 1854. The following year he went to St. Edmund's, Ware, as vice-president of the seminary; in 1857 he joined the congregation of the Oblates, then introduced into England by Manning; and he left St. Edmund's when the Oblates were withdrawn as the result of litigation in Rome between Cardinal Wiseman and his chapter in 1861. During the two following years of doubt and indecision a desire to do something for the conversion of the heathen world became almost an obsession. Under the influence of an old Spanish Jesuit he finally resolved

to found in England a college for foreign missions and to find the means by begging in foreign countries. Having obtained at Rome the blessing of the pope, he sailed at the end of 1863 for the Caribbean Sea.

Landing at Colon, he crossed the isthmus to Panama, then part of the republic of New Granada. The town was suffering from small-pox, and the dead were counted in hundreds. At the same time, owing to the refusal of the clergy to accept a new constitution requiring what was regarded as an acknowledgment of the civil power in spiritual matters, all the churches had been closed, and priests were forbidden to say mass or administer the sacraments. Vaughan spent his days among the sufferers, saying mass, hearing confessions, and consoling the dying. He was summoned before the president of the republic and warned to desist. He had promised to say mass in the room of a woman sick of the small-pox, and he did so. Taken before the prefect of the city and committed for trial, he escaped by boarding a ship bound for San Francisco. After spending five months travelling up and down California with varying success he determined to try his fortune in South America. His plan was to beg his way through Peru and Chili, and then to ride across the Andes into Brazil, and to sail from Rio, either for Australia or home. This plan he carried out except that instead of riding across the Andes he sailed round the Horn in H.M.S. *Charybdis*. These wanderings, during which his begging exposed him to varied risks, lasted nearly two years.

The work was suddenly cut short by a letter of recall from Manning. Vaughan reached England in the last week of July 1865, bringing with him 11,000*l.* in cash and holding promises for a considerably larger sum. Friends now came to his help, and a house and land were purchased at Mill Hill without his having to touch the money collected in the Americas. That was to be assigned to the maintenance of the students. The college, called St. Joseph's College, was opened in a very humble way on 1 March 1866. The most rigid economy was practised in all household arrangements. The progress was rapid; additional accommodation became necessary, the foundations of the present college were laid, and in March 1871 the new buildings opened, free from debt, with a community of thirty-four. In the autumn Vaughan saw the first fruits of his labours when the Holy See assigned to St. Joseph's missionaries the task of working

among the coloured population of the United States. In November he sailed with the first four missionaries, and after settling them in Baltimore started on a journey of discovery and inquiry through the southern states, in the course of which he visited St. Louis, New Orleans, Mobile, Savannah, Memphis, Vicksburg, Natchez, and Charleston. All his life he continued to take the deepest interest in the development of the Mill Hill college, and he remained president of St. Joseph's Missionary Society till his death. The college which he had built has now three affiliated seminaries. His missionaries are at work in the Philippines, in Uganda, in Madras, in New Zealand, in Borneo, in Labuan, in the basin of the Congo, in Kashmir, and Kafiristan. In 1911 they gave baptism to nearly 15,391 pagans.

Vaughan's first visit to America convinced him of the power of the press. In November 1868 he bought 'The Tablet,' which was founded by Frederick Lucas [q. v.] in 1840, and for nearly three years he was its acting editor. It was the time of the controversy about the papal infallibility. A disciple of Manning and W. G. Ward, Vaughan advocated uncompromisingly in 'The Tablet' the Ultramontane cause.

After the death of Dr. Turner, bishop of Salford, in July 1872, Vaughan, largely through Manning's influence, was chosen as his successor. He was consecrated at St. John's Cathedral, Salford, on 26 Oct. 1872. The catholic diocese of Salford, although geographically small, was estimated to contain 196,000 souls and was rapidly increasing. The new bishop was soon in love with Lancashire and its people, and, wrote of Salford as 'the grandest place in England for popular energy and devotion.' After his first survey of the wants of his diocese the bishop saw the need of a pastoral seminary, where newly ordained priests might spend together their first year. A sum of 18,000*l.* was collected, and the Pastoral Seminary was opened within three years. The bishop's second project was St. Bede's College, a catholic school of his own in Manchester, mainly for commercial education. Two houses facing Alexandra Park were purchased close to the Manchester Aquarium, which had hitherto been associated with high scientific and philanthropic ideals. The news that the Aquarium Company was near to bankruptcy and might be converted into a music hall, led the bishop to secure it summarily for 6800*l.* With the support of the leading catholics of Manchester the

old Aquarium was in the summer of 1877 absorbed in the new buildings of St. Bede's college which were opened in 1880; a central block was completed in 1884. More than two thousand boys have since passed through the school, and in 1910 one hundred and eighty boys were taught within its walls.

The diocese was comparatively well equipped in regard to elementary schools, but in other respects the diocesan organisation was deficient. Vaughan soon placed the whole administration on a thoroughly business footing. The diocesan synods which had been held every seven years were made annual. The system of administering the affairs of the diocese through deaneries was developed. Each dean was made responsible for the proper management of all the missions within his deanery. A board of temporal administration was appointed annually at the synod to advise the bishop on matters of finance, and to control schemes for new expenditure. The bishop was insistent that earnest efforts should be made to reduce the indebtedness of the missions and diocese. When he left Salford after fourteen years, the general debt had been reduced by 64,478*l*.

As a result of a census of the catholics of Manchester and Salford and a thorough inquiry into the various dangers menacing catholic children the bishop issued in November 1886 a pamphlet, 'The Loss of our Children,' in which he announced and justified the formation of the 'Rescue and Protection Society.' Ten thousand catholic children were declared to be in peril of their faith. It was shown that eighty per cent. of the catholic children who left the workhouses of Manchester were lost to the catholic church. The bishop resolved on a crusade of rescue. Much money and many workers were needed. He gave at once 1000*l*., together with the whole of the episcopal *mensa*, or official income, each year until he went to Westminster. 'Rescue Saturday' was established to make collections throughout the diocese every week on 'wages night.' Within three years litigation had removed all catholic children from protestant philanthropic homes, and a sufficiency of certified poor law schools for catholic children was soon established. The report of the Rescue Society for 1890 showed that seven homes, including two certified poor law schools, had been bought or built, and that in them 536 destitute children were maintained. In the same year 1515 cases were dealt with by a central committee, which met every Thursday at the bishop's house, and

8385 by district committees in various parts of the diocese. In the same period 234 children were adopted by catholic families in Canada. The cost was 159*l*. a week; 2000 people were taking an active part in the rescuing and protecting of the children.

Vaughan identified himself with the resistance of the English catholic bishops to certain claims put forward on behalf of the regular clergy in regard to the right to open schools without the authority of the diocesan, to the division of missions and the attendance at synods. In 1879 Vaughan joined in Rome the bishop of Clifton, the Hon. W. Clifford, who was the principal agent of the English bishops there; and a decision was substantially given in their favour in the bull 'Romanos Pontifices' on 14 May 1881.

In the general position of denominational schools in England, Vaughan took early a strong stand from which he never departed. In 1883 he had convinced himself that without the help of parliament the catholic, like all denominational schools, must perish. He therefore began a campaign in favour of financial equality between the voluntary and the board schools, starting the voluntary schools association. Branches sprang up over the country, while its programme received the sanction of Manning and the hierarchy. Its demands were formulated in February 1884. The agitation was thenceforth carried on with immense vigour, especially in Lancashire.

The bishop mixed freely with men of all denominations in Manchester. He was a frequent speaker at public meetings on temperance, sanitation, and the better housing of the poor. He advocated the establishment by the local authority of covered recreation grounds for public use, urging that amusements should tend to unite and not divide the family group. He was the founder of the Manchester Geographical Society, and he frequently attended the discussions before the Chamber of Commerce, where, on occasion, his missionaries from Mill Hill were invited to give an account of the countries they were helping to open up.

On the death of his father in December 1880 Vaughan succeeded to a life interest in the entailed estate at Courtfield. He arranged to receive 1000*l*. a year; and, subject to that annuity, he renounced his interest in the property. Of his seven brothers, six, including the eldest four, were priests at their father's death.

Besides Herbert, the next brothers, Roger, Kenelm, and Joseph, were ready in their turn each to give up his contingent right. Courtfield consequently passed at once, in the lifetime of all of them, to the fifth son, Colonel Francis Baynham Vaughan.

Vaughan was appointed archbishop of Westminster in succession to Manning on 29 March 1892 on the unanimous recommendation of the English bishops. He himself protested that his lack of learning unfitted him for the high office. On leaving Lancashire a marble bust was placed by public subscription in Manchester town hall. He was enthroned very quietly in the Pro-Cathedral, Kensington, on 8 May, and received the pallium from the hands of the apostolic delegate, the Hon. and Rt. Rev. Mgr. Stonor, archbishop of Trebizond, on 16 August in the Church of the Oratory. On 19 Jan. 1893 he became cardinal, receiving the red hat from the hands of Leo XIII, with the title of SS. Andrea and Gregorio on the Coelian. His long intimacy with Manning and frequent visits to Archbishop's House had made him quite familiar with the main problems which awaited him. But his efforts at solution often differed from those of his predecessor.

Vaughan embarked without delay on a large scheme of concentration in catholic ecclesiastical education throughout the country. He closed St. Thomas's Seminary at Hammersmith. On 15 July 1897 St. Mary's College, Oscott, was constituted *de jure* and *de facto* the common seminary for a group of dioceses, Westminster, Birmingham, Clifton, Newport, Portsmouth, Northampton, and what was then the vicariate of Wales. In the interest of concentration and efficiency the cardinal accepted a policy of complete self-effacement both for himself and his diocese. The supreme control of the central seminary was vested in a board of co-interested bishops. The cardinal provided as much money for the new endowment of the seminary as the other bishops together, and Westminster sent more students than any other diocese. But he claimed for himself and Westminster only one-seventh share in the government of the seminary, and no greater part in its management than was conceded to a bishop who had perhaps only a couple of students there. This policy was a mistake; and before his death he realised that in founding the Central Seminary on such lines he had largely parted with the power to control the training of his own students. The arrange-

ment was brought to an end shortly after his death.

Although Vaughan had previously opposed, like Manning and Ward, the education of catholic youths at the national universities, he changed his mind on coming to London, and at a meeting of the bishops on 4 Jan. 1895 he induced a majority to join him in urging that the Holy See should be asked to withdraw on certain conditions its former admonition against catholic attendance at Oxford and Cambridge. A resident chaplain should be provided with courses of lectures on catholic philosophy and church history. The resolutions of the bishops were finally approved by Leo XIII on 2 April 1895, and before his death Vaughan reported the success of the new policy.

From the first Vaughan meant to build Westminster Cathedral. In July 1894 he issued a private circular on the subject, suggesting a church after the style of Constantine's Church of St. Peter. The scheme met at the outset with little encouragement, but appeal was made for funds, and 45,000*l.* was received when John Francis Bentley [q. v. Suppl. II] was selected as architect. In the final design the idea of a Roman basilica was combined with the constructive improvements introduced by the Byzantine architects. On 29 June 1895 the foundation stone was laid. The building fund then stood at 75,000*l.*, and it rose in May 1897 to 100,848*l.* Some 64,000*l.* was added before the cardinal's death, and his funeral service on 25 June 1903 was the cathedral's opening; there was no other.

Between 1894 and 1897 Vaughan played an official part in the controversy over the validity of Anglican orders which was raised by Anglican advocates of corporate reunion. Vaughan held that corporate reunion could come only by a process of corporate submission. Even as providing a point of contact and an opportunity for an exchange of views he thought the question of the validity of Anglican orders was unfortunately chosen. It was mainly a question of fact. But he urged the appointment in March 1896 of the international commission to report upon the question in all its bearings. The result was a declaration from Rome that Anglican orders were null and void (16 July 1896) and the issue of the bull *Apostolicæ Curæ* (13 September).

In the cause of denominational schools Vaughan laboured with even greater persistency in London than in Manchester. He was anxious to work in harmony with the leaders of the Church of England. In

1895 both anonymously in 'The Tablet' and over his own name in 'The Times' (30 Sept. 1895) he repudiated the term 'voluntary school' and declared for the cessation of voluntary subscriptions for the support of the public elementary schools. Dr. E. W. Benson, archbishop of Canterbury, inclined to more temporising courses (29 November). But Vaughan was resolute, and his steadfastness was rewarded by the education bill of 1902, which recognised his fundamental principle that all the schools are the common care of the state. In spite of illness he followed the debates of 1902 with unflinching interest. He discussed every clause and amendment with the special emergency committee of the catholic education council which had been appointed to watch the bill.

During his last five years the cardinal's health gradually failed. Periods of rest became necessary and frequent. In June 1902 he was ordered to Bad Nauheim. On 25 March 1903 he left Archbishop's House, Westminster, for St. Joseph's College, Mill Hill, where he died on 19 June 1903. He was buried in the garden there. There is a recumbent figure of him in a chantry chapel in Westminster Cathedral.

The leading notes of the cardinal's character were its directness, impulsiveness, and perfect candour. His mind was not subtle or speculative; he loved plain dealing and plain speech. His sympathies were wide and generous; there was an element of romance in his nature to which large and bold enterprises easily appealed. On the other hand he was apt to be impatient of details. His life was coloured and governed by an internal faith. It was his custom to spend an hour every night in prayer before the blessed sacrament. His manner in public was sometimes thought to be haughty and unsympathetic, and notes in his diary show a consciousness of hardness which he tried hard to dispel. An iron bracelet with sharp points made of piano wire was cut off his arm after death.

Tall in stature, he was strikingly handsome. He was never painted by any artist of repute. A caricature portrait by 'Spy' appeared in 'Vanity Fair' in 1893.

Vaughan published many popular manuals of devotion and religious instruction which owed their success to his simplicity of style and directness of thought.

[Snead-Cox's *Life of Cardinal Vaughan*, 1910; Ward's *Life of Wiseman*; Purcell's *Life of Manning*; private information.]

J. G. S.-C.

VAUGHAN, KATE (1852 ?-1903), actress and dancer, whose real name was CATHERINE CANDELON, born in London, was elder daughter of a musician who played in the orchestra of the Grecian Theatre, City Road. After receiving some preliminary training in the dancing academy conducted by old Mrs. Conquest of that theatre, she took finishing lessons from John D'Auban, and, in association with her sister Susie, made her debut of dancer as one of the Sisters Vaughan at the Metropolitan music-hall in 1870. Early in 1872 she sustained a small part at the Royal Court Theatre in 'In Re Becca,' a travesty of Andrew Halliday's recent Drury Lane drama. In Dec. 1874 she danced the bolero delightfully at Drury Lane in Matthison's opera bouffe, 'Ten of 'em.' At the same house, in the Christmas of 1875, she sustained the leading character of Zemira in Blanchard's pantomime of 'Beauty and the Beast,' displaying abilities as a burlesque actress of an arch and refined type.

A notable seven years' association with the Gaiety began on 26 Aug. 1876, when she appeared as Maritana in Byron's extravaganza 'Little Don Caesar.' Thenceforth she formed, with Nellie Farren [q. v. Suppl. II], Edward Terry, and E. W. Royce, one of a quartette which delighted the town in a long succession of merry burlesques by Byron, Burnand and Reece. Her last performance at the Gaiety was as Lili in Burnand's burlesque drama, 'Blue Beard' (12 March 1883). In the summer of 1885 she danced at Her Majesty's in the spectacular ballet 'Excelsior,' and, although only appearing for two minutes nightly, proved a great attraction. Subsequently from reasons of health she abandoned dancing for old comedy, in which she showed unsuspected capacity. At the Gaiety on John Parry's farewell benefit (7 Feb. 1877) she had already appeared as First Niece in 'The Critic.' In 1886 she organised the Vaughan-Conway comedy company in conjunction with H. B. Conway, and made a successful tour of the provinces. Dissolving the partnership in 1887, she began a season of management at the Opera Comique on 5 Feb., appearing there as Lydia Languish in 'The Rivals,' and subsequently as Miss Hardcastle to the Young Marlow of Mr. Forbes Robertson, and as Peg Woffington in 'Masks and Faces' to the Triplet of James Fernandez. The chief success of the season (which terminated on 29 April) was the revival of 'The School for Scandal,' in which she made an

admirable Lady Teazle. In a later provincial tour she delighted country players by her rendering of Peggy in 'The Country Girl,' and of the title-character in Hermann Vezin's 'The Little Viscount.' At Terry's Theatre on 30 April 1894 she returned to burlesque as Kitty Seabrook in Branscombe's extravaganza, 'King Kodak,' but her old magic had departed. In 1896, after a testimonial performance at the Gaiety, she went to Australia for her health. In the summer of 1898 she had a short season at Terry's Theatre in her old-comedy characterisations. In 1902 failing health necessitated a visit to South Africa, but a theatrical tour which she opened at Cape Town proved unsuccessful. She died at Johannesburg on 21 Feb. 1903.

Miss Vaughan married on 3 June 1884, as his second wife, Colonel the Hon. Frederick Arthur Wellesley, third son of the first Earl Cowley. Her husband divorced her in 1897. A water-colour drawing of her as Morgiana in 'The Forty Thieves,' by Jack, was shown at the Victorian Era Exhibition in 1897.

In point of grace, magnetism, and spirituality, Kate Vaughan was the greatest English dancer of her century. She owed little to early training and much to innate refinement and an exquisite sense of rhythm. Ignoring the conventions of stage traditions, she inaugurated the new school of skirt-dancing. A woman of varied accomplishments, she was a capable actress in old comedy.

W. J. L.

VEITCH, JAMES HERBERT (1868-1907), horticulturist, born at Chelsea on 1 May 1868, was elder son (by his wife Jane Hodge) of John Gould Veitch, the senior member of a family distinguished as nurserymen for a century. James Herbert's great-great-grandfather, John Veitch (1752-1839), came from Jedburgh to be land-steward to Sir Thomas Acland, and held nursery-ground at Killerton, near Exeter, in 1808. John Veitch's son James (1772-1863), James Herbert Veitch's great-grandfather, founded the Exeter nursery in 1832, employed the celebrated plant-collectors William and Thomas Lobb as gardeners there, and, in conjunction with his sons, purchased, in 1853, the business of Messrs. Knight and Perry at Chelsea. In 1864

the two gardens were separated, that at Chelsea being carried on by James Herbert's grandfather, James Veitch (1815-1869), and that at Exeter by the latter's younger brother Robert. In 1865 James Veitch took into partnership at Chelsea his sons, John Gould Veitch (1839-1870), James Herbert's father, and Harry James Veitch, James Herbert's uncle.

Veitch was educated at Crawford College, Maidenhead, and in technical subjects in Germany and France, beginning work at the Chelsea nursery in 1885. He was elected fellow of the Linnean Society in 1889 and was also fellow of the Horticultural Society. From 1891 to 1893 he made a tour round the world, going by way of Rome and Naples to Ceylon, thence overland from Cape Tuticorin to Lahore, thence to Calcutta, the Straits Settlements, Buitenzorg, Japan, Corea, Australia and New Zealand. Among the results of his journey was the introduction of the large winter-cherry, *Physalis Francheti*. A series of letters on the gardens visited during the journey was printed in the 'Gardener's Chronicle' (March 1892-Dec. 1894), and privately printed collectively as 'A Traveller's Notes' in 1896.

In 1898 the firm of James Veitch & Sons was formed into a limited company, of which Veitch became managing director. One of the first steps taken by the company, in accordance with the firm's earlier practice, was to send out Mr. E. H. Wilson to China and Tibet to collect plants. In 1906 Veitch prepared for private distribution, under the title of 'Hortus Veitchii,' a sumptuous history of the firm and its collectors, illustrated with portraits. The botanical nomenclature was revised by George Nicholson [q. v. Suppl. II]. Shortly afterwards Veitch retired from business, owing to failing health, his uncle, Mr. Harry James Veitch, resuming work in his place. He died of paralysis at Exeter on 13 Nov. 1907, and was buried there. Veitch married in 1898 Lucy Elizabeth Wood, who survived him without issue.

[Hortus Veitchii, pp. 89-91; Athenæum, 20 Nov. 1907; Proc. Linnean Soc. 1907-8, pp. 65-6; information supplied by the family.]

G. S. B.

VERNON-HARCOURT, LEVESON FRANCIS (1839-1907), civil engineer, born in London on 25 Jan. 1839, was second son of Admiral Frederick Edward Vernon-Harcourt and grandson of Edward Harcourt, archbishop of York [q. v.]. He was thus a first cousin of Sir William

Harcourt [q. v. Suppl. II]. His mother was Marcia, daughter of Admiral John Richard Delap Tollemache, and sister of John Tollemache, first Lord Tollemache. His elder brother, Augustus George, F.R.S., is one of the metropolitan gas referees. Educated at Harrow and at Balliol College, Oxford, he obtained a first-class in mathematical moderations in Michaelmas term, 1861, and graduated with a first class in the natural science school in Easter term 1862. From 1862 to 1865 he was a pupil of (Sir) John Hawkshaw [q. v. Suppl. I] and was employed on the Penarth and Hull docks. After serving in the office as an assistant, he was appointed in 1866 resident engineer on the new works at the East and West India Docks (cf. his paper, *Proc. Inst. Civ. Eng.* xxxiv. 157). On their completion early in 1870 he gained, in open competition, the county surveyorship of Westmeath, but within a few months he resigned and took up the duties of resident engineer at Alderney harbour (cf. *Proc. Inst. Civ. Eng.* xxxvii. 60). From 1872 to 1874 he was resident engineer on the Rosslare harbour works and the railway to Wexford. He then returned to London, and in 1877 made a survey of the Upper Thames Valley, on behalf of Hawkshaw.

In 1882 he commenced practice as a consulting engineer in Westminster, and in the same year became professor of civil engineering at University College, London. He filled the chair with great success till 1905, being appointed emeritus professor next year. He chiefly devoted himself to the engineering of harbours and docks, rivers and canals, and water-supply, and in this branch of engineering he became an acknowledged authority, pursuing the study of it with enthusiasm in all parts of the world. In text-books and papers as well as in evidence before parliamentary inquiries he showed to advantage a practical training combined with literary and scientific aptitudes. His chief text-books are 'Rivers and Canals' (2 vols. Oxford, 1882; 2nd edit. 1896); 'Harbours and Docks' (Oxford, 1885); 'Civil Engineering as applied in Construction' (1902); 'Sanitary Engineering' (1907). In 1891 he published a popular work, 'Achievements in Engineering during the last Half-century.'

Vernon-Harcourt's fluent command of French enabled him to take an active part in the proceedings and organisation of navigation congresses. He attended on behalf of the Institution of Civil Engineers the Navigation Congresses held at Brussels in 1898 (cf. *Proc. Inst. Civ. Eng.* cxxxvi. 282),

at Paris in 1900 (*ib.* cxlv. 298), and at Düsseldorf in 1902 (*ib.* clii. 196). At the Milan congress in 1905 he was also delegate of the British government (*ib.* clxvi. 346). In 1906 he was a member of the International Consultative Commission for the Suez Canal works. He also served on an international jury in Vienna to consider schemes for large canal-lifts, and was created in 1904 a commander of the Imperial Franz-Josef Order of Austria-Hungary. In 1896 he reported to the Commissioners of the Port of Calcutta upon the navigation of the river Hooghly (cf. his paper in *Proc. Inst. Civ. Eng.* clx. 1905, p. 100). Other engineering reports relate to the rivers Usk, Ribble, Mersey (Crossens Channel), Orwell, and Dee, the Aire and Calder navigation, the Ouse navigation, and the harbours of Poole in Dorsetshire, Sligo and Newcastle in Ireland, and Newport, Monmouthshire. An essay written in 1881 'On the Means of Improving Harbours established on Low and Sandy Coasts, like those of Belgium' (MS. at the Institution Civ. Eng.) was placed second at the first quadrennial international competition instituted by the King of the Belgians. He was held in high repute among continental engineers as well as in his own country. At his death he was the oldest member of council of the Permanent International Association of Navigation Congresses.

Elected an associate of the Institution of Civil Engineers on 5 Dec. 1865, and transferred to membership on 19 Dec. 1871, he contributed eighteen papers in all to its 'Proceedings,' for which he was awarded the Telford and George Stephenson medals, six Telford premiums, and a Manby premium. These papers include, besides those already mentioned, 'Fixed and Movable Weirs' (lx. 24); 'Harbours and Estuaries on Sandy Coasts' (lxx. 1); 'The River Seine' (lxxxiv. 210); 'The Training of Rivers' (cxviii. 1). He also contributed to the 'Proceedings' of the Royal Society, the Society of Arts, and the Institution of Mining Engineers, and in 1905 he was president of the mechanical science section of the British Association at Cape Town. He wrote on 'River Engineering' and 'Water Supply' in the 'Encyclopædia Britannica' (9th edit.).

He died at Swanage on 14 Sept. 1907, and was buried at Brookwood cemetery. To the Institution of Civil Engineers he bequeathed 1000*l.* for the provision of biennial lectures on his special subjects. He married, on 2 Aug. 1870, Alice, younger daughter of Lieut.-colonel Henry Rowland

Brandreth, R.E., F.R.S., and left a son (d. 1891) and two daughters.

[Proc. Inst. Civ. Eng. clxxi. 421; Catalogue of the Library Inst. Civ. Eng.; Engineering, 20 Sept. 1907 Burke's Peerage.] W. F. S.

VEZIN, HERMANN (1829-1910), actor, born at Philadelphia, Pennsylvania, U.S.A., on 2 March 1829, was son of Charles Henri Vezin, merchant, of French origin, by his wife Emilie Kalisky. His great-great-grandfather, Pierre de Vezin, married in the seventeenth century Marie Charlotte de Châteauneuf, an actress at the French theatre at Hanover; Rouget de Lisle, composer of the 'Marseillaise,' was one of the great-grandsons of this union. Hermann Vezin was educated in Philadelphia, entering Pennsylvania University in 1845. Intended for the law, he graduated B.A. in 1847, proceeding M.A. in 1850. In 1848-9 he underwent in Berlin successful treatment for threatened eye-trouble.

In 1850 he came to England, and an introduction from Charles Kean secured him an engagement with John Langford Pritchard at the Theatre Royal, York. There he made his first appearance on the stage in the autumn of 1850, and played many minor Shakespearean parts in support of Mr. and Mrs. Charles Kean, William Creswick, and G. V. Brooke. In the following year he fulfilled engagements at Southampton, Ryde, Guildford, Reading, and at the Theatre Royal, Edinburgh, where his rôles included Young Norval in Home's 'Douglas,' Claude Melnotte in 'The Lady of Lyons,' and Richelieu.

In 1852 Charles Kean engaged him for the Princess's Theatre in London, and he made his first appearance on the London stage on 14 April 1852, as the Earl of Pembroke in 'King John.' Minor parts in Shakespearean and modern plays followed. In royal command performances at Windsor Castle, Vezin appeared as Snare in the second part of 'King Henry IV' (7 Jan. 1853) and as the wounded officer in 'Macbeth' (4 Feb. 1853).

On the termination of his engagement at the Princess's in 1853 he returned for some four years to the provinces to play leading parts like Fazio in Milman's tragedy of that name, Lesurques and Dubosc in 'The Courier of Lyons' (which he repeated at the Gaiety on 4 July 1870), and Sir Giles Overreach in 'A New Way to Pay Old Debts.' In 1857 he crossed to America, where he remained two years. Returning to England in 1859, he undertook the management of the Surrey theatre for six weeks, opening there on 13 June

1859, as Macbeth. He improved his reputation in important parts like Hamlet, Richard III, Louis XI, Shylock, Othello, and King John.

After a further tour in the provinces he was engaged by Samuel Phelps for Sadler's Wells Theatre, where he opened, on 8 Sept. 1860, as Orlando in 'As You Like It.' He soon made there a great impression as Aufidius in 'Coriolanus,' and in various Shakespearean rôles, including Bassanio, Mark Antony, and Romeo. At Windsor Castle, on 24 Jan. 1861, he played De Mauprat in Lytton's 'Richelieu,' in a command performance. He was Laertes (a favourite part) to the Hamlet of Charles Fechter [q.v.] at the Princess's Theatre on 1 April 1861, but he again supported Phelps at Sadler's Wells in June.

Vezin was now widely recognised as an actor of talent in both high tragedy and comedy. Engaged by Edmund Falconer for the Lyceum Theatre, he made a great success as Harry Kavanagh in Falconer's 'Peep o' Day' (9 Nov. 1861), playing the part for over 300 nights.

On 21 Feb. 1863, at St. Peter's church, Eaton Square, he was married to Mrs. Charles Young [see VEZIN, MRS. JANE ELIZABETH, Suppl. II], a member of Phelps's company. After a 'starring' tour with his wife in the provinces he played at the Princess's Theatre on 2 Jan. 1864, Don Cæsar in 'Donna Diana,' specially adapted for Vezin and his wife by Dr. Westland Marston from Moreto's Spanish play, 'Desden con el Desden.' He then rejoined Fechter, this time at the Lyceum. Undertaking a three months' management of the Princess's Theatre, which proved an artistic success, he opened on 20 July 1867 as James Harebell in W. G. Wills's 'The Man o' Airlie.' The fine impersonation, which he repeated at the Haymarket in May 1876, placed him in the first rank of English actors.

For the next twenty years Vezin played almost continuously leading parts at the chief London theatres in new or old pieces of literary aims. At the recently opened Gaiety Theatre he, with Phelps, Charles Mathews, and John L. Toole, played Peregrine in the revival of George Colman's 'John Bull' on 22 Dec. 1873; supported Phelps during 1874 in a series of revivals of old comedies; was Jaques in 'As You Like It,' on 6 Feb. 1875, and Benedick in 'Much Ado about Nothing' on 26 April. His Jaques proved a singularly fine performance, full of subtle irony, humour, and poetry. Subsequently it

largely contributed to the success of Marie Litton's revival of 'As You Like It' for a hundred nights at the Imperial Theatre (25 Feb. 1880), and Vezin repeated his triumph when the comedy was revived by Messrs. Hare and Kendal at the St. James's Theatre on 24 June 1885.

Meanwhile, under Chatterton's management of Drury Lane, he played Macbeth to the Lady Macbeth of Miss Geneviève Ward (4 Feb. 1876). At the Crystal Palace, on 13 Jan. 1876, he took the part of Œdipus in a translation of Sophocles' 'Œdipus at Colonus,' in which his declamatory powers showed to advantage. At the Haymarket Theatre on 11 Sept. 1876, he won further success by his creation of the title rôle of W. S. Gilbert's play, 'Dan'l Druce, Blacksmith' (revived at the Court in March 1884). At the opening of the Court Theatre, on 25 Jan. 1871, he had created Buckthorpe in Gilbert's comedy 'Randall's Thumb,' and returning to that theatre, under John Hare, on 30 March 1878, he gave a pathetic impersonation of Dr. Primrose in W. G. Wills's 'Olivia,' which he repeated at the Lyceum Theatre in Jan. 1897. At the Adelphi Theatre he supported Adelaide Neilson in 'The Crimson Cross' (27 Feb. 1879). At Sadler's Wells Theatre, late in 1880, he was seen as Iago in 'Othello' and as Sir Peter Teazle in 'The School for Scandal,' subsequently alternating the parts of Macduff and Macbeth with Charles Warner [q. v. Suppl. II].

At Drury Lane Theatre on 14 May 1881 he played Iago to the Othello of the American tragedian, John McCullough. At the Globe Theatre he created on 11 Nov. 1882 Edgar in Tennyson's 'The Promise of May.' At the Grand Theatre, Islington, on 7 May 1886 he played for the Shelley Society Count Francesco Cenci in a single private performance of Shelley's tragedy, 'The Cenci,' for which the Lord Chamberlain had refused his license (cf. *Frederick James Furnivall, a Record*, 1911, pp. lxxiii-v; *Pall Mall Gazette*, 1886). He joined Henry Irving at the Lyceum Theatre on 23 May 1888 as Coranto in the revival of A. C. Calmoun's 'The Amber Heart.' At the same theatre, on 17 Jan. 1889, owing to Irving's illness, he filled that actor's place as Macbeth with marked success.

From this time onward Vezin's appearances in London were few. Much time was spent in touring the provinces, and he gave occasional dramatic recitals at the St. James's, St. George's, and Steinway Halls. He mainly devoted himself to teaching elocution. Among his latest

appearances in London he played at the Opera Comique in 'Cousin Jack' and 'Mrs. M.P.,' two adaptations by himself of German farces (12 Nov. and 1 Dec. 1891); at Drury Lane Theatre, from September to December 1896, he was the Warden of Coolgardie in Eustace Leigh and Cyril Dare's 'The Duchess of Coolgardie,' and Robespierre in George Grant and James Lisle's 'The Kiss of Delilah'; and at the Strand Theatre on 2 May 1900, he was Fergus Crampton in Bernard Shaw's 'You Never Can Tell.' His final engagement was with Sir Herbert Tree at His Majesty's Theatre, 7 April 1909, when he appeared as Rowley in 'The School for Scandal.' His health was then rapidly failing, and he relinquished his part before the 'run' was over. After a career extending over nearly sixty years, he died at his residence, 10 Lancaster Place, Strand, on 12 June 1910; in accordance with his instructions his body was cremated at Golder's Green and his ashes scattered to the winds.

A distinguished elocutionist, Vezin was probably the most scholarly and intellectual actor of his generation, although he never reached the first place in the profession. He had a fine intellectual face, a firm mouth, and sharp, clear-cut features which he used expressively. His defect lay in a lack of emotional warmth and of personal magnetism and in the smallness of his stature (he was only five feet five and a half inches in height). He was an admirable instructor in elocution and acting, and many of his pupils attained prominence in their calling. A good engraved portrait appeared in the 'Theatre' for July 1883.

[Personal recollections; *The Times*, 14 June 1910; *Athenæum*, Jan. 1859, 18 June 1910; Henry Morley's *The Journal of a London Playgoer*, 1866; new edit. 1891; *Dramatic List*, 1879; *Dramatic Year Book*, 1892; Joseph Knight's *Theatrical Notes*, 1893; Hollingshead's *Gaiety Chronicles*, 1898 (with portrait); Pratt's *People of the Period*, 1897; *Green Room Book*, 1909.] J. P.

VEZIN, MRS. JANE ELIZABETH, formerly MRS. CHARLES YOUNG (1827-1902), actress, born while her mother was on tour in England in 1827, was daughter of George Thomson, merchant, by his wife Peggy Cook, an actress, whose aunt, Mrs. W. West [q. v.], enjoyed a high position on the stage. At an early age she accompanied her parents to Australia, and at eight, as a child singer and dancer, earned the reputation of a prodigy. In 1845 she was playing at the Victoria Theatre, Melbourne, and in June 1846, at

Trinity Church, Launceston, Tasmania, she was married to Charles Frederick Young, a comedian. She supported G. V. Brooke, the well-known actor, during his Australian tour of 1855, appearing with him as Beatrice in 'Much Ado About Nothing,' Emilia in 'Othello,' Pauline in 'The Lady of Lyons,' and Lady Macbeth.

As Mrs. Charles Young she made her first appearance on the London stage under the management of Samuel Phelps, at Sadler's Wells Theatre, on 15 Sept. 1857, playing Julia in 'The Hunchback.' She was welcomed with enthusiasm as an accomplished interpreter of the poetic and romantic drama. During the seasons of 1857 and 1858 she played most of the leading parts in Phelps's productions, making striking successes as the Princess of France in 'Love's Labour's Lost,' Rosalind in 'As You Like It,' Clara Douglas in 'Money,' Portia, Desdemona, Fanny Stirling in 'The Clandestine Marriage,' Imogen, Cordelia, Mrs. Haller in 'The Stranger,' Mistress Ford in 'The Merry Wives of Windsor,' Lydia Languish in 'The Rivals,' Lady Mabel Lynterne in Westland Marston's 'Patrician's Daughter,' Pauline in 'The Lady of Lyons,' Virginia in 'Virginius,' Mrs. Oakley in George Colman's 'The Jealous Wife,' Lady Townley in Vanbrugh and Cibber's 'The Provoked Husband,' Viola in 'Twelfth Night,' Constance in 'King John,' and Juliet.

During the summer vacation of 1858 she had appeared at the Haymarket and Lyceum theatres, playing at the former house the Widow Belmour in Murphy's 'The Way to Keep Him,' on 10 July, the last night of Buckstone's five years continuous 'season.'

In March 1859 she appeared at the Lyceum under Benjamin Webster and Edmund Falconer. At the opening of the Princess's Theatre under the management of Augustus Harris, senior (24 Sept.), she rendered Amoret in 'Ivy Hall,' adapted by John Oxenford from 'Le Roman d'un Jeune Homme Pauvre'; Henry Irving made his first appearance on the London stage on this occasion. When Phelps reopened Sadler's Wells Theatre, under his sole management, on 8 Sept. 1860, Mrs. Young appeared as Rosalind, acting for the first time with Hermann Vezin [q. v. Suppl. II], who appeared as Orlando. She remained with Phelps through the season of 1860-61, adding the parts of Miranda in 'The Tempest,' and Donna Violante in 'The Wonder' to her repertory. Her chief engagement during 1861 was at the Haymarket Theatre,

where on 30 Sept. she played Portia to the Shylock of the American actor Edwin Booth, who then made his first appearance in London.

In May 1862 she obtained a divorce from her husband, Young, and on 21 Feb. 1863, at St. Peter's church, Eaton Square, she was married to Hermann Vezin [q. v. Suppl. II], whom she at once accompanied on a theatrical tour in the provinces. Afterwards she played with him in Westland Marston's 'Donna Diana,' at the Princess's theatre on 2 Jan. 1864. On the tercentenary celebration of Shakespeare's birthday at Stratford-on-Avon, in April 1864, she acted Rosalind. There followed a long engagement at Drury Lane Theatre, under F. B. Chatterton and Edmund Falconer. There she first appeared on 8 Oct. 1864 as Desdemona, in a powerful cast which included Phelps as Othello and William Creswick as Iago. She repeated many of the chief parts she had already played at Sadler's Wells, adding to them the Lady in Milton's 'Comus' (17 April 1865), Marguerite in Bayle Bernard's 'Faust' (20 Oct. 1866), in which she made a great hit; Helen in 'The Hunchback,' with Helen Faucit as Julia (November 1866); and Lady Teazle in 'The School for Scandal' (4 March 1867). At the Princess's Theatre, on 22 August 1867, she gave a very beautiful performance of the part of Peg Woffington in Charles Reade's 'Masks and Faces.' Again with Phelps at Drury Lane, during the season of 1867-8, she played Lady Macbeth (14 Oct. 1867); Angiolina in 'The Doge of Venice' (2 Nov.); and Charlotte in 'The Hypocrite' (1 Feb. 1868).

Less important London engagements followed. At the St. James's Theatre, on 15 Oct. 1870, she was highly successful as Clotilde in 'Fernande,' adapted from the French by H. Sutherland Edwards, and on 4 March 1871 as Mrs. Arthur Minton in James Albery's comedy, 'Two Thorns.'

During March 1874 she toured in the chief provincial cities with her own company, playing parts of no great interest. At Drury Lane Theatre she reappeared under F. B. Chatterton as Lady Elizabeth in 'Richard III' (Cibber's version) (23 Sept. 1876), as Lady Macbeth (22 Nov.), as Paulina in 'The Winter's Tale,' with Charles Dillon (28 Sept. 1878), and later in the season as Emilia in 'Othello,' and Mrs. Oakley in 'The Jealous Wife.' She subsequently joined the company at the Prince of Wales's Theatre in Tottenham Court Road, under the management of the

Bancrofts, appearing on 27 Sept. 1879 as Lady Deene in James Albery's 'Duty,' an adaptation from Sardou's 'Les Bourgeois de Pont Arcy.' She again supported Edwin Booth at the Princess's Theatre on 6 Nov. 1880, as the Queen in 'Hamlet'; on 27 Dec. as Francesca Bentivoglio in 'The Fool's Revenge'; and on 17 Jan. 1881 as Emilia in 'Othello.'

After playing at the Adelphi Theatre, Olga Strogoff in H. J. Byron's 'Michael Strogoff' (14 Mar. 1881), she fulfilled her last professional engagement at the St. James's Theatre, under the management of Messrs. Hare and Kendal on 20 Oct. 1883, when she effectively acted Mrs. Rogers in William Gillette and Mrs. Hodgson Burnett's 'Young Folks' Ways.'

Mrs. Vezin was a graceful and earnest actress, of agreeable presence, with a sweet and sympathetic voice, a great command of unaffected pathos, and an admirable elocution. Comedy as well as tragedy lay within her compass, and from about 1858 to 1875 she had few rivals on the English stage in Shakespearean and poetical drama.

The death of an only daughter (by her first marriage) in 1901 unhinged her mind. At Margate, on 17 April 1902, she eluded the vigilance of her nurses, and flung herself from her bedroom window, with fatal result. She was buried at Highgate cemetery.

P.

VICTORIA ADELAIDE MARY LOUISE (1840-1901), PRINCESS ROYAL OF GREAT BRITAIN AND GERMAN EMPRESS, born at Buckingham Palace at 1.50 P.M. on 21 Nov. 1840, was eldest child of Queen Victoria and Prince Albert. The princess was baptised at Buckingham Palace on 10 Feb. 1841. Lord Melbourne, the prime minister, remarked 'how she looked about her, conscious that the stir was all about herself' (MARTIN, *Life of Prince Consort*, i. 100). Her English sponsors were Adelaide, the queen dowager, the duchess of Gloucester, the duchess of Kent, and the duke of Sussex. Leopold I, king of the Belgians, who was also a godfather, attended the ceremony in person, while the duke of Wellington represented the duke of Saxe-Coburg-Gotha.

Queen Victoria and Prince Albert be-

stowed unremitting care on the education of the princess. From infancy she was placed in the charge of a French governess, Mme. Charlier, and she early showed signs of intellectual alertness. At the age of three she spoke both English and French with fluency (*Letters of Queen Victoria*, ii. 3), while she habitually talked German with her parents. By Baron Stockmar she was considered 'extraordinarily gifted, even to the point of genius' (STOCKMAR, *Denkwürdigkeiten*, p. 43), and both in music and painting she soon acquired a proficiency beyond her years. Yet she remained perfectly natural and justified her father's judgment: 'she has a man's head and a child's heart.' (Cf. LADY LYTTLETON'S *LETTERS*, 1912, *passim*.)

Childhood and girlhood were passed at Windsor and Buckingham Palace, with occasional sojourns at Osborne House, which was acquired in 1845, and at Balmoral, to which the royal family paid an annual visit from 1848. In August 1849 the princess accompanied her parents on their visit to Ireland, and on 30 Oct. following she was present with her father and eldest brother at the opening of the new Coal Exchange in London. Strong ties of affection bound her closely to her brothers and sisters, and to her eldest brother, the Prince of Wales, afterwards King Edward VII [q. v. Suppl. II], she was devotedly attached. She shared his taste for the drama, and in the theatricals which the royal children organised for their parents' entertainment (Jan. 1853) she played the title rôle in Racine's 'Athalie' to the Prince of Wales's Abner. She joined her brothers in many of their studies, and impressed their tutors with her superior quickness of wit.

At the age of eleven the princess royal first met her future husband, Prince Frederick William, who came to London with his father, Prince William of Prussia, for the Great Exhibition of 1851. On Prince Frederick William she made an impression which proved lasting. In 1853, when the prince's father again visited England, a matrimonial alliance with the princess was suggested. But the prince's uncle, Frederick William IV, king of Prussia, whose assent was needful and who was mainly influenced by Russophil advisers, was at first disinclined to entertain the proposal, and the outbreak of the Crimean war in 1854 quickened his Russian sympathies.

The Crimean war was responsible, too, for the princess's first trip abroad. In Aug. 1855 she accompanied her parents

and the Prince of Wales on a visit at the Tuileries to Napoleon III, England's ally in the Russian war. She was delighted with her reception and completely enchanted by the Empress Eugénie. Paris had throughout life the same fascination for her as for her brother King Edward VII. In later life, however, national animosities debarred her from visiting the French capital save under the strictest incognito.

At length in 1855 King Frederick William IV yielded to sentimental rather than to political argument and sanctioned his nephew's offer of marriage. On 14 Sept. of the same year the young prince arrived at Balmoral. A few days later Queen Victoria and Prince Albert accepted his proposal for the hand of the princess. She was fifteen and he was twenty-four, although young for his age. The parents at first desired that the child princess should know nothing of the plan until after her confirmation (*Letters of Queen Victoria*, iii. 186). But an excursion with the princess on 29 Sept. to Craigna-Ben gave the prince his opportunity. 'He picked a white piece of heather (the emblem of good luck), which he gave to the princess, and this enabled him to make an allusion to his hopes and wishes' (*Journal of our Life in the Highlands*, p. 154). On 1 Oct. the prince left Balmoral; it was understood that the marriage should take place after the girl's seventeenth birthday. Henceforth her education was pursued with a special eye to her future position. The prince consort himself devoted an hour a day to her instruction. He discussed with her current social and political questions and fostered liberal and enlightened sympathies. At his suggestion she translated into English Johann Gustav Droysen's 'Karl August und die Deutsche Politik' (Weimar, 1857), a plea for a liberal national policy in Germany. The princess now first took part in social functions. On 8 May 1856 she made her début at a court ball at Buckingham Palace. On 20 March the same year she was confirmed by John Bird Sumner [q. v.], archbishop of Canterbury, in the private chapel of Windsor Castle.

The betrothal was not publicly announced until 29 April 1856, on the conclusion of the Crimean war by the treaty of Paris. But the secret had leaked out already, and the news was received coolly in both countries. 'The Times' (3 Oct. 1855) poured contempt on Prussia and its king. On 19 May 1857 Parliament voted a dowry of 40,000*l.*, with an annuity of 4000*l.* In June Prince

Frederick, accompanied by Count Moltke, came to England, and made his first public appearance with the princess at the Manchester Art Exhibition (29 June). The marriage negotiations were not concluded with the Prussian court without a hitch. Queen Victoria refused the Prussian proposal that the marriage should take place at Berlin. 'Whatever may be the practice of Prussian princes,' she wrote to Lord Clarendon [q. v.], secretary for foreign affairs, 'it is not every day that one marries the daughter of the Queen of England' (*Letters of Queen Victoria*, iii. 321). Accordingly the marriage was fixed to take place in London early in 1858. The bridegroom arrived in London on 23 Jan. and the marriage was celebrated in the chapel royal, St. James's Palace, on the 25th. The honeymoon was spent at Windsor. The public was at length moved to enthusiasm. Richard Cobden hailed the bride as 'England's daughter' (*ib.* iii. 334). On 2 Feb. she and her husband embarked at Gravesend for Germany.

In Germany the princess was well received. Her childish beauty and charm of manner won the sympathy of all classes on her formal entry into Berlin (8 Feb. 1858). After her reception by King Frederick William IV her husband telegraphed to Prince Albert 'The whole royal family is enchanted with my wife.' Princess Hohenlohe gave Queen Victoria an equally glowing account of the favourable impression which the princess created at Berlin (MARTIN, *Life of the Prince Consort*, iv. 172). 'I feel very happy,' she told a guest at a court reception on 27 March, 'and am proud to belong to this country' (BERNHARDI, *Aus meinem Leben*, iii. 17).

During the early years of her married life the princess made a tour of the smaller German courts, but she lived much in retirement in Berlin, at first in the gloomy old Schloss. Her first summer in Germany was spent at the castle of Babelsberg, where her father visited her in June 1858, and both he and her mother in August. On 20 Nov. following she and her husband moved into the Neue Palais on the Unter den Linden, which was henceforth her residence in Berlin. There on 27 Jan. 1859 she gave birth to her eldest son, William, afterwards German Emperor.

From the first, many of the conditions of the princess's new life proved irksome. The tone of the Prussian court in matters of religion and politics was narrower than that in England. The etiquette was more constrained and the standard of

comfort was lower. The princess chafed somewhat under her mother-in-law's strict surveillance, and few sympathised with her unshakeable faith in the beneficence of constitutional government as it was practised in England. She could not conceal her liberal convictions or hold aloof from political discussion. She steadily continued the historical and literary studies to which her father had accustomed her, and she wrote to him a weekly letter, asking his advice on political questions, and enclosing essays on historical subjects. His influence over her was unimpaired till his death. In Oct. 1858 her father-in-law, Prince William, assumed the regency, and his summons of a moderate liberal ministry evoked an expression of her satisfaction which irritated the conservative party at court. In December 1860 she delighted her father with an exhaustive memorandum, whereby she thought to allay the apprehensions of the Prussian court, on the advantages of ministerial responsibility (MARTIN, *Life of the Prince Consort*, v. 259). She was outspoken in all her criticism of her environment, and her active interests in art and philanthropy as well as in politics ran counter to Prussian ideas and traditions. She was constantly comparing her life in Germany with the amenities of her English home (BERNHARDI, *Aus meinem Leben*, vi. 116), and she wounded Prussian susceptibilities by pointing out England's social advantages. Over her husband she rapidly acquired a strong influence which increased distrust of her in court circles. Her energy and independence undoubtedly conquered any defect of resolution in him, but his liberal sentiments were deeply rooted. Meanwhile the English press was constantly denouncing the illiberality of Prussian rule, and the unpopularity of the princess, who was freely identified with such attacks, increased. 'This attitude of the English newspapers,' wrote Lord Clarendon in 1861, 'preys upon the princess royal's spirits, and materially affects her position in Prussia' (*Memoirs and Letters of Sir Robert Morier*, i. 295).

In Jan. 1861, when King William I succeeded his brother Frederick William IV on the throne of Prussia, the princess and her husband became crown princess and crown prince. On 18 Oct. she attended the coronation of her father-in-law at Königsberg. Before the close of the year she suffered the shock of her father's premature death (14 Dec. 1861). Her husband represented her at the funeral, which her delicate health prevented her

from attending. In her father the princess lost a valued friend and counsellor, while the Prussian king was deprived of an adviser, whose circumspect advice had helped him to reconcile opposing forces in Prussian politics.

In March 1862 a breach between the king of Prussia and both the moderate and advanced liberals led him to summon to his aid Bismarck and the conservative (Junker) party. To the new minister constitutional principles had no meaning, and the crown prince and princess made open declaration of hostility. The crown prince absented himself from cabinet meetings, which he had attended since the king's accession, and he and his wife withdrew from court (BERNHARDI, *Aus meinem Leben*, v. 8). In October 1862 they left Berlin, and subsequently joined the Prince of Wales, a frequent visitor at his sister's German home, on a cruise in the Mediterranean. Early in 1863 the crown princess with her son and consort was in England, where she filled the place of her widowed mother, Queen Victoria, at a drawing-room at Buckingham Palace (28 Feb.). On 10 March she was present at the Prince of Wales's wedding at Windsor.

The steady growth under Bismarck's ascendancy of absolutist principles of government in Prussia intensified the resentment of the crown princess and her husband. In June 1863 the crown prince made an open protest in a speech at Dantzig. The princess, with characteristic want of discretion, frankly told President Eichmann that her opinions were those of the liberal press (WHITMAN, *Emperor Frederick*, p. 162). Bismarck imputed to her a resolve 'to bring her consort more into prominence and to acquaint public opinion with the crown prince's way of thinking' (BUSCH's *Bismarck*, iii. 238). The king demanded of the crown prince a recantation of the Dantzig speech. The request was refused, but the prince offered to retire with his family to some place where he could not meddle with politics. In the result Bismarck imposed vexatious restrictions on the heir-apparent's freedom of action. Spies in the guise of aides-de-camp and chamberlains were set over him and his wife at Berlin, and by 1864 the whole of their retinue consisted of Bismarck's followers (*Memoirs of Sir Robert Morier*, i. 343, 410). The vituperative conservative press assigned the heir-apparent's obduracy to his wife's influence.

The princess met Queen Victoria at Rosenau near Coburg in August 1863, and

in her mother she had a firm sympathiser. The queen contemplated active intervention at Berlin on her daughter's behalf, and was only dissuaded by (Sir) Robert Morier [q. v.]. From September to December following the crown prince and his wife made a prolonged visit to the English court, and on their return to Berlin held aloof for a season from political discussion (BISMARCK, *Neue Tischgespräche und Interviews*, ii. 33).

The reopening of the Schleswig-Holstein question by the death of King Frederick VIII of Denmark (15 Nov. 1863) widened the breach with Bismarck. The crown princess and her husband warmly espoused the claims to the duchies of Duke Frederick of Augustenburg. The controversy divided the English royal family. The rival claim of Denmark had strong adherents there. While staying at Osborne the princess engaged in warm discussion with her sister-in-law, the Princess of Wales, the king of Denmark's daughter (BERNHARDI, *Aus meinem Leben*, v. 282). Bismarck's cynical resolve to annex the duchies to Germany thoroughly roused the anger of the crown princess. Bismarck complained that she was involving herself, with her husband, her uncle (the duke of Coburg), and her mother, in a conspiracy against Prussian interests. When she and the minister met, bitter words passed, and she ironically asked Bismarck whether his ambition was to become king or president of a republic (HORST KOHL, *Bismarck: Anhang*, i. 150).

The Austro-Prussian conflict of 1866 was abhorrent to the princess, and it accentuated the strife between her and the minister. On the outbreak of war (18 June) the crown prince took command of the second division of the Silesian army operating in Bohemia. Dislike of the conflict and its causes did not affect the princess's anxiety to relieve its suffering, and she now showed conspicuously for the first time that philanthropic energy and organising capacity which chiefly rendered her career memorable. She organised hospitals and raised money for the care of the wounded. It was mainly due to her efforts that the national fund for disabled soldiers (Nationalinvaliden-stiftung) was inaugurated at the close of the war. The Prussian victory involved, to the princess's sorrow, the deposition of Austria's allies among the princely families of Germany. With George V, the dispossessed king of Hanover, the princess avowed very lively sympathy.

The crown prince's exclusion from business of state continued, to his wife's unconcealed irritation. Bismarck declared that her devotion to English as opposed to Prussian interests rendered the situation inevitable. On occasion, however, the crown prince was suffered to represent his father on visits to foreign sovereigns. Delicate health and the cares of a growing family did not always allow the crown princess to accompany him. But in May 1867 she went with him to Paris for the opening of the International Exhibition, and there she made the acquaintance of Renan. Subsequently in April 1873 she was the guest of the Emperor Francis Joseph at Schönbrunn on the occasion of the International Exhibition at Vienna. In Jan. 1874 she attended at St. Petersburg the wedding of her brother Alfred, duke of Edinburgh, with the grand duchess Maria Alexandrovna. But foreign travel in less formal conditions was more congenial to her, and she lost no opportunity of journeying incognito through the chief countries of Europe.

The Franco-German war of 1870-1 plunged the crown princess in fresh controversy. The impression generally prevailed in Germany that England was on the side of France. She sought to convince Bismarck of the genuineness of England's professions of neutrality, but only provoked an incredulous smile. 'The English,' she wrote to Queen Victoria on 9 Aug. 1870, 'are more hated at this moment than the French. Of course *cela a rejailli* on my poor innocent head. I have fought many a battle about Lord Granville, indignant at hearing my old friend so attacked, but all parties make him out French' (FITZMAURICE, *Life of Lord Granville*, ii. 38). At the same time the crown princess bestirred herself in the interest of the German armies in the field. She appealed for funds on behalf of the soldiers' families (19 July 1870). In September she joined her sister, Princess Alice of Hesse-Darmstadt, at Homburg, and was indefatigable in organising hospitals for the wounded, in recruiting volunteer corps of lady nurses, and in distributing comforts to the troops on the way to the front. Yet compassionate kindness to French prisoners exposed her to suspicion. The threatened bombardment of Paris after the investment horrified her, and she appealed to her father-in-law to forbid it. The step was ineffectual, and excited the bitter sarcasm of Bismarck. Undeterred by failure, she started a scheme to collect supplies in

Belgium for the rapid provisioning of Paris after the capitulation. The British government and other neutral powers were approached, but Bismarck stepped in to foil the plan (*Memoirs and Letters of Sir Robert Morier*, ii. 211).

The crown princess welcomed the proclamation of the German Emperor at Versailles on 18 Jan. 1871, and took part in the festivities at Berlin on the return of the victorious German army. In Sept. 1871 she and her husband visited London, and were received with cordiality by Queen Victoria and the Prince of Wales. Their reception did much to dissipate the atmosphere of tension which had prejudiced the relations of England and Germany during the war.

The princess's public interests extended far beyond politics, and embraced philanthropy, education, art, and literature. Indeed enlightened progress in all branches of effort powerfully appealed to her. She cultivated the society of leaders of thought, art, and science. As a hostess she ignored the conventions of etiquette which restricted her guests to members of the aristocracy. Her receptions were invariably attended by the historians Mommsen and Dove, by Zeller the philosopher, by the scientist Virchow, and by Gustav Freytag the writer, who dedicated to her 'Die Ahnen' (six parts, 1872-80). With especial eagerness the princess encouraged intercourse with German painters and sculptors. Art was one of her main recreations. Elected a member of the Berlin Academy in 1860, she studied in her leisure hours sculpture under Begas and painting under Prof. Hagen. She drew correctly, but showed little power of imagination (for examples of her work cf. *Magazine of Art*, May and Sept. 1886). Her favourite artists were Werner and von Angeli, and with the latter she was long on intimate terms.

Prussia was almost the last state in Germany to assimilate the artistic development of the nineteenth century, and it was the crown princess who gave a first impulse towards the improvement of applied art. She carefully followed the progress of industrial art in England, and in 1865 she commissioned Dr. Schwabe to draw up a report, entitled 'Die Forderung der Kunst-Industrie in England und der Stand dieser Frage in Deutschland.' Her efforts to stimulate the interest of the Prussian government bore fruit. Schools of applied art were established in Prussia, and on 15 Sept. 1872 she had the satisfaction of witnessing the opening of an

industrial art exhibition at Berlin. Subsequently she and her husband set to work to form a permanent public collection of 'objets d'art,' and the Berlin Industrial Art Museum (Kunst-Gewerbe Museum); which was opened on 20 Nov. 1881, was mainly due to her personal initiative. In the structural evolution of the modern city of Berlin the princess's interest was always keen and her active influence consistently supported the civic effort to give the new city artistic dignity.

Her early endeavours in philanthropy were mainly confined to hospitals. The experiences of the wars of 1866 and 1870 had shown the inadequacy of existing hospital organisations in Germany. A more scientific training for nurses was a first necessity. The crown princess was well acquainted with the reforms effected in England by Florence Nightingale [q. v. Suppl. II], and in 1872 she drafted an exhaustive report on hospital organisation. At her instigation the Victoria House and Nursing School (Viktoria-Haus für Krankenpflege), which was named after her, was established at Berlin in 1881, and soon the Victoria sisters, mainly women of education, undertook the nursing in the municipal hospital at Friedrichshain. Out of the public gift to her and her husband on their silver wedding in 1883 she applied 118,000 marks to the endowment of the Victoria House. The success of the school led to the establishment of similar institutions throughout Germany. The value of her work for hospitals was recognised beyond Germany. In 1876 she received a gold medal at the Brussels exhibition for her designs for a barrack hospital, and on 26 May 1883 she was awarded the Royal Red Cross by Queen Victoria on the institution of that order.

From hospitals the crown princess soon passed to schemes for ameliorating the social conditions of the working classes. On her initiative the society for the promotion of health in the home (*Gesellschaft für häusliche Gesundheit*) was started in 1875; it undertook regular house to house visits for the purposes of sanitary inspection. Both at Bornstedt, her husband's country seat, and later at Cronberg, whither she retired after his death, she founded hospitals, workhouses, schools, and libraries.

The cause of popular education, especially for women, was meanwhile one of her chief concerns. In the development in Germany of women's higher education, the crown princess was a pioneer whose labour

had far-reaching results. Her untiring work for her own sex brought about a general improvement in the social position of German women. In 1868 at her instance Miss Georgina Archer [see ARCHER, JAMES, Suppl. II] was invited to Berlin and started the Victoria Lyceum, the first institution in Germany for the higher education of women. Two educational institutions, the Lette Verein (1871), a school for the technical training of soldiers' orphans; and the Heimathaus für Töchter höherer Stände; or home for girls of the higher middle classes; were mainly set on foot by her exertions, while her interest in modern educational methods was apparent in her patronage of the Pestalozzi-Fröbel Haus (1881). No less than forty-two educational and philanthropic institutions flourished under her auspices, and the impulse she gave to women's education throughout Germany swept away most of the old reactionary prejudices against opening to women the intellectual opportunities which men enjoyed.

Despite the public services of the princess, the value of which the German people acknowledged, the humiliating political position of her husband and herself underwent no change. Knowledge of political business was still denied them (GONTAUT-BIRON, *Dernières Années de l'ambassade*, p. 298). In June 1878 the Emperor William was wounded by an assassin (Nobiling), and the crown prince was appointed regent. But Bismarck contrived that his office should not carry with it any genuine authority. The prompt recovery of his father fully restored the old situation. At the end of 1879 the crown princess withdrew from Berlin on the ground of ill-health, and she spent several months with her husband and family at Pegli near Genoa. During the following years her appearances in public were few. In May 1883 she visited Paris incognito, and on 24 May 1884 she laid the foundation stone of St. George's (English) church at Berlin.

The health of the old emperor was now declining, and the crown prince's accession to the throne was clearly approaching. Bismarck showed some signs of readiness to cultivate better relations with the heir apparent and his family. On 21 Nov. 1884 he attended a soirée given by the crown princess in honour of her birthday (BISMARCK, *Neue Tischgespräche und Interviews*, ii. 127).

But the crown princess's long-deferred hopes of a happy change of estate were doomed to a cruel disappointment. In the

autumn of 1886 the crown prince contracted on the Italian Riviera an affection of the throat, which gradually sapped his strength. For nearly two years her husband's illness was the princess's main preoccupation, and she undertook with great efficiency the chief responsibilities of nursing. In May 1887, when the Berlin physicians diagnosed cancerous symptoms, an English physician, (Sir) Morell Mackenzie [q. v.], was called into consultation with the princess's assent, and his optimism initiated an unedifying controversy with his German colleagues, which involved the princess's name. She treated the English specialist with a confidence which the German specialists thought that she withheld from them. Both prince and princess took part in the celebration of Queen Victoria's jubilee (21 June 1887). After a visit to Toblach in Tyrol they moved in November to the Villa Zirio, San Remo, where the fatal progress of the malady no longer admitted of doubt. On 9 March 1888 the old emperor William died at Berlin, and the crown prince, a dying man, succeeded to the throne as Frederick III.

The Emperor Frederick and his consort immediately left San Remo for Charlottenburg, and in a rescript addressed to the chancellor, Prince Bismarck, the new sovereign announced his intention of devoting the remainder of his life to the moral and economic elevation of the nation. He was no longer able to speak, and all communications had to be made to him in writing. The empress undertook to prepare her husband for necessary business (H. BLUM, *Lebenserinnerungen*, ii. 220), and Bismarck's jealousy of her influence was aroused. A family quarrel embittered the difficult situation. Already in 1885 the princess had encouraged a plan for the marriage of her second daughter, Princess Victoria, to Alexander of Battenberg, Prince of Bulgaria. But the scheme had then been rejected. It was now revived, and the old quarrel between the empress and Bismarck found in the proposed match new fuel. The chancellor threatened to resign. He declared the marriage to be not only a breach of caste etiquette owing to Prince Alexander's inferior social rank, but to be an insult to Russia, which had declared its hostility to the Bulgarian ruler. The empress, who regarded her daughter's happiness as the highest consideration, ignored Bismarck's arguments. The chancellor prompted an unscrupulous press campaign which brought public opinion to his side. The dying emperor

yielded to the combined pressure of Bismarck and public opinion, and on 4 April 1888 he agreed to a postponement of the announcement of the marriage. The empress remained obdurate. But Queen Victoria visited Berlin (24 April) and was convinced by Bismarck of the fatal consequences of further resistance. The empress out of deference to her mother's wishes acquiesced in the situation. Crown Prince William sided with Bismarck throughout the dispute, but Queen Victoria reconciled him to his mother.

On 1 June 1888 the court moved from Charlottenburg to the new palace (Friedrichskron) at Potsdam, and there on 15 June the emperor died in the presence of his wife and family.

One of the last acts of the dying monarch was to place Bismarck's hand in that of the empress as a symbol of reconciliation. But the chancellor did not spare her humiliation in the first days of her widowhood. After her husband's death a cordon of soldiers was drawn round the palace at Potsdam to prevent the removal of any compromising documents; when the empress requested Bismarck to visit her, he replied that he had no time and must go to her son the emperor, his master (HOHENLOHE, ii. 419). Bismarck had taken timely precautions against the adoption by the new emperor of the liberal views of his parents; he had instilled into the young man his own political principles. Mother and son were as a consequence for a time estranged. Even the memory of the Emperor Frederick became involved in acute controversy. Extracts from the late emperor's diary were published by Dr. Friedrich Heinrich Geffcken in the 'Deutsche Rundschau' (Sept. 1888). They were intended as a reply to his traducers and as proof of the part that he had played while crown prince in the achievement of German unity. The suppression of the offending review by Bismarck's orders and the imprisonment of Dr. Geffcken (who was not convicted) on the charge of high treason excited the empress's deepest indignation. Bismarck's triumph, however, was short-lived. The new emperor dismissed him from office in March 1890. With curious inconsistency the fallen minister invited the empress's sympathy (HOHENLOHE, ii. 419), and in the presence of a witness she reminded him that his own past treatment of her had deprived her of any power of helping him now.

In 1891 a political rôle was assigned to her by the emperor. He was anxious to

test the attitude of the French people towards his family. Under strict incognito she accordingly made a week's stay (19-27 Feb.) at the German embassy in Paris. Queen Victoria was anxious that the English ambassador should arrange a meeting between her and the French president. The empress met in Paris French artists and visited the studios of Bonnat, Détéille, and Carolus Duran. But an indiscreet excursion to Versailles and St. Cloud, where memories of the German occupation of 1870 were still well alive, brought the experiment to an unhappy end. The French nationalist party protested against her presence, threatened a hostile demonstration, and cut short her sojourn (GASTON ROUTIER, *Voyage de l'impératrice Frédéric à Paris en 1891*).

After the death of her husband the Empress Frederick settled at Cronberg, where she purchased an estate on the slopes of the Taunus hills. With a legacy left her by the duchess of Galliera she built there a palatial country seat, which she named Friedrichshof. There she still followed the current course of politics, literature, and art, and entertained her relatives. During the last few months of her life she initiated the Empress Frederick Institute for the higher scientific education of members of the medical profession; this was opened at Berlin on 1 March 1906 after her death. Her relations with her son improved on the removal of Bismarck, and she was touched by the many tributes he paid to his father's memory. During her last years she repeatedly visited England, and on 22 June 1897 she took part in Queen Victoria's Diamond Jubilee procession. In the autumn of 1898 a fall from her horse, while out riding at Cronberg, brought on the first symptoms of cancer. She bore her sufferings with the same heroic patience as her husband had borne his. She outlived her mother six months, and died at Friedrichshof on 5 Aug. 1901. She was buried beside her husband in the Friedenskirche at Potsdam.

The empress's interests and accomplishments were of exceptional versatility and variety, and if there was a touch of dilettanteism about her discursive intellectual aptitudes, her devotion to intellectual and artistic pursuits was genuine. She was a clever artist, and an experienced connoisseur in music, though her skill as a performer was inferior to that of Queen Victoria. To philosophy and science she cherished a lifelong devotion, and followed their notable developments in her own time with eagerness. Although she retained her attachment to the Church of England,

her religion was undogmatic, and she sympathised with the broad views of Strauss, Renan, Schopenhauer, and Huxley. An ardent champion of religious toleration, she severely condemned anti-semitism. In politics she was steadfast to the creed of civil liberty in which her father had trained her, and she declined to reconcile herself to the despotic traditions of the Prussian court. She made little effort to adapt herself to her German environment, which was uncongenial to her. She often acted unwisely on the impulse of the moment; she was no good judge of character and was outspoken in her dislikes of persons, which she frequently conceived at first sight. Her unflinching resistance to Bismarck proves her courage, and her persistent support of social, artistic, and philanthropic reform in Prussia bears permanent testimony to the practical quality of her enlightenment. Her wise benevolence earned the gratitude of the German people, but she failed to win their affection.

Of her eight children she was survived by her two eldest sons (the Emperor William II and Prince Henry) and four daughters. Her third son, Sigismund, died as an infant on 19 June 1866, and she lost her youngest son, Waldemar, on 27 March 1879, at the age of eleven. She lived to see the marriages of all her remaining children. The Emperor William married; on 27 Feb. 1881, Princess Augusta Victoria of Schleswig-Holstein, and Prince Henry married on 24 May 1888 Princess Irene of Hesse-Alt. Her four daughters, Princesses Charlotte, Victoria, Sophie, and Margarete, wedded respectively Prince Bernard of Saxe-Meiningen (on 18 Feb. 1878), Prince Adolph of Schaumburg-Lippe (on 19 Nov. 1890), Constantine, Duke of Sparta (on 27 Oct. 1889), and Prince Frederick Charles of Hesse (on 25 Jan. 1893). All her children, except Princess Victoria of Schaumburg-Lippe, had issue, and her grandchildren numbered seventeen at the time of her death. Her grandchild Féodora (b. 1879), daughter of Princess Charlotte of Saxe-Meiningen, married on 24 Sept. 1898 Prince Henry XXX of Reuss.

As princess royal of England from her infancy and then as crown princess of Germany the Empress Frederick was frequently drawn, painted, and sculptured. The earliest portrait, perhaps, is that in 'The Christening of the Princess Royal,' painted by Charles Robert Leslie, R.A., now at Buckingham Palace. As a child the princess was painted more than once by Sir William Ross, R.A., in miniature, and by Sir Edwin Landseer, R.A., with a pony, and

again with Eos, her father's favourite greyhound. In the series of small statuettes in marble, by Mary Thornycroft [q. v.], now at Osborne House, the princess royal appears as 'Summer.' Another bust was made by Emil Wolff in 1851. The princess appears in the large family group of Queen Victoria and Prince Albert, by Winterhalter in 1846, and she was painted by the same artist at different stages of her life—as a girl, on her first début in society, at her marriage, and as princess of Prussia. 'The Marriage of the Princess Royal and Prince Frederick William of Prussia' (1858), painted by John Phillip, R.A., is now at Buckingham Palace. Among other English artists who drew portraits of the princess were Thomas Musgrave Joy and Edward Matthew Ward, R.A. After her marriage portraits were painted by A. Graefle, F. Hartmann, Ernst Hildebrand, and other leading German artists. Most of these remain in the private possession of her family in England and Germany. Many of them became well known in England in engravings. The picture by Hildebrand is in the Hohenzollern Museum at Berlin. In 1874 an important drawing was made by von Lenbach, as well as a portrait in oils in the costume of the Italian Renaissance by Heinrich von Angeli of Vienna, who then succeeded Winterhalter as favourite painter of Queen Victoria and her family. A half-length by the same artist (1882) is in the Wallace Collection in London, and another (1885) is in the Museum at Breslau. In 1894 Angeli painted a noble and pathetic portrait of the widowed empress, seated, at full-length, one version of which is at Buckingham Palace; it has been mezzotinted by Borner. The crown princess is conspicuous in the large painting by Anton von Werner of 'The Emperor William I receiving the Congratulations of his Family on his Birthday,' which was presented to Queen Victoria at the Jubilee of 1887 by the British colony at Berlin (information kindly supplied by Mr. Lionel Cust). Among other German artists who portrayed her, Begas executed a very life-like bust (1883) and also the sarcophagus over her tomb in the Friedenskirche, Potsdam. A cartoon by 'Nemo' appeared in 'Vanity Fair' in 1884. Memorial tablets were placed in the English church at Homburg (1903) and in the St. Johanniskirche, Cronberg (1906). A bust by Uphues was erected in 1902 on the Kaiser Friedrich promenade at Homburg. A striking statue of the empress in coronation robes, executed by Fritz Gerth, was

unveiled by the Emperor William II on 18 Oct. 1903, opposite the statue of her husband in the open space outside the Brandenburg gate at Berlin.

[No complete biography has been published. A summary of her life appeared in *The Times*, and *Daily Telegraph*, 6 Aug. 1901, and in a memoir by Karl Schrader in the *Biographisches Jahrbuch und Deutscher Nekrolog* (Berlin, 1905, vii. 451). Her early years may be followed in Sir Theodore Martin's *Life of the Prince Consort* (1874-80); *Letters of Sarah Lady Lyttelton*, 1912; in Sir Sidney Lee's *Queen Victoria* (1904), and *Edward VII*, Suppl. II; *Queen Victoria's Letters*, 1837-61 (1907). For her career in Germany see especially Martin Philippson's *Friedrich III als Kronprinz und Kaiser* (Wiesbaden, 2nd edit. 1908) and *Margarete von Poschinger's Life of the Emperor Frederick* (trans. by Sidney Whitman, 1901). Other biographies of her husband by H. Hengst (Berlin, 1883), V. Böhmert (Leipzig, 1888), E. Simon (Paris, 1888), Sir Rennell Rod (London, 1888), and H. Müller-Bohn (Berlin, 2nd edit. 1904) are also useful. Hints as to the princess's relations with German politicians may be gleaned from the *Memoirs of Duke Ernest of Saxe-Coburg-Gotha* (trans. 4 vols. 1888-70); T. von Bernhardi's *Aus meinem Leben*, vols. ii., v., and vi. (Berlin, 1893-1901); R. Hayn's *Das Leben Max Dunckers* (Berlin, 1891); *Memoirs of Prince Chlodwig of Hohenlohe-Schillingsfürst* (trans. 2 vols. 1906); Moritz Busch's *Bismarck, some secret Pages of his History* (trans. 3 vols. 1898); *Bismarck, His Reflections and Reminiscences* (trans. 2 vols. 1898); untranslated supplement ('Anhang') to latter work edited by H. Kohl in 2 vols. entitled respectively *Kaiser Wilhelm und Bismarck* and *Aus Bismarck's Briefwechsel* (Stuttgart, 1901); *Gustav zu Putlitz, Ein Lebensbild* (Berlin, 1894); H. Abeken's *Ein Schlichtes Leben in bewegter Zeit*, 1898, and H. Oncken's *Rudolf von Bennigsen* (2 vols. Stuttgart, 1910). The empress's artistic and philanthropic work are mainly described in L. Morgenstern's *Viktoria, Kronprinzessin des Deutschen Reichs* (Berlin, 1883); D. Roberts's *The Crown Prince and Princess of Germany* (1887); B. von der Lage's *Kaiserin Friedrich* (Berlin, 1888); and J. Jessen's *Die Kaiserin Friedrich* (1907). References of varying interest may be found in Lady Bloomfield's *Reminiscences of Court and Diplomatic Life* (2 vols. 1883); *Princess Alice's Letters to Queen Victoria*, 1885; Sir C. Kinloch-Cooke's *Mary Adelaide, Duchess of Teck* (1900); *le Vicomte de Gontaut-Biron's Mon Ambassade en Allemagne, 1872-3* (Paris, 1906), and *Dernières Années de l'ambassade en Allemagne* (Paris, 1907); *Memoirs and Letters of Sir Robert Morier*, 1826-76 (2 vols. 1911); G. W. Smalley's *Anglo-American Memoirs*, 1911;

W. Boyd Carpenter's *Some Pages of my Life*, 1911; T. Teignmouth Shore's *Some Recollections*, 1911; and Walburga Lady Paget's *Scenes and Memories*, 1912. Lady Blennerhassett has kindly supplied some unpublished notes. A character sketch by Max Harden in *Köpfe* (pt. ii. Berlin, 1910) represents the extreme German point of view. Some account of her latter years may be gathered from H. Delbrück's *Kaiser Friedrich und sein Haus* (Berlin, 1888); E. Lavis's *Trois Empereurs d'Allemagne* (Paris, 1888); Sir Morell Mackenzie's *Frederick the Noble*, 1888; and G. A. Leinhaas, *Erinnerungen an Kaiserin Friedrich* (Mainz, 1902); see also *Fortnightly Review* and *Deutsche Revue*, September 1901; *Quarterly Review* and *Deutsche Rundschau*, October 1901 for general appreciations.]

G. S. W.

VINCENT, SIR CHARLES EDWARD HOWARD, generally known as SIR HOWARD VINCENT (1849-1908), politician, born at Slinfold, Sussex, on 31 May 1849, was second and eldest surviving son of the five sons of Sir Frederick Vincent (1798-1883), eleventh baronet, sometime rector of Slinfold, Sussex, and prebendary of Chichester Cathedral, by his second wife, Maria Copley, daughter of Robert Young of Auchenskeoch. His father was succeeded in the baronetcy by William, his elder son by his first wife. Of Vincent's younger brothers, Claude (1853-1907) was under-secretary of the public works department in India, and Sir Edgar, K.C.M.G., was M.P. for Exeter from 1899 to 1906.

Howard Vincent, one of whose godfathers was Cardinal Manning, then archdeacon of Chichester, was an extremely delicate child, although in manhood his activity and vitality were exceptional. At Westminster school he made no progress, but being sent to travel in France and Germany he acquired an interest in foreign languages. At Dresden in 1866 he caught a glimpse of the Seven Weeks' war. In November of the same year he passed into Sandhurst, and in 1868 obtained a commission in the royal Welsh fusiliers. In 1870 he was refused permission to go out as a correspondent to the Franco-German war; but next year, as a special correspondent of the 'Daily Telegraph,' he succeeded in getting to Berlin. After carrying despatches for Lord Bloomfield [q. v.], the British ambassador, to Copenhagen and Vienna, he went on to Russia to study the language and the military organisation of the country. He published in 1872 a translation of Baron Stöckel's 'Reports upon the Military Forces of Prussia,' addressed to the French

minister of war (1868-70), and in the same year 'Elementary Military Geography, Reconnoitring and Sketching.' Although only a subaltern of two and twenty, he was also soon writing in service magazines and was delivering lectures at the Royal United Service Institution. He next visited Italy to learn the language. In 1872 he was sent to Ireland in command of a detachment of his regiment. There much of his time was devoted to hunting, to private theatricals, and to addressing political meetings in which he expressed broadly liberal views on the Irish question. Next year he resigned as lieutenant his commission in the army. On 3 May 1873 he entered himself a student at the Inner Temple. Excursions to Russia and to Turkey in the course of 1873 and 1874 extended his range of languages and knowledge of the politics of the Near East. He issued in 1873 'Russia's Advance Eastward,' a translation from the German of Lieutenant Hugo Sturman, as well as an Anglo-Russian-Turkish conversation manual for use in the event of war in the East.

Vincent, who was called to the bar on 20 Jan. 1876, and joined the south-eastern circuit, was sufficiently interested in his new profession to publish immediately 'The Law of Criticism and Libel' (1876); but he never devoted himself to practice. He illustrated his versatility by publishing for 1874 and 1875 'The Year Book of Facts in Science and the Arts' (2 vols. 1875-6). On the outbreak of the Russian-Turkish war in 1876 he joined, as a representative of the 'Daily Telegraph,' the Russian army, but suspicion of intimacy with the Turks prejudiced his position. During 1874-5 he was captain of the Berkshire militia, and from 1875 to 1878 lieutenant-colonel of the Central London rangers. While filling the last office he studied volunteer organisation, and promoted a series of conferences for the purpose of securing more generous treatment from government. In 1878 he published a volume on 'Improvements in the Volunteer Force.' From 1884 to 1904 he was colonel commandant of Queen's Westminster volunteers, and he brought the regiment to a high state of efficiency.

Questions of law and police meanwhile absorbed Vincent's interest. In 1877 he entered himself at Paris as a student of the faculté de droit, and after completing a close examination of the Paris police system he extended his researches to Brussels, Berlin, and Vienna. The experience fitted him for appointment in 1878

to the newly created post of director of criminal investigation at Scotland Yard. With infinite energy he reorganised the detective department of the London police system, and for three years he never left London for a day. His current duties were soon rendered arduous by Fenian outrages and threats. At the same time he formed plans for the reform of criminals and the aid of discharged prisoners. From 1880 to 1883 he was chairman of the Metropolitan and City Police Orphanage. In 1880 he published a French 'Procédure d'Extradition,' and in 1882 'A Police Code and Manual of Criminal Law,' which became a standard text-book. From 1883 he edited the 'Police Gazette.' His interest in his detective work was abiding, and he bequeathed a hundred guineas for an annual prize, the 'Howard Vincent cup,' for the most meritorious piece of work in connection with the detection of crime.

In 1884 Vincent resigned his association with Scotland Yard, and turned his attention to politics. A tour round the world led him to repudiate the liberalism towards which he had hitherto inclined, and developed an ardent faith in imperialism and protection. He was soon adopted as conservative candidate for Central Sheffield; and at the general election in Nov. 1885 he defeated Samuel Plimsoll [q. v. Suppl. I] by 1149 votes. This constituency he represented until his death, being re-elected five times, thrice after a contest in July 1886, July 1892, and January 1906, and twice unopposed in 1895 and 1900. Soon after entering parliament he joined the first London county council, on which he served from 1889 to 1896. Into politics Vincent carried the industry and persistency which had characterised his earlier work. He was soon a prominent organiser of the party, becoming in 1895 chairman of the National Union of Conservative Associations, in 1896 chairman of the publication committee of the conservative party, and in 1901 vice-chairman of the grand council of the Primrose League. Inside the House of Commons he was indefatigable as a private member, and although he was never invited to join an administration he had remarkable success in converting into statutes private measures of his own or of his friends' devising. To his persistence were mainly due the Acts dealing with the probation of first offenders (1887), saving life at sea, merchandise marks (1887), alien immigration (1905), and the appointment of a public trustee (1906). To the last measure Vincent devoted many years'

labour and met with many rebuffs; he regarded its passage as his chief political achievement. He long urged the prohibition of the importation of prison-made goods from foreign countries. Vincent was best known in the House of Commons by his unwavering advocacy of protection, when tariff reform was no part of the official conservative policy. Between 1888 and 1891 he agitated for the denunciation of British commercial treaties and the adoption of the principle of colonial preference. In the same cause he founded in 1891 the United Empire Trade League, and acted thenceforth as its honorary secretary, visiting Canada and the West Indies to gather information and evoke colonial sympathy. Under the League's auspices 'the Howard Vincent Map of the British Empire' was published in 1887, and reached a 19th edition in 1912.

Vincent, who was made C.B. in 1885, was knighted in 1896. In 1898 he attended as British delegate the Conference at Rome on the treatment of anarchists, and was made K.C.M.G. for his services. When the South African war broke out in 1899 Vincent busily helped to form and equip volunteer contingents. His selection for the command of the infantry of the C[ity] I[mperial] V[olunteers] in South Africa was, to his disappointment, cancelled owing to a heart affection. But he went to South Africa as a private observer. In 1901 he served as chairman of a departmental inquiry on the Irish constabulary and Dublin police. He died suddenly at Mentone on 7 April 1908, and was buried at Cannes. He was aide-de-camp to King Edward VII, and received decorations from France, Germany, and Italy.

A bronze tablet was placed in 1908 in his memory in the chapel of St. Michael and St. George in St. Paul's Cathedral. A cartoon by 'Spy' was issued in 'Vanity Fair' in 1883. Vincent married on 20 May 1882 Ethel Gwendoline, daughter and coheir of George Moffatt, M.P., of Goodrich Court, Herefordshire, and he left issue one daughter.

[Life by S. H. Jeyes and F. D. How, 1912; The Times, 8 and 11 April 1908; H. W. Lucy's Unionist Parliament, p. 42, and Balfourian Parliament, p. 330 (caricatures by E. T. Reed); private sources.] R. L.

VINCENT, JAMES EDMUND (1857-1909), journalist and author, born on 17 Nov. 1857 at St. Anne's, Bethesda, was eldest son of James Crawley Vincent, then incumbent there, by his wife Grace, daughter of

William Johnson, rector of Llanfaethu, Anglesey. His grandfather, James Vincent Vincent, was dean of Bangor (1862-76). The father's devoted service as vicar of Carnarvon during the cholera epidemic of 1867 caused his death. James Edmund was elected to scholarships both at Eton and Winchester, 1870, but went to Winchester. In 1876 he won a junior studentship at Christchurch, Oxford, matriculating on 13 Oct. He gained a second class in classical moderations in 1878 and a third class in the final classical school in 1880, when he graduated B.A. Entering at the Inner Temple on 13 April 1881, he was called to the bar on 26 Jan. 1884. He went the North Wales circuit, and was also a reporter for the 'Law Times' in the bankruptcy department of the queen's bench division from 1884 to 1889. In 1890 he was appointed chancellor of the diocese of Bangor.

But Vincent had already begun to devote more attention to journalism than law. He joined the staff of 'The Times' in 1886, and for the greater part of his life was the principal descriptive reporter of the paper. In 1901, as special correspondent, he accompanied King George V, then duke of Cornwall and York, on his colonial tour; and later wrote on motoring. From 1894 to 1897 he edited the 'National Observer,' after W. E. Henley's retirement, and from 1897 to 1901 'Country Life.'

Vincent did much work outside newspapers. He contributed occasionally to the 'Quarterly Review' and the 'Cornhill.' In 1885 he collaborated with Mr. Montague Shearman in a volume on 'Football' in the 'Historical Sporting' series; in 1887 he published 'Tenancy in Wales'; and in 1896, in 'The Land Question in North Wales,' defined the landowners' point of view. But his best literary work was in biography and topography. His 'Life of the Duke of Clarence,' 1893, was written by authority. 'From Cradle to Crown' (1902) was a profusely illustrated popular account of the life of King Edward VII; it was reissued in 1910 as 'The Life of Edward the Seventh.' Other biographical studies were 'John Nixon, Pioneer of the Steam Coal Trade in South Wales' (1900); and 'The Memories of Sir Llewelyn Turner' (1903), his father's friend and co-worker in North Wales. Vincent bought Lime Close, Drayton, a house near Abingdon, and became interested in the district. In 1906 he wrote 'Highways and Byways in Berkshire,' as well as the historical surveys

in W. T. Pike's 'Berks, Bucks, and Bedfordshire in the Twentieth Century' (1907) and 'Hertfordshire in the Twentieth Century' (1908). He was at work upon his 'Story of the Thames' (1909) at his death. 'Through East Anglia in a Motor-Car' (1907) was a vivacious record of travel. Vincent died of pleurisy at a nursing home in London on 18 July 1909, and was buried in Brookwood cemetery. A brass memorial tablet, with Latin inscription, was placed in Bangor Cathedral on St. Thomas's Day, 1910.

Vincent married on 12 Aug. 1884 Mary Alexandra, second daughter of Silas Kemball Cook, governor of the Seamen's Hospital, Greenwich, who survived him with two daughters.

[The Times, 19, 22 July, 23 Aug. 1909; N. Wales Chron. 23 July 1909, 23 Dec. 1900; Wainewright's Winchester Reg.; Foster's Alumni Oxon.; Brit. Mus. Cat.; private information; Cornhill, Sept. 1909 (Winchester in the Seventies, by J. E. Vincent), and Wykehamist, 21 Dec. 1909.]

G. LE G. N.

W

WADE, SIR WILLOUGHBY FRANCIS (1827-1906), physician, born at Bray, co. Wicklow, on 31 Aug. 1827, was eldest son of Edward Michael Wade (*d.* 1867), vicar of Holy Trinity, Derby, by his wife, the daughter of Mr. Justice Fox of the Irish bench. Wade counted Field-Marshal George Wade [q. v.], the military engineer, as a member of his family, and Sir Thomas Francis Wade [q. v.], ambassador to Peking, was his cousin. After early education at Brighton, Wade entered Rugby school on 13 Aug. 1842, and passed to Trinity College, Dublin, in 1845. There he graduated B.A. in 1849 and M.B. in 1851, after being apprenticed to Douglas Fox, F.R.C.S. England, of Derby (brother of Sir Charles Fox [q. v.], the engineer). He was admitted M.R.C.S., England, and a licentiate in midwifery of Dublin in 1851 and M.R.C.P., London, in 1859, becoming F.R.C.P. in 1871. Soon after graduating in medicine, Wade was appointed resident physician and medical tutor at the Birmingham general hospital, and he filled this post until 1855, when he settled in practice in the town. In 1857 he was appointed physician to the Birmingham general dispensary, and in 1860 to the Queen's Hospital, Birmingham, soon becoming senior physician to the hospital and professor of the practice of physic and clinical medicine at Queen's College. In 1865 he was elected physician to the general Birmingham hospital, and remained upon its staff until April 1892. He was elected consulting physician on his retirement. He long enjoyed a large consulting practice in and around Birmingham. He became J.P. for Warwickshire, and in 1896 was knighted and was made hon. M.D. of Dublin. He retired from practice in 1898 and went to Florence, where he lived at Villa Monforte, Maiano, until 1905. He

then removed to Rome, where he died on 28 May 1906.

He married in 1880 his cousin Augusta Frances, daughter of Sir John Power, second baronet, of Kilfane, but had no children.

Wade was more interested in the problems of general pathology than in clinical medicine. But he was the first to draw attention to the presence of albuminuria in diphtheria, showing that the disease was more than a local affection of the throat and nose. His chief claim to remembrance lies in his active control of the British Medical Association when that body still had its central offices in the midlands. He was elected to the council by the Birmingham branch in 1865; he succeeded George Callender as chairman of the scientific grants committee in 1880; he served as treasurer from 1882 to 1885, and as president at the Birmingham meeting in 1890, when in an address on medical education, he pointed out the insufficiency of the scientific knowledge required of medical students. He saw the members grow from 2500 to 20,000, with central offices in London, and on his initiative the association endowed the research scholarships which have proved a valuable help to the progress of medicine.

Besides contributions to scientific journals Wade was author of: 1. 'Notes on Clinical Medicine': No. 1. On diphtheria; No. 2. On a case of aortic aneurism, Birmingham, 1863; No. 3. On rheumatic fever, Birmingham, 1864. 2. 'On Gout as a Peripheral Neurosis,' 12mo., London and Birmingham, 1893.

[Brit. Med. Journal, 1906, i. 1379 (with portrait).] D'A.P.

WAKLEY, THOMAS (1851-1909). [See under WAKLEY, THOMAS HENRY.]

WAKLEY, THOMAS HENRY (1821-1907), surgeon and journalist, eldest son of Thomas Wakley [q. v.], was born in London on 21 March 1821. With a view to taking holy orders, he was educated, preparatory to matriculation at Oxford, by a private tutor, the Rev. James Basnett Mills, a son of a partner in the printing firm Mills & Jowett, who printed the 'Lancet' in its early days. Wakley resided in Oxford for a short time without matriculating as the son of a prominent radical, he probably found the atmosphere uncongenial. Then entering the University of London, he took up medicine at University College. Among his teachers were Samuel Cooper, Liston, Richard Quain, and Erasmus Wilson; the last named coached him privately. Continuing his medical studies in Paris, he there not only attended surgical lectures and clinics, but also devoted much time to music and singing under Garcia and Ronconi. In 1845 he became M.R.C.S., and in 1848 was elected assistant surgeon to the Royal Free Hospital. Taking a house in Guilford Street near the hospital, he filled the position of an informal casualty surgeon. As a young untried man, nearly all of whose studies had been pursued abroad, he incurred the hostility of his father's enemies, who held his appointment to be a breach of principles of hospital administration which his father's newspaper, the 'Lancet,' was vigorously upholding against abuses. Wakley was accused of malpraxis in treating a child for fracture complicated with scarlet fever, and an action was brought against him. In spite of the mental strain, he passed the examination for the fellowship of the College of Surgeons on 6 Dec. 1849, four days before the trial came on. The jury found a verdict for Wakley without leaving the box. Wakley soon moved to No. 7 Arlington Street, where for many years he practised as a consulting surgeon. As a surgeon his name is chiefly associated with the invention of a form of urethral dilator and with the use of glycerine in the treatment of affections of the external auditory canal (cf. *Clinical Reports on the Use of Glycerine*, ed. W. T. Robertson, 1851).

In 1857 his father made him and his youngest brother, James Goodchild Wakley, part proprietors of the 'Lancet,' with a share in the management. In 1862 the father died. The youngest son, James, became editor, while Thomas maintained an active interest in its conduct. Until 1882, when he retired from practice, he pursued the double occupation of con-

sulting surgeon and journalist. Upon the death of James Wakley in 1886 he assumed the editorship in association with his son Thomas. Thenceforth, until near his death, he devoted himself to his journalistic duties. Although he lacked the training of a journalist, he was a practical and shrewd editor, and maintained the position of the paper. The active management devolved in course of time on his son, but Wakley always kept in his own hands the 'Lancet' relief fund to meet accidental distresses of medical practitioners and their families, which he and his son founded and financed from 1839. To the last he helped to direct the Hospital Sunday Fund, which had been virtually founded by his brother. He manifested his interest in Epsom College for the sons of medical men by a donation in 1902 of 1000*l.* in the name of the proprietors of the 'Lancet.'

Wakley's energy was unbounded. When young he was a fine runner; he hunted until late in life, was a good shot, and fond of fishing. He died on 5 April 1907 of cardiac failure and senile decay, his last illness being practically his first. Wakley married in 1850 Harriette Anne, third daughter of Francis Radford Blake of Rickmansworth. She survived him, with a son, Thomas [see *infra*], and a daughter, Amy Florence.

Wakley wrote little. An article on diseases of the joints in Samuel Cooper's 'Dictionary of Practical Surgery' (new ed. revised by S. A. Lane, 1872) is the most important of his publications.

Wakley's only son, THOMAS WAKLEY (1851-1909), born in London on 10 July 1851, was educated at Westminster School and at Trinity College, Cambridge, where he studied medicine but took no degree. After he left Cambridge a serious bicycle accident interrupted his medical studies for some six years, but having entered St. Thomas's Hospital he became L.R.C.P. in 1883. Thenceforth he worked in the 'Lancet' office, first as assistant to his uncle, James Wakley, then as editor, later on his uncle's death in 1886 as joint-editor with his father, and finally as sole editor in succession to his father. A good amateur actor, a prominent freemason, and a numismatist, he died on 5 March 1909 of a gradually progressive hepatitis. He married in 1903 Gladys Muriel, daughter of Mr. Norman Barron, by whom he left one son, Thomas.

[*Lancet*, 13 April 1907 and 13 March 1909; personal knowledge.] H. P. C.

WALKER, SIR FREDERICK WILLIAM EDWARD FORESTIER- (1844-1910), general. [See FORESTIER-WALKER.]

WALKER, FREDERICK WILLIAM (1830-1910), schoolmaster, was born in Bermondsey on 7 July 1830. He was the only son of Thomas Walker of Tullamore in Ireland, hat manufacturer, who claimed to be descended from George Walker [q. v.], the defender of Londonderry in 1689. His mother was Elizabeth Elkington, of a Warwickshire family. He was sent in 1841 to St. Saviour's grammar school, Southwark, but during his early boyhood his parents went to live at Rugby, and he was entered as a day boy at Rugby school under Tait. Among his contemporaries was George Joachim Goschen [q. v. Suppl. II]. The two boys are said to have been coerced to fight for the amusement of their schoolfellows and to have displayed 'cumbrous ineptitude' (ELLIOT, *Life of G. J. Goschen*, 1911, i. 10). His father had suffered financial loss, and while at Rugby worked for some years in a hatter's shop, a fact which gave rise to a legend identifying him with Nixon, the school hatter mentioned in 'Tom Brown's School Days.'

In 1849 Walker won an open scholarship at Corpus Christi College, Oxford, after declining a Bible clerkship at Wadham. He took a first class in moderations in classics and a second in mathematics; in 1853 he won a first class in the final classical school, followed by a second in the final mathematical school; in 1854 he gained the Boden (Sanskrit) and the Vinerian (law) and Tancred (law) scholarships. He graduated B.A. in 1853, and proceeded M.A. in 1856. In 1854 he was entitled in due course to a fellowship at Corpus, but there was no vacancy for him to fill until 1859; he was appointed philosophical tutor, and in that capacity earned from Mark Pattison [q. v.] the title of 'malleus philosophorum.' About this time he spent six months in Dresden learning German with a special view to grammatical and philological study. He did miscellaneous educational work in England, acting as examiner of Grantham school for his college, as assistant master for a short time at Brighton College, and as private tutor in the family of the Bullers of Crediton, where Redvers Buller [q. v. Suppl. II] was his pupil. As a young man he was attracted by the high church doctrine, and his former headmaster, Dr. Tait, when bishop

of London, urged him to take holy orders with a view to becoming his examining chaplain. On 26 Jan. 1858 he was called to the bar at Lincoln's Inn, and joined the western circuit; but in 1859 the high mastership of Manchester grammar school, which was in the gift of the president of Corpus (see OLDHAM, HUGH), fell vacant; the post was offered to Walker, who reluctantly accepted it, mainly owing to the persuasions of Prof. John Matthias Wilson [q. v.].

Manchester grammar school was in 1859 a free school, with no power to charge fees, and with a decaying revenue derived partly from fishing rights in the Irk and partly from a monopoly in grinding corn, attached to a soke mill belonging to the school. The governing body was confined to members of the Church of England; the buildings were old and unsuitable; the scholars numbered barely 200; the educational system was obsolete. During Walker's tenure of office the school was completely reorganised in every direction; a change in the constitution of the governing body enlisted the help of the wealthy and able nonconformists of Manchester; the admission of fee-paying scholars, vehemently opposed by those who clung to the idea of a free school, put the finances of the school upon a secure basis; bequests and gifts to the amount of about 150,000l. provided new buildings and scholarships. By the time that Walker left, the numbers of the school were second only to those of Eton; in intellectual distinction it was scarcely surpassed.

In 1876 Walker was elected high master of St. Paul's school, which at that time was situated at the east end of St. Paul's Churchyard; and he continued in that post until his retirement from active work in July 1905. St. Paul's in 1876—the only other school in England whose head bears the title of high master—was in some respects not unlike what Manchester grammar school had been in 1859; but its constitution had just been remodelled by the charity commissioners, and it possessed ample and increasing revenues. One hundred and fifty-three foundation scholars [see COLET, JOHN] and a few paying pupils were educated at the school; the foundationers were generally chosen by patronage, and the traditions were not favourable to educational efficiency. The removal of the school from the City was contemplated, but its destination was uncertain. Walker at once set himself to organise the teaching and to revive the discipline; and in the eight years during

which the school still remained in St. Paul's Churchyard he greatly increased its reputation. In 1884 the school was removed to Hammersmith; a real expansion became possible, and the effect of Walker's organisation was seen in the rapid increase of numbers, and still more in the long series of notable successes gained by his pupils. The numbers rose from 211 in 1884 to 573 in 1888 and eventually to 650; in 1886 the first classical scholarship at Balliol was won by Richard Johnson Walker, the high master's only son, and for twenty years the success of his pupils at the universities and in every kind of open examination was one of the conspicuous facts in educational history. At Oxford the Ireland scholarship was won six times, the Craven eleven times, the Hertford eight times, the Derby five times; at Cambridge four Paulines were senior wranglers, six were Smith's prizemen; at the two universities twenty-one were elected to fellowships. From 1890 until the beginning of 1899 the high master and the governors of St. Paul's were engaged in a tedious struggle with the charity commissioners, whose proposals threatened to cripple the resources and to alter the character of the school chiefly by lowering the standard of the foundation scholarships. Walker's persistence and ingenuity were largely responsible for the issue, which was only reached after an appeal to the judicial committee of the privy council. The appeal came on for hearing in June 1896, but the judicial committee was spared the need of giving judgment. The commissioners gave way and on 25 Feb. 1899 they consented to frame a scheme in accordance with the wishes of the governors.

Walker took little or no part in general educational movements either in Manchester or in London; but in 1868 and 1869 he was public examiner at Oxford for the honours school of *literæ humaniores*, and in 1900 he sat with Dr. Warre of Eton on the commission for the education of officers in the army. In 1894 he was made an honorary fellow of Corpus; in 1899 he received the degree of Litt.D. from Victoria University. Walker, who had in 1869 declined the Corpus professorship of Latin at Oxford in succession to John Conington [q. v.], had a high reputation for accurate scholarship, and though he published nothing except occasional papers in the 'Classical Review,' he gave both direction and impulse to the philological work of Dr. W. G. Rutherford, J. E. King, C. Cookson, and other scholars of eminence, and also

to the literary activities of Paul Blouët ('Max O'Rell'), another member of his staff at St. Paul's.

He became a freeman and liveryman of the Fishmongers' Company in April 1878, and was elected a member of the court in 1897; he was consequently appointed on the Gresham school committee and later became a governor of that school, in the reorganisation of which he took a prominent part.

He resigned the high mastership of St. Paul's in July 1905, and for the rest of his life resided at 7 Holland Villas Road, Kensington, within a mile of the school, which he never revisited. He died at his residence on 13 Dec. 1910, and was buried in the Kensington cemetery at Hanwell after a service in St. Paul's Cathedral.

By his devotion to accurate and vigorous teaching (though for many years he never himself taught a class) and by the remarkable success of his methods Walker did much to raise the standard of public-school education throughout the country. He was a man of great force of character, formidable in opposition alike by his determination and his judgment, but generous and sympathetic as a friend and adviser. From his Oxford days he was on terms of friendship with the leaders of the positivist movement—Congreve, E. S. Beesly, Cotter Morison, and Mr. Frederic Harrison; for Congreve in particular he had an unbounded admiration. He was the lifelong friend of Jowett, to whose influence he believed himself to owe much.

He married in 1867 Maria, daughter of Richard Johnson, of Fallowfield, near Manchester, who brought him a considerable fortune; she died in 1869. His only son, the Rev. Richard Johnson Walker, entered Balliol College, Oxford, in October 1887, and won the Hertford, Ireland, and Craven scholarships; he was for a time an assistant master at St. Paul's under his father, but resigned with him in 1905. He has since been mayor of Hammersmith.

A marble bust of Walker was executed by Mr. H. R. Hope Pinker in 1889 and exhibited in the Royal Academy of 1890; it stands in the library of St. Paul's School. On his retirement his portrait was painted by Mr. Will Rothenstein and hangs in the board room. A characteristic sketch of him by Leslie Ward ('Spy') appeared in 'Vanity Fair' on 27 June 1901.

WALKER, SIR MARK (1827-1902), general, born at Gore Port on 24 Nov. 1827, was eldest of three sons of Captain Alexander Walker of Gore Port, Finea, Westmeath, by Elizabeth, daughter of William Elliott, of Rathcrogue, co. Carlow. The father, of the West Kent (97th) regiment, served at the battles of Vimiero, Salamanca, Talavera, Busaco, and Albuera, and at Talavera saved the colours of his regiment, which he carried, by tearing them off the pole and tying them round his waist. Sir Samuel Walker [q. v. Suppl. II] and Alexander Walker, captain 38th South Staffordshire regiment, who died unmarried at Aden of cholera in 1867, were younger brothers. Educated at Arlington House, Portarlington, under the Rev. John Ambrose Wall, he entered the army on 25 Sept. 1846, in the 30th foot, without purchase, on account of his father's services. In 1851 the regiment embarked for Cephalonia, and was detached in the Ionian Islands.

Walker was appointed adjutant to the company depot, under command of Major Hoey, which remained at Walmer until the following year, when it moved to Dover, and in 1853 to Fermooy. In October 1853 he proceeded with a draft to Cork, and embarked for Gibraltar, where the regiment was then stationed. On 4 Feb. 1854 he was promoted lieutenant and appointed adjutant. On 1 May 1854 the regiment embarked for Turkey; it was encamped at Scutari, and formed part of the 1st brigade under Brig.-General Pennefather, and of the 2nd division under Sir De Lacy Evans. In July Walker was with his regiment at Varna, and in September embarked for the Crimea. At the battle of the Alma (20 Sept.) Walker had his horse shot under him and was wounded in the chest by a spent grape shot. But he made the forced march to Balaklava and was present at its capture. On the following day the advance was resumed to the Inkerman Heights, and next day the 30th regiment took up its position on the right of the army. He was present when the Russians made a strong sortie on 26 Oct., and at the battle of Inkerman on 5 Nov. showed a resourceful gallantry which won him the Victoria Cross (date of notification of Victoria Cross, 2 June 1858).

D.N.B. 1901-1911

He was present with the regiment during the severe winter of 1854, serving continually in the trenches. On the night of 21 April, when on trench duty, he volunteered and led a party which took and destroyed a Russian rifle-pit, for which he was mentioned in despatches and promoted into the 'Bufs' (cf. KINGLAKE'S *Crimea*, viii. 214). He joined that regiment, and on the night of 9 June in the trenches was severely wounded by a piece of howitzer shell and had his right arm amputated the same night. He received the Crimean medal with three clasps, the Turkish medal and 5th class of the Mejidie (Despatches, *London Gazette*, 7 May 1855). On 7 July 1855 he was sent home, and six months after joined the depot at Winchester. Early in 1856 the depot of the Bufs went to the Curragh, and on 6 June he was promoted brevet-major for his services in the Crimea. After serving two years in Ireland, he joined the Bufs in the Ionian Islands in July 1858, and early in November the regiment was concentrated at Corfu, where he was presented with the Victoria Cross by General Sir George Buller at a parade of all the troops. The same month he went with the Bufs to India, and was stationed at Dum-Dum, and on 22 Nov. 1859 proceeded with a wing of the regiment to Canton. Serving through the China campaign, he was on 30 March 1860 appointed brigade major of the 4th brigade, which was in the 2nd division, commanded by Sir Robert Napier, the commander-in-chief being Sir James Hope Grant [q. v.]. He was present at the capture of Chusan, at the battle of Sinho, at the assault of the Taku forts, at the surrender of Peking, and at the signing of the treaty of peace by Lord Elgin. He received the medal with two clasps for Taku forts and Peking and the brevet of lieutenant-colonel on 15 Feb. 1861. He embarked with the regiment for England on 27 Oct., arriving on 15 April 1862, and was quartered successively at Dover, Tower of London, Aldershot, Sheffield, and the Curragh. In July 1867, when the Bufs proceeded to India, Walker remained in command of the company depot at home, and after two years exchanged into the 2nd battalion at Aldershot. He was promoted brevet-colonel on 15 Feb. 1869, and on 3 Aug. 1870 was advanced to a regimental majority in the 1st battalion, then quartered at Sitapur in Oude. He joined them in Jan. 1871, and served at Benares, Lucknow, and Calcutta. On 10 Dec. 1873 he was appointed to the command of the 45th

regiment (Sherwood Foresters), then at Ramsgoon, and on leaving the Buffs at Calcutta was given a rousing farewell by officers and men. In March 1875 he took the 45th regiment (Sherwood Foresters) to Bangalore, and on 24 May (Queen Victoria's birthday) was gazetted C.B. In August that year he was appointed a brigadier-general to command the Nagpore force, with headquarters at Ramptee. He vacated this command on 4 Nov. 1879, owing to promotion to major-general (11 Nov. 1878). On 22 Nov. 1879 he proceeded to England. In October 1882 he received the reward for distinguished service, and on 1 April 1883 was appointed to the command of the 1st brigade at Aldershot. From 1 April 1884 to 1 April 1888 he was in command of the infantry at Gibraltar. On 16 Dec. 1888 he became lieutenant-general, and general on 15 Feb. 1893. He retired 1 April 1893, and on 3 June following was appointed K.C.B. On 27 Sept. 1900 he was nominated to the command of the 45th Sherwood Foresters.

Walker died at Arlington Rectory, near Barnstaple, on 18 July 1902, and was buried at Folkestone. He married on 6 June 1881 Catharine, daughter of Robert Bruce Chichester, barrister-at-law, of Arlington, Devon, brother of Sir John Palmer Bruce Chichester, first baronet, of Arlington (cr. 1840); she survived him. An oil painting, painted in Rome in 1891 (by Signor Giove, 300 Via del Corso), was bequeathed to the Buffs, subject to Lady Walker's life interest. A small oil painting is in the library of the United Service Club in Pall Mall. A memorial tablet is in the nave of Canterbury Cathedral.

Creasy, *The British Empire*; Carter's *Medals of the British Army, Crimea*, p. 181; *The XXX*, the paper of the 1st battalion East Lancashire regiment; *History of 45th Regiment*, by General Hearn; private information.]

H. M. V.

WALKER, SIR SAMUEL, first baronet (1832-1911), lord chancellor of Ireland, born at Gore Port, Finesa, co. Westmeath, on 19 June 1832, was second of the three sons of Captain Alexander Walker of Gore Port. His eldest brother was General Sir Mark Walker [q. v. Suppl. II for fuller family details]. Walker was educated at Arlington House, Portarlington, a celebrated school whose headmaster, the Rev. John Ambrose Wall, anticipated for him a brilliant university career. Walker matricu-

lated in Trinity College, Dublin, in 1849, and was throughout the best man of his year in the classical schools, winning a scholarship in 1851, a year before the usual time, and graduating B.A. in 1854 as first senior moderator in classics and the large gold medallist. He was called to the Irish bar in Trinity term 1855.

Walker quickly attained a large practice both in equity and at the common law side, and went the home circuit. He was neither a fluent nor an attractive speaker, but his profound knowledge of law and penetration of motive, combined with his shrewd common sense, rendered him invaluable in consultation. An efficient cross-examiner, he impressed juries by his grasp of the salient points of a case, and was more successful as a verdict-getter than more brilliant advocates. He took silk on 6 July 1872. At the inner bar Walker increased his reputation, and rapidly came to the very front rank of the leaders. He attained the zenith of his fame at the bar in the state trial of Parnell in 1881, when, owing to the illness of his leader, Francis MacDonagh, Q.C., who had been counsel for O'Connell in 1844, the responsibility for the defence mainly devolved on Walker. The trial ended in a disagreement of the jury and a virtual triumph for the traversers.

In Trinity term 1881 Walker was appointed a bencher of the King's Inns. He was made solicitor-general for Ireland on 19 Dec. 1883, when Andrew Porter, the attorney-general, was made master of the rolls. Walker had always been a liberal in politics, and he now (Jan. 1884) entered the House of Commons unopposed as one of the members for the county of Londonderry—to fill the seat vacated by Porter. He had been an enthusiastic upholder of the tenants' side in the land controversy, which had reached an acute stage. Entering the House of Commons as a law officer of the crown, and sitting by virtue of his office on the treasury bench, Walker was somewhat embarrassed by the abrupt change from the law courts of Dublin to the prominent parliamentary position in which his ministerial office at once placed him. But his knowledge of the world came to his aid. He spoke only when compelled to do so, and then briefly and to the point. His dry humour rendered him quite equal to the ordeal of parliamentary interrogation. When Sir George Trevelyan, who was chief secretary to the lord lieutenant, broke down in health in 1884 owing to the strain of the Irish office, Walker as solicitor-general

—the attorney-general John Naish not being a member of the House of Commons —was the acting Irish secretary till the appointment of Sir Henry Campbell-Bannerman [q. v. Suppl. II] to the chief secretaryship in 1884. In May 1885 Walker became attorney-general for Ireland, and was sworn of the Irish privy council, but within a few weeks the Gladstone administration resigned on a defeat in the House of Commons (8 June 1885). Walker for the remainder of the session was as assiduous in his attendance as when in office.

At the general election of 1885, the county of Londonderry being divided under the Redistribution Act into two divisions, each returning one member, Walker sought election for North Londonderry; but he was defeated by Henry Lyle Mulholland (second Lord Dunleath) on 1 Dec. 1885. A month earlier, at a banquet in the Ulster Hall, Belfast, at which the Marquis of Hartington (Duke of Devonshire [q. v. Suppl. II]) was present, and at which the term liberal unionist was invented, Walker was present and said: 'The liberals of Ireland will not permit the union to be tampered with, and any attempt in that direction, no matter by what party, will not be tolerated.' But when Gladstone's adoption of home rule split the liberal party, Walker cast in his lot with the Gladstonian liberals. On the appointment of Gladstone as prime minister on 6 Feb. 1886, Walker, though without a seat in the House of Commons, again filled the office of attorney-general for Ireland, and he held the post till the fall of Gladstone's third administration on 3 Aug. 1886. While the liberal party was in opposition (1886-92) Walker pursued with distinction his practice at the Irish bar, and took a prominent part in the meetings of the liberal party held in Dublin. He was defeated in his candidature for South Londonderry in July 1892. On the formation of Gladstone's fourth administration in August 1892, Walker was appointed to the lord chancellorship of Ireland. At a complimentary dinner of the members of his old circuit, Walker was designated by Mr. Justice Gibson as the greatest lawyer of the Irish bar. He fully sustained on the bench his reputation as a lawyer. His judgments were masterpieces in their application of legal principles controlled by common sense. A good example of his work is presented by his judgment in *Clancarty v. Clancarty* (31 L.R.J. 530), dealing with precatory trusts. He retired from the chancellorship on the fall of the liberal ad-

ministration, on 8 July 1895. As lord chancellor he presided over the court of appeal in Ireland, and still remained as a lord justice of appeal a member of that court, though no longer its president. Although he received no salary, he was as unremitting in his judicial duties as any other member of that tribunal. He also went on several occasions on circuit as a commissioner of assize, with great satisfaction to the bar and the public. He was appointed in 1897 by Earl Cadogan, the unionist lord-lieutenant, to preside over the commission on the Irish fisheries. On the formation of Sir Henry Campbell-Bannerman's administration, Walker was reappointed lord chancellor of Ireland on 14 Dec. 1905. He was then in his seventy-fourth year, but he held the great seal till his death on 13 Aug. 1911. He was created a baronet on 12 July 1906. He died in Dublin somewhat suddenly, and is buried in Mount Jerome cemetery.

Walker was below rather than above the medium height. He had finely chiselled features and clear grey eyes of great lustre. His memory was encyclopædic; and he recalled particulars of cases on the instant without apparent effort. In conversation he was entertaining, and his mots were often remarkable for their caustic wit and insight. Although devoted to legal studies, Walker enjoyed to the full the generous amusements of life. In his younger days he was an admirable shot, and all through life was an enthusiastic angler. His long vacations were generally spent in fishing in the lakes of Connemara, and he employed the same boatman for six-and-forty years.

Walker was twice married: (1) on 9 Oct. 1855 to Cecilia Charlotte (d. 18 June 1880), daughter of Arthur Greene, and niece of Richard Wilson Greene, baron of the Irish Court of Exchequer, by whom he had two sons and four daughters; (2) on 17 Aug. 1881 to Eleanor, daughter of the Rev. Alexander MacLaughlin, by whom he had a son and daughter. His eldest son, Sir Alexander Arthur Walker, second baronet, is secretary of the Local Marine Board, Dublin.

A photograph of Walker in his judicial robes, by Walton & Co., has been finely engraved.

[The Times, Freeman's Journal, and Irish Times, 14 Aug. 1911; private information; personal knowledge.] J. G. S. M.

WALKER, VYELL EDWARD (1837-1906), cricketer, born at Southgate House, Southgate, on 20 April 1837, was fifth of seven sons of Isaac Walker of South-

gate, member of the prosperous brewing firm, Taylor, Walker & Co. of Limehouse, by his wife Sarah Sophia Taylor, of Palmer's Green, Middlesex. John Walker, of Arnos Grove, Southgate, was his grandfather. An uncle, Henry Walker, twice played for the Gentlemen of England *v.* Players. All Vyell's brothers—John, the eldest (1826–1885), Alfred (1827–1870), Frederick (1829–1880), Arthur Henry (1833–1878), Isaac Donnithorne (1844–1898), and Russell Donnithorne (b. 1842), who alone survives—distinguished themselves in the cricket field. Of these Isaac Donnithorne and Russell Donnithorne proved themselves, like Vyell, cricketers of the first class. From 1868 to 1874 'The "Walker Combination," formed of these three brothers (when V. E. was bowling and fielding his own bowling at short mid-on, with I. D. and R. D., like two terriers watching a rat-hole, in the field), was nearly, if not quite, as fatal as the three Graces very often; . . . there is no instance within the memory of living cricketers when the strategy of the game was better displayed than when three Graces or three Walkers were on the outside' (F. GALE in *Lillywhite*, 1880).

Educated at Stanmore, where Vyell learned cricket under Mr. A. Woodmass, and at Bayford, Hertfordshire, he was at Harrow school from 1850 to 1854, and played in the cricket matches against both Eton and Winchester in 1853 and 1854. On leaving school he, like his brothers, mainly devoted himself to cricket, although some twenty years later he joined the family brewing firm. In 1856, at nineteen, he appeared at Lord's for the Gentlemen of England against the Players. With three brothers, John, Frederick, and Arthur, he played for the Gentlemen next year, when the match with the Players was first contested at Kennington Oval. He regularly played for the Gentlemen until 1869, captaining the team on ten occasions. By 1859 he was considered the best all-round cricketer in the world. In July of that year he scored 108 for England *v.* Surrey at the Oval, and took all ten Surrey wickets in the first innings for 74 runs—still an unparalleled feat in first-class cricket. He twice subsequently—in 1864 and 1865—repeated the exploit of taking all ten wickets in an innings.

Vyell Walker's eldest brother, John, founded in 1858, on his own land, the Southgate club, which became a chief centre of local cricket and a notable scene of activity for Walker and his brothers up to July 1877, when the club ceased to

be their private property. There in 1859 John Walker invited the Kent eleven to play a Middlesex eleven which included five members of his family. John Walker and his brothers were mainly responsible for the creation of the Middlesex cricket club, which was definitely formed in 1864, and after many wanderings found a permanent home at Lord's in 1877. Vyell was secretary of the club from 1864 to 1870, joint-captain with his eldest brother, John, 1864–5, and sole captain (1866–72); he was succeeded in the captaincy (1873–84) by his youngest brother, Isaac Donnithorne, he was vice-president (1887–97), treasurer in 1895, president and trustee in 1898. In 1891 he served as president of the Marylebone cricket club.

As a batsman Walker played in an orthodox style; he was a powerful hitter, but had a safe defence. As a slow 'lob' bowler he was second only to William Clarke; he threw the ball higher than was customary, rendering its flight more deceptive; in the field he was exceptionally quick, especially in backing up his own crafty bowling. As a captain he had the gift of getting the best out of his men; his captaincy permanently raised Middlesex cricket to a foremost position.

On his brother Frederick's death in 1889 Walker succeeded to the family mansion and estate of Arnos Grove, Southgate, and in 1890 he presented to the new Southgate local board fifteen acres of land (valued at 5000*l.*) for use as a public recreation ground, and gave a further sum of 1000*l.* in 1894 to complete the laying out (*Standard*, 15 Nov. 1894). He became in 1891 J.P. and in 1899 D.L. for Middlesex, and was an active magistrate. He died at Southgate, unmarried, on 3 Jan. 1906. By his will he left Arnos Grove to his only surviving brother, Russell Donnithorne, and made bequests (amounting to 24,500*l.*) to London hospitals, societies, churches, and to the Cricketers' Fund Society (*The Times*, 23 March 1906). A chapel built at his expense in Southgate church was completed, a month after his death, in February 1906.

W. B. O.

WALLACE, WILLIAM ARTHUR JAMES (1842–1902), colonel, royal engineers, born at Kingstown, co. Dublin, on 4 Jan. 1842, was son of William James Wallace, J.P., of co. Wexford. Educated at private schools and at the Royal Military Academy at Woolwich, he was commissioned as lieutenant in the royal engineers on 19 Dec. 1860. After two years' instruction at Chatham and two years' service at home stations, Wallace in 1864 joined the railway branch of the public works department in India. He became executive engineer in 1871, then deputy consulting engineer for guaranteed railways administered from Calcutta. Promoted captain on 25 August 1873, and appointed officiating consulting engineer to the government of India at Lucknow in 1877, he went to Europe in 1878 in connection with the railway exhibits to the Paris Exhibition, and on his return to India in the autumn was appointed secretary to the railway conference at Calcutta. He worked out the details of a policy, advocated at the conference, of vigorous railway construction in India, a result of experience gained in the recent famine.

At the end of 1878 Wallace received the thanks of the commander-in-chief, Sir Frederick Haines [q. v. Suppl. II], for conducting the transport of General Sir Donald Stewart's division over 300 miles of new railway on the Indus Valley line between Multan and Sakkar, on its march to Kandahar. Serving under Sir Frederick (afterwards Earl) Roberts as field engineer to the Kuram Valley column in the Afghan campaign of 1879, Wallace was mentioned in despatches, and commended for his work on road-making and for his energy and skill in the management of the Ahmed Khel Jagis. He received the medal.

Returning from active service to railway work in August, he was appointed engineer-in-chief and manager of the northern Bengal railway at Saidpur, was promoted major on 1 July, and arrived home on furlough in June 1882. On the recommendation of Major-general Sir Andrew Clarke [q. v. Suppl. II], inspector-general of fortifications, Wallace was made director of a new railway corps, formed of the 8th company of royal engineers, to work the Egyptian railways in the coming Egyptian war. The railway corps contributed largely to the success of the operations in Egypt. The advance from Ismailia was mainly dependent on the transport by railway of supplies, which

amounted to 100 tons daily, while another 100 tons had to be stored at the advanced depots at Kassassin and Mahuta (see *Report, Professional Papers of the Royal Engineers*, vol. ix.). Wallace's improvised corps proved how essential in war such an organisation was, and led to its establishment in the service in an expanded form and on a more permanent basis. Wallace was present at the battle of Tel-el-Kebir on 13 September 1882, and for his services in the campaign was mentioned in despatches, received a brevet lieut.-colonelcy on 18 November 1882, medal with clasp, the 4th class of the Osmanieh, and the Khedive's bronze star.

Returning to India in October 1884, Wallace was appointed acting chief engineer to the government of India for guaranteed railways at Lahore. In the spring of the following year, when the Penjdeh incident in Central Asia caused great preparations to be made for war with Russia, Wallace was appointed controller at Lahore of military troops and stores traffic for the frontier. The Afghanistan boundary question was settled in September 1885, but Wallace remained at Lahore as chief engineer for guaranteed railways until his transference to Agra in April 1886. A brevet colonelcy was given to him on 18 Nov., and in the following year he returned to Lahore as chief engineer of the north-western railway.

In 1888 Wallace reported for the government of India on the Abt system of railways in Switzerland. On 1 Jan. 1890 he was made C.I.E. He retired from the service on 19 Dec. 1892. He died unmarried at Elm Park Gardens, London, on 6 Feb. 1902.

[War Office Records; Royal Engineers Records; W. Porter, *History of the Corps of Royal Engineers*, 2 vols. 1889; R. H. Vetch, *Life of Lieutenant-general Sir Andrew Clarke*, 1905; Susan, Countess of Malmesbury, *Life of Major-general Sir John Ardagh*, 1909; *The Times*, 11 Feb. 1902.] R. H. V.

WALLER, CHARLES HENRY (1840–1910), theologian, born at Ettingshall on 23 Nov. 1840, was eldest son of Stephen R. Waller, vicar of Ettingshall, Staffordshire. His grandfather, the Rev. Harry Waller of Hall Barn, Beaconsfield, was descended from Edmund Waller the poet. His mother was eldest daughter of the Rev. Charles Richard Cameron by his wife Lucy Lyttelton Cameron [q. v.], writer of religious tales for children, whose elder sister was Mary Martha Sherwood [q. v.], the authoress.

Educated at Bromsgrove School, he

matriculated on 4 June 1859 at University College, Oxford, and held a scholarship there (1859-64). He took a first class in classical and a second in mathematical moderations in 1861, and a second in lit. hum., and a third in mathematical finals in 1863, graduating B.A. in 1863; M.A. in 1867; B.D. and D.D. in 1891. He also won the Denyer and Johnson theological scholarship on its first award in 1866. Ordained deacon in 1864, and priest in 1865, he became curate of St. Jude, Mildmay Park, under William Pennefather [q. v.]. In 1865, on the recommendation of Canon A. M. W. Christopher of Oxford, he began his long service to the theological college, St. John's Hall, Highbury, as tutor under Dr. T. P. Boulton [q. v.]. He served in addition as reader or curate on Sundays at Christ Church, Down Street (1865-9), and at Curzon Chapel, Mayfair, in 1869, under A. W. Thorold [q. v.]; and was minister of St. John's Chapel, Hampstead (1870-4). He became McNeile professor of biblical exegesis at St. John's Hall in 1882, and principal from 1884, on Boulton's death, till his retirement on a pension in 1898. Of some 700 of his pupils at St. John's Hall, the majority entered the ministry of the Church of England.

A pronounced evangelical, he acted as examining chaplain to Bishop J. C. Ryle [q. v.]. At Oxford he had come under the influence of John William Burgon [q. v. Suppl. I], and through life his main interest lay in the conservative study and interpretation of the Scriptures, on which he wrote much. He died on 9 May 1910 at Little Coxwell, Faringdon, Berkshire, and was buried there. He married, at Heckington, Lincolnshire, on 22 July 1865, Anna Maria, daughter of the Rev. James Stubbs, by whom he left four sons (three in holy orders) and three daughters (one a C.M.S. missionary at Sagra, Benares).

Waller's published works include: 1. 'The Names on the Gates of Pearl, and other Studies,' 1875; 3rd edit. 1904. 2. 'A Grammar and Analytical Vocabulary of the Words in the Greek Testament,' 2 parts, 1877-8. 3. 'Deuteronomy' and 'Joshua' in Ellicott's 'Commentary,' 1882. 4. 'The Authoritative Inspiration of Holy Scripture, as distinct from the Inspiration of its Human Authors,' 1887. 5. 'A Handbook to the Epistles of St. Paul,' 1887. 6. 'Apostolical Succession tested by Holy Scripture,' 1895. 7. 'The Word of God and the Testimony of Jesus Christ,' 1903. 8. 'Moses and the Prophets, a Plea for the Authority of Moses in

Holy Scripture,' 1907; a reply to the Rev. Canon Driver.

[Foster's Alumni Oxon.; Crockford, 1910; The Times, 11 May 1910; Record, 13 May 1910; Johnian (St. John's College, Highbury), Sept. 1910; private information.] E. H. P.

WALLER, SAMUEL EDMUND (1850-1903), painter of genre pictures, born at the Spa, Gloucester, on 18 June 1850, was son of Frederick Sandham Waller by his wife Anne Elizabeth Hitch. The father, an architect practising in Gloucester, ably restored considerable portions of Gloucester Cathedral in perfect harmony with the original design. Young Waller was educated at Cheltenham College with a view to the army, but showing artistic inclinations was sent to the Gloucester School of Art, and went through a course of architectural studies in his father's office. The training proved of service to him, for many of his pictures have architectural backgrounds. At eighteen he entered the Royal Academy Schools, and three years later (1871) he exhibited his first pictures at Burlington House entitled 'A Winter's Tale' and 'The Illustrious Stranger.' In 1872 he went to Ireland, and published an illustrated account of his travels entitled 'Six Weeks in the Saddle.' In 1873 he joined the staff of the 'Graphic.' Next year he appeared at the Royal Academy with a work called 'Soldiers of Fortune,' and henceforward was a steady exhibitor there until 1902. His chief and best-known pictures were 'Jealous' (1875), now in National Gallery, Melbourne; 'The Way of the World' (1876); 'Home?' (1877), now in National Gallery, Sydney; 'The Empty Saddle' (1879), with an architectural setting taken from Burford Priory, Oxfordshire; 'Success!' (1881) and 'Sweethearts and Wives' (1882), both in the Tate Gallery. Later works are 'The Day of Reckoning' (1883), 'Peril' (1886), 'The Morning of Agincourt' (1888), 'In his Father's Footsteps' (1889), 'Dawn' (1890), 'One-and-Twenty' (1891), 'The Ruined Sanctuary' (1892), 'Alone!' (1896), 'Safe' (1898), 'My Hero' (1902).

Old English country life strongly attracted his imagination, and furnished him with the romantic incidents which formed the subjects of his most notable pictures, and their backgrounds were frequently taken from Elizabethan houses in his native county or elsewhere in England. Many of his pictures are well known by reproductions and engravings throughout the English-speaking world. The originals

are in many cases in private ownership in America and Australia as well as in England. Waller's great knowledge of horses and his skill in representing them gave his work much vogue among sportsmen. He took great pains in studying animals, and related some of his experiences in articles contributed to the 'Art Journal' (1893-6). His pictures usually tell a story effectively and dramatically, but he was more of an illustrator than a genuine artist.

He died at his studio, Haverstock Hill, London, N., on 14 June 1903, after a long illness, and was buried at Golder's Green. He married in 1874 Mary Lemon, daughter of the Rev. Hugh Fowler of Burnwood, Gloucestershire. His widow, a well-known artist, who exhibited at the Royal Academy from 1877 to 1904, survived him with a son.

A very fine oil portrait of Waller—a head—by John Pettie, R.A., belongs to the family.

[The Times, 15 June 1903; Art Journal, 1893, 1896, and 1903; Graves's Royal Acad. Exhibitors, 1906; private information.]

F. W. G.-N.

WALPOLE, SIR SPENCER (1839-1907), historian and civil servant, born in Serle Street, Lincoln's Inn Fields, on 6 Feb. 1839, was elder son of Spencer Horatio Walpole [q. v.] by his wife Isabella, fourth daughter of Spencer Perceval, the prime minister. His younger brother, Sir Horatio George Walpole, was assistant under-secretary for India from 1883 to 1907.

Walpole's health in childhood was delicate, and it was chiefly on his account that his father, when the boy was six years old, moved with his family from London to Ealing for the sake of purer air. In the autumn of 1852 he was sent to Eton, where he became a favourite pupil of the Rev. William Gifford Cookesley [q. v.]. In 1854, when Cookesley left Eton, he changed to the pupil-room of William Johnson (afterwards Cory) [q. v. Suppl. I]. At Eton Walpole gained health and strength through rowing—becoming captain of a boat; to the effects of that exercise he attributed the excellent constitution which he enjoyed through life after an ailing childhood. Acceptance of office as home secretary in the short-lived administration of 1852 involved for Walpole's father the loss of a good practice at the bar, and for this reason the son, instead of being sent to a university on leaving Eton in 1857, became at the age of nineteen a clerk in the war office, achieving his first success in life by winning the first place in the preliminary examination.

Though Walpole always regretted that he missed a university career, the loss allowed him, when his father again became home secretary in 1858, to gain an early insight into public life as his private secretary. He continued to hold the same position under Sotheran Estcourt, home secretary after the elder Walpole resigned in Jan. 1859. Estcourt on his retirement in the following June wrote to the head of the war office that almost his only regret in quitting office was that he lost Walpole as a companion of his work. Walpole resumed his duties at the war office until, on his father's return to the home office in 1866, he once more became his private secretary. Those were the years of the volunteer movement—the origin and significance of which Walpole afterwards described in his history. He entered with characteristic energy into the movement, taking his full share of the work of organisation at the war office, and himself joining the Ealing division.

In March 1867 Walpole was appointed, on his father's recommendation, one of two inspectors of fisheries for England and Wales with a salary of 700*l.* a year. The income enabled him to marry, while the work with its promise of 'many a pleasant wandering by river, lake and sea-shore' was most congenial. His great practical ability gave every assurance of success in the performance of his duties. He was fortunate, too, in his colleague, Frank Buckland, the naturalist, whose energy and kindness rivalled his own. Nevertheless these were difficult years. After his marriage he lived, when in London, in a small house in Coleshill Street, where he supplemented his official income by hard work for the press. Frederick Greenwood [q. v. Suppl. II], to whose suggestions he owed something in the formation of his literary style, had recently become editor of the newly founded 'Pall Mall Gazette,' and Walpole contributed, often in hours stolen from sleep, the financial articles. His domestic expenses were increasing, and there had been loss of money through failure of an investment. Happily, in the intervals of official work and journalism he made time to write the life of his grandfather, Spencer Perceval. This book, published in 1874, so pleased Lord Egmont, the head of the Perceval family, that he bequeathed 10,000*l.* to the author, and his speedy death brought Walpole into possession of this bequest. This turn of fortune enabled him to relinquish journalism and to devote himself to the chief achievement of his life—the 'History of England from 1815'

—the first two volumes of which, appearing in 1878, quickly gave him rank as an historian.

Dislike of Beaconsfield's foreign policy, and whig sympathies derived from his historical studies, caused Walpole to recognise his true political convictions and to leave the Carlton Club. In April 1882 he was appointed by Gladstone governor of the Isle of Man. That post he held for nearly twelve years. His literary activity, though it was such as would have left to most men of letters little time for other occupation, was in no way checked by administrative duties efficiently discharged. In 1889 he published the official life of Lord John Russell—one of the best of political biographies. The history of England to 1856 appeared in its final form in 1890, when the last of the six volumes was published; in 1893 there followed a slim volume called 'The Land of Home Rule'—an essay on the history and constitution of the Isle of Man; and he contributed many articles to the 'Edinburgh Review.'

In 1893 Walpole left the Isle of Man on his appointment as secretary to the post office—a post which gave new opportunities to his aptitude for organisation and enabled him during his five years' tenure to effect lasting improvements in the British postal system. In 1897 he went as British delegate to the Postal Congress which met at Washington in that year, and was greatly interested by all that he heard and saw in America. A mutual attraction and respect marked his relations with Americans and led to the formation of friendships which he valued.

At the beginning of 1898, 'in recognition of his valuable public services,' Walpole was promoted to the rank of K.C.B.—an honour unduly delayed in the opinion of his friends. In Feb. 1899, to the regret of colleagues and subordinates, he left the post office, and early in the following year bought Hartfield Grove, a small property in Sussex pleasantly situated on the edge of Ashdown Forest.

In London, where he was very popular, Walpole had been warmly welcomed when he returned in 1893. Of versatile human interests, he won confidence and regard by his candour, modesty, consideration for others, and freedom from self-consciousness. Honours and compliments fell to him in abundance. In 1894 he had been elected president of the Literary Society—an office which his father had held for nearly thirty years, and he had been for some

years a member of The Club when he was elected to Grillion's in May 1902. In 1904 he was given the honorary degree of D.Litt. at Oxford on Lord Goschen's installation as chancellor, and he was made a fellow of the British Academy. He was appointed chairman of the Pacific Cable Board in 1901 and chosen a director of the London and Brighton Railway Company in 1902. He was a valuable member of the committee of the London Library. A continuation of his history under the title of 'A History of Twenty-five Years (1856–1880)' appeared in 1904, and there were contributions from his pen in the 'Encyclopædia Britannica' and the 'Cambridge Modern History,' as well as in the 'Edinburgh Review.' At his country home he was made a magistrate, took much interest in his stock, and played golf. It was in the midst of these various activities that he was stricken down by cerebral hemorrhage and died at Hartfield Grove on 7 July 1907.

It is by his 'History of England from 1815,' brought down to 1880 in the four vols. of the 'History of Twenty-five Years,' that Walpole's name will be remembered. A knowledge derived from experience of the world which he describes, a high integrity of mind, the spirit of detachment, a just sense of proportion, an aptitude for the handling of statistics, with a perception of the right deductions to be drawn from them, and scrupulous accuracy, are high qualifications for the historian of recent events, and Walpole possessed them all. Like Macaulay he is at times too much inclined to accentuate his observations by the use of antithesis, and his generalisations, though interesting, are not always invulnerable when subjected to analysis, but, in the words of his friend, Sir Alfred Lyall, he has, in a style clear, level, and straightforward, 'filled up, with distinguished merit and ability, large vacant spaces in the history of our country.' Though educated in a conservative atmosphere, he ultimately accepted a political philosophy which was more nearly that of Manchester than of other schools of thought. A believer in *laissez faire*, he was equally distrustful of toryism and of socialism. Walpole's chief publications were: 1. 'The Life of Spencer Perceval,' 1874. 2. 'The History of England from the Conclusion of the Great War in 1815 to 1856,' 6 vols. 1876–90. 3. 'The Life of Lord John Russell,' 2 vols. 1889. 4. 'The Land of Home Rule,' 1893. 5. 'The History of Twenty-five Years (1856–1880),' of which the first two volumes

appeared in 1904, and the last two, incomplete, under the supervision of Sir Alfred Lyall in 1908. 6. 'Studies in Biography,' 1907. 7. 'Essays Political and Biographical,' with a short memoir by his daughter, posthumously in 1908. Besides these works he wrote two volumes for the 'English Citizen' series, viz. 'The Electorate and the Legislature' (1881) and 'Foreign Relations' (1882).

Walpole married on 12 Nov. 1867 Marion Jane, youngest daughter of Sir John Digby Murray, tenth baronet of Blackbarony, who survived him till 9 May 1912. He left an only daughter, married to Mr. Francis C. Holland.

An excellent portrait of Walpole, painted in later life by Mr. Hugh Riviere, is in the possession of his daughter.

[Private information; Proc. Brit. Acad. (by Sir Alfred C. Lyall), 1907-8, pp. 373-8; memoir prefixed to Essays Political and Biographical, 1908.] F. C. H.

WALSH, WILLIAM PAKENHAM (1820-1902), bishop of Ossory, Ferns, and Leighlin, born at Mote Park, Roscommon, 4 May 1820, was eldest son of Thomas Walsh of St. Helena Lodge, co. Roscommon, by Mary, daughter of Robert Pakenham of Athlone. He entered Trinity College, Dublin, on 14 Oct. 1836, where he won the vice-chancellor's, the Biblical Greek, and the divinity prizes, with the Theological Society's gold medal. He graduated B.A. in 1841, proceeding M.A. in 1853, B.D. and D.D. in 1873. Ordained deacon in 1843, he was licensed to the curacy of Ovoca, co. Wicklow, and ordained priest the next year. From 1845 to 1858 he was curate of Rathdrum, co. Wicklow, where in the famine years 1846-7 his zeal and charity made him known far beyond his parish. From 1858 to 1873 he was chaplain of Sandford church, Ranelagh, Dublin.

As Donnellan lecturer of Trinity College he in 1860 chose as his theme Christian missions. He was long association secretary for Ireland of the Church Missionary Society. From 1873 to 1878 Walsh was dean of Cashel, and busily devoted his leisure there to literary work. In 1878 he was elected to the united sees of Ossory, Ferns, and Leighlin, being consecrated in Christ Church cathedral, Dublin, in September 1878.

As a bishop, Walsh was known by his gentle piety and wide sympathies. Zealous for foreign missions, he preached the annual sermon of the Church Missionary Society in 1882. A far-reaching movement for

the increase of the society's funds was the result of his appeal. Although a decided evangelical, Walsh avoided ecclesiastical controversy. His influence was of great value in building up the disestablished church. Failure of health led to his resignation in October 1897. He died at Shankill, co. Dublin, on 30 July 1902. Walsh was twice married: (1) in 1861 to Clara, daughter of Samuel Ridley, of Muswell Hill, four sons and three daughters of whom survived him; and (2) in 1879 to Annie Frances, daughter of John Winthorpe Hackett, incumbent of St. James's, Bray, co. Dublin, who, with two sons, survived him.

His chief publications were: 1. 'Christian Missions,' Donnellan Lectures, 1862. 2. 'The Moabite Stone,' 1872. 3. 'The Forty Days of the Bible,' 1874. 4. 'The Angel of the Lord,' 1876. 5. 'Daily Readings for Holy Seasons,' 1876. 6. 'Ancient Monuments and Holy Writ,' 1878. 7. 'Heroes of the Mission Fields,' 1879. 8. 'Modern Heroes of the Mission Fields,' 1882. 9. 'The Decalogue of Charity,' 1882. 10. 'Echoes of Bible History,' 1887. 11. 'Voices of the Psalms,' 1890.

[Guardian, 6 Aug. 1902; Record, 8 Aug. 1902; Lowndes, Bishops of the Day; E. Stock, History of the C.M.S., 1899, ii. 37; iii. 265; private information.] A. R. B.

WALSHAM, SIR JOHN, second baronet (1830-1905), diplomatist, born at Cheltenham on 29 Oct. 1830, was eldest of four sons of Sir John James Walsham, first baronet, of Knill Court, Herefordshire, high sheriff of Radnorshire in 1870, by Sarah Frances, second daughter of Matthew Bell of Woolsington House, Northumberland. The father's family, of Norfolk origin, migrated to Radnorshire in the sixteenth century, and acquired by marriage the estates of the Knill family. The baronetcy conferred on a direct ancestor, General Sir Thomas Morgan [q. v.], on 1 Feb. 1661, became extinct in 1768, and was revived in 1831 in favour of Sir John's father.

After education at Bury St. Edmund's grammar school and at Trinity College, Cambridge, where he graduated B.A. in 1854 and M.A. in 1857, Walsham entered the audit office in March 1854. In October of the same year he was appointed a clerk in the foreign office, and was temporarily attached to the British legation at Mexico 30 Dec. 1857. He was appointed paid attaché there in 1860, and remained there till 1866, when he was transferred as second secretary to Madrid. The British legation

was at that time engaged in correspondence arising out of the practice persisted in by the Spanish authorities of firing upon merchant vessels passing by the Spanish forts in the Straits of Gibraltar if they failed to display their national flags. This practice was abandoned in pursuance of an agreement signed in March 1865, but claims for losses occasioned by it still remained unsettled. Among these was one preferred by the owners of the schooner *Mermaid* of Dartmouth, alleged to have been sunk by a shot fired from the batteries at Ceuta. After much controversy it was referred by agreement to the arbitration of a joint commission, and Walsham, who had thoroughly mastered the details of this and other cases, was appointed to be one of the British commissioners. In 1870, after working for some time at the foreign office during the pressure of business occasioned by the outbreak of the Franco-German war, he proceeded to the Hague, and in 1873 was nominated as secretary of legation at Peking, but did not take up the appointment, withdrawing from the service shortly before his father's death on 10 Aug. 1874, when he succeeded as second baronet. In January 1875 he rejoined the service, being appointed secretary of legation at Madrid and remaining there till May 1878, when he was promoted to be secretary of embassy at Berlin. In 1883 he was transferred to Paris, receiving promotion to the titular rank of minister plenipotentiary, and on 24 Nov. 1885 was made British envoy at Peking. This onerous post he held for seven years, until his health was seriously affected by the combined strain of work and climate. On 31 March 1890 he obtained from the Chinese government the signature of an additional article to the Chefoo agreement of 1875, formally declaring Chungking on the Yang-tze river to be open to trade on the same footing as other treaty ports. In 1891 a succession of outbreaks occurred in different parts of China, in which missionary establishments were plundered and destroyed and several British subjects lost their lives. Walsham pressed with vigour for adequate measures to ensure punishment of those responsible and better protection in the future, and his efforts, supported by the home government, were attended with considerable success. In April 1892 he was transferred to Bucharest, and retired on a pension in September 1894. He was made K.C.M.G. in February 1895.

Walsham was a hardworking and meritorious public servant, whose unselfishness and

kindness of heart earned for him great popularity, but whose work, partly on account of his naturally retiring disposition, partly in consequence of physical breakdown from over-exertion, scarcely received full public recognition. He died in Gloucestershire on 10 Dec. 1905, and was buried at the ancestral home of the family, Knill Court. He married on 5 March 1867 Florence, only daughter of the Hon. Peter Campbell Scarlett, by whom he left two sons.

[*The Times*, 12 Dec. 1905; *Foreign Office List*, 1906, p. 401; *Burke's Peerage*; *Papers laid before Parliament*.] S.

WALSHAM, WILLIAM JOHNSON (1847-1903), surgeon, born in London on 27 June 1847, was elder son of William Walker Walsham by his wife Louisa Johnson. Educated privately at Highbury, he early showed a mechanical bent, and was apprenticed to the engineering firm of Messrs. Maudslay. Soon turning to chemistry and then to medicine, he entered St. Bartholomew's Hospital in May 1867, and obtained the chief school prizes in his first and second years of studentship. In 1869 he gained the gold medal given by the Society of Apothecaries for proficiency in materia medica and pharmaceutical chemistry, and in 1870 was admitted a licentiate of the Society of Apothecaries. He then proceeded to Aberdeen, where he graduated M.B. and C.M. in 1871 with the highest honours. Returning to London, he was admitted M.R.C.S. England on 17 Nov. 1871. He served the offices of house physician and of house surgeon at St. Bartholomew's Hospital; in 1872-3 was assistant demonstrator of anatomy in the medical school; full demonstrator 1873-80; demonstrator of practical surgery 1880-9; lecturer on anatomy 1889-97, and lecturer on surgery from 1897. Walsham was appointed assistant surgeon at St. Bartholomew's Hospital on 10 March 1881, and took charge of the orthopaedic department. He became full surgeon in 1897.

At the Metropolitan Hospital he was elected surgeon in 1876, taking charge of the department for diseases of the nose and throat. He became consulting surgeon in 1896. He also served as surgeon to the Hospital for Diseases of the Chest from 1876 to 1884. At the Royal College of Surgeons Walsham was elected a fellow on 10 June 1875, was an examiner in anatomy on the conjoint board in 1892, and in surgery from 1897 to 1902.

Walsham was a first-rate teacher of

medical students. As a pupil of Sir John Struthers [q. v.] at Aberdeen, he early turned his attention to dissection, and many of his preparations are still preserved at St. Bartholomew's Hospital. As surgical dresser to Sir James Paget he soon learned that pathology is the foundation of modern surgery, and of this fact he never lost sight. Physically delicate, he was unequal to the largest operations in surgery, but he excelled in those which required delicacy of touch, perfect anatomical knowledge, and perseverance, like the plastic operations of harelip and cleft palate and the tedious manipulations of orthopædic surgery.

He died at 77 Harley Street, London, on 5 Oct. 1903, and was buried at the Highgate cemetery. He married in 1876 Edith, the elder daughter of Joseph Huntley Spencer, but left no issue.

Walsham published: 1. 'Surgery: its Theory and Practice,' 1887; 8th edit. 1903; a widely circulated textbook for students. 2. 'A Manual of Operative Surgery on the Dead Body,' conjointly with Sir Thomas Smith [q. v. Supp. II]; 2nd edit. 1876. 3. 'A Handbook of Surgical Pathology for the use of Students in the Museum of St. Bartholomew's Hospital,' 1878; 2nd edit., with Mr. D'Arcy Power, 1890. 4. 'The Deformities of the Human Foot with their Treatment,' 1895. 5. 'Nasal Obstruction: the diagnosis of the various conditions causing it and their treatment,' 1898. Walsham edited the 'St. Bartholomew's Hospital Reports,' 1887-97, and contributed various articles to Heath's 'Dictionary of Surgery,' Treves's 'System of Surgery,' and to Morris's 'Treatise on Anatomy.'

[St. Bartholomew's Hosp. Reports, vol. xxxix. 1904 (with portrait); St. Bartholomew's Hosp. Journal, vol. xl. 1903, p. 17 (with portrait); Medico-Chirurgical Trans. vol. lxxxvii. 1904, pp. cxxxv-cxliii; private information; personal knowledge.] D'A. P.

WALTER, SIR EDWARD (1823-1904), founder of the Corps of Commissionaires, born in London 9 Dec. 1823, was third son of John Walter (1776-1847) [q. v.], proprietor of 'The Times,' by his wife Mary, daughter of Henry Smith of Eastling, Kent. He was educated at Eton and at Exeter College, Oxford. He entered the army in 1843 as ensign of the 44th regiment; he exchanged as captain into the 8th hussars in 1848, and retired in 1853.

Early in 1859 he founded the Corps of Commissionaires for the purpose of finding employment for discharged soldiers and

sailors of good character. The neglected position of the discharged soldier had long been a general reproach. Walter was the first to seek a remedy. Limiting his efforts at first to wounded men only, he obtained by personal canvassing situations in London for eight, each of whom had lost a limb. On 13 February 1859 Walter took seven crippled men to Westminster Abbey to return thanks for employment. Two days later he organised twenty-seven veterans of the army and navy into a society that should be self-supporting and entirely dependent on the exertions and earnings of its members. He provided the men with uniforms, and took offices in Exchange Court, where he carried on his work single-handed. At first he was handicapped by numerous failures of his men to retain their situations. But he had no lack of patience or confidence. For five years he was assisted only by members of his family, but in 1864, when the corps numbered 250, he appealed to the public for the purpose of creating an officers' endowment fund to enable him to engage a staff of officers to assist.

The appeal met with a generous response, and branches of the corps were opened in some provincial cities. The progress of the corps was steady. In 1874 the strength was a little under 500. By 1886 it reached 1200; in 1904 about 3000; in 1909, 3740; and on 11 June 1911, 4152. Of these 2541 men are stationed in London, while the remaining 1611 are distributed in ten other large cities, Belfast, Birmingham, Bristol, Edinburgh, Glasgow, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, and Nottingham. The corps is wholly self-supporting, with its own pension and insurance fund and sick fund. King Edward VII, who inspected the corps at Buckingham Palace on 16 June 1907, described it as one of the best regulated and most useful institutions in the country. In 1884 Walter received a testimonial from officers of the navy and army. For his services as founder and captain of the corps Walter was knighted in 1885, and was nominated K.C.B. (civil) in 1887.

For the last years of his life he resided at Perran Lodge, Branksome, Bournemouth, where he died after a long illness on 26 Feb. 1904. He was buried at Bearwood, and a granite obelisk was erected by the corps to his memory in Brookwood cemetery. He was succeeded in the command of the corps by his nephew, Major Frederick Edward Walter (second son of John Walter of Bearwood). He married in 1853 Mary

Anne Eliza (*d.* 1880), eldest daughter of John Carver Athorpe of Dinnington Hall, Rotherham, Yorkshire.

A portrait in oils, by Mrs. Wey, in possession of Lady Walter at Perran Lodge, Branksome, Bournemouth.

WALTON, SIR JOHN LAWSON (1852–1908), lawyer, born on 4 Aug. 1852, was son of John Walton, Wesleyan minister in Ceylon and at Grahamstown, South Africa, who became president of the Wesleyan conference in 1887 and died on 5 June 1904, aged 80. After receiving his early education at Merchant Taylors' School, Great Crosby, in Lancashire, John Walton matriculated in 1872 at London University, but did not graduate, and entering the Inner Temple as a student on 2 Nov. 1874, he was called to the bar on 13 June 1877. Joining the north-eastern circuit, he rose rapidly in the profession, taking silk in 1890, only thirteen years after his call. He was helped at starting by a strong connection among the Wesleyans, especially in the West Riding towns. A born advocate, persuasive, tactful, and adroit, Walton acquired as large a practice in London as on circuit. He first came into public notice in March 1896 by his victory over Sir Frank Lockwood [*q. v.* Suppl. I] in the action brought against Dr. William Smoult Playfair [*q. v.* Suppl. II] for libel and slander; the damages, 12,000*l.*, were the largest that, up to that date, had been awarded by an English jury. His services were much in request on behalf of the trade unions, and he appeared for the respondents in the House of Lords in the case of *Allen v. Flood* (*Law Reports*, 1898, A.C. 1).

Walton was from his earliest years a keen politician, and in 1891 was chosen as the liberal candidate for Battersea; but rather than divide the party he withdrew his candidature in deference to the strong local claims of Mr. John Burns. At the general election of 1892 he contested Central Leeds unsuccessfully: at the bye-election, however, which followed the elevation of Sir Lyon Playfair [*q. v.* Suppl. I] to the peerage in the same year, he was returned for South Leeds, a seat which he held against all comers down to his death. During the ten years of unionist administration between 1895 and 1905 he played a prominent part in opposition; and though he carried his forensic style with him into parliament, his pleasant voice and carefully

chosen language always procured him a ready hearing. A strong radical in domestic politics, especially where the House of Lords and the established church were concerned, he followed Mr. Asquith and Sir Edward Grey during the Boer War, and was a member of the short-lived liberal imperial party under Lord Rosebery. Though not himself a member of the Church of England, he took a lively interest in her affairs, and was a witness before the royal commission appointed in 1904 to inquire into ecclesiastical disorders; there he advocated a more effective procedure against clergy charged with breaking the law. On the formation of Sir Henry Campbell-Bannerman's government in December 1905 he was made attorney-general, and was knighted. The appointment was a result of Mr. (afterwards Viscount) Haldane's choice of the war office in preference to legal preferment. Though personally popular on all sides, Walton seemed never quite at home in his office. His attainments as a lawyer were neither deep nor varied, and ill-health interfered with his regular attendance in the House of Commons. One of his first duties as law officer was to introduce the trades disputes bill into the House of Commons; that measure, as originally drafted, made trade unions or their executive committees responsible for breaches of the law committed by their members. Walton's defence of this clause on 28 March 1906 caused much dissatisfaction in the ranks of the labour party, and on the second reading a month later, 25 April, the solicitor-general, Sir William Robson, announced that the clause would be abandoned in committee. This surrender on the part of the government did not tend to strengthen the attorney-general's position.

Walton died after a short illness at his house in Great Cumberland Place on 18 Jan. 1908. He was buried at Ellesborough, near Wendover in Buckinghamshire. He married on 21 Aug. 1882 Joanna McNeilage, only daughter of Robert Hedderwick of Glasgow, by whom he had a family of one daughter and two sons. A caricature portrait by 'Spy' appeared in 'Vanity Fair' in 1902.

[The Times, 20 Jan. 1908 and 23 March et seq. 1896; Hansard, 4th series, cliv. 1295, clv. 1482.] J. B. A.

WALTON, SIR JOSEPH (1845–1910), judge, born in Liverpool on 25 Sept. 1845, was eldest son of Joseph Walton of Faza-

kerley, Lancashire, by his wife Winifred Cowley. His parents were Roman Catholics. After being educated at St. Francis Xavier's College, Salisbury Street, and the Jesuit College at Stonyhurst, he passed to London University, and graduated in 1865 with first-class honours in mental and moral science. In the same year he entered Lincoln's Inn, where he was called to the bar on 17 Nov. 1868, and was made a bencher in 1896. Walton, who joined the northern circuit, entered the chambers of Charles (afterwards Lord) Russell [q. v. Suppl. I], then one of the leading juniors, and practised for several years as a 'local' at Liverpool. His chief work was in commercial and shipping cases, but his name is also associated with other important actions. A Roman Catholic as well as a distinguished advocate, Walton was retained in the actions brought successfully in the interest of Roman Catholic children against Thomas John Barnardo [q. v. Suppl. II]. Walton took a leading part in two cases which attracted considerable public interest. Having succeeded Sir Charles Russell as leading counsel to the Jockey Club, he appeared in *Powell v. Kempton Park Racecourse Company* ([1899] Appeal Court 143), which defined a 'place' within the meaning of the Betting Act, 1853, and in the copyright case of *Walter v. Lane* ([1900] Appeal Court 539), arising out of the republication of reports from 'The Times' of speeches by Lord Rosebery which decided that there is copyright in the report of a speech.

Walton's advancement in the profession was slow. He took silk in 1892, and became recorder of Wigan in 1895; but the general esteem in which he was held was shown by his election in 1899 to be chairman of the general council of the bar. Upon the appointment in 1901 of Sir James Mathew [q. v. Suppl. II] to be a lord justice, Walton succeeded him as a judge of the king's bench, and was knighted. His wide experience of commercial matters was of service to the commercial court, but on the whole his work as a judge did not fulfil expectation, though in judicial demeanour he was above criticism. He was interested in the work of the Medico-Legal Society, of which he became second president in 1905. He died suddenly at his country residence at Shinglestreet, near Woodbridge, on 12 Aug. 1910, having taken, in the previous week, an active part in the proceedings of the International Law Association in London. He was buried in the Roman Catholic cemetery, Kensal Green.

In all that concerned the social and educational movements of the church of which he was a member Walton took an active part, and for a time was a member of the Liverpool school board. Much of his leisure was spent in yachting, and he was a frequent prize-winner at the Oxford and Aldeburgh regattas. He wrote a small work on the 'Practice and Procedure of the Court of Common Pleas at Lancaster' (1870), and was one of the editors of the 'Annual Practice of the Supreme Court' for 1884-5 and 1885-6.

He married on 12 Sept. 1871 Teresa, fourth daughter of Nicholas D'Arey of Ballyforan, co. Roscommon, by whom he had eight sons and one daughter. A younger son, Louis Alban, second lieutenant, royal Lancaster regiment, died of enteric fever at Naauwpoort on 19 May 1901, aged twenty.

His portrait by Hudson was presented to him by old school friends, and is in the possession of Lady Walton. A caricature portrait by 'Spy' appeared in 'Vanity Fair' in 1902.

[The Times, 15 and 18 Aug. 1910; Foster Men at the Bar; Law Journal, 20 Aug. 1910; Trans. Medico-Legal Soc. vol. vii.; private information.] C. E. A. B.

WANKLYN, JAMES ALFRED (1834-1906), analytical chemist, born at Ashton-under-Lyne on 18 Feb. 1834, was son of Thomas Wanklyn of Ashton-under-Lyne. His mother's maiden name was Ann Dakeyne.

After studying at Owens College, Manchester, he qualified for the medical profession, becoming M.R.C.S. in 1856, but did not practise. He devoted himself in the first instance to chemical research, and afterwards to the science of public health.

In 1856 he acted as assistant to Prof. (Sir) Edward Frankland [q. v. Suppl. I]. Next, he studied chemistry at Heidelberg under Bunsen. In 1859 he was appointed demonstrator of chemistry in the University of Edinburgh, when Lyon (afterwards Lord) Playfair [q. v. Suppl. I] was professor. Migrating to London, Wanklyn was from 1863 to 1870 professor of chemistry at the London Institution, and from 1877 to 1880 lecturer in chemistry and physics at St. George's Hospital. At various periods he was public analyst for the boroughs of Buckingham, Peterborough, Shrewsbury, and High Wycombe. The latter part of his life was passed at New

Malden, Surrey, where he had a laboratory and practised as an analytical and consulting chemist. He died unmarried at 6 Derby villas, New Malden, on 19 July 1906 from heart failure, and was buried at New Malden cemetery.

Wanklyn was elected a corresponding member of the Royal Bavarian Academy of Sciences in 1869. Beyond honorary membership of the Edinburgh Chemical Society he was not allied with any British scientific society.

Wanklyn's first scientific paper, 'On Cadmium-ethyl,' was published by the Chemical Society (*Journal*, vol. ix. 1857). Next year he gave an account in Liebig's 'Annalen' of his preparation of propionic acid, and read a paper on the subject before the Chemical Society, 'On a New Method of preparing Propionic Acid: viz. by the Action of Carbonic Acid upon an Ethyl-compound' (*Journal*, vol. xi. 1859). The research afforded the first example of the artificial production of an organic substance directly from carbonic acid (see also *Journal*, vol. iv. (ser. 2), 1866). He contributed to the 'Proceedings of the Royal Society' the subjoined memoirs: 'On Some New Ethyl-compounds containing the Alkali Metals' (vol. ix. 1857-9); 'On the Action of Carbonic Oxide on Sodium-alcohol' (*ib.*); 'On the Synthesis of Acetic Acid' (vol. x.), and 'On the Distillation of Mixtures: a Contribution to the Theory of Fractional Distillation' (vol. xii.).

Several important papers were published in collaboration with others; with Lyon Playfair, 'On a Mode of taking the Density of Vapour of Volatile Liquids at Temperatures below the Boiling Point' (*Trans. Roy. Soc. Edin.* 1861); with Peter Guthrie Tait [q. v. Suppl. II], 'Note on the Electricity developed during Evaporation and during Effervescence from Chemical Action' (*Proc. Roy. Soc. Edin.* 1862); with Emil Erlenmeyer 'Sur la Constitution de la Mannite' (*Répertoire de Chimie Pure*, 1862); with Arthur Gamgee [q. v. Suppl. II] 'On the Action of Permanganate of Potash on Urea, Ammonia, and Acetamide in strongly Alkaline Solutions' (*Journ. Chem. Soc.* 1868); with J. S. W. Thudichum, 'Researches on the Constitution and Reactions of Tyrosine' (*ib.* 1869).

In 1871 Wanklyn gave much attention to milk-analysis, making for the 'Milk Journal' many hundreds of analyses of milk purchased in different parts of London, and investigating for the government the milk supplied to the metropolitan workhouses.

But the Wanklyn method of estimation of the total solids of milk after evaporation of water was ultimately entirely superseded (see *Chemical News*, January 1886 and H. D. RICHMOND's *Dairy Chemistry*, 1899).

From 1865 to 1895 Wanklyn published many papers on the chemistry of public health in the 'Reports of the British Association,' the 'Chemical News,' and other scientific periodicals. His ammonia process of water analysis was first announced to a royal commission on 20 June 1867, and a paper on the subject was read the same day before the Chemical Society (*Journal*, 1867). With W. J. Cooper he made, for five years, for the local government board, monthly analyses by this process of the London water supply. Much controversy was aroused by his work, but Wanklyn was insistent on the value of the process (see his *Water-Analysis*.)

Wanklyn's independent publications were: 1. 'Milk Analysis: a Practical Treatise on the Examination of Milk and its Derivatives, Cream, Butter, and Cheese,' 1873; 2nd edit. 1886. 2. 'Tea, Coffee and Cocoa: a Practical Treatise on the Analysis of Tea, Coffee, Cocoa, Chocolate, Maté (Paraguay tea), &c.,' 1874. 3. 'The Gas Engineer's Chemical Manual,' 1886. 4. 'Arsenic,' 1901. He contributed several important articles to Watts's 'Dictionary of Chemistry' (see vol. iv. suppl. i. 1872). He collaborated with E. T. Chapman in 'Water-Analysis: a Practical Treatise on the Examination of Potable Water' (1868; 3rd edit. 1874, after Chapman's death; 10th edit. 1896—of this French and German translations appeared; 11th edit. 1907, with memoir and portrait of Wanklyn). He was joint author with W. J. Cooper of 'Bread Analysis: a Practical Treatise on the Examination of Flour and Bread' (1881; new edit. 1886); 'Air Analysis, with an Appendix on Illuminating Gas' (1890); and 'Sewage Analysis' (1899; 2nd edit. 1905). With W. H. Corfield [q. v. Suppl. II] and W. H. Michael, he collaborated in 'A Manual of Public Health' (1874).

T. E. J.

WANTAGE, first BARON. [See LINDSAY, afterwards LOYD-LINDSAY, ROBERT JAMES (1832-1911), soldier and politician.]

WARD, HARRY LEIGH DOUGLAS (1825-1906), writer on mediæval romances, born on 18 Feb. 1825, was fourth son of John Giffard Ward, successively rector of Chelmsford (1817) and St. James's, Piccadilly (1825), and dean of Lincoln (1845-1860). He was educated at Winchester and University College, Oxford (B.A. 1847), and in 1849 became an assistant in the department of manuscripts at the British Museum, where he remained until his superannuation at the end of 1893.

In his early official years he made a catalogue of the Icelandic manuscripts in the British Museum; this was never printed, but is preserved among the books of reference in the students' room. His attention was thus directed, by way of the Norse sagas, to the study of mediæval romantic literature in general, which became henceforth the engrossing interest of his life, and in which, through his wide reading, retentive memory, and sound critical instinct, he acquired exceptional proficiency. This bore fruit first in a comprehensive and admirable article on 'Romance, Mediæval,' which he wrote for Knight's 'English Cyclopædia' in 1873; and more fully afterwards in his monumental, though unfinished, 'Catalogue of Romances in the British Museum,' of which vol. i. appeared in 1883, vol. ii. in 1893, and vol. iii., based largely on his notes, in 1910 (after his death). Vol. i. is the largest and also perhaps the most interesting to students of literature generally, comprising the great Arthurian and Charlemagne cycles, besides many other important groups of romances, such as those of Troy, Alexander, and Guillaume d'Orange, and a host of miscellaneous romances in prose or verse. It became at once a standard textbook, being no mere catalogue, but rather a collection of monographs, combining a succinct account of the conclusions of specialists with additions (often of considerable value) based on Ward's own independent studies. Vol. ii. includes the 'Beowulf' epic, but deals mainly with collections of shorter tales: Icelandic sagas, Æsopic fables, miracles of the Virgin, etc. Vol. iii. is entirely occupied with the 'exempla' used by preachers and moralists, and so appeals mainly to the professed mediævalist. The university of Halle conferred on him the honorary degree of Ph.D. in recognition of his work on the romances.

Ward's other published work was scanty, consisting merely (apart from reviews) of some translations of Andersen's 'Fairy Tales and Sketches' (1870); 'The Vision

of Thurkill' (in 'Journal Brit. Archæol. Assoc.' xxxi. 420, 1875); and 'Lailoken (or Merlin Silvester)' (in 'Romania,' xxii. 504, 1893).

Ward's actual output in print by no means measures the full extent of his services to learning. During his long career at the British Museum he was continually consulted by students of various nationalities; and it was always a delight to him to place his rich stores of knowledge at their disposal, without any care for his own claims to priority of publication.

Ward died at Hampstead on 28 Jan. 1906. On 28 April 1866 he married Mary Elizabeth, daughter of Samuel George Fox, and had by her four sons and three daughters; one of the daughters predeceased him.

[The Times, 1 Feb. 1906; Gent. Mag. Feb. 1906, p. 106; private information.]

J. A. H.

WARD, HARRY MARSHALL (1854-1906), botanist, born at Hereford in 1854, was eldest son of Francis Marshall Ward, musician. He was educated first at the cathedral school at Lincoln, and then at a private school at Nottingham. After attending lectures by Huxley (in 1874-5) and by Prof. (now Sir William) Thiselton-Dyer, assisted by Professor Vines, in 1875, at the Normal School of Science, South Kensington, where he showed exceptional promise as a manipulator and draughtsman, he entered Owens College, Manchester, in 1875, and distinguished himself in chemistry, physiology, and botany, under Professors Roscoe, Gamgee, and Williamson. In 1876 he obtained an open science scholarship at Christ's College, Cambridge. There Ward attended the lectures of Sir Michael Foster on physiology, of Francis Maitland Balfour on embryology, and of Professor Vines on botany. In 1879 Ward graduated B.A. with first-class honours in the science tripos. He had already lectured at Newnham College and acted as demonstrator at South Kensington. During 1880 he visited the laboratory of Julius Sachs at Wurzburg. Here he began his first research work, on the development of the embryo-sac, which he continued at the Jodrell laboratory at Kew, the results being published in the Linnean Society's 'Journal' and in the 'Quarterly Journal of Microscopical Science' for 1880. Meanwhile he was appointed by the colonial office to investigate in Ceylon the coffee-leaf disease. Ward pursued the inquiry, which had been begun by (Sir) Daniel Morris, with characteristic thoroughness, although no effective prevention

proved practicable. He communicated two valuable reports to the Ceylon government. While in Ceylon he made detailed observations on other tropical fungal parasites; and on his return to England in 1882 botanists recognised that the mycological side of botanical research had secured a valuable recruit.

After working for a short time under Anton de Bary at Strasburg, he was, through the influence of Sir Henry Roscoe, appointed to a Berkeley research fellowship at Owens College. In 1883 he was made fellow of Christ's College and assistant lecturer to Professor Williamson at Manchester, where he remained three years. An unsuccessful candidate for the chair of botany at Glasgow in 1885, Ward became in the same year professor of botany in the Royal Indian Engineering College, Coopers Hill, and proceeded M.A. at Cambridge in 1885. He was made Sc.D. there in 1892 and D.Sc. of Victoria in 1902. He was elected a fellow of the Linnean Society in 1886, and served on its council from 1887 to 1889, and was elected to the Royal Society in 1888, receiving the royal medal in 1893.

The ten years (1885-95) that Ward held his chair at Coopers Hill proved the most productive period of his career of research. In 1887 he published his edition of Sachs's 'Vorlesungen über Pflanzenphysiologie' ('Lectures on the Physiology of Plants'), which was followed in 1889 by two smaller original volumes adapted to the need of students, 'Timber and some of its Diseases' (in the 'Nature' series), and 'Diseases of Plants' (in the 'Romance of Sciences' series); by 'The Oak: a Popular Introduction to Forest-Botany' (1892), a study recalling the method of his master Huxley's 'Crayfish'; and by an edition of Thomas Laslett's 'Timber and Timber-trees' (1894). The results of his original researches he communicated in papers to the Royal Society or to the 'Annals of Botany,' which was the organ of 'the new botany,' and of which, in 1887, he was one of the founders. The more important of these papers fall into four groups: (1) on the root-tubercles of the bean and the sources of nitrogen in the plant (1887-8); (2) on ferment-action, as exemplified in the colouring-matter of Persian berries (a research carried on with John Dunlop) and in the piercing of cell-walls by fungal hyphæ; (3) on symbiosis, or the relations between the host and the parasite, the subject of his Croonian lecture in 1890, also illustrated by his study of the ginger-

beer plant in 1892; and (4) on the bacteriology of water, 1892-9. In the last research, undertaken with Professor Percy Frankland, at the request of the Royal Society, Ward identified eighty species of bacteria in the water of the Thames, but the bulk of the manuscript and drawings was so great as to render publication *in extenso* impossible. His conclusion as to the destructive effects of light upon bacteria (*Phil. Trans.* 1894) attracted public attention, owing to its hygienic implications.

On the death of Charles Babington, professor of botany at Cambridge, in 1895, Ward succeeded him, becoming at the same time professorial fellow of Sidney Sussex College. At Cambridge Ward worked with great vigour, infusing his own energy into university syndicates, colleagues, and students. Mainly through his effort the new botany schools were opened in 1904. They proved the best equipped laboratories in the kingdom.

As a teacher at Cambridge he took an elementary class besides advanced courses. Clear in speech, lucid and vivid in exposition, and a rapid draughtsman, he was prone to overcrowd his lectures with excess of matter. His text-book on 'Grasses' (1901), and that on 'Trees' (1904-5), which was completed after his death by Professor Groom for the Cambridge series of 'Natural Science Manuals,' showed that he recognised the claims upon him of every side of botanical study. Always alive to the practical side of botanical work, he devoted his last original research to the rusts affecting the brome grasses. He communicated his results to the Cambridge Philosophical Society, of which he was president, in 1902, and therein he incidentally refuted the mycoplasma theory of Professor Eriksson of Stockholm (cf. *British Association, Botany Section, Debate*, Cambridge, 1904). Ward was a regular attendant at the meetings of the British Association, and at Toronto in 1897 was president of section K, delivering an address on 'The Economic Significance of Fungi.'

Ward died at Babbacombe, Torquay, on 26 Aug. 1906, and was buried in the Huntingdon Road cemetery, Cambridge. He married in 1883 Linda, daughter of Francis Kingdon of Exeter, who, with a son and a daughter, survived him.

G. S. B.

WARD, HENRY SNOWDEN (1865-1911), photographer and author, born at Great Horton, Bradford, on 27 Feb. 1865, was eldest of five sons of William Ward, stuff manufacturer, by his wife Mary, only daughter of Henry Snowden, manufacturer.

After education at Great Horton national school, at Bradford grammar school (1876-9), and at Bradford Technical College, Ward entered in 1880 his father's business. He then with Herbert James Riley established the periodical 'The Practical Naturalist' (afterwards amalgamated with 'The Naturalist's World'), and founded the Practical Naturalists' Society. In 1885 he joined the printing and publishing firm of Percy Lund & Co. of Bradford, for whom in 1890 he founded and edited the monthly periodical, the 'Practical Photographer.' He soon became a recognised authority on photography and kindred technical subjects. He left Bradford for London in 1891, and paid his first visit to America in 1892. After his marriage there in 1893 he and his wife, an accomplished photographer, edited in London such photographic periodicals as the 'Photogram' (1894-1906), continued from 1906 as the 'Photographic Monthly'; 'The Process Photogram' (1895-1905), continued from 1906 as the 'Process Engravers' Monthly,' as well as 'Photograms of the Year' (from 1896) and 'The Photographic Annual' (from 1908). He also compiled many technical handbooks, of which the chief were 'Practical Radiography' (with A. W. Isenthal, 1896; new edits. 1897, 1898, and 1901, the first handbook in English on the Röntgen rays); 'The Figures, Facts, and Formulæ of Photography' (3 editions, 1903); 'Photography for the Press' (1905; 3rd edit. 1909); and 'Finishing the Negative' (1907). For the photographic firm of Dawbarn & Ward (in existence from 1894 to 1911), of which he was a joint director, he edited the 'Useful Arts Series' (1899), the 'Home Workers' Series,' and 'Rural Handbooks' (1902).

Becoming a member of the Royal Photographic Society in 1892 and a fellow in 1895, he did good service on the council. He was one of the first members in 1897 of the Röntgen Society, and was president in July 1909 of the Canterbury meeting of

the photographic convention founded in 1886 to promote photographic research.

Literature and topography also attracted Ward, and he and his wife wrote and copiously illustrated with photographs taken by themselves: 'Shakespeare's Town and Times' (4to, 1896; 3rd enlarged edit. 1908); 'The Shakespearean Guide to Stratford-on-Avon' (1897); 'The Real Dickens Land' (4to, 1903); 'The Canterbury Pilgrimages' (1904). Ward also edited, with notes and introduction, an edition, elaborately illustrated by his wife, of R. D. Blackmore's 'Lorna Doone' in 1908.

Ward was an ardent traveller, and made many lecturing tours in Great Britain, Canada, and the United States. His topics were both technical and literary. An enthusiastic admirer of Dickens, he was an original member of the Dickens Fellowship, was chairman of council (1907-8), and was mainly responsible for the acquisition for the Guildhall Library of Frederick George Kitton's collection of Dickensiana in 1908. As commissioner of the Dickens Fellowship he went in October 1911 to America on a six months' lecture tour to stimulate American interest in the Dickens centenary; but he died suddenly in New York from mastoiditis-meningitis on 7 Dec. 1911, and was buried at Albany, New York State. He married on 15 July 1893 Catharine Weed, daughter of William Barnes of Albany, New York, and granddaughter of Thurlow Weed (1797-1822), a prominent New York journalist and politician. She became member of the Royal Photographic Society in 1893, and fellow in 1895, and collaborated with her husband in most of his literary work. They lived for many years at Golden Green, Hadlow, Kent.

[The Times, 8 Dec. 1911; Who's Who, 1911; Photogr. Soc. Journal, Dec. 1911; The Dickensian, Jan. 1912 (with portrait); information from Mrs. Ward.] W. B. O.

WARDLE, SIR THOMAS (1831-1909), promoter of the silk industry, born at Macclesfield on 26 Jan. 1831, was eldest son of Joshua Wardle, founder of the silk-dyeing industry at Leek, Staffordshire. Educated at a private school at Macclesfield and at the Leek grammar school, he entered his father's business at Leek-brook at an early age, and after his father's death he established in 1882 the silk and cotton-printing business of Wardle & Co. at Hen-croft, Leek, and later the Churnet works there. He was also one of the founders and original directors of the Leek Spun Silk Manufacturing Company. An intimate

friendship with William Morris [q. v. Suppl. I.] began in 1875, when Morris paid the first of many visits to Leek and worked with Wardle at the lost art of indigo-dyeing. Together they succeeded in restoring vegetable dyeing to the position of an important industry (cf. MACKAIL's *Life of William Morris*, 1899). The friendship stimulated artistic workmanship at Wardle's factories, and he produced the earliest prints on cretonnes and silks from Morris's designs.

To Wardle was mainly due the commercial utilisation of Indian *tasar* or wild silk, to the possible manufacturing value of which Dr. (now Sir) George Birdwood had drawn the attention of the Bombay government in 1860. After much experimenting at Dr. Birdwood's instigation, Wardle in 1867 succeeded in bleaching the brown fibre and dyeing it so as to make it serviceable for manufacture. In 1872 he had a piece of this product woven in Crefield, and thenceforth *tasar* silk was utilised by the Yorkshire manufacturers, the waste being converted into 'seal-cloth' or plush—an imitation of seal-skin. Wardle exhibited his results at the British section of the Paris exhibition of 1878 (cf. BIRDWOOD's *Handbook* to the section), and was appointed a Chevalier of the Legion of Honour and an Officier d'Académie. Owing chiefly to Wardle's researches, *tasar* silk from China as well as from India became a generally important article of commerce.

By direction of the India office Wardle in 1885-6 visited Bengal to collect silk textiles and native embroideries for the Colonial and Indian exhibition at South Kensington, and to investigate the state of sericulture. His report, which showed that 60 per cent. of the silk-worms died of preventible diseases and that the reeling from the cocoons in the filatures was very imperfect, led to reform, and consequently to a revival of the almost lost trade in Bengal silk in England and France. On the same visit, in 1886, Wardle investigated the causes of the decay in the ancient silk productivity of Kashmir, and after his return to England long pressed a scientific scheme for its revival on the government. At length in 1897 he officially made large purchases in Europe of silk-worm eggs and cocoon-reeling machinery for the Kashmir Durbar, and under his advice a disappearing industry was placed on a footing of great prosperity. On a visit to Kashmir in 1903 he suggested the addition of silk weaving to silk production, with the result that Kashmir now produces silk of a quality comparable

to that of Italy (*Imperial Gaz. of India*, vol. xv.). Wardle narrated the story of his efforts in 'Kashmir and its new Silk Industry' (1904). In Cyprus, too, Wardle reorganised silk production. Universally recognised as the chief authority on matters connected with silk, he had a principal share in founding, in 1887, the Silk Association of Great Britain and Ireland, of which he remained president to his death. Knighted in 1897, he was admitted to the honorary freedom of the Weavers' Company on 3 Feb. 1903.

Wardle was remarkable for his intellectual activity and versatility. To John Sleight's 'History of Leek' (1862) he contributed a chapter on the geology of the neighbourhood which earned him the fellowship of the Geological Society. He also wrote on the geology of mid-England, of Roches, of Shuttinslowe, and of Cromer. He made a good collection of carboniferous limestone fossils, which he presented to the Nicholson Institute at Leek, and he wrote three monographs on fossils. He was on the council of the Palæontographical Society, and a fellow of the Chemical and Statistical Societies. An earnest churchman, and one of the originators of the Lichfield diocesan choral festival, Wardle composed a set of chants for the canticles and psalms for congregational singing, music for the marriage service, and also songs and Christmas carols. He took part in local affairs, serving as J.P. from 1898. He died at Leek on 3 Jan. 1909, and was buried in the Cheddleton churchyard. There is a memorial window in Warslow church, where a new chancel had been erected by Sir Thomas shortly before his death. He married in 1857 Elizabeth, daughter of Hugh Wardle of Leek (to whom he was not lineally related); her brother, George Wardle, was William Morris's manager at the Queen Square works. An expert in embroidery, she, with her husband, founded the Leek School of Embroidery, where tasteful and original work in both design and colour was done under her direction. An excellent copy in cloth of the Bayeux tapestry made there is now in the Reading Art Gallery. Lady Wardle died on 8 Sept. 1902, leaving five sons and four daughters.

Wardle wrote many monographs on silk. These include a report on the silk industry in England for the Royal Commission on Technical Instruction, 1884 (2nd report, vol. iii.); 'The Wild Silks of India,' a South Kensington handbook (1885); 'The Depression in the English Silk Trade and its Causes' (1886), a strong plea for a protective

import tariff; 'On Silk, its Entomology, Uses, and Manufacture' (1888); 'On the Adulteration of Silk by Chemical Weighting' (1897); and 'The Divisibility of Silk Fibre' (1908). To 'Chambers's Encyclopædia' he contributed in 1888 an article on 'Silk.'

[Wardle's books and pamphlets; Mackail's *Life of William Morris*, 1899; Sir W. Lawrence's *Valley of Kashmir*, 1895; *Imp. Gaz. of India*, vol. xv.; Col. T. H. Hendley's *Memoir, Jnl. of Indian Art and Industry*, Oct. 1909; *The Times*, 5 Jan. 1909; *Macclesfield Courier and Herald*, Leek Post, and *Textile Mercury*, all of 9 Jan. 1909; *Trans. WARING, ANNA LETITIA (1823-1910), hymn writer, born at Plas-y-Velin, Neath, Glamorganshire, on 19 April 1823, was the second daughter of Elijah and Deborah Waring, members of the Society of Friends. Her uncle, Samuel Miller Waring (1792-1827), a hymn writer, author of 'Sacred Melodies' (1826), had left the Friends for the Anglican communion; a desire for sacraments led his niece to follow his example; she was baptised on 15 May 1842 at St. Martin's, Winnall, Winchester. She early wrote hymns (her 'Father, I know that all my life' was written in 1846); her verse writing, continued to near the close of life, never lost its freshness, and exhibits at its best a real poetic vein, with a delicate purity of feeling and a ringing melody of diction. James Martineau writes of 'long-standing spiritual obligations' to her (TALBOT, p. 27). She had learned Hebrew for the study of the poetry of the Old Testament, and daily read the Hebrew psalter. Her kindly nature was shown in her love of animals, her philanthropy in her constant visits to the Bristol prisons and her interest in the Discharged Prisoners Aid Society. Her friendships were few and deep. With an habitually grave demeanour she combined a 'merry, quiet humour.' She died unmarried on 10 May 1910 at Clifton, Bristol.

She published: 1. 'Hymns and Meditations,' 1850, 16mo; 17th edit. 1896; several American reprints. 2. 'Additional Hymns,' 1858, 12mo (included in subsequent editions of No. 1). 3. 'Days of Remembrance,' 1886 (calendar of Bible texts).

[*The Times*, 24 May 1910; Julian, *Dict. of Hymnology*, 1907, pp. 1233 sq., 1723; M. S. Talbot, *In Remembrance of A. L. Waring*, 1911 (portrait, additional hymns, and other verses); Joseph Smith, *Cat. of Friends' Books*, 1867, ii. 856.] A. G.

WARINGTON, ROBERT (1838-1907), agricultural chemist, eldest son and second child of Robert Warington [q. v.], one of the founders of the Chemical Society, was born at 22 Princes Street, Spitalfields, on 22 Aug. 1838. In 1842 his father was appointed chemical operator and resident director to the Society of Apothecaries, and the family took up their residence on 29 Sept. 1842 at Apothecaries' Hall. The son's constitution was naturally feeble, and life in the heart of the city did not strengthen it. Whilst still quite young, he studied chemistry in his father's laboratory and attended lectures by Faraday, Brande, and Hofmann. His father, being desirous of securing the youth employment in the country, obtained in Jan. 1859, from Sir John Bennet Lawes [q. v. Suppl. I], an engagement for his son at the Rothamsted Laboratory as unpaid assistant. He remained there for a year, devoting all his time to ash analyses, and then returned to London as research assistant to (Sir) Edward Frankland [q. v. Suppl. I]. In Oct. 1862 a further break-down in health forced him again to seek a country life, and he went as assistant to the Royal Agricultural College at Cirencester, where he remained till June 1867. During his stay at Cirencester his earliest papers on scientific subjects under his own name were published in the 'Journal of the Chemical Society.'

His first original work of importance was an investigation into the part played by ferric oxide and alumina in decomposing soluble phosphates and other salts, and retaining them in the soil. The results of this investigation (embodied in a series of four papers read before the Chemical Society) show careful work and close reasoning. In 1864 he commenced lecturing at Cirencester on the Rothamsted experiments, and it was proposed that Warington should publish a book on the subject. But Dr. Sir Joseph Henry Gilbert [q. v. Suppl. II], Lawes's collaborator, objected; the book remained in manuscript, and Gilbert and Warington were estranged for life.

Leaving Cirencester in June 1867, Warington was given by Lawes the post of chemist to his manure and tartaric and citric acid works at Barking and Millwall. His engagement terminated in 1874, but he remained in the Millwall laboratory for two years longer, working on citric and tartaric acids, and ultimately publishing his results in a paper of 70 pages in the 'Journal of the Chemical Society' (1875). In 1876 he returned to Rothamsted, under

an agreement for one year only, to work simply as Lawes's private assistant. Before settling at Harpenden, he made in the autumn of 1876 a short tour of the German experimental stations. He was still associated with the Rothamsted investigations in 1889 when Sir John Lawes resigned to the present committee of management his active control over the experiments. It was then evident that the work of the station could no longer be carried on in its painful state of tension between Gilbert and Warington, and, all attempts at accommodation having failed, the committee reluctantly decided in June 1890 to terminate Warington's work at the end of that year. Warington had then reached a very interesting stage in an important research he had long been pursuing (since early in 1877) on the nitrification of the soil, and he was allowed to remain on his own petition without remuneration till June 1891. Before that date he had brought the work he had on hand to a successful termination. He was, however, denied the reward of seeing his work carried to its fullest natural conclusion, for though he obtained cultures which converted ammonia into nitrites, and others which produced the further conversion of nitrites into nitrates, and thus showed that nitrification was the work of two different organisms, it was left to Winogradski to isolate the organisms themselves.

Although Warington's original work in agricultural chemistry ended with his severance from Rothamsted, he was appointed by the committee lecturer in America under the Lawes trust. He gave six lectures, delivered 12-18 Aug. 1891, whilst in the United States, dealing chiefly with the subject of nitrification as illustrated by his own work at Rothamsted. These lectures were published by the U.S. department of agriculture in 'Expt. Station Bulletin,' No. 8, 1892. On his return to England Lawes entrusted him with an investigation at his Millwall factory into the contamination of tartaric acid and citric acid by the vessels used in their preparation; and he found a method for overcoming the evil. In 1894 he was appointed one of the examiners in agriculture for the science and art department, and (for three years) Sibthorpean professor of agriculture at the University of Oxford. Thereafter he retired into private life at Harpenden, busying himself with writings and in charitable and religious work.

His published writings mostly appeared in the 'Journal of the Chemical Society'

and other scientific publications. They are clear in expression and precise in argument. Amongst other literary work, he contributed the article 'Manure' to Mackenzie's 'Chemistry as applied to the Arts and Manufactures,' various articles to Watts' 'Dictionary of Chemistry,' and the four articles on 'Cereals,' 'Citric Acid,' 'Artificial Manure,' and 'Nitrification' to Thorpe's 'Dictionary of Applied Chemistry' (1895). Warington wrote the greater part of the four articles on 'Rain and Drainage Waters at Rothamsted' which appeared in the 'Journal of the Royal Agricultural Society' under the joint names of Lawes, Gilbert, and Warington in 1881-83.

His greatest success was with a practical handbook entitled 'Chemistry of the Farm,' which he contributed to the Farm Series of Vinton & Co. This was first published in 1881, and was translated into several foreign languages; it reached its 19th English edition during his lifetime. Dr. J. A. Voelcker says of it that 'it is a model of what such a book should be. Whilst retaining its small compass, it is literally packed with sound information set out in concentrated form and with scientific method.' He was elected a fellow of the Chemical Society in 1863, subsequently becoming a vice-president, and he was admitted a fellow of the Royal Society in 1886.

He died at Harpenden on 20 March 1907, and was buried there.

He was twice married: (1) in 1884 to Helen Louisa (*d.* 1898), daughter of G. H. Makins, M.R.C.S., formerly chief assayer to the Bank of England, by whom he had five daughters; (2) in 1902 to Rosa Jane, daughter of F. R. Spackman, M.D., of Harpenden.

[Obituary by Spencer U. Pickering, F.R.S., in *Journal of Chemical Society*, No. div., Dec. 1908, pp. 2258-69 (also printed with some omissions in *Proc. Royal Society*, 80B, xv.-xxiv.); *Cyclopedia of Modern Agriculture*, 1911, xii. 79-80 (by Dr. J. A. Voelcker); personal knowledge and private information.]

E. C.

WARNE, FREDERICK (1825-1901), publisher, sixth and youngest son of the twelve children of Edmund Warne, builder, and of Matilda, daughter of R. A. Stannard, was born at Westminster on 13 Oct. 1825. Educated privately at Soho, he joined, at the age of fourteen, his brother, William Henry Warne (*d.* 1859), and his brother-in-law, George Routledge [q. v.], in the retail bookselling business which Routledge had founded in Ryder's Court, Leicester Square, in 1836. Routledge started a

publishing business in 1843, and in 1851 Warne became a partner in the firm, which was then styled Routledge & Co.; the name was changed to Routledge, Warne & Routledge in 1858 on Routledge's son, Robert Warne Routledge, becoming a partner. From 1851 till 1865 Warne was largely identified with the success of the firm. In 1865, on the advice of the publisher George Smith, of Smith, Elder & Co., Warne began an independent publishing career at 15 Bedford Street, Strand (now Chandos House). There he was joined by Edward James Dodd (a lifelong friend and colleague at Routledge's), and by A. W. Duret, who left the firm of the Dalziel brothers to join him. An American branch was established in New York in 1881.

Warne effectively emulated Routledge's ambition to popularise good literature. In 1868 he inaugurated the 'Chandos Classics,' in which issue an edition of Shakespeare ultimately numbered 340,000 copies. Of the 154 volumes in the series, five million copies were sold. 'Nuttall's Dictionary,' which was originally published by Routledge, Warne & Routledge in 1863, was first issued by Warne in January 1867, when 668,000 copies were soon disposed of. In 1886 a fully revised edition appeared, of which the circulation approached by 1911 one million copies.

Warne was active in the publication of coloured picture books for children [see EVANS, EDMUND, Suppl. II]. He inaugurated a new era between 1870 and 1880 by his issue of the 'Aunt Louisa toy books,' which were followed by new editions of Edward Lear's 'Book of Nonsense,' by the children's books (1878-1885) of Randolph Caldecott [q. v.], and later by the works of Kate Greenaway [q. v. Suppl. II] and Mr. Walter Crane. In the field of fiction Warne issued Disraeli's novels before their transfer to Messrs. Longman in 1870 and published in London nearly all Mrs. Frances Hodgson Burnett's novels, including 'Little Lord Fauntleroy' (1886). He also first introduced to the English reading public the three American magazines, the 'Century,' 'St. Nicholas,' and 'Scribner's.'

In 1895 Warne, with his partner Dodd, left the business (Duret had retired in 1879), and he was succeeded by his three surviving sons, Harold Edmund, William Fruing, and Norman (d. 1905). Throughout his career Warne combined enterprise and business capacity with a keen interest in good literature. He died at his residence, 8 Bedford Square, on 7 Nov.

1901, and was buried at Highgate. He married on 6 July 1852, Louisa Jane, daughter of William Fruing of St. Helier's, Jersey, and had issue seven sons and three daughters. Three sons and two daughters survived him. A portrait in oils of Warne, painted by Henry Stannard, R.I., is in the possession of a daughter, Miss Amelia Louisa Warne, at 19 Eton Villas, Haverstock Hill, N.W.

[The Times, 15 Nov. 1901; Publishers' Circular (with portrait), Literature, Athenæum, 16 Nov. 1901; information kindly supplied by Mr. W. Fruing Warne.] W. B. O.

WARNER, CHARLES, whose real name was CHARLES JOHN LICKFOLD (1846-1909), actor, born in Kensington, London, on 10 Oct. 1846, was son of James Lickfold, actor, by his wife Hannah. He was educated at Westbury College, Highgate, and was intended for the profession of an architect, to which a brother of his father belonged. His father was a member of Samuel Phelps's company at Sadler's Wells, and Charles made his first appearance on the stage on 24 Jan. 1861 at Windsor Castle, as a page in Lytton's 'Richelieu,' at a command performance by Phelps's company. Subsequently he entered the office of his uncle, the architect, but within a few months, despite his parents' objections, he ran away and obtained an engagement, under James Rodgers, at the Theatre Royal, Hanley. There he made his first appearance in February 1862, as Bras Rouge in Charles Dillon's 'The Mysteries of Paris,' appearing on the same evening as Muley Sahib in M. G. Lewis's tragedy 'The Castle Spectre.' He spent a short period with Rodgers at Hanley, Lichfield, and Worcester, and the following year joined H. Nye Chart's company at the Theatre Royal, Brighton.

He made his first appearance on the London stage, under George Vining's management, at the Princess's Theatre, 25 April 1864, when he played Benvolio in 'Romeo and Juliet' with Stella Colas. After a short season at Liverpool he was engaged by Edmund Falconer and F. B. Chatterton for three autumn and winter seasons at Drury Lane Theatre. He first appeared with Phelps there on 23 Sept. 1865 in a minor part in 'Macbeth,' and from September 1866 to March 1868 he supported Phelps and others in a round of Shakespearean and other plays. In the summer of 1866 he acted at the Sadler's Wells and Haymarket Theatres; his parts included Ned Plummer in 'Dot,' Careless

in 'The School for Scandal,' and Modus in 'The Hunchback.'

Engaged by W. H. Liston for the Olympic Theatre, he opened there on 9 Oct. 1869 as Steerforth in 'Little Em'ly,' and subsequently played there a series of parts, in one of which, Charley Burridge in H. J. Byron's 'Daisy Farm,' he made his first pronounced success in London (1 May 1871). From the Olympic he went to the Lyceum Theatre under H. L. Bateman [q. v.]. There on 26 Dec. 1871 he succeeded Irving as Alfred Jingle in Albery's play of 'Pickwick.' In September 1872, at the Prince's Theatre, Manchester, he supported Adelaide Neilson as Romeo, Claude Melnotte, and Orlando, and in the following year he appeared with her in Paris at the Athénée Theatre.

On his return to London he was engaged by David James and Thomas Thorne for the Vaudeville, and 'opened' there on 20 Sept. 1873 as Charles Surface in 'The School for Scandal.' On the first performance there of H. J. Byron's comedy, 'Our Boys,' 16 Jan. 1875, he created the part of Charles Middlewick.

From the Vaudeville he passed to the Haymarket Theatre, where his rôles included Claudio in 'Measure for Measure,' in support of Adelaide Neilson (1 April 1876). Subsequently he returned to the Vaudeville to play his original part in 'Our Boys.' He was next seen at the St. James's Theatre under Mrs. John Wood, and as Vladimir in 'The Danischeffs' on 6 Jan. 1877 he made a great impression. At the Aquarium Theatre, 24 May, he made a further success in his impersonation of Young Mirabel in Farquhar's old comedy, 'The Inconstant.' At the Globe Theatre matinée performance, 2 Feb. 1878, he played Romeo for the first time in London.

Subsequently at the Princess's Theatre he achieved his chief reputation in melodrama. His performance of Tom Robinson in a revival of Charles Reade's drama, 'It's Never Too Late to Mend' (26 Dec. 1878), proved a popular triumph. On 2 June 1879 his rendering at the same theatre of Coupeau in Charles Reade's version of Emile Zola's 'L'Assommoir,' entitled 'Drink,' placed him among the most popular actors of his day. His presentation of the drunkard, who dies of delirium tremens, was as realistic and intense as any performance of which there is record. Francisque Sarcey, the French critic, declared it to be infinitely superior to that of Gil Naza, the French actor, who created the part in Paris.

On 20 Sept. 1880 he commenced an engagement at Sadler's Wells Theatre, when he appeared with effect as Othello. This was followed by William Tell, Claude Melnotte, and Ingomar, and he alternated the parts of Macbeth and Macduff with Hermann Vezin. A five years' engagement with the Gatti Brothers at the Adelphi Theatre began on 14 March 1881. He appeared as Michael Strogoff in a drama of that name, adapted from the French by H. J. Byron. Warner illustrated his strength of passion and will at this performance when, in a grim duel between himself as hero and James Fernandez as the villain, he impulsively caught at his antagonist's unhappily unblunted dagger, and dangerously wounded his hand; he ended the play and took his call, but fainted as soon as the curtain fell, and for several hours his life seemed in jeopardy. The joint of his middle finger was permanently stiffened. While at the Adelphi he confined himself to melodrama, playing Walter Lee in Henry Pettitt's drama, 'Taken from Life' (31 Dec. 1881), which ran for twelve months; Christian in Robert Buchanan's 'Stormbeaten' (14 March 1883); and Ned Drayton in Sims and Pettitt's drama, 'In the Ranks' (6 Oct.), which ran for eighteen months.

On 9 Dec. 1887 Warner was given a great complimentary 'benefit' performance at Drury Lane Theatre, prior to his departure on an Australian tour. His daughter Grace then made her first appearance on the stage, playing Juliet to her father's Romeo in the balcony scene. Originally intended to last a few weeks, his tour in Australia proved so successful that he remained there two and a half years. His repertory included many of his old parts, including those in 'Drink,' 'The Road to Ruin,' 'The School for Scandal,' 'It's Never Too Late to Mend,' and 'Dora,' also by Charles Reade. In addition he played many new parts, including Hamlet and Pygmalion in 'Pygmalion and Galatea.' On his return to England he continued his successes in melodrama. He acted for Augustus Harris at Drury Lane Theatre (6 Sept. 1890), and reappeared at the Princess's Theatre (16 April 1892). At the end of 1894 he toured as D'Artagnan in 'The Three Musketeers,' and in many ephemeral melodramas. At the Princess's on 27 Dec. 1897, he played Jack Ferrers in 'How London Lives'; and he gave a vivid performance of the part of a paralytic, Jan Perrott, in 'Ragged Robin,' on 23 June 1898, at Her Majesty's Theatre, under (Sir) H. Beerbohm Tree. At Wyndham's Theatre on 1 March

1902, he gave another remarkable performance as André Marex in 'Heard at the Telephone,' and also on the same evening as Raymond de Gourgiran in 'Caesar's Wife.' At Drury Lane on 14 July 1903, he played Antonio in the 'all star' cast of 'The Merchant of Venice' at a performance in aid of the Actors' Benevolent Fund; and in the following year he went to America, playing in 'Drink' and 'The Two Orphans.'

On his return to London he was at the Savoy Theatre with Mrs. Brown-Potter, on 6 Dec. 1904, as Canio in a dramatic version of 'I Pagliacci.' At the New Theatre on 2 May 1905, he gave a powerful performance of the part of Kleschna in 'Leah Kleschna,' and at His Majesty's Theatre on 1 Sept. 1906 he appeared as Leontes in Tree's revival of 'The Winter's Tale,' with Ellen Terry as Hermione. This was his last appearance on the regular stage in England. In 1907 he returned to America, and played at the leading 'vaudeville' theatres in 'At the Telephone,' 'Devil Montague,' and a condensed version of 'Drink.' He committed suicide by hanging, whilst insane, at the Hotel Seymour, West 45th Street, New York, on 11 Feb. 1909, and was buried at Woodlawn cemetery, New York, on 13 Feb. 1909.

Warner was an effective actor in melodramatic parts which admitted of great nervous tension, but his high-strung nerves often found vent in a violence which proved alarming to his colleagues on the stage, and impaired his artistic control of voice and gesture. In old comedy he checked his emotional impulses with good results, and proved himself a sound and sympathetic interpreter. In private life he was of warm-hearted, generous, and buoyant temperament. He married in 1872, at Hampstead, Frances Elizabeth Hards, who was unconnected with the theatre. Of his two surviving children, both the son, H(enry) B(yron) Warner, and the daughter, Grace, are well known on the stage. The latter married a promising actor, Franklin McLeay, a Canadian by birth, who died prematurely in 1910 at the age of thirty-three.

[Personal recollections; private correspondence; Dramatic List, 1879; Clement Scott's Theatre, April 1881, Feb. 1891 (with portrait); Drama of Yesterday and To-day, 1899; Green Room Book, 1909; The Times, Daily Telegraph, and Era, 13 Feb. 1909 (with portrait).] J. P.

WATERHOUSE, ALFRED (1830-1905), architect, born in Liverpool on 19 July 1830, was eldest son of Alfred Water-

house of Whiteknights, Reading, and previously of Liverpool, by his wife Mary, daughter of Paul Bevan. Both parents belonged to the Society of Friends. Educated at Grove House school, Tottenham, Waterhouse inclined, when his schooldays were over, to the career of a painter. He was articled, however, to Richard Lane, architect, of Manchester, with whom he served his time; and after completing his studies in France, Italy, and Germany, started in practice on his own account in Manchester in 1853. There he stopped till 1865, and in those twelve years succeeded in laying the foundations of a large practice in the north. Removal to London brought him a great increase of work in the south, but his connection with Liverpool and Manchester remained unbroken to the end.

In Manchester came his first opportunity, when in 1859 he won the competition for the assize courts, a building the planning of which offered him the sort of problem with which he was well qualified to deal. A clear thinker, he was capable of much useful innovation. The public entrance to the courts was made independent of the official part of the building: a new feature which no future designer could afford to ignore. With the power to grasp the principles by which a building might be made most suitable for its purpose went in Waterhouse the ability to see almost intuitively yet accurately the inherent possibilities of a site, and the proper disposition of the building to be placed on it.

After the Manchester assize courts there followed the more important commission of the Manchester town hall, this being also won in competition. The town hall, which was opened in 1877, is a well-planned building of a fine and picturesque massing placed on an irregular triangle. With such difficulties of site, Waterhouse found himself called upon to deal somewhat frequently, and did so with invariable success. The town hall shows to best advantage that individual type of Gothic which in Waterhouse's own work, and in that of many who followed in his footsteps, came to be generally associated with public and quasi-public buildings. Waterhouse was committed to the picturesque rather than the formal type of architectural design. A few of his buildings, such as the City and Guilds Institute in Exhibition Road (1881), were laid out on lines more severe and with real appreciation of the demands of formal treatment, but they were insignificant in number and probably dictated by special circumstances.

Other important works in Manchester were Owens College (1870), which, after later additions including the Christie Library and the Whitworth Hall, became the Victoria University, the Salford gaol (1863), the National Provincial Bank of England (1888), St. Mary's Hospital (1899), and the Refuge Assurance offices (1891), the southern half of which with the tower were added by his son. Waterhouse's work in Liverpool, which was little less important, included University College and engineering laboratories (1884), the Royal Infirmary (1887), the London and North-Western hotel (1868), the Turner memorial (1882), the Pearl Life Assurance (1896), and the Seaman's Orphanage (1871), while in the neighbouring county the Yorkshire College of Science, Leeds (1878), was a prominent example of his work.

Meanwhile Waterhouse was in 1866 one of the selected competitors for the new law courts in London, and he came near securing the first place, which, after much delay, was awarded to George Edmund Street [q. v.]. Before the final decision was announced, Waterhouse was entrusted with the construction of the new Natural History Museum in South Kensington (1868), which was regarded as a sort of solatium for his failure to obtain the larger commission. His useful suggestion that there should be a corridor for students at the back of the bays of the great hall, which should give them private means of access to the cases, and a freedom of examination which could not be permitted to the general public, the architect was not allowed to carry into effect. The work was completed in 1880. The plan is broad and simple; yet the architecture is marked by great richness. Adhering to his habitual picturesque treatment of outline, Waterhouse here allowed himself an unwonted exuberance of detail; the result is a building very distinctive and original, but in striking contrast to the studiously restrained treatment of the neighbouring City and Guilds Institute, which he designed in 1881.

In 1876 the first portion of the head London office of the Prudential Assurance was built in Holborn. This was twice enlarged till in its complete state it formed the chief architectural feature of the street, and the offices of the society which Waterhouse planned rapidly became conspicuous objects in the larger provincial towns. In 1881 a commencement was made with St. Paul's School, at West Kensington. In this building, as in others of the period, terra cotta was largely employed. His demands

for this material were so large and continuous, and led to so general a use of it by others, that he may almost be said to have created a great industry. Possessing the courage of his opinions, he was always ready to give a trial to new materials and new methods of construction if, after examination, they commended themselves to him. He was thus one of the first architects to make a free use of constructional ironwork. Waterhouse worked seldom in stone, and on the rare occasions of his employment if he seemed to lean to new forms of expression. The new University Club, St. James's Street (1866), is a Gothic effort, but in the National Provincial Bank, Piccadilly branch (1892), and again in the National Liberal Club (1884), the design is Renaissance in character. In the case of the last building he turned to good use an awkward site, the quiet and dignified edifice being graced by an angle tower which strikes a pleasant note of refinement.

Waterhouse did comparatively little ecclesiastical work or restoration, but he laid a tender hand on the ancient fabric of Staple Inn in Holborn (1887). St. Elisabeth, Reddish (1880), which he built for Sir W. Houldsworth, is his most successful church; others are St. Mary, Twyford (1876), St. Bartholomew, Reading, with a chancel added by Bodley, and St. John's, Brooklands, Manchester (1865). He also built the King's Weigh House chapel, in South Audley Street, London, and the Lyndhurst Road congregational church, Hampstead (1883), and at Yattendon, where he acquired a house and estate in 1887, he restored the fabric of the church partly at his own expense.

Of collegiate work he had his share. At Cambridge he made additions to Gonville and Caius College, commencing in 1868; he built a new court at Trinity Hall (1872), a block of undergraduates' rooms at Jesus (1869); the master's lodge, hall, library, and lecture rooms at Pembroke (1871), and the Union, begun in 1866 and finished later. At Oxford he was responsible for the south front and, afterwards, the hall at Balliol (1867), the interior of the latter having been since altered by his son, and for the debating hall of the Union (1878). His largest domestic works were the reconstruction of Eaton Hall (1870), Iwerne Minster, Dorset (1877), Heythrop Hall (1871), rebuilt after destruction by fire in a severe classical style, Hurton Hall, Guisborough (1865) and Blackmoor, Hampshire (1866), for the first Lord Selborne, with

many surrounding buildings; he also built Abinger Hall (1871) for Lord Farrer; Buckhold, Berkshire (1884); and Allerton Priory, Liverpool (1867). Three times he built for himself, Barcombe Cottage, Fallowfield, Manchester (1864); Fox Hill in Whiteknights Park, Reading (1868); and lastly Yattendon Court (1877), where the village became a visible testimony to his sense of the obligations of a landlord.

In 1891 he took his eldest son, Paul, into partnership; works of note about this period were the National Provincial Bank, Piccadilly; the dining-hall and chapel, Girtton (1872); additions to the Yorkshire College, Leeds (1878), a block of shops and offices, St. Andrews Square, Edinburgh (1895); medical school buildings for Liverpool University College, Liverpool Royal Infirmary, and a wing of the Nottingham General Hospital (1899). The Hôtel Métropole, Brighton (1888), followed a little later, as well as improvements in the Grand Hotel, Charing Cross (1898), extensive alterations to the Grosvenor Hotel (1900), the Surveyors' Institution and University College Hospital (1897), the last-named being completed by Mr. Paul Waterhouse. Other works carried out from time to time which deserve mention are New Court, Carey Street, Lincoln's Inn (1875), Reading grammar school (1870), Hove town hall (1880), Foster's Bank, Cambridge (1891), Brown's Bank (now Lloyds), Leeds (1895), St. Margaret's School, Bushey (1894), and Rhyl Hospital, first block (1898); the last two buildings in partnership with his son.

Waterhouse's productive capacity was combined with critical insight. His services as assessor in competitions were widely sought, and there a clearness of perception and a power of rapidly grasping a scheme as a whole enabled him to arrive rapidly at decisions authoritatively founded on reasoned data. He was a member of the international jury for the competition for the new west front to Milan cathedral; was on the committee of selection for the Imperial Institute, acted as assessor for the Birmingham law courts, of which he made a sketch plan for the competitors' guidance. Among the last competitions in which he took part himself was the first (inconclusive) competition for the admiralty and war office in 1882. Thenceforth his work came to him unsolicited.

Waterhouse's early liking for colour never deserted him; he was probably the most accomplished sketcher in water colours in the profession, and on various occasions

exhibited in the water-colour room at the Royal Academy.

At the height of his career Waterhouse was regarded as the chief figure in the profession by a large majority of his fellow architects, and his eminence was recognised at home and abroad. He became a fellow of the Royal Institute of British Architects in 1861, was for many years a member of council, member and afterwards chairman of the art standing committee, president of the institute 1888-1891, and gold medallist in 1878, when the president described him as a 'great mason,' a phrase which expressed tersely the belief of architects generally that he knew precisely what his materials were capable of, and the best way to turn them to account. He was elected A.R.A. on 16 Jan. 1878, and R.A. on 4 June 1885, becoming treasurer in 1898, and proving of great service to the institution in that capacity. He gave up active membership of the R.A. in 1903. In June 1895 he received the LL.D. degree at Manchester, that being the first honorary degree conferred by the Victoria University. In 1893 he was made a corresponding member of the Institute of France. He held diplomas from Vienna, (1869), Brussels (1886), Antwerp (1887), Milan (1888), Berlin (1889); the 'grand prix' was awarded him at the Paris International Exhibition of 1867.

Waterhouse was treasurer of the Artists' General Benevolent Institution till 1901. He joined in founding and was president till 1901 of the 'Society for checking the Abuses of Public Advertising,' a form of vulgarisation of the scenery of town or country which was particularly odious to him.

In 1901 Waterhouse's health broke down and he retired from active work. His last years were spent at Yattendon, where he died on 22 Aug. 1905. He was buried in the churchyard there. He married in 1860 Elizabeth, daughter of John Hodgkin, and sister of Thomas Hodgkin the historian, by whom he had three sons and two daughters. His eldest son is Paul, his partner and successor; his elder daughter, Mary Monica, married Robert Bridges, the poet.

Besides official addresses, Waterhouse wrote an essay on architects in 'The Unwritten Laws and Ideals of Active Careers' (ed. Miss Pitcairn, 1889).

There is a good portrait of him by Sir William Quiller Orchardson, which hangs with those of other presidents in the galleries of the institute. Another portrait

by Sir Lawrence Alma Tadema (1892) is in possession of the family. Both are in oil colour.

[The Builder, leading article and obit. notice, 26 Aug. 1905; Builders' Journal, 30 Aug. 1905; Building News, 25 Aug. 1905; private information from Mr. Paul Waterhouse, supplemented by personal recollections.]

WATERLOW, Sir SYDNEY HEDLEY, first baronet (1822–1906), lord mayor of London and philanthropist, born in Crown Street, Finsbury, on 1 Nov. 1822, was fourth of the five sons of James Waterlow (b. 19 April 1790, d. 11 July 1876) of Huntington Lodge, Peckham Road, Surrey, by his wife Mary, daughter of William Crakell. The family was of French Walloon descent, and the father, who was a member of the Stationers' Company and a common councilman for Cornhill ward, started in 1811 a small stationer's business in Birchin Lane, where in 1836 he was joined by his eldest son, Alfred James, and between 1840 and 1844 by other sons.

Brought up by his grandmother at Mile End till the age of seven, Sydney went first to a dame's school in Worship Street, then to a boarding school at Brighton, and lastly to St. Saviour's grammar school in Southwark, living at that time with his father in Gloucester Terrace, Hoxton. His father was a member of the unitarian congregation at South Place chapel, Finsbury, under the ministry of William Johnson Fox [q. v.], whose teaching greatly influenced young Waterlow. In Nov. 1836 he was apprenticed through the Stationers' Company to his uncle, Thomas Harrison, the government printer, with whom he lived at Pimlico and afterwards at Sloane Square. His diligence procured him in the fourth year of his apprenticeship the sole charge of the foreign office printing, with full responsibility for its secrecy. On the expiration of his indentures in Nov. 1843 he went to Paris, and was employed during the winter in printing for the publisher Galignani a catalogue of his library.

In Easter 1844 he joined his brothers Alfred, Walter, and Albert in adding a printing branch to the stationery business in Birchin Lane, the modest capital of 120*l.* being furnished by their father. They began by printing the 'Bankers' Magazine,' of which the first number appeared in April. Success at once followed, largely through the great share which the firm secured in railway printing and stationery. Additional

premises were taken at 49 Parliament Street (1846), London Wall (1851), Carpenters' Hall (1854), Great Winchester Street (1866), Castle Street, Finsbury (1872), Little Chart Mills, Ashford, Kent (1875), and Paris in 1883 (*London Directories*). The firm was converted into a limited company in February 1876, under the style of Waterlow and Sons, Limited, and in February 1877 the company sold the Birchin Lane portion of their business to Waterlow Brothers and Layton. From this date until 1895, when he retired, Sydney was managing director of the company. The company was reconstructed in 1879, and again in 1897; its present capital is 1,350,000*l.*

Waterlow joined the city corporation in 1857, when he was elected a common councilman for the ward of Broad Street, and on 3 April 1862 received a special vote of thanks from the corporation for devising and establishing a system of over-house telegraphs for the City police stations (*Minutes of the Common Council*, 3 April 1862). He was elected alderman of Langbourn ward on 30 Jan. 1863, and served the office of sheriff in 1866–7. The year was notable for a banquet given to the Viceroy of Egypt at the Mansion House and the costly reception of the Sultan Abdul Aziz by the corporation at Guildhall. Waterlow and his brother sheriff were knighted on 3 Aug. 1867. On Michaelmas Day 1872 he was elected lord mayor. Among the more important events of his mayoralty were the establishment of the Hospital Sunday Fund (21 Nov.); the opening to the public of the newly built Guildhall Library (10 March 1873); and the entertainment of the Shah of Persia at Guildhall (20 June). On 29 July 1873 he was made a baronet. He was for ten years (from 29 May 1873) governor of the Irish Society, was treasurer of St. Bartholomew's Hospital from 1874 to 20 June 1892, and was chairman of the United Westminster Schools from 1873 to 1893. He resigned his alderman's gown on 18 Sept. 1883.

Waterlow had long been known in the metropolis for his practical philanthropy. He long laboured to secure for the poor of London decent housing and pure water. In 1862 he built at his own expense in Mark Street, Finsbury, a block of working-class dwellings, with accommodation for eighty families; these tenements, though built for comfort and let at moderate rents, produced a good return for the outlay. In 1863 he originated the Improved Industrial Dwellings Company, Limited, of which he

was chairman till his death, when the company possessed 6000 tenements, which housed 30,000 persons. The company now has a capital of 1,000,000*l*.

Waterlow was returned as liberal member for Dumfriesshire in 1868, but was unseated in 1869 on technical grounds, his firm having taken a government contract of which he had no personal knowledge. After an unsuccessful contest for the same seat in 1869 and for Southwark in 1870, he was returned for Maidstone in 1874, and sat for that borough until 1880, when he was defeated. He was shortly afterwards elected for Gravesend, and retained that seat until 1885, when he unsuccessfully fought the Medway division of Kent. A stalwart liberal, he spoke in parliament in favour of a reform of the London Corporation. In 1870 he was appointed on the royal commission for inquiry into friendly and benefit societies (report presented 1874), in September 1877 on the royal judicature commission (which reported in 1881), and in July 1880 on the Livery Companies Commission (report presented 1884).

In 1872, a few months before his mayoralty, he presented Lauderdale House at Highgate, with its grounds, to St. Bartholomew's Hospital, for use as a convalescent home. The building was adapted and furnished at his expense, and was opened on 8 July 1872 by King Edward VII and Queen Alexandra, then Prince and Princess of Wales, but it was disused for hospital purposes in 1880. In 1889 Waterlow presented the house with a surrounding estate of twenty-nine acres to the London County Council. The fine grounds have since been known as Waterlow Park, where a statue of Waterlow was erected by public subscription in 1900.

Waterlow joined the livery of the Stationers' Company in 1847, serving as Master in 1872-3, the year of his mayoralty. He also became by redemption a freeman and liveryman of the Clothworkers' Company on 30 July 1873, and the same day passed (by election and fine) through the offices of assistant, warden, and master. He was a juror for Great Britain at the International Exhibitions of Paris (1867) and Philadelphia (1876), one of the royal commissioners of the 1851 exhibition, chairman of the city of London income tax commissioners, and treasurer of the City and Guilds of London Institute from 1879 (the year after its inception) to 1891. He was also a director of the Union Bank of London, vice-chairman of the

London, Chatham and Dover Railway, and vice-president and chairman of the distribution committee of the Hospital Sunday Fund. In 1902 he was made a K.C.V.O.

Waterlow died, after a brief illness, on 3 August 1906, at his country residence, Trosley Towers, Wrotham, Kent, and was buried at Stansted, Kent. His estate was sworn for probate at 89,948*l*. 19*s*. 8*d*. gross; the residue after payment of various legacies was left to his wife, the testator having made in his lifetime what he considered an adequate provision for each member of his family.

He was twice married: (1) on 7 May 1845 to Anna Maria (d. 1880), youngest daughter of William Hickson of Fairseat, Wrotham, Kent, by whom he had five sons and three daughters; (2) in 1882 to Margaret, daughter of William Hamilton of Napa, California, U.S.A., who survived him. His eldest son, Philip Hickson, succeeded to the baronetcy. A subscription portrait by (Sir) Hubert von Herkomer (1892) is in the hall of St. Bartholomew's Hospital. A cartoon portrait appeared in 'Vanity Fair' in 1872.

W.

WATKIN, SIR EDWARD WILLIAM (1819-1901), railway promoter, born in Ravalld Street, Salford, on 26 Sept. 1819, was son of Absalom Watkin, a cotton merchant and prominent citizen of Manchester, by his wife Elizabeth, daughter of William Makinson of Bolton. Of two brothers, John (1821-1870) took holy orders and was vicar of Stixwold, Lincolnshire, and Alfred (1825-1875), a merchant, was mayor of Manchester in 1873-4.

Watkin, after education at a private school, entered the office of his father. Interesting himself from youth in public movements, he became when about twenty-one a director of the Manchester Athenæum, and helped to organise the great literary soirées in 1843-4. With some other members of the Athenæum he started the Saturday half-holiday movement in Manchester. In 1845 he wrote 'A Plea for Public Parks,'

and acted as one of the secretaries of a committee which raised money for the opening of three public parks in Manchester and Salford. In the same year he joined in founding the 'Manchester Examiner.'

Watkin soon became partner in his father's business, but in 1845 he abandoned the cotton trade to take up the secretaryship of the Trent Valley railway, which line was afterwards sold at a profit of 438,000*l.* to the London and North Western Railway Company. Watkin, who had ably negotiated the transfer, then entered the service of the latter company. On recovering from a breakdown in health he paid his first visit to America in 1851, and in the following year published an account of it entitled 'A Trip to the United States and Canada.' In 1853 he was appointed general manager of the Manchester, Sheffield, and Lincolnshire railway, and entered on an intricate series of negotiations with the Great Northern, the London and North Western, and Midland railways, three lines whose hostile competition threatened disaster to his own company. At the desire of the Duke of Newcastle, secretary of state for the colonies, he undertook, in 1861, a mission to Canada in order to investigate the means of confederating the five British provinces into a dominion of Canada, and to consider the feasibility of transferring the Hudson Bay territory to the control of the government; the last was accomplished in 1869. Another object was that of planning railways designed to bring Quebec within easier reach of other parts of Canada and of the Atlantic.

On returning home Watkin resigned his appointment as manager of the Manchester, Sheffield, and Lincolnshire Company, through disagreement with his directors, who had come to terms in his absence with the Midland railway, and he became president of the Grand Trunk railway of Canada. Within two years, however, he resumed, in 1863, his connection with the Manchester company, first as director and from January 1864 as chairman. In that position, which he retained till May 1894, he did his chief work. With this office he combined the chairmanship of the South Eastern company from 1866-1894, and of the Metropolitan companies from 1872-94. For a short time he was a director of the Great Eastern (1867) and Great Western (1866) companies. Other enterprises also occupied him. He carried out a scheme for a new railway between Manchester and Liverpool, that

of the Cheshire lines committee, which was opened in 1877, and he was actively interested in making the Athens and Piræus railway. He projected the practical union of the Welsh railway system by linking up a number of small lines with the object of forming a through route from Cardiff to Liverpool, thus bringing South and North Wales into direct railway communication with Lancashire by means of the Mersey Tunnel, opened in 1886. To this end a swing bridge over the river Dee at Connah's Quay was built (1887-90) and lines to Birkenhead completed.

Despite these varied calls on his attention, it was to the three railways of which he was chairman that Watkin long devoted his main energies. As chairman of the Manchester, Sheffield, and Lincolnshire railway, now the Great Central, he met with great difficulties by the competition of both the Great Northern and Midland companies, but he greatly improved its affairs. His chief aim was to form a through route under a single management from Manchester and the north to Dover. With that end in view, he projected the new and independent line from Sheffield to Marylebone, London. At the time the Manchester company's trains ran over the Great Northern line from Retford. The proposed Great Central line was strongly resisted by Watkin's competitors, but he had his way after a long struggle, and the line was opened for through traffic to London on 8 March 1899.

It was from a desire to extend his scheme of through traffic that Watkin long and ardently advocated a channel tunnel railway between Dover and Calais. This proposal was first made in 1869. A channel tunnel company was formed in 1872, and under Watkin's direction excavations were begun in 1881 beneath the seashore between Folkestone and Dover. At the instance of the board of trade the court of chancery at once issued an injunction forbidding Watkin to proceed, on the ground of his infringement of the crown's foreshore rights. Next session Watkin, who long sat in the House of Commons, introduced a private bill authorising his project; after consideration by a joint committee of the two houses, which pronounced against it by a majority of sixty-four, the bill was withdrawn. Subsequently in 1888, and again in 1890, Watkin reintroduced a bill authorising his experimental works without result, and it was finally withdrawn in 1893. In 1886 Watkin, on receiving a report from Professor Boyd

Dawkins, began boring for coal in the neighbourhood of Dover, and the work was continued until 1891, at the expense of the Channel Tunnel Company. Sufficient evidence was obtained to justify the sinking of a trial shaft and the formation of companies for further exploration. Watkin also proposed a railway tunnel between Scotland and Ireland and a ship canal in Ireland between Dublin and Galway. His passion for enterprise further led him to become chairman in 1889 of a company to erect at Wembley Park, Middlesex, a 'Watkin' tower on the model of the Eiffel tower in Paris. Owing to lack of funds only a single stage was completed; this was opened to the public in 1896, and was demolished in 1907.

Watkin was returned to Parliament as liberal member for Great Yarmouth in 1857, but was unseated on petition. He sat as member for Stockport from 1864 to 1868, when he was defeated. In 1869 he unsuccessfully contested East Cheshire, but was member for Hythe from 1874 to 1895. His political views remained liberal until 1885, when he became a unionist, but he often acted independently of any party. He was a member of the Manchester City Council from 1859 to 1862 and high sheriff of Cheshire in 1874. He was knighted in 1868 and created a baronet in 1880.

He died at Rose Hill, Northenden, Cheshire, on 13 April 1901, and was buried at Northenden parish church.

Watkin married in 1845 Mary Briggs (*d.* 8 March 1887), daughter of Jonathan Mellor of Oldham, by whom he had a son, Alfred Mellor Watkin, M.P. for Grimsby (1877-80), and his successor in the baronetcy, and a daughter Harriette, wife of H. W. Worsley-Taylor, K.C., of Moreton Hall, Whalley. His second wife, whom he married in 1893, when she was eighty-one years old, was Ann (*d.* 26 May 1896), daughter of William Little, and widow of Herbert Ingram, M.P., founder of the 'Illustrated London News.' A portrait of Watkin by (Sir) Hubert von Herkomer was exhibited at the Royal Academy in 1887. A cartoon portrait by 'Ape' (i.e. Carlo Pellegrini [*q. v.*], who also painted his portrait in oils) appeared in 'Vanity Fair' in 1875.

Besides the works named above he wrote: 1. 'Absolom Watkin. Fragment No. 1,' 1874 (a sketch of his father, with some of his writings). 2. 'Canada and the States: Recollections, 1851 to 1886,' 1887, 3.

'India: a Few Pages about it,' 1889 (on the public works policy of the Indian government). 4. 'Alderman Cobden of Manchester,' 1891 (letters and reminiscences of Richard Cobden).

WATSON, ALBERT (1828-1904), principal of Brasenose College, Oxford, and classical scholar, born at Kidderminster on 4 Dec. 1828, was fifth son of Richard Watson of that town. Educated at Rugby (1843-7), he entered Wadham College, Oxford, on 21 April 1847 as a commoner. In Easter term 1851 he obtained a first class in literæ humaniores (B.A. 1851), proceeding M.A. in 1853, and for a few months in 1854 was a master at Marlborough College. On 12 March 1852 he had been elected fellow of Brasenose College, Oxford, and took holy orders in 1853, becoming priest in 1856, but never holding any benefice. Settling down to educational work in Oxford he was tutor of his college (1854-67) and lecturer (1868-73). He was also librarian 1868-77 and senior bursar 1870-81, and during the three years 1886-9 served the office of principal. He was again fellow from 1890 till his death. His chief extra-collegiate positions were those of librarian of the Union Society 1852-3, examiner 1859, 1860, 1864, and 1866, and curator of the University Galleries. He died suddenly from heart failure at Oxford on 21 Nov. 1904. He was unmarried.

A posthumous portrait, based on photographs, is in Brasenose College common room.

Watson's only published work was an edition of 'Select Letters of Cicero,' with notes (Oxford, 1870; 4th edit., 1891; text only, 1874, 1875), a task suggested to him, it is believed, by John Conington, and carried out with conspicuous acumen and industry. 'Watson's Letters' was for many years a household word at Oxford.

He also translated part of Ranke's 'History of England' (Clarendon Press, 1875).

With wide reading in all branches of standard literature, but especially historical and political, and with a retentive memory, Watson combined a rare power of co-ordinating what he knew. The characteristics of decision and determination which his features suggested were quite overborne by his gentleness and benevolence. Reserved and retiring to an unusual degree, he yet in social converse put his stores of wit and learning at the free disposal of his guests. Throughout his life he was a convinced liberal, and a considerable force in Oxford politics.

[Brasenose Coll. Reg. 1909; Foster's Alumni Oxonienses; Oxford Mag. 30 Nov. 1904; C. B. Heberden. Address in Brasenose College Chapel, 27 Nov. 1904, privately printed.] F. M.

WATSON, GEORGE LENNOX (1851-1904), naval architect, born at Glasgow on 30 Oct. 1851, was eldest son of Thomas Watson, M.D., by his wife Ellen, daughter of Timothy Burstall, an engineer. Educated at the High School and then at the Collegiate School, Glasgow, he was apprenticed in 1867 to Robert Napier & Sons, shipbuilders and marine engineers of Govan. In 1871 he found employment with A. and J. Inglis, shipbuilders, of Pointhouse, near Glasgow, making with a member of the firm experiments in yacht-designing, and in 1872 he started business in Glasgow as a naval architect. Exact methods of yacht-modelling were only then being introduced, and Watson was the first to apply to the designing of yachts the laws governing the resistance of bodies moving in water which William John Macquorn Rankine [q. v.] and William Froude [q. v.] had formulated. During a career of over thirty years he designed many of the most successful yachts that have sailed in British waters.

Early successes were the 5-ton cutter Clotilde (1873), which beat Fife's Pearl; the 10-ton cutter Madge (1875), which had great success in American waters; the Vril (1876); the 68-ton cutter Marjorie (1883); and the Vanduara (1880), which was the fastest vessel of her class, beating the Formosa, the property of Edward VII, then Prince of Wales, on several occasions. When Dixon Kemp's new rule of measurement for racing purposes in 1887 required the building of a broader and lighter type of vessel, Watson was equally successful. The Yarana (1888), the Creole (1890), and the Queen Mab (1892) were all

notable prize-winners, and a record success was achieved by the Britannia, which Watson built for King Edward VII, then Prince of Wales, in 1893. Between 1893-7 it won 147 prizes, 122 of them first prizes, out of 219 starts, the total value of the prizes amounting to 9973*l*. The Bona (1900), the Kariad (1900, at first named The Distant Shore), and the Sybarita (1901) were large vessels notable for their seaworthiness; a race between the two latter in the Clyde in 1901 during a storm which compelled the accompanying steam yachts to put back proved one of the most remarkable yachting contests on record.

Between 1887 and 1901 Watson was prominently before the public as the designer of the British challenger's yacht in the contest in American waters between Great Britain and America. Watson designed J. Bell & Brothers' Thistle (1887), Lord Dunraven's Valkyrie II (1893), and Valkyrie III (1895), and Sir Thomas Lipton's Shamrock II (1901). Though these vessels failed to regain the cup for Great Britain they were yachts of the highest class. The American yachts which defeated them had little success whenever they visited British waters.

Watson, in addition to racing craft, also designed passenger, cargo, and mail steamers, and many of the largest steam yachts of the day. Amongst the latter were the Lysistrata (2089 tons), built for James Gordon Bennett; the Atmah (1746 tons), built for Baron Edmond de Rothschild; the Alberta (1322 tons), built for the King of the Belgians; the Zarnitza (1086 tons), built for the Tsar of Russia, and other yachts built for foreign owners.

Watson contributed to 'Yachting' (2 vols. 1895, Badminton Library) and published in 1881 a series of lectures, 'Progress in Yachting and Yacht-building,' delivered at the Glasgow naval and marine engineering exhibition (1880-1). In 1882 he was elected a member of the Institute of Naval Architects, before which he read a paper on a new form of steering-gear. He was also for nearly twenty years consulting naval architect to the National Lifeboat Institution. He died at Glasgow on 12 Nov. 1904. Watson married in 1903 Marie, the daughter of Edward Lovibond of Greenwich. He had no issue.

[Trans. of Inst. of Nav. Architects, 1905; Who's Who, 1905; The Times, 14 Nov. 1904; Yachting, 1895; art. on Yachting in Encyc. Brit., 11th ed.; A. E. T. Watson, King

Edward VII as a Sportsman, 1911; Yacht Racing Calendar and Rev. 1904.] S. E. F.

WATSON, HENRY WILLIAM (1827–1903), mathematician, born at Marylebone on 25 Feb. 1827, was son of Thomas Watson, R.N., by his wife Eleanor Mary Kingston.

Educated at King's College, London, he won the first mathematical scholarship instituted there, proceeding in 1846 to Trinity College, Cambridge, where he was scholar. He graduated as second wrangler and Smith's prizeman in 1850, Dr. W. H. Besant being senior wrangler. He became fellow in 1851, and from 1851 to 1853 was assistant tutor. With James Fitzjames Stephen, who entered Trinity in 1847, Watson formed a close friendship (see *LESLIE STEPHEN'S Life of Sir J. F. Stephen*). Both were 'Apostles,' and (Sir) William Harcourt, (Sir) Henry Sumner Maine, and E. H. Stanley (afterwards fifteenth Earl of Derby) belonged to their coterie. After a short stay in London, studying law (with Stephen as fellow-student), Watson became mathematical master in the City of London School (1854), and was afterwards (1857) mathematical lecturer at King's College, London. Ordained deacon in 1856, he took priest's orders in 1858. From 1857 to 1865 he was a mathematical master at Harrow School, retiring on presentation to the benefice of Berkswell, near Coventry. One of the original founders of the Alpine Club in 1857, he delighted in mountaineering, but left the Club in 1862.

Watson was moderator and examiner during 1860–1 in the Cambridge mathematical tripos, and an additional examiner in 1877. From 1893 to 1896 he was examiner in mathematics at London University. One of the founders of the Birmingham Philosophical Society, he was president 1880–1. He was elected F.R.S. on 2 June 1881. Cambridge University conferred the honorary Sc.D. degree in 1883.

Watson's independent publications were 'The Elements of Plane and Solid Geometry' (1871) and 'Treatise on the Kinetic Theory of Gases' (1876; 2nd edit. 1893, which embodied criticisms given in correspondence by Clerk Maxwell). In collaboration with Samuel Hawksley Burbury [q. v. Suppl. II] there appeared 'A Treatise on Generalised Co-ordinates applied to the Kinetics of a Material System' (1879), a work on abstract dynamics; and 'The Mathematical Theory of Electricity and Magnetism,' vol. i. 'Electrostatics' (1885), vol. ii. 'Magnetism and Electrodynamics'

(1889). The article 'Molecule' in the 'Encyclopædia Britannica,' 9th edition, was also written jointly with Burbury.

Watson's contributions to serial scientific literature include 'Direct Investigation of Lagrange's and Monge's Methods of Solution of Partial Differential Equations,' in the 'Quarterly Journal of Mathematics' (1863); 'The Kinetic Theory of Gases' and 'On the Progress of Science, its Conditions and Limitations,' read at the Birmingham Philosophical Society (1877, 1891); and, jointly with Sir Francis Galton [q. v. Suppl. II], 'On the Probability of the Extinction of Families' (*Journ. Anthropol. Inst.* vol. iv.).

He died at Brighton on 11 Jan. 1903, five months after his resignation of Berkswell. He married in 1856 Emily, daughter of Henry Rowe, of Cambridge; his wife's sister married Robert Baldwin Hayward [q. v. Suppl. II]. He had issue one son and two daughters.

T. E. J.

WATSON, JOHN, who wrote under the pseudonym of **IAN MACLAREN** (1850–1907), presbyterian divine and author, born at Manningtree, Essex, on 3 Nov. 1850, was only child of John Watson (d. 1 Jan. 1879), a clerk in the civil service, who subsequently became receiver-general of taxes in Scotland, by his wife Isabella MacLaren. He came of pure Highland stock. His father was born at Braemar, while his mother belonged to the Loch Tay district and spoke Gaelic. Her ancestors were Roman catholics. Watson's parents, however, belonged to the Free Church of Scotland.

When Watson was about four the family removed to Perth. After attending the grammar school of that city, he was sent to the high school of Stirling, where his companions included Henry Drummond [q. v. Suppl. I]. In 1866 he entered Edinburgh University. His career there was somewhat disappointing, but he showed some promise in philosophy and became president of the University Philosophical Society. He graduated M.A. in 1870.

Reluctantly, at his father's wish, he studied for the ministry of the Free Church of Scotland at New College, Edinburgh (1870–4); his teachers included Andrew Bruce Davidson [q. v. Suppl. II] and Robert Rainy [q. v. Suppl. II]. His course was undistinguished; at its close he passed a

semester at Tübingen University, studying under Beck and Weizsäcker.

In the autumn of 1874 he became assistant to the Rev. Dr. J. H. Wilson, Barclay church, Edinburgh. There he had misgivings as to his ministerial fitness, and thought of studying for the bar. Early in 1875 he was inducted minister of the Free church at Logiealmond, Perthshire; his uncle, Hiram Watson, had been minister there from 1841 to 1853, leaving the Church of Scotland at the Disruption. In Logiealmond, the 'Drumtochty' of 'Beside the Bonnie Brier Bush,' Watson spent some three of his happiest years, making himself popular with the people and winning some repute as a preacher. In 1877 he became colleague and successor to the Rev. Dr. Samuel Miller of Free St. Matthew's church, Glasgow, a wealthy congregation and a centre of spiritual influence. His Glasgow ministry, which was less harmonious and successful than that at Logiealmond, lasted barely three years.

The main work of Watson's life began in 1880, when he accepted an invitation to form a new presbyterian charge in the Sefton Park district of Liverpool. There he remained exactly twenty-five years, and established a congregation which for wealth, culture, and influence became one of the foremost in the Presbyterian Church of England. His attractive personality and public spirit drew to him all sorts and conditions of people. His preaching, while resting on a basis of broad evangelicalism, was essentially modern, catholic, oratorical, and cultured. Matthew Arnold [q. v. Suppl. I] on the day he died (15 April 1888) heard Watson preach at Sefton Park church, and remarked that he had rarely been so affected by any preacher (W. ROBERTSON NICOLL's *Life*, p. 130). Watson's congregation raised, while he was minister, nearly 150,000*l.*, and erected a church whose elegance and size has earned for it the title of 'the presbyterian cathedral of England,' as well as two large branch churches and a social institute. Watson's influence on the civic life of the community was considerable, no fewer than six members of his congregation becoming lord mayors of Liverpool, while others were prominent in the city council. He took a leading part in the creation of the University of Liverpool, and had a seat on its council (1903-6).

In 1894 Watson achieved a new and a wider reputation. In that year he published, under the pseudonym of 'Ian Maclaren,' a number of sketches of Scottish rural life

entitled 'Beside the Bonnie Brier Bush.' The book at once made Watson one of the most popular authors in Great Britain and America. 'Ian Maclaren' knew little of the novelist's art, but out of simple elements he produced pictures of Scots character which, if not wholly free from sentimentalism, are artistic delineations of the Scottish peasant's nobility of sentiment and religious emotion. Watson was aware of 'the reverse side of the shield' which George Douglas Brown [q. v. Suppl. II] apotheosised in 'The House with the Green Shutters,' but his interpretation was admirably effective. In Great Britain more than a quarter of a million copies have been sold; in America the sale has amounted to about half a million, exclusive of an incomplete pirated edition which was circulated in large numbers at a low price. The work has also been translated into several European tongues, and has been popular in Germany. In 1895 there followed in the same vein 'The Days of Auld Langsyne,' hardly inferior in execution and popularity. There was some falling off in workmanship in 'Kate Carnegie and those Ministers' (1897), in spite of its geniality and easy command of the Scots vernacular. 'Afterwards, and Other Stories' (1898) shows the author's command of pathos; 'Young Barbarians' (1901) is a delightful boy's book; 'His Majesty Baby and some Common People' appeared in 1902; 'St. Jude's' (posthumously, 1907) contained sketches of Glasgow life. 'Graham of Claverhouse' (posthumously, 1908) was 'Ian Maclaren's' only serious attempt at novel writing, and proved a failure.

From 12 Oct. to 16 Dec. 1896 Watson, taking advantage of the popularity of his books, made his first American lecture tour under the management of Major J. B. Pond, and was welcomed with immense enthusiasm (POND, *Eccentricities of Genius*, p. 405). At Yale University he was made hon. D.D. after delivering there the Lyman Beecher lectures on preaching, which he published in the same year under the title of 'The Cure of Souls.' Watson repeated his success in a second American lecture tour, also under Pond's direction (19 Feb.-10 May 1899).

Meanwhile Watson had engaged, under his own name, in theological literature. In 1896 he issued 'The Mind of the Master,' an able interpretation of the person and teaching of Christ, which brought him in 1897 under a passing suspicion of heresy (W. ROBERTSON NICOLL's *Life*, p. 214).

The most notable of his theological works was 'The Doctrines of Grace' (1900). 'The Life of the Master' (1901) illustrated Watson's breadth of view.

Watson worked strenuously to arouse interest in the theological college of his denomination. As convener of the synod's college committee he took a leading part in the removal of the college from London to Cambridge. Mainly owing to his energy and eloquence a sum of 16,000*l.* was raised in five weeks, which enabled Westminster College, Cambridge, to be opened free of debt in October 1899. Watson in 1897 declined a call to St. John's presbyterian church, Kensington, and in April 1900 was elected moderator of synod. On the outbreak of the Boer war (Oct. 1899) he supported the British government, and alienated many nonconformists by preaching sermons justifying the war. He also encouraged the young men of Liverpool to volunteer for active service in South Africa. In 1901 ill-health led him to pass the winter in Egypt. On his return he delivered a short course of lectures at the Royal Institution, London, entitled 'The Scot of the Eighteenth Century: his Religion and his Life.' The lectures were repeated at Cambridge, and were published posthumously in 1907.

In February 1905 Watson celebrated the conclusion of twenty-five years' ministry at Sefton Park, and in October he resigned owing to ill-health and pressure of other work. A sum of 2600*l.* was then privately presented to him. He continued to reside in Liverpool. In January 1907 he accepted, on what proved to be the eve of his death, the presidency of the National Free Church Council, and was nominated for the principalship of Westminster College, Cambridge, in succession to Dr. Oswald Dykes.

On 30 Jan. 1907 he sailed for New York to undertake a third lecturing tour in America. His popularity showed no sign of abatement, but he suffered from fatigue and from the cold. At Haverford College, Philadelphia, he delivered a course of lectures on 'The Religious Condition of Scotland in the Eighteenth Century.' In 'God's Message to the Human Soul: the Use of the Bible in the Light of the New Knowledge' (Cole Lectures of Vanderbilt University at Nashville, 1907) he maintained that the authority of the Bible was indestructible, while he welcomed reverent biblical criticism. Towards the end of March he passed to Canada. He lectured and preached at Valley City, North Dakota, on 21 April. Two days later he arrived

at Mount Pleasant, Iowa, where he fell ill and died on 6 May 1907 in the Brazelton hotel. His remains were accorded a public funeral on 27 May in Smithdown cemetery, Liverpool.

Watson, whose sense of humour was keen and patriotism intense, earnestly sought as a preacher to combine the spirit of faith with that of culture. The twofold character of his work as secular and religious writer led to some depreciating criticism of both results of his labours. But theology and literature equally appealed to him.

Besides the works cited, Watson was also the author, in his own name, of: 1. 'The Order of Service for Young People,' 1895. 2. 'The Upper Room' ('Little Books on Religion' series), 1896. 3. 'The Potter's Wheel,' 1898. 4. 'Companions of the Sorrowful Way,' 1898. 5. 'Homely Virtues,' 1903. 6. 'The Inspiration of our Faith, and Other Sermons,' 1905. 7. 'Respectable Sins,' a volume of sermons for young men, edited by his son, Frederick W. Watson, and published posthumously in 1909.

Watson married on 6 June 1878 Jane Burnie, daughter of Francis John Ferguson, of Glasgow, and a near relative of Sir Samuel Ferguson [q. v.]. She survived him with four sons.

A portrait, painted by Robert Morrison of Liverpool, hangs in the Guild Room of Sefton Park church, Liverpool.

W. F. G.

WATSON, SIR PATRICK HERON (1832-1907), surgeon, born at Edinburgh on 5 Jan. 1832, was third of four surviving sons of Charles Watson, D.D., minister of Burntisland, Fife, and Isabella Boog his wife. His three brothers all attained distinction, two (Charles and Robert Boog) in the church, and the third (David Matthew) in business.

Patrick Watson was educated at the Edinburgh Academy and at the University, where he graduated M.D. in 1853.

Admitted L.R.C.S. Edinburgh in 1853, he was elected F.R.C.S. in 1855. After a year's residence at the Royal Infirmary, Edinburgh, Watson volunteered for service

at the opening of the Crimean war. He was appointed a staff assistant surgeon, but his operative skill and his teaching powers were so obvious that he was retained at Woolwich to instruct other volunteer surgeons. He went to the Crimea some months later, and was attached to the royal artillery; but an attack of enteric followed by dysentery caused him to be invalided home in 1856. He received the Crimean, Turkish, and Sardinian medals. As soon as his health was restored, Watson began to teach surgery at the High School Yards, Edinburgh, and became lecturer on systematic and clinical surgery at the Royal College of Surgeons there. Watson afterwards acted as private assistant to Prof. James Miller, whose eldest daughter he afterwards married. He declined an offer of a similar post under Professor James Syme [q. v.]. In 1860 he was chosen assistant surgeon to the Royal Infirmary, and full surgeon in 1863. On the expiration of his term of office in 1878, the managers appointed him an extra surgeon for five years.

Watson, who endeared himself to his patients, was as an operator unrivalled in Edinburgh for brilliancy of execution and rapidity of manipulation. He devised and carried out many of the operations which only became general in a succeeding generation. Before the introduction of Listerian methods he had removed the whole larynx, extirpated the spleen, performed ovariectomy with success, and popularised excision of the joints. As a lecturer he was eloquent, clear, and impressive; as a hospital surgeon and clinical teacher he was effective and popular.

In 1878 Watson accompanied the third Earl of Rosslyn on the special embassy sent to Spain on King Alfonso XII's marriage, and was decorated caballero of the order of Carlos III of Spain.

At the Royal College of Surgeons of Edinburgh, Watson was president in 1878 and again in 1905, at the quatercentenary festival. From 1882 to 1906 he represented the college on the General Medical Council. He was one of the honorary surgeons in Scotland to Queen Victoria and to King Edward VII. He was made hon. LL.D. of Edinburgh in 1884 and hon. F.R.C.S. Ireland in 1887. He was knighted in 1903. Through life he was a keen volunteer. He joined the Queen's Edinburgh brigade as a surgeon and retired with the rank of brigade surgeon lieutenant-colonel, V.D. He died at his residence in Charlotte Square,

Edinburgh, on 21 Dec. 1907. Watson married in 1861 Elizabeth Gordon, the eldest daughter of Prof. James Miller, and left two sons and two daughters.

A portrait painted by Sir George Reid belongs to Watson's son, Charles Heron Watson, F.R.C.S. Edin.

Watson's works, all published at Edinburgh, are: 1. 'The Modern Pathology and Treatment of Venereal Disease,' 1861. 2. 'Excision of the Knee Joint,' 1867. 3. 'Amputation of the Scapula along with Two-thirds of the Clavicle and the Remains of the Arm,' 1869; 4. 'Excision of the Thyroid Gland,' 1873.

[Scottish Medical and Surgical Journal, vol. xxii. 1908, p. 66 (with portrait); Lancet, 1908, i. 69; Brit. Med. Journal, 1908, i. 62; private information.]

D'A. P.

WATSON, ROBERT SPENCE (1837-1911), politician, social and educational reformer, born at 10 Claremont Place, Gateshead-on-Tyne, on 8 June 1837, was the eldest son in a family of five sons and seven daughters of Joseph Watson of Bensham Grove, Gateshead-on-Tyne, by his wife Sarah, daughter of Robert Spence of North Shields. Like both his parents Spence Watson was a Quaker. His father was a solicitor of literary attainments. In 1846 Robert became a pupil of Dr. Collingwood Bruce, proceeding to the Friends' school at York in October 1848. In 1853 he entered University College, London, and tied for the English literature prize that year. He was articled to his father on leaving college, and after admission as a solicitor in 1860, he entered into partnership with him. Through life he was actively engaged in his profession.

From youth Watson played an energetic part in public life, interesting himself in political, social, philanthropic and educational movements. For nearly half a century he consequently held a position of much influence in his native place and the north of England. He bestowed especially close attention on means of improving and disseminating popular culture. In 1862 he became honorary secretary of the Literary and Philosophical Institution, Newcastle-upon-Tyne, founded in 1793. He held the office for thirty-one years when he became a vice-president of the society. In 1900 he succeeded Lord Armstrong as president. Between 1868 and 1883 he delivered seventy-five lectures to the society, mainly on the history and development of the English language.

In 1871 Watson helped to found the Durham College of Science, now known as Armstrong College, Newcastle-upon-Tyne, in the university of Durham. For forty years he took a leading part in its government, becoming its first president in 1910, and one of its representatives on the senate of Durham University, which conferred on him the honorary degree of D.C.L. in 1906.

Spence Watson was also elected a member of the first Newcastle school board in 1871, and he continued to sit on the board for twenty-three years. He was a pioneer of university extension in the north of England and of the Newcastle Free Public Library. From 1885 to 1911 he was president of the Tyneside Sunday Lecture Society, and became chairman of the Newcastle-upon-Tyne grammar school in 1911.

Nor were Watson's interests confined to affairs at home. He was from an early age an ardent traveller and mountaineer, joining the Alpine Club in 1862. His recreations included angling as well as mountaineering. In 1870, at the invitation of the Society of Friends, he went to Alsace-Lorraine as one of the commissioners of the War Victims Fund for the distribution of relief to the non-combatants in the Franco-German war. In January 1871 he revisited France to superintend similar work in the department of the Seine. In 1873 the French government, through the duc de Broglie, offered him the legion of honour, but he declined to accept the distinction. He was, however, presented with a gold medal which was specially struck in acknowledgment of his services. In 1879 he visited Wazan, the sacred city of Morocco, which no Christian European had entered before. With the assistance of Sir John Drummond Hay, the British minister at Tangier, he obtained an introduction to the great cherif of Wazan and his English wife. In 1880 he published an account of his journey in 'A Visit to Wazan, the Sacred City of Morocco.'

Spence Watson was an enthusiastic politician and a lifelong adherent of the liberal party. In 1874 he founded the Newcastle Liberal Association on a representative basis of ward elections, and was its president from 1874 to 1897. From 1890 to 1902 he was president of the National Liberal Federation. During that period he was probably the chief liberal leader outside parliament, influencing the policy of the party by force of character. His political friends included Joseph Cowen, John

Morley, John Bright, Lord Ripon, and Earl Grey. Personally he had no desire to enter the House of Commons, and refused all invitations to become a parliamentary candidate. On 27 Feb. 1893 the National Liberal Federation presented him with his portrait by Sir George Reid, P.R.S.A. This he gave to the National Liberal Club, a replica by the artist being presented to Mrs. Spence Watson. In 1907 he was made a privy councillor on the nomination of Sir Henry Campbell-Bannerman, then prime minister.

His political principles embraced zeal for the cause of international peace and for the welfare of native races under British rule, especially in India. He was president of the Peace Society for several years previous to his death, and he took an active part in the Indian National Congress movement. The development of free institutions in Russia was another of his aspirations. He co-operated with Stepniak, and other Russian political exiles in England, in the attempt to disseminate information among Englishmen of existing methods of governing Russia. He was from 1890 to 1911 president of the Society of Friends of Russian Freedom.

Spence Watson was a pioneer in the settlement of trade disputes by arbitration. He first acted as umpire in 1864, and he was sole umpire on forty-seven occasions between 1884 and 1894 in disputes in the leading industries in the north of England. Such services, which ultimately numbered nearly 100, were always rendered voluntarily.

Spence Watson was made hon. LL.D. of St. Andrews in 1881. One of the earliest in England to interest himself in the adaptation of electrical power to industrial purposes, he helped the Newcastle-upon-Tyne Electric Supply Company, Limited, on Tyneside to acquire parliamentary powers in 1890. He died on 2 March 1911 at his residence, Bensham Grove, Gateshead, which he had inherited from his father, and was buried at Jesmond old cemetery, Newcastle-upon-Tyne. He married on 9 June 1863 Elizabeth, daughter of Edward and Jane Richardson of Newcastle-upon-Tyne. He had one son and five daughters.

Besides the book mentioned, Spence Watson published: 1. 'Cædmon the First English Poet,' 1890. 2. 'The History of the Literary and Philosophical Society of Newcastle-upon-Tyne,' 1897. 3. 'The History of the National Liberal Federation,' 1906. 4. 'Joseph Skipsey, his Life and Work,' 1909. Among his numerous pamph-

lets dealing with industrial, educational and political subjects, 'The History of English Rule and Policy in South Africa' (1897) had a circulation of nearly 250,000 copies, including translations into French and Dutch.

Painted portraits of Spence Watson are numerous. In addition to that by Sir George Reid at the National Liberal Club, one by Miss Lilian Etherington was given to the Newcastle Liberal Club in 1890. Another by Ralph Hedley, R.B.A., was presented to him in 1898 (now at Bensham Grove). A replica by H. Macheth Raeburn, A.R.E., of Sir George Reid's portrait, presented by subscription to the Literary and Philosophical Institution, Newcastle-upon-Tyne, was unveiled by Mr. Thomas Burt, M.P., on 24 Sept. 1912. A portrait by Percy Bigland is in the John Bright Library, Friends' school, York, and a replica by the artist at Armstrong College, Newcastle-upon-Tyne. A bust by Christian Neuper is in the Free Library, Newcastle-upon-Tyne.

The 'Spence Watson' prize in English literature was founded in Armstrong College, Newcastle-upon-Tyne, out of funds which he bequeathed to the college. A fund to establish at the college a Spence Watson lectureship in English literature is in process of formation by members of the Literary and Philosophical Institution, Newcastle-upon-Tyne.

[Northumberland County History, vols. iii. and iv.; A Historical Sketch of the Society of Friends ('in scorn called Quakers') in Newcastle-upon-Tyne and Gateshead, 1653-1898, by John William Steel, with contributions from other Friends, 1899; Hist. of Literary and Philosophical Institution, Newcastle-upon-Tyne; Hist. of the National Liberal Federation; Who's Who, 1911; unpublished Reminiscences by Robert Spence Watson; and three unpublished volumes of collected speeches and personal records.] P. C.

WATTS, GEORGE FREDERIC (1817-1904), painter and sculptor, was the eldest child of the second marriage of George Watts, a musical-instrument maker (born 1774), who came to London from Hereford about 1800. Some Welsh names in the family of George Watts's mother indicate that he may have been partly of Welsh descent. (This is the only ground for the statement often confidently made that the artist was a 'Celt.') By his first marriage George Watts had a son and two daughters, who were nearly grown up when in 1816 he took for second wife a widow whose maiden name had been

Harriet Smith. Their son, George Frederic, was born in Queen Street, Bryanston Square, on 23 Feb. 1817. Three more sons followed, who all died in infancy or early childhood. George Watts, besides being a piano maker and tuner, was much occupied with unsuccessful schemes for the invention and manufacture of new musical instruments. The second Mrs. Watts fell into a consumption and died in 1826. The boy George Frederic grew up as the ailing and cherished son of a refined, ineffectual father in straitened circumstances, his two half-sisters by the first marriage managing the household as best they might. He suffered much from giddiness and sick headache, and had no regular schooling, but devoured the books, few but good, that were in the house, especially the 'Iliad' and Scott's novels. He learned his Bible, and despite painful recollections of the gloom and depression of puritan Sundays, loved it in after life, not indeed as revelation, but as the highest ethical and traditional poetry and symbolism. From childhood he was devoted to drawing, and there are still extant minutely accurate copies of engravings made by him with a chalk point in his twelfth year. His father, who had some taste in art, encouraged this bent. The opportunity, not for regular teaching but for study of a kind perhaps more fruitful, came to him through acquaintance with the family of Behnes. The elder Behnes was a piano-maker from Hanover with whom George Watts was in some way associated. In the same house with him lived a French *émigré* practising as a sculptor, and this man's example moved two of Behnes's sons, Henry and William, to follow the profession of art. William and a crippled third brother, Charles, occupied first a studio in Dean Street, Soho, and afterwards one in Osnaburgh Street. Of these studios Watts in boyhood had the run, and learned all that could be learned there. William Behnes was a fine draughtsman and something of a painter as well as a sculptor; he taught the boy early to feel and understand the supreme qualities of the Parthenon marbles. A friend of Charles, a miniature painter, gave young Watts his first chance and first lesson in oil-painting by setting him to make a copy from Lely and prescribing the colours to be used. Soon we hear of the lad taking in William Behnes with a sham Vandyck which, for a jest, he had himself painted and smoked to make it look old. George Watts showed some of his son's drawings to Sir Martin Archer Shee,

whose verdict was not encouraging. The boy got more favourable notice from Haydon, who stopped him one day as he was carrying a bundle of drawings in the street. He drew continually, both copies and originals, and by the time he was sixteen had begun to earn a livelihood by small commissions for portraits in pencil or chalks at five shillings each. At eighteen he entered the Royal Academy schools, where he found the teaching slack and unhelpful. From Hilton, the keeper, he received praise and encouragement, but failed to win the medal which Hilton thought he deserved. In his twentieth year (1837) he had a studio of his own in Clipstone Street, and painted the fine study of a wounded heron, now in the memorial gallery at Limnerslease, from a bird he had bought in a poulterer's shop. At the Royal Academy he exhibited this picture and two portraits of ladies. Portraits of himself and of his father done in these years show already a frank and skilful handling of the oil medium.

By this time young Watts had made the acquaintance of Nicolas Wanoostrocht [q. v.], an Englishman of Belgian extraction, who kept a successful school inherited from his father at Blackheath, and who was at the same time a professional cricketer and writer on cricket under the name of Nicholas Felix. At the Blackheath school Watts spent many of his evenings, studying music, French, Italian, and to some extent Greek, and acquiring from his new friend both a fresh zest for life and a wider range of reading. As a commission from him Watts drew and lithographed seven positions in the game of cricket, several of the figures being portraits of the famous cricketers of the day. These lithographs are now rare: five of the original drawings are preserved in the Marylebone cricket club. Life was however still a struggle to the young man. The failure of his father's undertakings weighed upon him, and he was subject to alternate moods of confident hope and acute physical and mental depression. In his twenty-first or twenty-second year he had the good fortune to be introduced to Mr. Constantine Ionides, a member of a leading family in the Greek colony in London and father of the well-known art collector of the same name. Mr. Ionides ordered from young Watts a copy of a portrait of his father by Lane, preferred the copy to the original when it was done, and gave him a commission for a family group. The connection was renewed later, and as many as twenty

portraits of various members of the Ionides family, dating from almost all periods of his working life, are extant. Distinguished persons from other circles soon began to figure among his sitters, including members of the Noel and of the Spring Rice families. He had a commission to paint a portrait of Roebuck, and one of Jeremy Bentham from the wax effigy which the philosopher had ordered to be constructed over his bones. But in his own mind he from the first regarded portraiture as an inferior branch of art, and set his whole soul's ambition on imaginative and creative design.

In April 1842 was issued the official notice inviting cartoons in competition for a design from English history, Spenser, Shakespeare, or Milton, in commemoration of the rebuilding of Westminster Palace, just completed. Watts went ardently to work, and sent in, with no expectation of success, a cartoon of Caractacus led in triumph through Rome. To his extreme surprise he won one of the three premiums (300*l.*), the other winners being Edward Armitage [q. v. Suppl. I.] and C. W. Cope [q. v. Suppl. I.]. The cartoons were acquired by a speculator and sent on exhibition round the country; that by Watts fell into the hands of a dealer who cut it up; such fragments as have survived are now preserved in the collection of Lord Northbourne at Betteshanger Park. With the sum thus earned Watts determined to start on a journey to Italy. He travelled by diligence, then by water down the Saône and Rhône, and by steamboat from Marseilles to Leghorn, making good friends by the way; and so by Pisa to Florence, where he had promised himself a stay of two months. Absorbed in the enthusiasm of study, he had almost reached the end of his time when he was reminded of an introduction he had brought but neglected to deliver to Lord Holland, then British minister at the court of Tuscany. He called and was welcomed. The rare natural dignity, simplicity, and charm of presence and person which at all times distinguished him won him the warm regard and affection both of Lord and Lady Holland almost from his first visit. They invited him to stay with them for a few days in the house tenanted by the legation, the Casa Feroni (now Palazzo Amerighi) in the Via dei Serragli, Borgo San Frediano. In the result he lived as their guest for the next four years, partly at the Casa Feroni, partly at the old Medicean villa of Careggi without the walls. Studios

in both houses—at the Villa Careggi a vast one—were arranged for him. Nothing was more characteristic of the man than his quietly ascetic way of living in the midst of luxury and the unshaken industry which never let itself be seduced by social attention or flattery. He worked hard during these Florence years, always with high ambitions though always with a modest estimate of himself. He began with portraits of Lord and Lady Holland, of which the former was afterwards nearly destroyed by fire. He also painted the grand duke of Lucca, Countess Walewska, and Princess Mathilde Bonaparte. In the evenings he drew pencil portraits of many interesting guests and friends. He decorated the courtyard of the Casa Feroni with frescoes, which have since disappeared under whitewash. At the Villa Careggi there is still preserved a fresco painted by him of the scene following the death of Lorenzo de' Medici. In the great studio at the villa he designed and began to execute many vast canvases inspired by Italian literature and legend. Among these was the subject from Boccaccio's tale of 'Anastasio degl' Onesti,' afterwards carried out on a huge scale in his studio in Charles Street; Dante's 'Paolo and Francesca,' in its final form perhaps the noblest extant rendering of the theme in painting; the Fata Morgana from Boiardo; and the scene of Buondelmonti riding under the portico on the day that saw the beginning of the great feud. He practised modelling also, and an alabaster Medusa of the time is still preserved. He paid visits with Lord and Lady Holland to their villa at Naples and to Rome, where he learned to prize the Sistine ceiling of Michelangelo as the highest achievement of human art after the marbles of the Parthenon. After 1845 the Hollands (no longer at the legation) lived much at Naples, Watts staying on by himself at Careggi, and receiving sympathetic attentions, such as at all times he needed and attracted, from Lady Duff Gordon and her two daughters, Georgiana and Alice, who remained his staunch friends to the end. In 1847 the Westminster Palace commissioners invited a new competition for an historical painting, and Watts began to prepare with immense pains preliminary studies for a great design of Alfred urging his countrymen to fight the Danes by sea.

In April of this year he sailed from Loughorn to London, and brought with him several huge canvases, intending to finish them in England and then return to Italy. But destiny decided otherwise, and the

remainder of his life, except for an occasional trip abroad of a few weeks or months, was spent in England. The princely amateur Mr. R. S. Holford, whose acquaintance he had made shortly before leaving Careggi, offered him a vacant room in Dorchester House as a temporary studio. While working here he lodged at 48 Cambridge Street. In the Westminster Hall competition he won one of the three first premiums of 500*l.*, Frederick Richard Pickersgill [q. v. Suppl. I] and Edward Armitage [q. v. Suppl. I] carrying off the others. The commissioners desiring to purchase Watts's work, he offered it for the nominal price of 200*l.*, and it was placed in one of the committee-rooms of the House of Commons. At Dorchester House Watts painted 'Life's Illusions' and 'Time and Oblivion,' the two of his allegorical designs with which to the end he remained least dissatisfied. John Ruskin, with whom Watts had made friends after his return from Italy, for a while had 'Time and Oblivion' in his house, but presently found in it not enough minute imitation of natural detail. He afterwards bought a picture by Watts of 'Saint Michael contending with Satan for the body of Moses.' For the Duff Gordon ladies Watts at this time painted a portrait of Louisa, Marchioness of Waterford, for whose gifts of mind and person and powers as an amateur artist he conceived the strongest admiration. Lord and Lady Holland having by this time (1847-8) come back to England, Watts resumed his intimacy with them, and painted decorations on some of the ceilings at Holland House, as well as a new full-length portrait of the lady. About the same time he painted portraits of Guizot and Panizzi. Pencil designs of nearly the same date were 'The Temptation of Eve' and 'Satan calling up his Legions.' Meanwhile he was cherishing a great dream, which has been aptly called 'the ambition of half his life and the regret of the other half.' This was for a vast comprehensive sequence of emblematic and decorative paintings illustrating the cosmic evolution of the world and of human civilisation. 'The House of Life' was the name which, looking back on the scheme in retrospect, he would have given it. But much as his enthusiastic projects for monumental works of painting impressed the circle of his immediate friends, they left cold the public powers who dispose of funds and wall-spaces, and scope and opportunity for their realisation were seldom granted him. Of this particular scheme only a few

detached episodes were destined later to come into being, painted as separate pictures and on a different scale from his first conception. London life, the London climate, and the difficulty of even earning a livelihood by the kind of work he longed to do, depressed his never robust health. He planned a travel in Greece with Mr. Ionides in 1848, but gave it up in consequence of the disturbed state of Europe. By this time he had moved to a large studio at 30 Charles Street, Berkeley Square. Here he became a member of the distinguished circle, including Robert Morier, Chichester Fortescue, James Spedding, John Ruskin, Henry Layard, and William Harcourt, which met twice a week for evening conversation at Morier's rooms, 49 New Bond Street, and formed the nucleus of the Cosmopolitan Club. When in September 1853 Morier went abroad, and about the same time Watts gave up the Charles Street studio, the club established itself there, and with one short interruption held its meetings in the same place, with the great Boccaccio picture still hanging on the walls, until 1902, when the house was vacated and the picture removed to the great hall at the Tate Gallery.

A new friend of Watts about 1850-1 was the poet Aubrey de Vere [q. v. Suppl. II], a cousin of his early friends the Spring Rices and brother of Sir Vere de Vere, to whom the painter about this date paid a visit at Curragh Chase. He had always been interested in Ireland, and had previously painted from imagination a picture of an Irish eviction. Flying visits of this nature often proved tonic for his health, which in all these years was very frail. It was about this time that he conceived the scheme of a series of portraits of the distinguished men of his time to be ultimately presented to the nation, and began with Lord John Russell. Additions were made to the series at intervals until almost the year of his death, and the greater part of them have now found their home in the National Portrait Gallery. About the same time he was induced to admit a young gentleman from Yorkshire, Roddam Spencer Stanhope, to work in his studio; but he did not believe in the direct teaching of art to a pupil by a master, only in the exercise of a general stimulus and example. A fresh acquaintance which in 1850 had a decisive influence on his life was that with Miss Virginia Pattle, soon afterwards to become Lady Somers, the most beautiful and fascinating of the seven remarkable daughters

of James Pattle, of the East India Company's service. She was then living with her brother-in-law and sister, Mr. and Mrs. Henry Thoby Prinsep [q. v.]. The whole family became his devoted and admiring friends; their features are commemorated in very many paintings and drawings by his hand. The Prinseps were looking for a new home, and Watts found them one in Little Holland House, Kensington, a rather romantic, rambling combination of two old houses in a spacious garden, and with much of a country aspect, in the south-west corner of Holland Park. In this home they invited Watts to join them, and he was domesticated there for the next five-and-twenty years; retaining also for the first year or two the studio in Charles Street. In this circle he first received the name 'Signor,' by which his nearer friends always afterwards spoke of and to him, as something less formal than a surname and less familiar than a Christian name. Meantime he was low in health and spirits; and the mood found its expression in pictures such as 'Found Drowned,' 'Under a Dry Arch,' 'The Seamstress.' In 1850 he exhibited a picture of 'The Good Samaritan.' Through his friend Lord Elcho he asked for leave to decorate the great hall of Euston Station with monumental paintings, if the company would pay for scaffolding and colours. The offer was declined. He accepted, under protest as to the conditions, an official commission, consequent on his success in the 1847 competition, to paint one of a series of twelve wall-paintings by different hands in a cramped corridor of Westminster Palace, and chose for his subject the 'Triumph of the Red Cross Knight' from Spenser. These paintings are now dilapidated and covered up. In 1853 he went for a month's trip to Venice with R. S. Stanhope, and, making his first intimate acquaintance with Venetian art, thought he found in the work of Titian and his contemporaries a pictorial expression of exactly those qualities in flesh and drapery the rendering of which in marble had from the first appealed to him above all things in the sculptures of the Parthenon. His life-long technical preoccupation was the attainment of something like these same Phidias and Titianic qualities in his own work. In the same year he obtained the best chance of his life for a large decorative work of the kind he loved. For the north wall of the newly finished hall of Lincoln's Inn he offered to paint in fresco a great subject which

he called 'Justice—a Hemicycle of Lawgivers.' The offer was accepted. The work, which could only be done during law vacations, took him six years to finish, after many delays due to weak health and absences abroad. Paralysing attacks of nervous headache and prostration continued to be frequent. It may be doubted if the physical atmosphere of Little Holland House was good for him. But its social atmosphere—largely of his own creation—was entirely congenial. He lived the life of a recluse so far as concerned outside society, and never broke his ascetic habits of early rising and day-long industry. But everything that was gifted, amiable, or admirable in the life of Victorian England seemed naturally drawn towards him, and came to seek him in the Kensington studio and garden. His chief time for receiving friends and visitors other than sitters (and these included practically all the distinguished men and beautiful women of his day) was on Sunday afternoons and evenings. A new and inspiring friend and sitter at this time was Mrs. Nassau Senior, of whom he painted one of his best portraits, exhibiting it by way of experiment under a pseudonym. He spent some months of the winter 1855-6 in Paris, where he had sittings from Thiers, Prince Jerome Buonaparte, and Princess Lieven among others. About this time he also undertook fresco work for Lord Somers at 7 Carlton House Terrace.

In 1856-7 Watts ventured upon a more extended travel than usual. His old friend (Sir) Charles Newton [q. v. Suppl. I], the archaeologist, had for some years been British consul at Mitylene and had often pressed him to go out there for a visit. Now at length, in the autumn of 1856, when the Crimean war was over and Lord Stratford de Redcliffe had obtained the firmans enabling Newton to begin his long-desired task of excavation at Budrum, the site of the ancient Halicarnassus, Watts could not resist his friend's summons. He went out on H.M.S. Gorgon, accompanied by Valentine Prinsep [q. v. Suppl. II], the youngest son of his friends at Little Holland House, and stayed seven months, partly watching the excavations with Newton, partly on a visit to Lord Stratford de Redcliffe at Constantinople, where he painted the portrait of the ambassador now in the National Portrait Gallery. His brush was never idle, and he took in impressions of landscape of which the picture 'The Island of Cos' was a chief result. Returning

in June 1857, he resumed work on the Lincoln's Inn fresco. During this summer Tennyson was a visitor at Little Holland House, and Watts painted the first of several portraits of him. In this year also Rossetti, with whom Watts was already on friendly terms, brought to him for the first time his young disciple Burne-Jones, whose genius the elder master with characteristic generosity recognised and with whom he maintained to the end a cordial friendship. In 1859 he painted the portrait of Gladstone now in the National Portrait Gallery. In the same year the Lincoln's Inn fresco was completed amidst general congratulations. Watts had in the meanwhile continued his fresco work for Lord Somers in London, and had undertaken new work of the same kind for Lord Lansdowne at Bowood, where his subjects were 'Coriolanus' and 'Achilles parted from Briseis.' Among his well-known pictures begun in these years were 'The Genius of Greek Poetry,' 'Time, Death, and Judgment,' 'Esau,' 'Chaos' (from the original 'House of Life' scheme), and 'Sir Galahad.'

To escape the fogs and glooms of London, Watts spent several winters before and after 1860 at Sandown House, Esher, the home of a sister of Thoby Prinsep. Here he lived in the intimacy of the Orleans princes, then at Claremont, and of Sir Alexander and Lady (Lucy) Duff Gordon and their circle, including George Meredith [q. v. Suppl. II]. He was a skilled rider, and gained health hunting with the Old Surrey foxhounds and the Duc d'Aumale's harriers on his favourite thoroughbred mare Undine. He took an eager interest and such share as his strength enabled him in the volunteer movement of the time. In the following years he formed a new and affectionate intimacy with Frederic Leighton, who in 1866 built the well-known house and studio in Holland Road, almost adjoining the Little Holland House garden. Another valued addition to the circle was Joachim the musician; and yet another, Sir John Herschel the astronomer: Watts's portraits of these friends are among his best work. John Lothrop Motley, then American minister in England, was a welcome sitter about this time. Through the initiative of Dean Milman, Watts was chosen to design figures of St. Matthew and St. John to be done in mosaic in St. Paul's: the dean's further wish that he should be charged with a whole scheme of interior decoration for the cathedral failed to take effect. Portraits of Lord Shrewsbury,

Lord Lothian, and the three Talbot sisters (of whom one was Lady Lothian) led to visits at Blickling and Ingestre. The incurable illness under which Lord Lothian was suffering suggested the motive of the painter's 'Love and Death,' the most popular and perhaps the finest of his symbolic designs. Of this subject, as of so many others, Watts painted in the ensuing years several versions varying in scale and handling. New sitters, who soon became admiring friends and buyers, continued to come about him: among them Sir William Bowman the oculist in 1863, and Mr. Charles Rickards of Manchester in 1865. The intelligent sympathy with his aims and enthusiasm for his work shown by the last-named friend was to the end of his life one of the artist's most valued encouragements. Meantime a change, sudden and of brief duration, had passed over his life. Miss Ellen Terry, then in the radiance of her early girlhood, was brought into the circle. A marriage, foredoomed to failure, was arranged between her and the recluse, half-invalid painter nearly thirty years her senior. This was in February 1864; in June of the next year they parted by consent, and in 1877 Watts sought and obtained a divorce.

To give a fixed date to any work of Watts is apt to be misleading, since it was his habit to paint upon a single picture, or upon variations and replicas of a single design, through many successive years. The decade 1860-70 saw the inception of most, and the completion of some, of the works in painting and sculpture by which he remains best known to the world. Such were in painting 'The Court of Death'; a series of three pictures on the story of Eve, and another of three on the story of Cain, each charged with a weight of brooding ethical and symbolic suggestion; 'The Return of the Dove'; the landscape 'Carrara Mountains'; with the classical subjects of 'Ariadne in Naxos,' 'The Childhood of Zeus,' 'The Judgment of Paris,' 'Daphne,' 'Thetis,' 'Diana and Endymion,' 'Orpheus and Eurydice,' and the so-called 'Wife of Pygmalion,' which was the interpretation in paint of a Greek bust in the Chantrey collection at Oxford. To these years also belong some of his finest female portraits, e.g. those of Lady Margaret Beaumont, Lady Bath, Mrs. Percy Wyndham, and Miss Edith Villiers, afterwards Countess of Lytton. From the same or the next following period date many of his portraits of

celebrities now in the National Portrait Gallery, including those of Rossetti, Swinburne, Burne-Jones, Robert Lowe, Lord Aberdare, Lord Lawrence, Thomas Carlyle, and John Stuart Mill—the latter painted just before the philosopher's death in 1873. From this time also dates the devotion of a large part of the artist's time to works of sculpture. First came the mythological bust of Clytie struggling out of her flower-calyx; then an effigy of Mr. Thomas Owen for Condoover church; then one of Bishop Lonsdale for Lichfield Cathedral; and later again a monument to Lord Lothian for Blickling. For his work as a sculptor Watts built himself a new studio in the Little Holland House garden. Finding that the Prinseps' lease of the place would expire in 1871, he tried unsuccessfully to secure a ten years' extension. Lord Holland had died in 1869, and his widow was now urged to sell this corner of the estate for the benefit of the rest. The tenancy was thenceforth only from year to year, and Watts foresaw with dismay that he would have to change his home and place of work. He bought some acres in the Isle of Wight adjoining Tennyson's property of Farringford, with intent to build there a house that should be for the Prinseps a permanent and for himself an occasional home. To provide the means for this and also for his own accommodation in London he forced himself to the distasteful task of miscellaneous portrait-painting. At the same time he continued to labour at the Condoover and Blickling monuments and also at the statue of the first Lord Holland, done in conjunction with Edgar Boehm, which now stands behind the fountain facing the street from Holland Park. In 1870 the idea of a great equestrian statue for the Duke of Westminster of his ancestor Hugh Lupus, Warden of the Marches, was first mooted and the sketch begun. In the same year he painted a version of the 'Denunciation of Cain,' the second subject of the symbolic trilogy above mentioned, as his diploma picture for the Royal Academy. Without submitting his name as a candidate he had been elected an associate of that body in 1867 and a full member immediately afterwards. Four years earlier, as a witness before the parliamentary commission of 1863, he had made extremely candid comments on what he thought the Academy's errors and shortcomings: so that the honour now done him was an act of some generosity.

In 1872 Watts began to build The Briary at Freshwater, and in London two

years later a new Little Holland House in Melbury Road, not two hundred yards from the old. The Prinseps occupied The Briary in the spring of 1874, Watts remaining at the old Little Holland House till August 1875. In the meantime he had painted one of his best allegorical pictures, 'The Spirit of Christianity,' as well as an official portrait of the Prince of Wales. After spending most of the winter at Freshwater he achieved the trying labour of shifting the accumulations of his life's work from one house to the other, and got settled in Melbury road by February 1876. Here he received in the following years many friendly services from his neighbours Mr. and Mrs. Russell Barrington: services which the lady has fully recorded in the volume cited at foot of this article. In 1877 he suffered a great loss by the death of Mrs. Nassau Senior. In the same year his public reputation was much enhanced by the first exhibition at the newly opened Grosvenor Gallery, to which he sent a large version of 'Love and Death' and three of his finest portraits. In this and subsequent exhibitions at the same place, and afterwards at the New Gallery, his contributions were more effectively seen than on the walls of the Royal Academy, where work of more popular aim seemed to crowd them out of sight. Every year confirmed his conviction that art should have a mission beyond the pleasure of the eye, and that the artist should strive to benefit and uplift his fellow-men by appealing through their visual sense to their hearts and consciences. Pictures of symbolic and ethical significance became more and more the main effort of his life, his purpose being in the end to offer what he thought the best of them to the nation. At the same time portraits, principally of sitters chosen by himself with the same object, continued to occupy him. He also gave much of his time and strength to a colossal equestrian statue which he called 'Physical Energy.' This was a variation upon his design of the original Hugh Lupus monument for the Duke of Westminster, so carried out as to gain a more abstract and universal significance.

In 1878 Thoby Prinsep died, and his widow moved to a house at Brighton, where a studio was arranged for Watts's occasional use, The Briary being given up. In 1880 Mr. Rickards's entire collection of pictures by Watts, fifty-six in number, was exhibited at the Manchester Institution, and made a great impression. In 1881 he

was persuaded to publish some of his thoughts on art in the 'Nineteenth Century,' to which he continued afterwards to be an occasional contributor. Other friends, particularly Lady Marian Alford [q. v. Suppl. I] and her circle, engaged his active interest in the work of the School of Needlework: an interest which was afterwards extended to the Home Arts and Industries Association and the Arts and Crafts Guild. To the working studios which formed part of the new Little Holland House a separate exhibition studio was in 1881 attached, to which the public were admitted on Saturday and Sunday afternoons. A winter exhibition of two hundred of his pictures at the Grosvenor Gallery (1881-2) further increased his reputation with the general public. The Universities of Oxford and Cambridge having each proposed to confer upon him its honorary degree, he at first wished to decline these honours, but was ultimately persuaded to accept them (1882). The exhibition of some of his pictures at Paris moved to enthusiasm a young American lady, Miss Mead (afterwards Mrs. Edwin Abbey), whose energy organised in 1885 a display of his work in New York, thus spreading his fame to the western hemisphere. In 1885 he was offered a baronetcy by Gladstone, but declined it. His perfectly sincere diffidence as to the ultimate value of his work (though not as to the rightness of his aims) made him at all times shrink from official honours or public praise lest posterity should think they had been ill bestowed. In 1886 he learned officially that his proposal ultimately to present to the nation both a series of symbolic pictures and a series of contemporary portraits would be warmly welcomed. But despite these evidences of recognition, and despite the general honour and affection which surrounded him, the loneliness of his home and the weakness of his health, together with his ever-present sense of the gulf between his ideals and his achievement, caused him frequent depression.

In 1886 a new happiness came into his life through his marriage with a friend and disciple of some years' standing, Miss Mary Fraser Tytler. Helped by her wise tendance and devoted companionship, he lived on to a patriarchal age, through eighteen years more of fruitful industry, only interrupted by occasional illness and only darkened by the successive deaths of nearly all the friends of his early and middle life. The summers were spent

regularly at the new Little Holland House; the first winter and spring in Egypt, with rests at Malta, Constantinople, and Athens; the next (1887-8) at Malta, where his work was interrupted by illness, and at Mentone; the third (1890-1) at Monkshatch on the Hog's Back, the home of his friends Mr. and Mrs. Andrew Hichens. The climate here specially suiting him, he decided to acquire and build on a picturesque wooded site near by. The house, called Limmerslease, was finished in the summer of 1891. Thenceforward his winters were regularly spent there, and as time went on a great part of his summers also. In 1894 he declined a second offer of a baronetcy from Gladstone. In 1895, as the new building for the National Portrait Gallery was approaching completion, he arranged to present to it fifteen paintings and two drawings of distinguished contemporaries; the number of his works there has since doubled. In 1897 his eightieth birthday was celebrated by an exhibition of his collected works at the New Gallery and the presentation of a widely signed address of congratulation. In the same year he made to the National Gallery of British Art a gift of some twenty of his chief symbolic and allegoric paintings. He published a proposal to commemorate the jubilee of Queen Victoria by a monument to the obscure and quickly forgotten doers of heroic deeds in daily civic life. The project hung fire, but he himself did something towards realising it by presenting to the public, in what is known as the Postmen's Park at St. Botolph's, Aldersgate, a shelter or covered corridor where inscriptions recording such deeds should be put up: this was completed and opened in 1900. He was much interested in the character and career of Cecil Rhodes [q. v. Suppl. II], and in 1897 began a portrait of him which remains unfinished. In 1898 he began at Limmerslease a labour of love in the shape of a monumental statue of Tennyson for Lincoln. A strong new interest in his life was the school of decorative terra-cotta work successfully started by Mrs. Watts in the village of Compton, close beside their home. In 1899 he made a summer trip to Inverness-shire—his first visit to Scotland—and brought back pictures of Scottish landscape marked by the same qualities of style, breadth, and grave splendour of colour and atmospheric effect as his earlier impressions of Asia Minor or the Bay of Naples or the Carrara Mountains or the Riviera. In 1902 the

Order of Merit was instituted by King Edward VII. Watts was named one of the original twelve members, and accepted without demur the proffered honour, the only one he had so accepted in his life. In the same year he consented to a suggestion of Lord Grey that his equestrian statue of 'Physical Energy,' at which he had laboured for many years but which was not yet finished to his mind, should be cast in bronze for South Africa as a memorial to Rhodes's achievement as a pioneer of empire. Another cast has since the artist's death been placed in Lancaster Walk, Kensington Gardens. In 1903 he decided to give up Little Holland House and make Limmerslease his only home, and as a preliminary step built a gallery there a furlong from his house, to receive the pictures remaining on his hands; this was opened to the public in April 1904, and has since been much extended and enriched.

All this while there had been no falling-off in Watts's industry as a painter, and little in his power of hand. To the last fifteen or twenty years of his life belong such symbolic paintings as 'Sic transit,' 'Love Triumphant,' 'For he had Great Possessions,' 'Industry and Greed,' 'Faith, Hope and Charity,' 'The Slumber of the Ages,' 'The Sower of the Systems,' and such portraits as those of George Meredith, Lord Roberts, Mr. Gerald Balfour, Mr. Walter Crane, and Mr. Charles Booth, with others of himself and of Tennyson. The last portrait of himself, an experiment in the tempera medium, was painted in March 1904. During this spring he had several attacks of illness, but none that seemed alarming, till one day in early June he caught a chill working in the London garden studio in an east wind; he lacked strength for resistance, and died three weeks later, on 1 July 1904, in his eighty-eighth year. He was buried at Compton, near the mortuary chapel built there from his wife's designs.

The number of paintings left by Watts is computed at something like eight hundred, so that not a tithe of them has been mentioned above. Besides the twenty-five which are in the Tate Gallery, the thirty-six in the National Portrait Gallery, and a large number at Limmerslease, others have through the generosity of the artist found homes in most of the important public galleries of the United Kingdom and the colonies; the rest remain scattered in private hands.

To his contemporaries Watts set a great

example by unremitting industry and lofty purpose, by sweetness, dignity, and generosity of mind and character, and by the absolute devotion of all his powers to the benefit of his race and country as he conceived it. Other English artists before him who had thought nobly of their art and its mission, such as James Barry [q. v.] and Benjamin Robert Haydon [q. v.], had been deluded by pride and vanity into crediting themselves with gifts and aptitudes which they did not possess. Watts was beyond measure both generous in his estimate of other men's work and modest in his estimate of his own. A sense of failure pursued him always, yet never embittered him nor deterred him from striving after what he conceived to be the highest. 'I would have liked,' he said, 'to do for modern thought what Michelangelo did for theological thought.' But even to the genius of Michelangelo his achievement was possible only because of the great and unbroken collective traditions, both technical and spiritual, which he inherited. In the modern world no such tradition exists, and Watts was compelled to embody, by technical methods of his own devising, not the consenting thoughts of whole generations, but only his own private thoughts, on human life and destiny. His conceptions were as a rule so sane, so simple, so broad and general in their significance, that the painted symbols in which they are expressed present no ambiguity and can be read without an effort, appealing happily and harmoniously to the visual emotions before making their further appeal to the moral emotions and human sympathies. They vary greatly in power of vision and presentment, but hardly ever lack rhythmical flow and beauty, as well as originality, of composition, or richness of inventive and suggestive colour. The best of them, such as 'Love and Death,' 'Love and Life,' 'Love Triumphant,' 'The Spirit of Christianity,' and the Eve trilogy, seem never likely to be regarded as other than masterpieces of the painter's art. The same is true of many of his purely poetic compositions, whether from the classics or from later romantic literature, such as 'Diana and Endymion,' 'Orpheus and Eurydice' (especially in the first version), and 'Fata Morgana.' Where various versions of the same subject on different scales exist, it is generally the smaller rather than the larger or monumental version which is technically the most satisfying and the most directly handled. Watts might easily

have been a master of brilliant and showily effective technique had he chosen. Some of his earlier work shows a remarkable aptitude that way; but he deliberately checked it, and laboured all his life, humbly and experimentally, to emulate the higher and subtler qualities which roused him to enthusiasm in Attic sculpture and Venetian painting. The result is generally a certain reticent and tentative method of handling, which does not, however, exclude either splendour of colouring or richness and vitality of surface. Something of the same reticence and tentativeness, the same undemonstrative brushwork, with an earnest and often highly successful imaginative endeavour to bring to the surface the inward and spiritual character of his sitters, marks the whole range of his portraits; at least of his male portraits; sometimes in those of women, as of Mrs. Cavendish Bentinck and her children, Lady Margaret Beaumont, Mrs. Nassau Senior, Mrs. Percy Wyndham, he let himself go, and produced effects of splendid opulence and power. The Victorian age was fortunate in having an artist of so fine a strain to interpret and record the beauty and graciousness of its best women and the breeding and intellect and distinction of its best men.

In person Watts was of middle height and rather slenderly made, the frame in later life somewhat bowed, but to the end suggesting the power of tenacious activity. The face was long, the features finely cut, the expression thoughtful and benign. His hair was brown, with a full moustache drooping into the beard; in later years it turned grey almost to whiteness and the beard was worn shorter. In and after middle age, with a small velvet skull-cap worn on the back of his head, he bore a remarkable resemblance to the portraits of Titian. There are many portraits of him, mostly by his own hand: one of the best is that which he painted in middle life for Sir William Bowman and is now in the Tate Gallery. He had a leisurely fulness and pensiveness in his way of speaking, and a beautiful simple courtesy and geniality of manner.

S. C.

WATTS, HENRY EDWARD (1826-1904), author, born at Calcutta on 15 Oct. 1826, was son of Henry Cecil Watts, head clerk in the police office at Calcutta, by his wife Emily Weldon. He was educated at a private school at Greenwich, and later at Exeter grammar school, where he became head-boy. Plans of proceeding to Exeter College, Oxford, or of training for the Honourable East India Company's Service came to nothing. At the age of twenty Watts returned to Calcutta, whence, after working as a journalist for some years, he went to Australia in search of an elder brother who had gone to the gold-diggings and was never heard of again. After an unsuccessful venture in mining, Watts joined the staff of the 'Melbourne Argus,' of which paper he became editor in 1859. On his return to England he was attached to a short-lived liberal newspaper at York, where he contracted small-pox, a disease of which he bore marked traces in after-life. Later he removed to London, and about 1868 joined the 'Standard,' acting as leader-writer and sub-editor in the colonial and literary departments. At this period he was also home correspondent for the 'Melbourne Argus.' He occupied rooms in Pall Mall before settling at 52 Bedford Gardens, Camden Hill, where he died of cancer on 7 Nov. 1904. He was unmarried. A contributor to the 'Westminster Review,' the 'Encyclopædia Britannica,' 'Blackwood's,' 'Fraser's,' the 'Saturday Review,' and the 'St. James's Gazette,' he is best remembered for his translation of 'Don Quixote' (1888; revised edit. 1895), originally begun in collaboration with A. J. Duffield [q. v. Suppl. I]. The first edition contained 'a new life of Cervantes,' which was corrected, enlarged, and issued separately in 1895. Watts also wrote a biographical sketch of Cervantes for the 'Great Writers' series in 1891, an essay on Quevedo for an English edition of 'Pablo de Segovia' (1892), illustrated by Daniel Vierge, and 'Spain' (1893) for the 'Story of the Nations' series.

Watts had no linguistic gifts, and only once travelled in Spain, when he went with his friend, Carlisle Macartney, for the purpose of visiting places associated with Cervantes or with 'Don Quixote'; yet his workmanlike knowledge of Spanish, his literary taste, and fluent English style enabled him to produce a well-annotated

translation and to make a marked advance on the eighteenth-century versions which he condemned. His life of Cervantes is less satisfactory: apart from recent crucial discoveries, of which he was ignorant, Watts's work is disfigured by an extravagant hero-worship. A man of violent prejudices, Watts allowed his personal likings and antipathies to disturb his literary judgments. Though harsh in speech and brusque in manner, he was not unpopular at the Savile Club, London, of which he was an original member and an habitual frequenter.

[Private information.]

J. F.-K.

WATTS, JOHN (1861-1902), jockey, born at Stockbridge, Hampshire, on 9 May 1861, one of a family of ten, was son of Thomas Watts. In due course he was apprenticed to Tom Cannon, then training at Houghton, near Stockbridge. In May 1876, when he weighed 6 stone, he rode at Salisbury his first winner, a horse called Aristocrat, belonging to his master, which dead-heated with Sir George Chetwynd's Sugar cane. The boy put on weight rapidly, and his riding opportunities while he held a jockey's licence were in consequence restricted. His abilities developed slowly, although he rode two other winners in 1876, eight in 1877, thirteen in 1878, eight in 1879, and nineteen in 1880.

In 1879 there began an association with Richard Marsh, then training at Lordship Farm, Newmarket, who became trainer for Edward VII when Prince of Wales. Marsh made Watts first jockey to the prince. Watts's first important success was gained in 1881, when he won the Cambridgeshire on the American horse Foxhall. Two years later he won the Oaks with Lord Rosebery's Bonny Jean, the first of four successes in that race.

After the death of Fred Archer in 1886 and the retirement of Tom Cannon, Watts was regarded as the leader of his profession, although, owing to the difficulty he experienced in keeping his weight down and his failure to obtain as many mounts as his chief rivals, he never occupied the first place in the list of winning jockeys. He was, however, second one year and third another. He rode nineteen classic winners. In the Derby he won on Merry Hampton (1887), on Sainfoin (1890), on Ladas (1894), and on the Prince of Wales's Persimmon (1896). The last-named horse defeated by a neck, after a prolonged tussle amid intense excitement, Mr. Leopold de Rothschild's St. Frusquin. In the Two Thousand Guineas

Watts won on Ladas (1894), and on Kirkconnel (1895); in the One Thousand on Miss Jummy (1886), Semolina (1889), Thais (1896), and Chelandry (1897); in the Oaks on Bonny Jean (1883), Miss Jummy (1886), Memoir (1890), and Mrs. Butterwick (1893); in the St. Leger on Ossian (1883), the Lambkin (1884), Memoir (1890), La Flèche (1892), and Persimmon (1896); and in the Ascot Cup on Morion, La Flèche, and Persimmon. His last winning mount in a 'classic' race was Lord Rosebery's Chelandry, who won the One Thousand Guineas in 1897. Watts gave up his jockey's licence in 1899, when his career in the saddle had extended over twenty-four years, and his winners numbered in all 1412. His most successful years were 1887, when he had 110 winning mounts, 1888 with 105 winners, 1891 with 114, and 1892 with 106 winners.

Watts, who acquired much of his skill from Tom Cannon, modelled his style on the 'old school' of which Fordham and Tom Cannon were masters. Nature had endowed Watts with the best of 'hands.' Perhaps he was seen to chief advantage on an inexperienced two-year-old, employing gentle persuasion with admirable effect, although he was equal to strenuous measures at need.

In 1900 Watts began to train racehorses at Newmarket. That season he only saddled one winner of a 100*l.* plate; but in 1901 he turned out seven winners of fifteen races worth 5557*l.*, and in 1902 four winners of five races valued at 1327*l.*, between March and July. On 19 July of that year he had a seizure at Sandown Park, and on the 29th of the same month died in the hospital on the course. He was buried in Newmarket cemetery. He was twice married: (1) in 1885 to Annie, daughter of Mrs. Lancaster of the Black Bear Hotel, Newmarket; and (2) in 1901 to Lutetia Annie, daughter of Francis Hammond of Portland House, Newmarket. His widow in 1911 married Kempton, son of Tom Cannon, formerly a successful jockey. Two of Watts's sons adopted their father's profession, and the eldest afterwards became a trainer at Newmarket.

A painting by Miss M. D. Hardy of Watts winning the Derby on Persimmon in 1896, and a photogravure of Watts on the same horse, with portraits of the King and Richard Marsh, are reproduced in A. E. T. Watson's 'King Edward VII as a Sportsman,' pp. 160-4. A caricature portrait by 'Lib' appeared in 'Vanity Fair' in 1887.

[Sportsman, 30 July 1902; Ruff's Guide to the Turf; Notes supplied by Mr. J. E. Watts; King Edward VII as a Sportsman, ed. A. E. T. Watson, 1911.] E. M.

WAUGH, BENJAMIN (1839-1908), philanthropist, born at Settle, Yorkshire, on 20 Feb. 1839, was the eldest son of James Waugh, by his wife Mary, daughter of John Harrison of Skipton. After education at a private school he went to business at fourteen. But in 1862 he entered Airedale College, Bradford, to be trained for the congregational ministry. He was congregational minister at Newbury from 1865 to 1866, at Greenwich from 1866 till 1885, and at New Southgate from 1885 till 1887, when he retired, to devote himself exclusively to philanthropic labours.

At Greenwich Waugh began to work in behalf of neglected and ill-treated children. In conjunction with John Macgregor ('Rob Roy') he founded a day institution for the care of vagrant boys, which they called the Wastepaper and Blacking Brigade; they arranged with two smack owners to employ the boys in deep-sea fisheries. The local magistrates acknowledged the usefulness of their plan and handed over to them first offenders instead of sending them to prison. Public appreciation of Waugh's work was shown by his election in 1870 for Greenwich to the London school board; he was re-elected in 1873, retiring on account of bad health in 1876, when he received a letter of regret from the education department and an illuminated address and a purse of 500 guineas from his fellow-members. He did good work on the board as first chairman of the books committee and as a champion of the cause of neglected children.

From 1874 to 1896 Waugh was editor of the 'Sunday Magazine,' having succeeded Dr. Thomas Guthrie [q. v.]. In 1873 he published a plea for the abolition of juvenile imprisonment, 'The Gaol-Cradle: who rocks it?'

After recovering his health in 1880 Waugh resumed his beneficent work, and in 1884 he assisted Miss Sarah Smith ('Hesba Stretton') [q. v. Suppl. II] in the establishment of the London Society for the Prevention of Cruelty to Children. In 1885 he collaborated with Cardinal Manning in an article in the 'Contemporary Review' entitled 'The Child of the English Savage,' describing the evils to be combated by his society. The society gradually gained support, and in 1888 was established by

Waugh's efforts upon a national non-sectarian basis, with a constitution approved by Manning, the Bishop of Bedford, and the chief rabbi. It was incorporated by royal charter in 1895 as the National Society for the Prevention of Cruelty to Children. Up to this date Waugh received no remuneration save a small salary for editing the society's organ, the 'Child's Guardian,' but from 1895 till 1905 he acted as paid director. His organising capacity, courage, and energy triumphed over obstacles. He was an admirable platform advocate, and his enthusiasm was tempered by candour and fairness. On legislation affecting children Waugh exerted much influence, chiefly with the aid of Samuel Smith, M.P. [q. v. Suppl. II]. He supported the agitation of William Thomas Stead in 1885, and caused to be inserted in the Criminal Law Amendment Act of that year a provision enabling young children's evidence to be taken in courts of law although they were too young to be sworn. To his effort was almost entirely due the important Act of 1889 for the prevention of cruelty to and better protection of children, which allowed a child to be taken from parents who grossly abused their power and to be entrusted to other relatives or friends or to an institution, whilst the parents were obliged to contribute to its maintenance. The Act recognised a civil right on the part of children to be fed, clothed, and properly treated. In accordance with Waugh's views, more stringent Acts followed in 1894, in 1904, and 1908, and all greatly improved the legal position of uncared-for and misused children.

Waugh's society worked in co-operation with the police by a system of local aid committees directed from the headquarters. Offending parents received warning before prosecution. Waugh was careful not to interfere unnecessarily with parental authority. Until 1891 his operations were hampered by want of funds, but subsequently the finances of the society prospered. In 1897 its administration was attacked in the press, but Waugh was amply vindicated by a commission of inquiry, consisting of Lord Herschell, Mr. Francis Buxton, and Mr. Victor Williamson. His disinterestedness was proved, and thenceforth the society's progress was unimpeded. Waugh resigned the active direction of the society in 1905, owing to failing health. He died at West-cliff-on-sea on 11 March 1908, and was buried in the Southend borough cemetery. He married in 1865 Lilian, daughter of Samuel Boothroyd of Southport. She

survived him with three sons and five daughters. His widow was granted a civil service pension of 70*l.* in 1909.

Besides the work mentioned, Waugh published: 1. 'The Children's Sunday Hour,' 1884; new edit. 1887. 2. 'W. T. Stead: a Life for the People,' 1885. 3. 'Hymns for Children,' 1892. 4. 'The Child of Nazareth,' 1906. He was a leading member of a well-known literary dining club, the Eclectic, which met monthly in the Cathedral Hotel, St. Paul's Churchyard.

A memorial of Waugh with medallion portrait is affixed to the wall of the offices of the N.S.P.C.C. in Leicester Square.

G. LEB G. N.

WAUGH, JAMES (1831-1905), trainer of racehorses, born at Jedburgh on 13 Dec. 1831, was son of Richard Waugh, a farmer there. Brought up on his father's farm, he became in 1851 private trainer of steeplechasers at Cessford Moor to a banker named Grainger. He frequently rode the horses in races. In 1855 he went to Jedburgh to train for Sir David Baird and Sir J. Boswell, and four years later succeeded Matthew Dawson [q. v. Suppl. I] in the training establishment at Gullane. Thence he soon removed to Ilsley, in Berkshire, where he became private trainer to Mr. Robinson, an Australian, for whom he won the Royal Hunt Cup at Ascot with Gratitude. In 1866, on Robinson's retirement from the turf, Waugh succeeded Matthew Dawson at Russley, on the Berks-Wilts border, where he was a successful private trainer for James Merry. He saddled Marksman, who ran second to Hermit in the Derby of 1867; Belladrum, second to Pretender in the Two Thousand Guineas in 1869; and Macgregor, who, in 1870, won the Two Thousand Guineas.

At the close of the season of 1870 Waugh left Russley for Kentford, Newmarket, whence he soon migrated to Naclo, on the Polish frontier, to train for Count Henckel. After two years at Naclo he spent seven years at Carlbürg, in Hungary, where he

trained winners of every big race in Austria-Hungary. In some of the events successes were scored several times. His horses also won many important prizes in Germany. Returning to Newmarket in 1880, he settled first at Middleton Cottage and then at Meynell House for the rest of his life. Several continental owners sent horses to be trained by him, among them Prince Tassilo Festetics, for whom he won the Grand Prize at Baden Baden, the German Derby, and other important races. From 1885 to 1890 he took charge of Mr. John Hammond's horses, including St. Gatien, who in 1884 dead-heated with Harvester in the Derby, and won the Cesarewitch, carrying 8st. 10lb., and Florence, winner of the Cambridgeshire (1884). For Mr. Hammond, Waugh won the Ascot Cup in 1885 with St. Gatien, the Ascot Stakes with Eurasian in 1887, and the Cambridgeshire with Laureate in 1889. Other patrons were the Chevalier Scheibler, Count Lehndorff, Count Kinsky, and Messrs. A. B. Carr, Deacon, J. S. Baird-Hay, Sir R. W. Jardine, Dobell, James Russel, D. J. Jardine, and Inglis, and Miss Graham. He trained The Rush to win the Chester Cup in 1896, and the Ascot Gold Vase in 1898; Piety the Manchester Cup in 1897; and Refractor the Royal Hunt Cup at Ascot in 1899.

A skilful and conscientious trainer, Waugh achieved some success as a breeder of race horses, and when at Newmarket bought and sold thoroughbreds for continental patrons and foreign governments. He was an excellent judge of a horse. In all his dealings he was the soul of honour. He was noted for his geniality and hospitality, and took an interest in cross-country sport.

He died at Newmarket, after some years of failing health, on 23 Oct. 1905, and was buried in the cemetery there. He married in 1854 Isabella (d. 1881), daughter of William Scott of Tomshielhaugh, South-dean. Of his large family, six sons adopted the father's calling.

[Notes supplied by Waugh's daughter, Janet, wife of Joseph Butters, the trainer; Sportsman, 24 Oct. 1905; From Gladiateur to Persimmon (H. Sydenham Dixon), p. 47; Ruff's Guide to the Turf.] E. M.

WEBB, ALFRED JOHN (1834-1908), Irish biographer, born in Dublin on 10 June 1834, was eldest son of Richard Davis Webb, a printer in Abbey Street, by his wife Hannah Waring of Waterford. He was of Quaker family, and his father was a

zealous worker in the anti-slavery movement and for social reform generally. In youth Alfred started a fund for the victims of the Irish famine of 1846-7. He was first sent to a day school kept by Quakers in Dublin, and later to Dr. Hodgson's High School, Manchester. On leaving this place he was apprenticed to his father's trade. About twenty he was sent to Australia, partly to benefit his health by change of climate, and partly for purposes of business. The business came to nothing, and he went off to the gold-fields. Recalled to England, he worked his passage home as a deck hand on a sailing vessel, although he had ample money for his journey (*Freeman's Journal*, 1 Aug. 1908). On his return to Ireland he resumed work in his father's printing office, becoming manager and proprietor. Interesting himself in Irish affairs, he was one of the earliest advocates of the home rule movement, which Isaac Butt [q. v.] inaugurated in 1870. He was a supporter of the united Irish party under Parnell, but left that leader in 1887. In 1890 he was returned as anti-Parnellite M.P. for West Waterford, and remained its representative until 1895. For many years he was one of the treasurers of the party funds. He died on 30 July 1908 near Hillswick in the Shetland Isles, while on a holiday. He was buried at the Quaker burial ground at Temple Hill, Blackwick, co. Dublin. He married Elizabeth, daughter of one of the Shackletons of Ballitorc. She predeceased him in 1906. He had no children.

Webb was an enthusiastic traveller. Indian politics occupied his attention, and he visited that country more than once—the last time in 1898, when he was president of the Indian National Congress. Much of his leisure was devoted to literature. His chief work was 'A Compendium of Irish Biography,' Dublin, 1877, which, inadequate as it is, is so far the best separate work of its kind in existence. He was a frequent contributor of travel sketches and political and general articles to the '*Freeman's Journal*,' the '*Irish Monthly*,' and the New York '*Nation*,' and also published '*The Opinions of some Protestants regarding their Irish Catholic Fellow-Countrymen*' (3rd edit. 1886); '*The Alleged Massacre of 1641*' (1887); and '*Thoughts in Retirement*.'

[*Freeman's Journal*, 1 Aug. 1908; *The Times*, 1 Aug. 1908; *Annual Register*, 1908, p. 132; *Brit. Mus. Cat.*; information from his sister, Miss Deborah Webb.]

D. J. O'D.

WEBB, ALLAN BECHER (1839-1907), dean of Salisbury and bishop in South Africa, born on 6 Oct. 1839, at Calcutta, was eldest son of Allan Webb, M.D., surgeon to the governor-general of India and professor of descriptive and surgical anatomy at the Calcutta Medical College. His mother was Emma, daughter of John Aubrey Danby.

Admitted to Rugby under Edward Meyrick Goulburn [q. v. Suppl. I] in October 1855, Webb in 1858 won a scholarship at Corpus Christi College, Oxford, and in 1860 obtained a first class in classical moderations. He graduated B.A. in 1862 with a second class in literæ humaniores, and proceeded M.A. in 1864 and D.D. in 1871. In 1863 he was elected to a fellowship at University College, and was ordained deacon, serving the curacy of St. Peter-in-the-East, Oxford. From 1864 to 1865 he was vice-principal of Cuddesdon College, under Edward King [q. v. Suppl. II]. He resigned his fellowship on his marriage in 1867, and accepted the rectory of Avon Dasset, near Leamington.

In 1870 he was nominated to succeed Dr. Twells as bishop of Bloemfontein, Orange Free State. His consecration gave rise to some controversy. Webb, supported by Robert Gray [q. v.], bishop of Cape Town, declined to take the oath of allegiance to the English primate, on the ground that it was opposed to the canons of the South African synod, but offered to take the oath of obedience to his metropolitan, the bishop of Cape Town. Archibald Campbell Tait [q. v.], archbishop of Canterbury, however, held such procedure to infringe the Jerusalem Act of 1841 (5 Vict. c. 6), which regulated the appointment to bishoprics within the British dominions (*Guardian*, 23 Nov. 1870). The act was not, however, in force in Scotland, and the primate finally allowed Webb to take the oath of canonical obedience to Bishop Gray and his successors in Inverness cathedral on 30 November 1870. Webb was in full accord with the high church views generally prevalent in the South African province; and he was active in promoting the work of sisterhoods, whether missionary, educational, or medical. His diocese extended over the Orange Free State, Basutoland, and Bechuanaland; and his youth and vigour stood him in good stead. In 1883 he succeeded Nathaniel James Merriman [q. v.] as bishop of Graham's Town. Here, too, he actively engaged in developing mission and educational work both for natives and Europeans, and in fostering

diocesan institutions like the college of St. Andrew and the sisterhood of the Resurrection. The chancel of the cathedral at Graham's Town, which was consecrated in 1893, stands as a permanent memorial of his episcopate, during which he did much to heal the schism that had rent the South African province since the Colenso controversy.

In 1898 Webb left South Africa after twenty-eight years' work. On his return home he was appointed provost of Inverness cathedral, and he also acted as assistant bishop in the diocese of Moray and Brechin. In 1901 he became dean of Salisbury in succession to George David Boyle [q. v. Suppl. II]. Webb was devoted to stately worship, and though never a fluent speaker was an impressive preacher at missions and retreats. He died on 12 June 1907 at the deanery, Salisbury, and was buried in the cathedral cloisters. In 1867 Webb married Eliza, daughter of Robert Barr Bourne, rector and patron of Donhead, St. Andrew. She survived him, with two sons.

There are in the possession of his son, Mr. A. Cyprian Bourne Webb, chancellor of the diocese of Salisbury, a crayon drawing by Frank Miles, done in 1878, and a portrait in oils, painted by Miss Agnes Walker in 1902; neither is a striking likeness. In his memory stained glass was placed in the great north window, and the screen was erected in the morning chapel at Salisbury cathedral.

In addition to sermons, Webb published the following devotional works: 1. 'The Priesthood of the Laity in the Body of Christ,' 1889. 2. 'The Life of Service before the Throne,' 1895. 3. 'The Unveiling of the Eternal Word,' 1897. 4. 'With Christ in Paradise,' 2nd edit. 1898.

[The Times, 13, 18 June 1907; Church Times, 14 June 1907; Guardian, 19 June 1907; Pelican Record, June 1907; Rugby School Register (1842-74), 1902; Farrer, Life of Robert Gray, 1876, ii. 509; Cuddesdon College (1854-1904), 1904; private information.] G. S. W.

WEBB, FRANCIS WILLIAM (1836-1906), civil engineer, born at Tixall rectory, Staffordshire, on 21 May 1836, was second son of William Webb, rector of Tixall. Showing at an early age a liking for mechanical pursuits, he became at fifteen a pupil of Francis Trevithick, then locomotive superintendent of the London and North Western railway. With that railway he was, save for an interval of five years, associated for life. When his pupilage ended he was engaged in the drawing-office;

in Feb. 1859 he became chief draughtsman, and from 1861 to 1866 he was works manager. After serving as manager of the Bolton Iron and Steel Company's works from 1866 to 1871, he became on 1 Oct. 1871 chief mechanical engineer and locomotive superintendent of the London and North Western railway. The post carried heavy responsibility. Not only is the company's system exceptionally extensive, but the locomotive superintendent had charge, in addition to his normal duties, of departments dealing with signals, permanent way, cranes, water-supply, and electrical work. For more than thirty years, during which the population of Crewe increased from 18,000 to 42,000, Webb, who was exceptionally energetic, self-reliant, and resourceful, was the autocratic ruler of the industrial colony there.

He was a prolific inventor and took out many patents for improvements in the design and construction of locomotives and other machinery, but his name is chiefly associated with the compound locomotive, the steel sleeper, the electric train-staff for working single-line railways, and the electrical working of points and signals.

Webb began work on the compound locomotive in 1878, by converting to the compound principle an old locomotive. This was worked for several years on the Ashby and Nuneaton branch, and in 1882 he put into service a three-cylinder compound engine of an entirely new type, named 'Experiment,' in which he used two outside high-pressure and one inside low-pressure cylinders, the high-pressure and low-pressure cylinders driving on separate axles. In 1884 he brought out the 'Dreadnought' class, with larger cylinders, and in 1889 the 'Teutonic' class, with cylinders of the same size as the 'Dreadnoughts' but larger driving-wheels and simplified low-pressure valve-gear. The 'Greater Britain' class of 1891 had still larger cylinders, and in 1897 Webb brought out the 'Black Prince' or 'Diamond Jubilee' class of compounds, which had two high-pressure and two low-pressure cylinders, all driving on one axle. He was a strong advocate of compounding, and he satisfied himself that by means of it he obtained, with substantial economy, the greater power called for by the steady increase in the weight of trains. The subject excited much controversy among engineers, and the question of the relative merits of simple and compound locomotives is not yet settled.

The town of Crewe owes much to his

public spirit. The Mechanics' Institution, of which he was president for many years, was an object of his special solicitude. The Cottage Hospital is due to his initiative, and of it he was a generous supporter. With Sir Richard Moon he prevailed upon the directors of the railway company to present to the town a public park. He served on the governing body of the town, and was elected mayor in Nov. 1886, being re-elected for a second term in the following year. During the first term of his mayoralty the 4000th locomotive was completed at Crewe, and the occasion was signalised by the presentation to him of the freedom of the borough. He was also created in 1886 an alderman of the borough; and was for some time magistrate for the county and an alderman of the county council. To him was due the formation of the engineer volunteer corps at Crewe, a reserve of the royal engineers, which rendered valuable service in the South African war.

He was elected an associate of the Institution of Civil Engineers on 23 May 1865, and became a member on 3 Dec. 1872. He was elected to the council of that society in May 1889, and became a vice-president in Nov. 1900. At the time of his retirement from the council in 1905 he was the senior vice-president. He bequeathed to the institution money for a prize for papers on railway machinery, and made a generous legacy to the benevolent fund of the society.

His contributions to its 'Proceedings' were four papers dealing with a 'Standard Engine-Shed' (lxxx. 258); 'Steel Permanent Way' (lxxxi. 299); 'Locomotive Fire-box Stays' (cl. 89), and 'Copper Locomotive-Boiler Tubes' (clv. 401). He was also a member of council of the Iron and Steel Institute, to which he presented a paper 'On the Endurance of Steel Rails' (*Journal*, 1886, 148). He was a life member of the Société des Ingénieurs civils de France.

He retired from the London and North Western railway in Dec. 1902, when the directors recorded their appreciation of his 'devoted and exceptional services.' After his retirement his health failed, and on 4 June 1906 he died at Bournemouth, where he was buried. He was unmarried.

By his will Webb left 10,000*l.* to found a nursing institution at Crewe, and the residue of his estate, amounting to 50,000*l.*, to found an orphanage for children of deceased employees of the London and North Western Railway Company. The

orphanage, which accommodates twenty boys and twenty girls, was opened on 18 Dec. 1911.

A bust of Webb, being a replica of a model made from life by Sir Henry B. Robertson of Corwen, is in the Cottage Hospital at Crewe. A second replica, as well as a portrait in oils by Hall Neale, is in the orphanage. Another portrait in oils, by Mr. Charles H. Charnock, a blacksmith employed at the Crewe works, is also in the Cottage Hospital.

[Minutes of Proc. Inst. Civ. Eng., clxvii. 373; The Times, 6 June 1906; Chronicle (Crewe), 29 Dec. 1902; Railway Mag., Feb. 1900; private information.] W. F. S.

WEBB, THOMAS EBENEZER (1821–1903), lawyer and man of letters, born at Portscatho, Cornwall, on 8 May 1821, was eldest of the twelve children of the Rev. Thomas Webb, who owned a small estate in Cornwall, by his wife Amelia, daughter of James Ryall, of an Irish family. After education at Kingswood College, Sheffield, where he was afterwards for a time an assistant master, he won a classical scholarship at Trinity College, Dublin, in 1845. He was moderator in metaphysics there in 1848, obtained vice-chancellor's prizes for English, Greek and Latin verse composition, and distinguished himself at the college historical society. He was always a brilliant talker and an eloquent speaker. Well read in English literature, he from an early age contributed verse and prose to the press and to 'Kottabos' and other magazines. In 1857 he took the degree of LL.D. at Dublin, was elected professor of moral philosophy at the university, and published 'The Intellectualism of Locke,' a brilliant but paradoxical attempt to show that Locke anticipated Kant's recognition of synthetic *a priori* propositions. His literary gifts were greater than his philosophical powers. But he was re-elected to his professorship in 1862, and next year was chosen fellow of Trinity College—a post which he enjoyed for the next eight years.

Meanwhile Webb was called to the Irish bar in 1861, and took silk in 1874. He was regius professor of laws at Trinity College from 1867 to 1887, and was also public orator from 1879 to 1887. In 1887 he withdrew from academic office to become county court judge for Donegal. He filled that position till his death. He was elected bencher of the King's Inns in 1899.

Apart from his professional duties Webb was keenly interested through life in politics

and literature. In 1868 he stood without success in the whig interest for the University of Dublin. But in 1880 he abandoned his old party, and was thenceforth a rigorous critic of liberal policy in Ireland. In a pamphlet on the Irish land question (1880) he denounced proposed concessions to the tenants as ruinous to freedom of contract, though he approved legislation enabling tenants to purchase their holdings. He was hostile to Gladstone's home rule scheme of 1886 (see his pamphlets 'Ipse Dixit on the Gladstonian Settlement of Ireland,' and 'The Irish Question: a Reply to Mr. Gladstone,' 1886). He regarded home rule as a step towards separation.

In 1880 Webb produced a verse translation of Goethe's 'Faust,' which is more faithful and poetical than the versions of his many rivals. In 1885 there followed 'The Veil of Isis,' essays on idealism which failed to establish his position as a philosopher. His latest years were largely devoted to formulating doubts of the received Shakespearean tradition. With characteristic love of paradox he claimed in 'The Mystery of William Shakespeare: a Summary of Evidence' (1902), to deprive Shakespeare of the authorship of his plays and poems. He was well acquainted with Shakespeare's text, but had small knowledge of Elizabethan literature and history.

Webb's favourite recreation was hunting, and he long followed the Ward and Kildare hounds. He died at his residence in Dublin, 5 Mount Street Crescent, on 10 Nov. 1903, and was buried in Mount Jerome cemetery. He married in 1849 Susan, daughter of Robert Gilbert of Baringlen, co. Wicklow; she survived him with three sons and a daughter.

[Private information; personal knowledge; The Irish Times, 11 Nov. 1903; The Times, 12 Nov. 1903; Athenæum, 14 Nov. 1903; Who's Who, 1903.] R. Y. T.

WEBBER, CHARLES EDMUND (1838–1904), major-general, royal engineers, born in Dublin on 5 Sept. 1838, was son of the Rev. T. Webber of Leekfield, co. Sligo. After education at private schools and at the Royal Military Academy at Woolwich, he was commissioned as lieutenant in the royal engineers on 20 April 1855. The exigencies of the Crimean war cut short his professional instruction at Chatham, and he was sent to the Belfast military district, being employed principally on the defences of Lough Swilly.

In September 1857 Webber was posted

to the 21st company of royal engineers at Chatham, which was ordered to join in India, during the Indian Mutiny campaign, the Central India field force, commanded by Major-general Sir Hugh Rose, afterwards Lord Strathnairn [q. v.]. Brigadier C. S. Stuart's brigade, to which Webber's company was attached, marched on Jhansi, which Sir Hugh Rose's brigade reached by another route. Webber was mentioned in despatches for his services on this march. He took part in the battle of the Betwa on 1 April and in the assault of Jhansi on the 3rd, when he led the ladder party at the Black Tower on the left up a loop-holed wall twenty-seven feet high. Webber saved the life of Lieutenant Dartnell of the 86th regiment, who, severely wounded, was first to enter the place with him. Although Sir Hugh Rose recommended both officers for brevet promotion, only Dartnell was rewarded. Webber took part in the operations attending the capture of Kunch (7 May), of Kalpi (23 May), and of Gwalior (19 June). A detachment of his company in his charge joined a flying column under Captain McMahon, 14th light dragoons, in Central India against Tantia Topi, Man Singh, and Firozshah, and he was mentioned in despatches. He continued in the field until April 1859. When the mutiny was suppressed he was employed in the public works department, first at Gwalior and afterwards at Allahabad, until he returned to England in May 1860. For his services in the Indian Mutiny campaign he received the medal with clasp for Central India.

After service in the Brighton sub-district until Oct. 1861 he was until 1866 assistant instructor in military surveying at Woolwich. He was promoted captain on 1 April 1862. During the latter part of the seven weeks' war in 1866 he was attached to the Prussian army in the field to report on the engineering operations and military telegraphs. Minor services on special missions abroad followed, with duty at the Curragh Camp in Ireland (1867-9). The 22nd company of royal engineers, of which he was in command at Chatham, was as a temporary expedient lent to the post office from 1869 to 1871 to assist in constructing and organising the telegraph service. In May 1870 Webber took the headquarters of the company to London, the rest being distributed about the country. In 1871 the 34th company was added to Webber's command and stationed at Inverness in Scotland. The total strength of the royal engineers at that

time employed under the post office was six officers and 153 non-commissioned officers and men. The mileage both over and under ground constructed and rebuilt in 1871 was over 1000 line miles and over 3200 wire miles.

Webber, who was promoted major on 5 July 1872, was director of telegraphs with the southern army in the autumn manœuvres of that year. The headquarters of the 34th company were then moved to Ipswich as the centre of the eastern division (lying east of a line between Lynn and Beachy Head) of the postal telegraphs. In 1874, at Webber's suggestion, the south of England was permanently assigned for the training and exercise of military telegraphists, five officers and 160 non-commissioned officers and men being employed by the post office there. The scheme proved of great value both to the army organisation and the general post office. While employed under the post office he with Colonel Sir Francis Bolton [q. v. Suppl. I] founded in 1871 the Society of Telegraph Engineers (now the Institution of Telegraph Engineers); he was treasurer and a member of council, and in 1882 was president.

Webber's reputation as an expert in all matters affecting military telegraphy was well established when in May 1879 he resumed active military service in the field. Accompanying Sir Garnet Wolseley to South Africa for the Zulu war, he became assistant adjutant and quartermaster-general on the staff of the inspector-general of the lines of communication of the Zulu field force. He was stationed at Landmann's Drift. He afterwards took part in the operations against Sekukuni in the Transvaal. He was mentioned in despatches for his services (27 Dec. 1879), and received the South African medal and clasp.

Promoted regimental lieutenant-colonel on 24 Jan. 1880, Webber on his return home was successively commanding royal engineer of the Cork district in Ireland (July 1880-Feb. 1881), of the Gosport sub-district of the Portsmouth command (Feb. 1881-July 1883), and of the home district (July 1883-Sept. 1884). Meanwhile he was at Paris in 1881 as British commissioner at the electrical exhibition, and as member of the International Electrical Congress.

In 1882 he accompanied Sir Garnet Wolseley as assistant adjutant and quartermaster-general in the Egyptian campaign, and was in charge of telegraphs. He was

present at the battle of Tel-el-Kebir, and was mentioned in despatches, being created a C.B., and receiving the Egyptian medal with clasp, the Khedive's bronze star, and the third class of the Mejidie. Webber, who was promoted to a brevet colonelcy on 24 Jan. 1884, went again to Egypt in September, and served throughout the Nile expedition under Lord Wolseley as assistant adjutant and quartermaster-general for telegraphs. He received another clasp to his Egyptian medal. Coming home in 1885, he retired with the honorary rank of major-general. Thenceforth Webber engaged in electrical pursuits in London. He was at first managing director, and later consulting electric adviser of the Anglo-American Brush Electric Light Corporation, and was thus associated with the early application of electric lighting in London and elsewhere. He was also consulting electric engineer of the City of London Pioneer Company and of the Chelsea Electric Supply Company. He died suddenly at Margate of angina pectoris on 23 Sept. 1904, and was buried at St. Margaret's, Lee, Kent.

Webber was a member of the Royal United Service Institution, of the Institution of Civil Engineers, an original member of the Société Internationale des Electriciens, and a fellow of the Society of Arts. Among many papers, chiefly on military and electrical subjects, were those on 'The Organisation of the Nation for Defence' (United Service Institution, 1903); 'Telegraph Tariffs' (Society of Arts, May 1884); and 'Telegraphs in the Nile Expedition' (Society of Telegraph Engineers).

Webber married: (1) at Brighton, on 28 May 1861, Alice Augusta Gertrude Hanbury Tracy (*d.* 25 Feb. 1877), daughter of Thomas Charles, second Lord Sudeley; (2) at Neuchâtel, Switzerland, on 23 Aug. 1877, Mrs. Sarah Elizabeth Stainbank, born Gunn (*d.* 1907). By his first wife he had three sons, and a daughter who died young. The eldest son, Major Raymond Sudeley Webber, was in the royal Welsh fusiliers.

[War Office Records; Royal Engineers' Records; Electrician, Engineering, and the Royal Engineers' Journal, 1904; The Times, 24 Sept. 1904; Porter's History of the Royal Engineers, 1891.] R. H. V.

WEBSTER, WENTWORTH (1829–1907), Basque scholar and folklorist, born at Uxbridge, Middlesex, in 1829, was eldest son of Charles Webster. Owing to delicate health he had no regular schooling, but he was a diligent boy with a retentive

memory, and was a well-informed student when he was admitted commoner of Lincoln College on 15 March 1849. He graduated B.A. in 1852, proceeding M.A. in 1855, and was ordained deacon in 1854 and priest in 1861. After serving as curate at Cloford, Somerset, 1854–8, he was ordered by his medical advisers to settle in the south of France. He lived for some time at Bagnères-de-Bigorre, Hautes-Pyrénées, and at Biarritz, Basses-Pyrénées, taking pupils, among them Henry Butler Clarke [*q. v.* Suppl. II]. An indefatigable walker, he became familiar with the Basque provinces on both sides of the Pyrénées, and with the Basques themselves, their language, traditions, and poetry. At the same time he grew well versed in French and Spanish, and in all the Pyrenean dialects.

From 1869 to 1881 he was Anglican chaplain at St. Jean-de-Luz, Basses-Pyrénées. In 1881 he settled at Sare, in a house which overlooked the valley of La Rhune. There he mainly devoted himself to study, writing on the Basques and also on church history. He contributed much on Basque and Spanish philology and antiquities to 'Bulletin de la Société des Sciences et des Arts de Bayonne,' 'Bulletin de la Société Ramond de Bagnères-de-Bigorre,' 'Revue de Linguistique,' and 'Bulletin de la Real Academia de la Historia de Madrid.' He was a corresponding member of the Royal Historical Society of Madrid. With all serious students of Basque, whether French, Spanish, English, or German, he corresponded and was generous in the distribution of his stores of information. He wrote many papers on church history and theology in the 'Anglican Church Magazine.' Gladstone awarded him a pension of 150*l.* from the civil list on 16 Jan. 1894. He died at Sare on 2 April 1907, in his seventy-ninth year, and was buried at St. Jean-de-Luz. He married on 17 Oct. 1866, at Camberwell, Surrey, Laura Thekla Knipping, a native of Cleve in Germany. There were four daughters and one son, Erwin Wentworth, fellow of Wadham College, Oxford.

Webster published: 1. 'Basque Legends, collected chiefly in the Labourd,' 1878; reprinted 1879; probably his best and most characteristic work; many of the legends were taken down in Basque from the recitation of people who knew no other language. 2. 'Spain,' London, 1882, a survey of the geography, ethnology, literature, and commerce of the country, founded mainly on information supplied by

Spanish friends of high position. 3. 'De Quelques Travaux sur le basque faits par des étrangers pendant les années 1892-4,' Bayonne, 1894. 4. 'Le Dictionnaire Latin-basque de Pierre d'Urte,' Bayonne, 1895. 5. 'Les Pastorales basques,' Paris, 1899. 6. 'Grammaire Cantabrique-basque de Pierre d'Urte,' 1901. 7. 'Les Loisirs d'un étranger au pays basque,' Châlons-sur-Saône, 1901, a selection from his miscellaneous papers in journals of foreign learned societies. 8. 'Gleanings in Church History, chiefly in Spain and France,' 1903.

WEIR, HARRISON WILLIAM (1824-1906), animal painter and author, born at Lewes, Sussex, on 5 May 1824, was second son of John Weir, successively manager of a Lewes bank and administration clerk in the legacy duty office, Somerset House, by his wife Elizabeth Jenner. A brother, John Jenner Weir, an ornithologist and entomologist, was controller-general of the customs. Weir was sent to school at Albany Academy, Camberwell, but showing an aptitude for drawing, he was withdrawn in 1837, in his fourteenth year, and articulated for seven years to George Baxter (1804-1867), the colour-printer. Baxter, also a native of Lewes, had originally started as a designer and engraver on wood there, but he subsequently removed to London, and obtained a patent for his invention of printing in colour in 1835. Baxter employed Weir in every branch of his business, his chief work being that of printing off the plates. Weir soon found his duties uncongenial, and he remained unwillingly to complete his engagement in 1844. While with Baxter he learnt to engrave and draw on wood. His spare time was devoted to drawing and painting, his subjects being chiefly birds and animals. These unaided efforts promised well. In 1842 Herbert Ingram [q. v.] founded the 'Illustrated London News,' and Weir was employed as a draughtsman on wood and an engraver from the first number; he long worked on the paper, and at his death was the last surviving member of the original staff. His painting of a robin, to which he gave the name of 'The Christmas Carol Singer,' was purchased for 150l. by Ingram; issued in his paper as a coloured plate, it proved (it is said) the precursor of the modern Christmas supplement. About this time Weir became acquainted with the family of the animal

painter, John Frederick Herring [q. v.], whose eldest daughter, Anne, he married, when just of age, in 1845. In this year he exhibited his first picture, 'The Dead Shot,' an oil painting of a wild duck, at the British Institution, and henceforth he was an occasional exhibitor at the Royal Academy, the Suffolk Street, and other galleries. On being elected in 1849 a member of the New Water-colour Society—now the Royal Institute—he exhibited chiefly with that society, showing altogether 100 pictures there.

Meanwhile Weir mainly confined his energy to illustrations for periodicals and books. He worked not only for the 'Illustrated London News' but for the 'Pictorial Times,' the 'Field,' and many other illustrated papers. As a book illustrator few artists were more prolific or popular. Gaining admission to literary society, his intimate friends included Douglas Jerrold, Henry Mayhew, Albert Smith, and Tom Hood the younger, and he was well acquainted with Thackeray and other men of letters.

Weir's drawings of landscape have the finish and smoothness common to contemporary woodcuts, but his animals and birds show a distinctive and individual treatment. Many of his best pictures of animals were designed for the Rev. J. G. Wood's 'Illustrated Natural History' (1853), and he furnished admirable illustrations for 'Three Hundred Æsop's Fables' (1867). In some cases Weir compiled the books which he illustrated. 'The Poetry of Nature' (1867) was an anthology of his own choosing. He was both author and illustrator of 'Every Day in the Country' (1883) and 'Animal Stories, Old and New' (1885). He persistently endeavoured to improve books for children and the poorer classes, and prepared drawing copy-books which were widely used. He did all he could to disseminate his own love of animals. He originated the first cat show in 1872, became a judge of cats, and later wrote and illustrated 'Our Cats and all about them' (1889). Among domestic animals he devoted especially close attention to the care of poultry. As early as 1853 he designed some coloured plates for 'The Poultry Book,' by W. Wingfield and G. W. Johnson, and when that work was re-issued in 1856 he contributed the descriptive text on pigeons and rabbits. An experienced poultry breeder, he for thirty years acted as a judge at the principal poultry and pigeon shows. An exhaustive work from his pen, entitled 'Our Poultry and all

about them,' issued in 1903, had occupied him many years, and was illustrated throughout with his own paintings and drawings. His account there of old English game fowl is probably the most valuable extant; but the rest of the work is for the modern expert of greater historic than of practical interest.

Weir was at the same time a practical horticulturist, being much interested in the cultivation of fruit trees, and for many years contributing articles and drawings to gardening periodicals. He was engaged by Messrs. Garrard & Co. to design the cups for Goodwood, Ascot, and other race-meetings for over thirty years. In 1891 he was granted a civil list pension of 100*l*.

Weir's unceasing industry left him no time for travel. He was apparently only once out of England, on a short visit to Andalusia, in Spain. His leisure was divided between his garden and his clubs. After long residence at Lyndhurst Road, Peckham, he built himself a house at Sevenoaks. His latest years were passed at Poplar Hall, Appledore, Kent. There he died on 3 Jan. 1906, and was buried at Sevenoaks. Weir was thrice married: (1) to Anne, eldest daughter of J. F. Herring, in 1845; (2) to Alice, youngest daughter of T. Upjohn, M.R.C.S. (d. 1898); and (3) to Eva, daughter of George Gobell of Worthing, Sussex, who survives him. He had two sons, Arthur Herring Weir (1847-1902) and John Gilbert Weir, and two daughters.

WELDON, WALTER FRANK RAPHAEL (1860-1906), zoologist, born at Highgate, London, on 15 March 1860, was elder son and second of the three children of Walter Weldon [q. v.], journalist and chemist, by his wife Anne Cotton. His father frequently changed his place of residence and the sons received desultory education until 1873, when Weldon went as a boarder to Mr. Watson's school at Caversham near Reading. After spending nearly three years there he matriculated at London University in 1876, and in the autumn of the same year entered University College, London, with the intention of qualifying for a medical career. After a

year's study at University College he was transferred to King's College, London, and on 6 April 1878 entered St. John's College, Cambridge, as a commoner, subsequently becoming an exhibitor in 1879 and a scholar in 1881. At Cambridge Weldon came under the influence of Francis Maitland Balfour [q. v.] and abandoned medical studies for zoology. Though his undergraduate studies were interrupted by ill-health and by the sudden death of his brother Dante in 1881, he succeeded in gaining a first-class in the natural sciences tripos in that year, and in the autumn proceeded for a year's research work to the zoological station at Naples. Returning to Cambridge in Sept. 1882, he became successively demonstrator in zoology (1882-4), fellow of St. John's College (3 Nov. 1884), and university lecturer in invertebrate morphology (1884-91). After his marriage in 1883 he and his wife spent their vacations at such resorts as offered the best opportunities for the study of marine zoology. The most important of their expeditions was to the Bahamas in the autumn of 1886. As soon as the laboratory of the Marine Biological Association at Plymouth was sufficiently advanced, Weldon transferred his vacation work thither, and from 1888 to 1891 he was only in Cambridge for the statutory purposes of keeping residence and fulfilling his duties as university lecturer.

At Plymouth he began the series of original researches which established his reputation. Until 1888 he was engaged on the morphological and embryological studies which seemed to contemporary zoologists to afford the best hope of elucidating the problems of animal evolution. But the more he became acquainted with animals living in their natural environment the more he became convinced that the current methods of laboratory research were incapable of giving an answer to the questions of variation, inheritance, and natural selection that forced themselves on his attention. In 1889, when Galton's recently published work on natural inheritance came into his hands, he perceived that the statistical methods explained and recommended in that book might be extended to the study of animals. He soon undertook a statistical study of the variation of the common shrimp, and after a year's hard work published his results in the 47th volume of the 'Proceedings of the Royal Society,' showing that a number of selected measurements made on several races of shrimps collected from different

localities gave frequency distributions closely following the normal or Gaussian curve. In a second paper, 'On Certain Correlated Variations in *Crangon vulgaris*,' published two years later, he calculated the numerical measures of the degree of inter-relation between two organs or characters in the same individual and tabled them for four local races of shrimps. These two papers were the foundation of that branch of zoological study afterwards known by the name of 'biometrics.'

Meanwhile Weldon had been elected a fellow of the Royal Society in May 1890, and at the end of the year succeeded Prof. (Sir) E. Ray Lankester as Jodrell professor of zoology at University College, London. The tenure of the Jodrell chair (1891-9) was a period of intense activity. A brilliant lecturer and endowed with the power of exciting enthusiasm, Weldon soon attracted a large class, and his association with Professor Karl Pearson, who had been independently drawn towards biometrical studies by Galton's work, led to increased energy in the special line of research which he had initiated. In 1894 Weldon became the secretary of a committee of the Royal Society 'for conducting statistical inquiries into the measurable characteristics of plants and animals,' the other members of the committee being F. Galton (chairman), F. Darwin, A. Macalister, R. Meldola, and E. B. Poulton. The committee undertook an ambitious programme which was not fully realised; its most important result was the investigation, undertaken by Weldon and presented to the Royal Society in Nov. 1894 under the title 'An Attempt to measure the Death Rate due to the Selective Destruction of *Carcinus maenas*.' To this were appended 'Some Remarks on Variation in Animals and Plants,' in which Weldon stated that 'the questions raised by the Darwinian hypothesis are purely statistical, and the statistical method is the only one at present obvious by which that hypothesis can be experimentally checked.' The report showed that an apparently purposeless character in the shore-crabs of Plymouth Sound is correlated with a selective death rate, and it evoked a storm of criticism, which led Weldon to continue his experiments, with the result that he demonstrated that the character in question was connected with the efficient filtration of the water entering the gill-chamber, a matter of great importance in Plymouth Sound, whose waters are rendered turbid by china clay and the sewage discharged into the harbour. These experiments, which were

conducted on a large scale and were extremely laborious, formed the subject of Weldon's presidential address to the zoological section of the British Association in 1898.

In addition to these and other exacting lines of research and the ordinary duties of his chair, Weldon took a leading part in the work of the association for promoting a professorial university for London, and his friends, fearing that he was over-straining his energies, hailed with relief his election to the Linacre professorship of comparative anatomy at Oxford in February 1899. But though Oxford afforded opportunities for greater intellectual leisure, Weldon disdained to make use of them. He had on hand numerous exacting projects, and he tried to deal with them all at once. His leisure hours at Oxford were spent in long bicycle rides, during which he studied the fauna of the neighbourhood; his vacations were spent in journeys to various parts of the continent, where he worked at his statistical calculations and collected material for fresh lines of research. He added to his labours by undertaking the co-editorship of 'Biometrika,' a new scientific journal devoted to his special branch of study, and contributed to it twelve separate original and critical papers between 1901 and 1906.

The rediscovery of Mendel's memoirs on plant hybridisation in 1900 drew Weldon into an active controversy which culminated at the meeting of the British Association at Cambridge in 1904. Though Weldon was always critical of what appeared to him to be loose or insufficiently grounded inferences on the part of the Mendelian school, he was by no means unappreciative of the significance of Mendel's work. He would not admit its universal applicability, and even before the meeting at Cambridge he had planned and was engaged on a book (never finished) which was to set forth a determinate theory of inheritance, with a simple Mendelism at one end of the range and blended inheritance at the other. At the close of 1905 his attention was diverted by a paper presented to the Royal Society by Captain C. C. Hurst, on the inheritance of coat colour in horses. Disagreeing with the author's conclusions, Weldon made a minute study of the 'General Studbook' in the autumn of 1905, and in Jan. 1906 he published 'A Note on the Offspring of Thoroughbred Chestnut Mares.' This was his last scientific publication. In the Lent term he was still engaged on the 'Studbook,' and had collected material for a much more copious memoir on inheritance in horses. In the Easter vacation, while he was staying

with his wife at an inn at Woolstone, he was attacked by influenza, which on his return to London on 11 April developed into acute pneumonia. He died in a nursing home on 13 April 1906. He was buried at Holywell, Oxford. In addition to the book on inheritance he left behind him a mass of unfinished work which other hands have only partially completed. For this Dictionary he wrote the article on Huxley in the first supplement.

A Weldon memorial prize for the most noteworthy contribution to biometric science was founded at Oxford in 1907, and was first awarded in 1912 to Prof. Karl Pearson, who declined it on the ground that the prize was intended for the encouragement of younger men. The prize was then awarded to Dr. David Heron. A posthumous bust was placed in the Oxford museum.

Weldon married on 13 March 1883 Florence, eldest daughter of William Tebb of Rede Hall, Burstow, Surrey. His wife was his constant companion on his travels, and gave no inconsiderable help to his later scientific researches.

[Obituary notices in *Biometrika*, vol. v., by Prof. Karl Pearson; in the *Proceedings of the Royal Society of London*, vol. xxiv., by A. E. Shipley; in the *Proceedings of the Linnean Society*, 1906, by G. C. Bourne; personal recollections; information supplied by Mrs. Weldon.] G. C. B.

WELLESLEY, SIR GEORGE GREVILLE (1814-1901), admiral, born on 2 Aug. 1814, was third and youngest son of Gerald Valerian Wellesley, D.D. (1770-1848), prebendary of Durham (the youngest brother of the duke of Wellington), by his wife Lady Emily Mary, eldest daughter of Charles Sloane Cadogan, first Earl Cadogan. He entered the navy in 1828, taking the course at the Royal Naval College, Portsmouth. He passed his examination in 1834, and received his commission as lieutenant on 28 April 1838. In Jan. 1839 he was appointed to the flagship in the Mediterranean for disposal, and on 30 March was sent from her to the *Castor* frigate, in which he served for over two years, ending the commission as first lieutenant. In her he took part in the operations of 1840 on the coast of Syria, including the attacks on Caiffa, Jaffa, Tsour, and St. Jean d'Acre; he was twice gazetted and received the Syrian and Turkish medals with clasp. In November 1841 he was appointed to the *Thalia*, frigate, going out to the East Indies, and from her was, on 16 April 1842, promoted to commander and appointed to the *Childers*, brig, which he

paid off two years later. On 2 Dec. 1844 he was promoted to captain, and in that rank was first employed in the *Daedalus*, which he commanded in the Pacific from 1849 to 1853. In February 1855 he was appointed to the *Cornwallis*, screw 60 gun ship, for the Baltic, and commanded a squadron of the fleet at the bombardment of Sveaborg. He received the Baltic medal, and in February 1856 the C.B. The *Cornwallis* then went for a year to the North America station, after which Wellesley was for five years in command of the *Indian* navy. He was promoted to rear-admiral on 3 April 1863, and in June 1865 was appointed admiral superintendent at Portsmouth, and held the post for four years. On resigning it he was appointed, on 30 June 1869, commander-in-chief on the North America and West Indies station, and on 26 July following became vice-admiral. He returned home in September 1870, and from October 1870 to September 1871 was in command of the Channel squadron. In September 1873 he again became commander-in-chief on the North America station, where he remained till his promotion to admiral on 11 Dec. 1875. From November 1877 to August 1879 he was first sea lord in W. H. Smith's board of admiralty. In June 1879 he was awarded a good service pension, and retired on 2 August of the same year. He was raised to the K.C.B. in April 1880, and to the G.C.B. at the Jubilee of 1887. In 1888 he became a commissioner of the Patriotic Fund. He died in London on 6 April 1901.

Wellesley married on 25 Jan. 1853 Elizabeth Doughty, youngest daughter of Robert Lukin. She died on 9 Jan. 1906, leaving a daughter, Olivia Georgiana, wife of Lieut.-col. Sir Henry Trotter, K.C.M.G.

[O'Byrne's *Nav. Biog. Dict.*; *The Times*, 8 and 12 April 1901; R.N. List; Burke's *Peerage*; a photographic portrait was published in *Illus. London News*, 1901.]

L. G. C. L.

WELLS, HENRY TANWORTH (1828-1903), portrait-painter in oils and miniature, born on 12 Dec. 1828 in Marylebone, was only son of Henry Tanworth Wells, merchant, by his wife Charlotte Henman. One sister, Augusta, was an exhibitor at the Royal Academy, and another sister, Sarah, married Henry Hugh Armstead [q. v. Suppl. II]. Educated at Lancing, Wells was apprenticed in 1843 as a lithographic draughtsman to Messrs. Dickinson, with whom he soon, however, began work as a miniature-painter. His studies were

continued in the evening at Leigh's school. In 1850 he spent six months at Couture's atelier in Paris. He also joined a society which met every evening in Clipstone Street for drawing and criticism. D. G. Rossetti, C. Keene, J. R. Clayton, F. Smallfield, the brothers E. and G. Dalziel, and G. P. Boyce were fellow members. From his youth Wells devoted himself to portraiture. At first he practised exclusively as a miniature painter, much in the manner of Sir W. Ross, with whom and Robert Thorburn he shared the practice of the time. Between 1846 and 1860 Wells contributed over seventy miniatures, principally of ladies and children, all of which are now in private hands, to the Royal Academy exhibitions. Among these the most noticeable are the Princess Mary of Cambridge, painted in 1853 by command for Queen Victoria, and whole-lengths of the Duchess of Sutherland (as Lady Stafford), Countess Waldegrave, and Mrs. Popham (1860).

Wells's sympathies were mildly attached in the early days of his career to the Pre-Raphaelites, and he counted among his friends many of the fraternity, though his own work remained uninfluenced by them. In December 1857, when in Rome, he married Joanna Mary Boyce, herself a gifted painter and writer for the *Saturday Review*, and sister of George P. Boyce, the water-colour artist. Her *'Elgiva,'* exhibited in the Academy in 1855, was pronounced by Madox Brown to be the work of 'the best hand in the rooms,' and after her premature death in 1861 William Rossetti pronounced her to have been 'the best painter that ever handled a brush with the female hand.' A charming miniature group painted by Wells in 1859-60 of himself standing beside her, riding a donkey, on a single piece of ivory 21 x 15½ inches (now owned by his daughter, Mrs. Hadley), is a fine example of his latest miniature work and perhaps his largest. Another group of himself, his wife, George Boyce, and John Clayton (owned by his elder daughter, Mrs. Street), painted in oils (1861), is the best example of his early work in this medium.

From 1861 Wells, fearing the strain upon his eyesight, abandoned miniature painting, and in that year contributed to Burlington House his first large work in oils, a portrait of Lord Ranelagh, lieutenant-colonel of the south Middlesex volunteers, now at the headquarters of the corps. Within the next decade he painted numerous other volunteers' portraits singly and in groups. Of the latter two are well known: the earlier group, 'Volunteers

at the Firing Point,' a large canvas painted in 1866, the year of his election as associate of the Royal Academy, was engraved in mezzotint by Atkinson. This picture, now in the Diploma Gallery, was exchanged for another work 'News and Letters at the Loch Side' (1868), which formerly hung there and now belongs to Mrs. Nicholson at Arisaig House. The later group, 'Earl and Countess Spencer at Wimbledon,' with Lords Ducie, Grosvenor, and Elcho and others, was exhibited in 1868 (now the property of Earl Spencer). These and 'The Queen and her Judges at the Opening of the Royal Courts of Justice' (1867), are among the best of his larger works. In 1870 Wells was elected a full member of the Royal Academy.

Among the many presentation portraits painted by Wells are Hon. Robert Marsham, Warden, for Merton College (1866), the duke of Devonshire for the Iron and Steel Institute (1872), Sir S. J. Gibbons (1873), Lord Mayor, for the Salters' Company, Lord Chancellor Selborne (1874), for the Mercers' Company, Samuel Morley (1874), for the Congregational Memorial Hall, Rt. Hon. W. E. Forster (1875), Sir Lowthian Bell, F.R.S. (1895), for Newcastle-on-Tyne (photogravure by R. Paulussen), and Sir W. Macpherson (1901), for the Calcutta Turf Club. Other celebrities painted were Earl Spencer, K.G. (1867), engraved by S. Cousins, General Sir R. Buller (1889), Sir M. Hicks Beach (1896), the Bishop of Ripon (1897), and the Earl of Pembroke (1898); and among ladies who sat to him were the three daughters of Sir I. Lowthian Bell, exhibited in 1865 as 'Tableau Vivant,' Lady Coleridge, painted in miniature (1891), Miss Ethel Davis (1896), Mrs. Thewlis Johnson (1890), the Hon. Mrs. Sydney Smith (1903), Lady Wyllie (1890), and his daughter, Mrs. Street (1883).

The most popular of Wells's works was, however, a painting of Queen Victoria, as princess, receiving the news of her accession from the archbishop of Canterbury and the Marquess Conyngham, exhibited in 1880 as 'Victoria Regina.' This painting was presented by the artist's daughters to the National Gallery of British Art, and a second version is at Buckingham Palace.

In 1870 Wells succeeded George Richmond, R.A., as limner to Grillion's Club, and in this capacity drew crayon portraits of some fifty of its distinguished members, chiefly political, during the following thirty years. Many of these drawings were exhibited; a few were etched by C. W. Sherborn, and the rest were either en-

graved by C. Holl, J. Brown, J. Stodart, and W. Roffe, or reproduced by autotype. As a man of business and a strenuous supporter of the constitutional rights and privileges of the Academy, Wells was a valued member of the council, and in the agitation for reform, initiated in August and September 1886 in 'The Times' by Holman Hunt, he was the most vigorous defender of the existing order of affairs. He was nominated by Lord Leighton to act as his deputy on certain occasions during the president's absence abroad through ill-health in 1895. In 1879, at the time of the royal commission, and again in connection with the bill in 1900, he worked hard for the cause of artistic copyright.

Wells contributed, between 1846 and 1903, 287 works to the Royal Academy exhibitions, and, in addition to those already mentioned as being engraved, about forty-five were reproduced in Cassell's 'Royal Academy Pictures' (1891-1903). His portraits are usually signed with his monogram and dated.

Wells died at his residence, Thorpe Lodge, Campden Hill, on 16 Jan. 1903, and was buried at Kensal Green cemetery. He was survived by his two daughters, Alice Joanna (Mrs. A. E. Street) and Joanna Margaret (Mrs. W. Hadley). His son Sidney Boyce died in 1869. His portrait, painted by himself in 1897, and a bust by Sir J. E. Boehm (1888), belong to his elder daughter.

WEST, EDWARD WILLIAM (1824-1905), Oriental scholar, born at Pentonville, London, on 2 May 1824, was eldest of twelve children (six sons and six daughters) of William West by his wife Margaret Anderson. His ancestors on the paternal side for three generations had been architects and engineers, or 'builders and mechanics,' as they were called in the eighteenth century. Owing to ill-health he was at first educated at home by his mother, but from his eleventh till his fifteenth year he attended a day school at Pentonville, and in Oct. 1839 entered the engineering department of King's College, London, where he won high honours in

1842. A year later, after a severe illness, he spent a twelvemonth in a locomotive shop at Bromsgrove, in Worcestershire.

His parents had lived in India for some years before their marriage, the father at Bombay, the mother in Calcutta. In 1844 West went out to Bombay, where he arrived on 6 June, to superintend a large establishment of cotton presses there. He retained the post for five years. Before leaving England he studied Hindustani for a few weeks under Professor Duncan Forbes of King's College, London, and learned to read the Perso-Arabic characters as well as the Nāgari script, in which the Sanskrit language of India is commonly written. Otherwise his knowledge of Oriental languages was self-taught. His method was to study direct from grammars, dictionaries, texts, and manuscripts, supplemented by occasional conversations with native Indians. He soon interested himself in Indian religions, especially that of the Parsis, the ancient faith of Zoroaster. A visit to the Indian cave-temples at Elephanta, near Bombay, in March 1846, drew his attention to Hindu antiquities; and a vacation tour made in the following year, March 1847, with the Rev. John Wilson and a party, including Arthur West, his brother, to the Island of Salsette, north of Bombay, enabled him to visit the Kanheri caves, and inspired him with a wish to copy the inscriptions carved there in Pāli, the sacred Buddhist language. In January 1850 West, after resigning his office of superintendent of the cotton presses, revisited the Kanheri caves; but he spent the next year in England, and it was not until 1852 that he had opportunities of frequent inspection. In that year he became civil engineer, and later was chief engineer, of the Great Indian Peninsula railway, which ran through Bombay presidency.

Early in 1860 West laid before the Bombay Asiatic Society his copies of the Buddhist cave-records of Kanheri, and the results were published in 1861 in the society's 'Journal.' Copies of the inscriptions of the Nasik caves were made in a similar manner, and were published in 1862; these were followed later by transcripts of the Kura cave inscriptions and of other Buddhist sculptured records. As early as 1851 he had begun from the Buddhist scriptural text, the 'Mahāwāṇso,' a glossary of the Pāli language in which all the cave records were written; but he afterwards gave up this lexicographical design and ultimately withdrew from Pāli

study, in the development of which he did yeoman service.

West's lasting renown rests upon his Iranian labours. Almost as soon as he reached India, occasional conversations with the Parsi manager of the cotton presses drew his attention to the Zoroastrian religion. But Martin Haug's 'Essays on the Sacred Language, Writings, and Religion of the Parsis' (Bombay, 1862) chiefly stimulated his interest, which was confirmed by a personal acquaintance with the author which he made at Poona in 1866. West began work on a copy of the Avesta, or the scriptures of Zoroaster, with a Gujarāṭī translation of the Avesta and Dhanjibhai Framji's 'Pahlavi Grammar' (1855). The rest of his life was devoted in co-operation with Haug to the study of Pahlavi, the difficult language and literature of Sasanian Persia. Both he and Haug returned to Europe in 1866, when Haug was appointed in 1867 to the professorship of Sanskrit and comparative philology at the University of Munich. West went to Munich for six years (1867-73) spending his time on the publication with translation of the Pahlavi texts of Zoroastrianism. On 17 June 1871 the University of Munich bestowed upon him the honorary degree of doctor of philosophy. After a year in England (1873-4) West revisited India (1874-6) in order to procure manuscripts of the important Pahlavi books 'Dēnkart' and 'Dāṭistan-i Dēnik'; he paid a last visit to the Kanheri caves on 6 Feb. 1875.

In 1876 he resumed residence in Munich, but soon settled finally in England, first at Maidenhead and afterwards at Watford. His main occupation was a translation of a series of Pahlavi texts for Max Müller's 'Sacred Books of the East.' His services to Oriental scholarship, especially in Pahlavi, were widely recognised. The Bavarian Academy of Sciences made him in 1887 a corresponding member. From 1884 to 1901 he was a member of the Royal Asiatic Society of Great Britain and Ireland; and on 6 July 1901 he was presented with the society's gold medal, personally handed to him with an address by the Prince of Wales (afterwards King Edward VII). The American Oriental Society also conferred upon him honorary membership (16 April 1899). West was ready in personal aid to scholars who corresponded with him. With characteristic modesty he acknowledged, shortly before his death, that 'although his studies and researches had always been

undertaken for the sake of amusement and curiosity, they could hardly be considered as mere waste of time.'

He died in his eighty-first year at Watford, on 4 Feb. 1905. He was survived by his wife Sarah Margaret Barclay, and by an only son, Max, an artist.

West's principal publications relating to Pahlavi are: 1. 'Book of the Mainyō-i Khard, Pāzand, Sanskrit, and English, with a Glossary,' Stuttgart and London, 1871. 2. 'Book of Ardā-Virāf, Pahlavi and English' (edited and translated in collaboration with Hoshangji and Haug), Bombay and London, 1872. 3. 'Glossary and Index to the same' (with Haug), Bombay and London, 1872. 4. 'Shikand-gūmānik Vījār' (with Hoshangji), Bombay, 1887. 5. Five volumes of translations from Pahlavi texts, in Max Müller's 'Sacred Books of the East,' v. xviii. xxiv. xxxvii. xlvii., Oxford, 1880-1897. 6. A valuable monograph, 'Pahlavi Literature,' in Geiger and Kuhn's 'Grundriss der iranischen Philologie,' Strassburg, 1897.

Besides the papers already cited West read a technical paper on 'Ten-ton Cranes' before the Bombay Mechanics' Institute in March 1857, and contributed numerous articles, reviews, and communications on Oriental subjects to the 'Journal of the Royal Asiatic Society of Great Britain and Ireland' (1869-1900); to the 'Academy' (1874-1900); to the 'Indian Antiquary' (1880-2); to 'Le Muséon' (1882-7); to 'Sitzungsberichte d. Akad. Wiss. zu München' (1888, p. 399 seq.); and to 'Epigraphia Indica' (iv. no. 21, p. 174 seq.).

[Correspondence and personal memoranda received during West's lifetime; a notice by L. C. Casartelli, Roman catholic bishop of Salford, in the Manchester Guardian, 13 March 1905.] A. V. W. J.

WEST, SIR LIONEL SACKVILLE-, second BARON SACKVILLE (1827-1908), diplomatist. [See SACKVILLE-WEST.]

WESTALL, WILLIAM [BURY] (1834-1903), novelist and journalist, born on 7 Feb. 1834 at White Ash, near Blackburn, in Lancashire, was eldest son of John Westall, a cotton spinner of White Ash, by his wife Ann, daughter of James Bury Entwistle. Richard Westall the painter [q. v.] belonged to the same stock. After being educated at the Liverpool high school, Westall engaged in his father's cotton-spinning business. But about 1870 he retired, lived much abroad, and devoted himself

to journalism. While at Dresden he sent articles to 'The Times' and 'Spectator,' and moving to Geneva in 1874 acted as foreign correspondent both to 'The Times' and the 'Daily News,' besides editing the 'Swiss Times,' of which he became part proprietor. His first book, 'Tales and Traditions of Saxony and Lusatia,' appeared in 1877, but his earliest success in fiction, 'The Old Factory,' a story of Lancashire life with strong local colouring, was issued in 1881. His later novel, 'Her Two Millions' (1897), amusingly depicts the conditions of Anglo-continental journalism in Geneva, where Westall became acquainted with Russian revolutionaries, particularly with Prince Kropotkin and with S. Stepniak (i.e. Sergyei Mikhailowitch Kravchinsky). He persuaded the latter to settle in London, and collaborated with him in translations of contemporary Russian literature, and of Stepniak's book on the aims of reform, 'Russia under the Czars' (1885). Westall was long a prolific writer of novels, drawing freely on his experiences alike in Lancashire and on the continent and further afield. He extended his travels to North and South America and to the West Indies, but finally returned to England, making his residence in Worthing.

He died at Heathfield, Sussex, on 9 Sept. 1903, and was buried there. He had just completed his latest novel, 'Dr. Wynne's Revenge.'

Westall was married twice: (1) on 13 March 1855 to Ellen Ann, second daughter of Christopher Wood of Silverdale, Lancashire, by whom he had two sons and one daughter; and (2) at Neuchâtel on 2 Aug. 1863, to her elder sister Alicia, by whom he had two sons and two daughters.

A portrait—a bad likeness—belongs to Westall's daughter, Mrs. Chadwick, Clyde House, Heaton Chapel. A large photograph hangs in the Whitefriars Club.

Westall's numerous novels, which are of old-fashioned type, mainly dependent on incident and description, comprise, besides those mentioned: 1. 'Larry Lohengrin,' 1881 (another edition, 'John Brown and Larry Lohengrin,' 1889). 2. 'The Phantom City,' 1886. 3. 'A Fair Crusader,' 1888. 4. 'Roy of Roy's Court,' 1892. 5. 'The Witch's Curse,' 1893. 6. 'As a Man sows,' 1894. 7. 'Sons of Belial,' 1895. 8. 'With the Red Eagle,' 1897. 9. 'Don or Devil,' 1901. 10. 'The Old Bank,' 1902.

E. S. H.-R.

WESTCOTT, BROOKE FOSS (1825–1901), bishop of Durham, born at Birmingham on 12 Jan. 1825, was the only surviving son of Frederick Brooke Westcott, lecturer on botany at Sydenham College Medical School, Birmingham, and hon. sec. of the Birmingham Horticultural Society, by his wife Sarah, daughter of W. Armitage, a Birmingham manufacturer. His paternal great-grandfather, whose Christian names he bore, was a member of the East India Company's Madras establishment and was employed by the company on some important missions. From 1837 to 1844, while residing at home, the future bishop attended King Edward VI's School in Birmingham under James Prince Lee [q. v.], who, while he insisted on accuracy of scholarship and the precise value of words, used the classics to stimulate broad historical and human interests and love of literature, and gave suggestive theological teaching. From boyhood Westcott showed keenness in the pursuit of knowledge, aptitude for classical studies, a religious and thoughtful disposition, interest in current social industrial movements, and a predilection for drawing and music. Music he did not cultivate to any great extent in after-years, but through life he found a resource in sketching.

In October 1844 he went up to Trinity College, Cambridge. During his undergraduate career his mind and character developed on the same lines as at school. In 1846 he obtained the Battie University scholarship, and was awarded the medal for a Greek ode in that and the following year, and the members' prize for a Latin essay in 1847. At the same time he read widely. In his walks he studied botany and geology, as well as the architecture of village churches. His closest friends were scholars of Trinity of his year, all of whom, like himself, became fellows; they included C. B. Scott, afterwards headmaster of Westminster school, John Llewelyn Davies, and D. J. Vaughan [q. v. Suppl. II]; another companion was Alfred Barry [q. v. Suppl. II], afterwards bishop of Sydney. Two other friends of the same year were J. E. B. Mayor [q. v. Suppl. II] of St. John's, afterwards professor of Latin, and George Howson (d. 1852) of Christ's (younger brother of J. S. Howson [q. v.], afterwards dean of Chester). The young men discussed varied topics, literary, artistic, philosophical, and theological, including the Oxford Movement, which reached a crisis in 1845 through the secession of J. H. Newman to Rome. Westcott liked Keble's

poetry, and was attracted by the insistence of the Tractarians on the idea of the corporate life of the church and on the importance of self-discipline, but he was repelled by their dogmatism. In many respects he felt more in sympathy with the views of Arnold, Hampden, and Stanley.

He graduated B.A. as 24th wrangler in January 1848, his friend C. B. Scott being two places above him. He then went in for the classical tripos, in which he was bracketed with Scott as first in the first class. In the competition for the chancellor's medals Scott was first and Westcott second. Both were elected fellows of Trinity in 1849. For the three and a half years after his tripos examinations Westcott took private pupils, and threw himself into this work with great zeal. Among his pupils, with many of whom he formed close friendships, were J. B. Lightfoot [q. v.] and E. W. Benson [q. v. Suppl. I], who had come up to Trinity subsequently to himself from King Edward VI's School, Birmingham, and F. J. A. Hort [q. v. Suppl. I]. Outside his teaching work he interested himself in forming with friends a society for investigating alleged supernatural appearances and effects—an anticipation of the 'Psychical Society.' But he soon seems to have concluded that such investigations could lead to no satisfactory or useful result. He found time for some theological reading, and in 1850 obtained the Norrisian prize for an essay 'On the Alleged Historical Contradictions of the Gospels,' and published it in 1851, under the title 'The Elements of the Gospel Harmony.' He was ordained deacon on Trinity Sunday 1851, his fellowship being taken as a title, and priest on the 21st of the following December, in both cases by his old headmaster, Prince Lee, who had now become bishop of Manchester. He had already decided to leave Cambridge, and in Jan. 1852 accepted a post at Harrow. In December of the same year he married. His work at Harrow was to assist Dr. Vaughan, the headmaster, in correcting the sixth-form composition, and occasionally to take the form for him. For some time, too, he had charge of a small boarding-house, and along with it a pupil-room of boys drawn mainly from the headmaster's house and the home-boarders. At the end of 1863 he succeeded to a large boarding-house. For the work of an ordinary form-master he was not well fitted. He did not understand the ordinary boy, and he had some difficulty in maintaining discipline. But on individual boys, of

minds and characters more or less responsive to his, he made a deep impression. Happily both in his small house and his large house there were an unusual number of boys of promise. Meanwhile the school—masters and boys alike—increasingly, as time went on, looked up to him as a man of great and varied learning.

By using every spare hour during the school terms and the greater part of the holidays for study and writing, Westcott succeeded in producing, while at Harrow, some of his best-known books and making a wide reputation as a biblical critic and theologian. In 1855 appeared his 'General Survey of the History of the Canon of the New Testament during the First Four Centuries'; in 1859 a course of four sermons preached before the University of Cambridge on 'Characteristics of the Gospel Miracles'; in 1860 his 'Introduction to the Study of the Gospels,' an enlargement of his early essay entitled 'The Elements of the Gospel Harmony'; in 1864 'The Bible in the Church,' a popular account of the reception of the Old Testament in the Jewish, and of both Old and New in the Christian, Church; in 1866 the 'Gospel of the Resurrection,' an essay in which he gave expression to some of his most characteristic thoughts on the Christian faith and its relation to reason and human life; in 1868, 'A General View of the History of the English Bible,' in which he threw light on many points which had commonly been misunderstood (3rd edit. revised by W. Aldis Wright, 1905). He also wrote many articles for 'Smith's Dictionary of the Bible,' of which the first volume appeared in 1860 and the second and third in 1863, and he was beginning to work at the Johannine writings and to collaborate with Hort in the preparation of a critical text of the New Testament. In 1866 and 1867 he published three articles in the 'Contemporary Review' on 'The Myths of Plato,' 'The Dramatist as Prophet: Æschylus,' and 'Euripides as a Religious Teacher.' These were republished many years later in his 'Essays in the History of Religious Thought in the West' (1891). Further during his last two or three years at Harrow he gave a good deal of time to the study of Robert Browning's poems, and of the works of Comte, and in 1867 published an article in the 'Contemporary Review' on 'Aspects of Positivism in Relation to Christianity,' which was republished as an Appendix to the 3rd edit. of his 'Gospel of the Resurrection.'

In the autumn of 1868, Dr. Magee, who

had just been consecrated to the see of Peterborough, made Westcott one of his examining chaplains, and in 1869 appointed him to a residentiary canonry. The resignation of his mastership and large house at Harrow involved pecuniary sacrifice, but for two or three years past he had found school-work very wearing, and the canonry promised more leisure for literary work. Soon after leaving Harrow, however, Cambridge rather than Peterborough became his headquarters. In September 1870 the regius professorship of divinity at Cambridge became vacant through the resignation of Dr. Jeremie [q. v.]. Lightfoot, then Hulsean professor, refused to stand, and prevailed upon Westcott to do so, and used his great influence to secure the latter's election, which took place on 1 Nov. He retained his canonry till May 1883, but he resided at Peterborough only for three months in each long vacation.

At Peterborough Westcott taught himself so to use his naturally weak voice as to make himself audible in a large building. In the architecture and history of the cathedral he took deep interest. Like his friend Benson, he cherished the hope that ancient ideals might be so adapted to modern conditions as to make the cathedrals of England a more potent influence for good in the life of the church and nation than they had long been. He wrote two articles on the subject in 'Macmillan's Magazine'; and an essay in the volume on Cathedrals edited by Dean Howson. He strove in various ways to increase the usefulness of his own cathedral both to the city and diocese. He gave courses of expositions and addresses at other than the usual times of service. He also took an active interest both in the regular choir and in the formation of a voluntary choir to assist at special services in the nave; and he arranged the Paragraph Psalter with a view to the rendering of the Psalms in a manner that would better bring out their meaning. During his summers at Peterborough some able young Oxford graduates came to read theology under his guidance; one of them was Henry Scott Holland.

When Westcott resumed as professor his connection with Cambridge, active change was in progress in the university. The abolition of tests finally passed in 1871 was a challenge to earnest churchmen to strive to guard in new ways the religious influences which they felt to be most precious. In his 'Religious Office of the Universities,' a volume of sermons and papers published in

1873, Westcott showed what a source of far-reaching influence the university ought in his view to be, notwithstanding its changed relation to the church.

The arrangements for the encouragement of theological studies stood in great need of improvement, and in the movement for reform Westcott, as regius professor, took the lead. From time to time the lectures of particular professors had excited interest. But there was no concerted action among the professors or the colleges—in which indeed few theological lectures of much value were given—with a view to covering different branches of the subject. At the beginning of the Michaelmas term of 1871 the divinity professors for the first time issued a joint programme of their lectures. In 1871 it fell to the new regius professor to have a hand in framing fresh regulations for the B.D. and D.D. degrees, and the principal share in carrying them into effect and in raising the standard of attainment. He also bore a considerable part in drawing up the scheme for an honours examination in theology, held for the first time in 1874, by which the B.A. degree could be obtained and which was of wider scope than the existing theological examination, designed chiefly for candidates for orders. Again, he succeeded in establishing in 1873 the preliminary examination for holy orders, although it was not an examination under the management of the university.

Far more important than any administrative measures was the influence of his teaching and his character. His full courses for the first three years were on periods of, or topics chosen from, early church history. In that subject he was personally interested, and there was as yet no professor of ecclesiastical history in the university, and no prominent lecturer engaged in teaching it in any of the colleges. From 1874-9 his principal courses were on Christian doctrine; subsequent themes were a book, or selected passages, of the New Testament. He also held once a week from the first a more informal evening class, in which for many years he commented on the Johannine writings. Somewhat excessive condensation in expression made him at times difficult to follow. He dwelt by preference on the widest aspects of truth, which are the most difficult to grasp. But his lectures gave evidence of painstaking inquiry after facts, careful analysis, and thoroughness in investigating the significations of words. Above all he succeeded in communicating to many hearers somewhat of his own

sense of the deep spiritual meaning of the scriptures, and his broad sympathy with various forms of Christian faith and hope, and with the best endeavours of pre-Christian times.

His counsel was often privately asked on questions of belief, or on the choice of a sphere of work. Younger members of the university turned to him for aid in various religious efforts. To his inspiration and guidance was largely due the inception of the Cambridge Mission to Delhi, which continues to bear the impress of his aims and spirit. So, too, with a view that men who were looking forward to be parochial clergy should receive more help at the university in preparing for their future work, the Cambridge Clergy Training School was founded, with Westcott as president; he delivered courses of devotional addresses to themembers, and they regularly attended his classes on Christian doctrine. The school's subsequent position largely reflects Westcott's early interest in it. Its present home has received the name of Westcott House.

At public meetings in Cambridge he advocated foreign missions and other religious or social objects with inspiring eloquence. In general university business he was also active. From 1872 to 1876 and 1878 to 1882 he was a member of the council of the senate, the chief administrative body in the university, and he served on important syndicates. Like Lightfoot he urged on the senate the plan of university extension originated by (Prof.) James Stuart, for establishing, under the management of a university syndicate, systematic courses of lectures and classes in populous centres.

In May 1883 he resigned his examining chaplaincy at Peterborough. To his surprise Bishop Magee thereupon requested him to resign his canonry. Next month (June) he became examining chaplain to his old friend, Dr. Benson, newly appointed archbishop of Canterbury; and in October he received through Gladstone a canonry at Westminster. Gladstone had already sounded him as to his willingness to accept the deanery of Exeter, and in 1885 the liberal prime minister offered that of Lincoln, while in 1889 Lord Salisbury offered him that of Norwich. But he felt that so long as his strength was equal to his work at Cambridge he ought not to give it up for such a post.

He felt deeply the responsibility of preaching in the Abbey; and its historic associations powerfully appealed to him.

He looked forward to settling altogether at Westminster on retiring from his professorship. During his months of residence there he took part in several public movements, and joined in an influential protest by members of various Christian bodies against the immense expenditure of the nations of Europe on armaments, and in a plea for the settlement of international differences by arbitration.

Though no considerable work appeared from his pen during the first ten years of the tenure of his professorship, he published various sermons, essays, and addresses and the articles on the Alexandrian teachers, 'Clement,' 'Demetrius,' and 'Dionysius,' in the 'Dictionary of Christian Biography' (vol. i. 1877). His literary energy was mainly absorbed by the preparation, in conjunction with Hort, of a critical text of the New Testament in Greek. This, the fruit of twenty-eight years' toil, was published in May 1881 (2 vols.; new edit. 1885). In 1870 he had been appointed a member of the committee for the revision of the English translation of the New Testament. The revised version was published in 1881, a few days after Westcott and Hort's Greek text. He was besides still at work upon the Johannine writings. His commentary upon the 'Gospel according to St. John' appeared in the 'Speaker's Commentary' in 1882, that on the 'Epistles of St. John' in 1883. Thereupon he devoted himself to the 'Epistle to the Hebrews,' and published his Commentary upon it in 1889.

Origen and his place in the history of Christian thought was a subject which peculiarly attracted him. He delivered two lectures on it at Edinburgh in 1877, wrote in the 'Contemporary Review' in 1878 on 'Origen and the Beginnings of Religious Philosophy' (see *Religious Thought in the West*, 1891), and contributed a masterly article on Origen to the 'Dictionary of Christian Biography' (vol. iv. 1889). Another favourite theme was 'Benjamin Whichcote,' 'father of the Cambridge Platonists' (see *Religious Thought* and BARRY'S *Masters of English Theology*). In 1881 he was appointed a member of the ecclesiastical courts commission, for which he did historical work of another kind. Sermons and addresses also continued to appear singly or in volumes, among them 'Christus Consummator' (1886) and 'Social Aspects of Christianity' (1887), two volumes of sermons preached at Westminster. The latter was his earliest treatment with some fulness of a subject in

which he always took the deepest interest. In 'The Victory of the Cross,' sermons preached in Hereford Cathedral in 1888, he defined his views on the doctrine of the Atonement.

On 21 May 1882 Westcott was elected fellow of King's College, Cambridge. The degree of D.C.L. was conferred on him at Oxford in 1881; and that of D.D. (honorary) at the Tercentenary of Edinburgh University in 1884. He was made hon. D.D. of Dublin in 1888. Three months after the death of his friend Lightfoot the bishopric of Durham was offered to Westcott, on 6 March 1890. He was in his sixty-sixth year; he was wanting in some of the practical qualities that were conspicuous in Lightfoot; but it was certain that he would form a great conception of what he ought to attempt to do, and would strive to fulfil it with an enthusiasm which age had not abated. For himself, when his duty to accept the post became clear, he saw an unique opportunity for labouring, 'at the end of life,' more effectively than before for objects about which he had always felt deep concern, especially the fulfilment by the Church of her mission in relation to human society. He was consecrated in Westminster Abbey on 1 May 1890. On leaving Cambridge he was elected honorary fellow of both King's and Trinity Colleges, and the University of Durham made him hon. D.D. on settling in his diocese.

In a first letter to his clergy of the diocese, which he addressed to them as soon as he had been duly elected, he undertook 'to face in the light of the Christian faith some of the gravest problems of social and national life.' Very soon, with a view to furthering the solution of difficult social and economic problems and the removal of class-prejudices, he brought together for conferences at Auckland Castle employers of labour, secretaries of trade-unions, leading co-operators, men who had taken a prominent part in the administration of the poor laws or in municipal life. In the choice of the representatives Westcott found in Canon W. M. Ede, rector of Gateshead (now dean of Worcester), a valuable adviser. The men met at dinner in the evening for friendly intercourse, and after spending the night under the Bishop's roof, engaged the next morning in a formal discussion of some appointed question, when the bishop presided and opened the proceedings with a short and pertinent address. These conferences prepared the way for the part which the bishop was

able to play in the settlement of the great strike which took place in the Durham coal trade and lasted from 9 March to 1 June 1892. For many weeks Westcott watched anxiously for a moment at which he could prudently intervene. Then he addressed an invitation to the representatives of the miners and of the owners to meet at Auckland Castle, which was accepted by both sides. The owners finally consented to reopen the pits without insisting on the full reduction that they had declared to be necessary, stating that they did so in consequence of the appeal which the Bishop had made to them 'not on the ground of any judgment on his part of the reasonableness or otherwise of their claim, but solely on the ground of consideration and of the impoverished condition of the men and of the generally prevailing distress.' The bishop also assisted in procuring the establishment of boards of conciliation in the county for dealing with industrial differences. At the same time he warmly supported movements for providing homes for aged miners, and better dwellings for the miners. He frequently addressed large bodies of workpeople, not merely at services specially arranged for them, such as an annual miners' service in Durham Cathedral, but at their own meetings. At various times he spoke to the members of co-operative societies, and in 1894 he addressed the great concourse at the Northumberland Miners' Gala. In many previous years this gathering had been addressed by eminent politicians, as well as by labour-leaders, but the invitation to a church dignitary was something new, and was a remarkable proof of the place that Westcott had won in the esteem of the pitmen. Before such audiences he held up high ideals of duty and human brotherhood; though he never condescended to partisan advocacy of their cause, they felt his enthusiasm and his strong sympathy. He used on these occasions few notes, and spoke with a greater eloquence and effect than in delivering sermons and addresses which were carefully written but were sometimes difficult to follow. The bishop's influence in labour matters is in some respects unique in the history of the English episcopate. (For Westcott's treatment of labour problems and for the impression which he made upon the miners, see especially the very interesting appreciation by Mr. THOMAS BURT, M.P., in the *Life*, ii. 733 seq.)

In his more normal episcopal work his relations with his younger clergy were

especially noteworthy. He continued Lightfoot's plan of having six or eight candidates for orders to read for a year or so at Auckland Castle. Once a week he lectured to them; for another hour also in each week he presided when one of the students read a short paper, which was then discussed. These 'sons of the house,' as they were called, present and past, including those who had been there in Lightfoot's time, assembled once a year at the Castle. Many of the junior clergy placed themselves in Westcott's hands to decide for them individually as their bishop what their work should be, whether in the church at home or abroad. His old interest in foreign missions never diminished, and thirty-six men in orders went from the diocese during his episcopate 'with the bishop's direct mission or glad approval' to foreign or colonial service.

In his charges, addresses at diocesan conferences, and the like the bishop did not dwell on controversial questions, but on fundamental truths and their application to the common life of the church. He did not collect large sums of money for church-building or church-work; he was satisfied with the organisation of the diocese as he found it. He was preoccupied with ideas which were not always congenial to business men, and he was not invariably a good judge of men's capabilities and characters. Yet the diocese acknowledged the influence of his saintliness, of his devotion to duty, and to some extent of his teaching.

While unassuming in demeanour and in the conduct of his household, he had a keen sense of the respect due to his office. He delighted in the historic associations of Auckland Castle, where he constantly entertained workpeople and church-workers. He was chary of undertaking work outside his diocese, but he presided at short notice at the Church Congress at Hull, owing to the illness of W. D. Maclagan, archbishop of York, and read a paper on 'Socialism.' In 1893 he was a chief speaker at the demonstration in the Albert Hall against the Welsh Church suspensory bill; and preached before the British Medical Association at Newcastle, and the Church Congress at Birmingham. In 1895 he delivered the annual sermon in London before the Church Missionary Society, and in 1901 the sermon before the York convocation. Of the Christian Social Union, which was formed in 1889 mainly under Oxford auspices, he was first president, and he held the office till his death, giving an address at each annual meeting. He continued to aid the cause of peace

and international arbitration. Yet he supported the Boer war when it had become evident that the Boers were striving for supremacy in South Africa.

His literary work, although limited by the calls of his episcopate, did not cease. In the first two years he put into shape the notes of his Cambridge lectures on Christian doctrine, and published them under the title 'The Gospel of Life' (1892). During his summer holidays also up to the end he worked at a commentary on the Epistle to the Ephesians, and the portion of it that he left was edited and published after his death. For the rest, he composed little save sermons and addresses; but these cost him no small effort, for he never had a facile pen. Many of them he collected and published in such volumes as 'The Incarnation and Common Life' (1893), 'Christian Aspects of Life' (1897), and 'Lessons from Work' (1901). In 1898, when dedicating a memorial to Christina Rossetti in Christ Church, Woburn Square, he gave a careful and sympathetic appreciation of her character and poetry.

On 28 May 1901 his wife died; but in the weeks following this bereavement the bishop fulfilled his public engagements. He preached with great apparent vigour at the miners' service in Durham Cathedral on Saturday, 20 July. But his strength was giving way, and he died on 27 July. He was buried beside his wife in the chapel of Auckland Castle. It was his express wish that there should be no subscription for a memorial to him.

A lifelike portrait of Westcott, painted in 1889 by Sir W. B. Richmond, is now in the Fitzwilliam Museum, Cambridge. The artist wrote of his 'countenance so mobile, so flashing, so tender and yet so strong.' His old friend Llewelyn Davies recalled that as an undergraduate 'he had the intensity which was always noticed in him, rather feminine than robust, ready at any moment to lighten into vivid looks and utterance.' His figure was spare and rather below middle height; his movements were rapid and energetic.

Westcott married in 1852 Sarah Louisa Mary, elder daughter of Thomas Whithard of Kingsdown, Bristol, the sister of an old schoolfellow. He had seven sons and three daughters. The eldest son, Frederick Brooke, senior classic in 1881, is archdeacon of Norwich. Five other sons were ordained, four of whom became missionaries to India. The youngest of these died there; two (Foss and George Herbert) are now bishops of Nagpur and Lucknow respectively.

Westcott's life is remarkable for its many-sided activity and the extraordinary amount of achievement. On several of the subjects of biblical criticism and religious thought on which Westcott wrote inquiry and debate have since continued in Germany, and have become more or less active in England, and the position of some of the questions has consequently changed. Notably is this the case with the problems of the origin of the synoptic gospels and of the authorship of the fourth gospel; the former is discussed by Westcott in his 'Introduction to the Study of the Gospels,' and the latter both in that work and in the 'Prolegomena' to his 'Commentary on St. John's Gospel.' On the other hand, in his work on the 'Canon of the New Testament' he contends in the main for views which have now come to be widely accepted, and this work is probably still for English students the most serviceable 'survey of the history' of the reception of the books of the New Testament in the Church. His treatment of all these subjects represented in England a great advance at the time when he wrote both in knowledge and in the candid examination of opinions opposed to the traditional ones.

In the field of textual criticism the appearance of 'Westcott and Hort's Greek Testament' was admitted, on the Continent as well as in England, to have been epoch-making. But Westcott has perhaps hardly had his due share of the credit owing to the fact that the exposition of the principles on which the text had been made was left to Hort, probably because the latter had fewer engagements. But these principles and the determination thereby of each individual reading were arrived at through the independent investigations of the two scholars, followed by discussion between them. Anyone knowing the two men would hesitate to say that the contribution of either of them to the result thus obtained was greater than that of the other.

The value of Westcott's work as a commentator lies especially in the aid he affords towards an understanding of the profound teaching of the Johannine writings, and of the Epistle to the Hebrews (1889; 3rd edit. 1903). It may be held that he is sometimes too subtle in his interpretations; but through spiritual sympathy and deep meditation he has often penetrated far into the real meaning of the text. His commentaries also contain many careful discussions of the usages of important words or phrases. With his 'Commentary on the Epistles of St. John' (1883) he

published three important essays on 'The Church and the World' (an examination of the relations of Christianity and the Roman Empire), 'The Gospel of Creation,' and 'The Relation of Christianity to Art.' The last is included in 'Religious Thought in the West' (1891). Westcott's leading ideas on the final problems of existence may be best gathered from his 'Gospel of the Resurrection' (1866; 7th edit. 1891) and 'Gospel of Life' (1892). He was perhaps too apt to enunciate propositions of wide import, which in his view corresponded with the constitution of man's being, without discussing with sufficient fulness the means of their verification. But no one can fail to be impressed by his conception of the task of theology and his conviction that it is the duty of the Christian theologian to take account of knowledge of all kinds and of all the religious aspirations of mankind. A strong resemblance has often been noticed between his teaching and that of F. D. Maurice. Westcott, however, though younger by twenty years, had thought out his own position independently, and in order that he might do so had for the most part refrained, as he more than once said, from reading Maurice's works. In 1884, after reading the latter's 'Life and Letters,' he wrote to Llewelyn Davies, 'I never knew before how deep my sympathy is with most of his characteristic thoughts.' Westcott by his writings certainly helped no little to extend the influence of these thoughts, which were characteristic of them both.

WESTLAND, SIR JAMES (1842-1903), Anglo-Indian financier, eldest of eight children of James Westland, manager of Aberdeen Town and County Bank, Dundee, by his wife Agnes Monro, was born in Dundee on 14 Nov. 1842. The second of his four brothers, William, also had a financial career in India, becoming deputy secretary and treasurer of the Bank of Bengal. James was educated in Aberdeen, at first privately under Dr. Tulloch (1847-53), then at the grammar school

(1853-6), and at the gymnasium (1856-7). In 1857 he entered Marischal College, and after some study at a school at Wimbledon passed first into Woolwich in January 1861. But he abandoned the army, and in July 1861 he headed the competitive examination for the Indian civil service, the second place being taken by (Sir) Alexander Mackenzie [q. v. Suppl. II].

Arriving in Calcutta in October 1862, he was assistant magistrate and collector in various Bengal districts until July 1866, when he served as collector, first of Nuddea and afterwards of Jessore. Of Jessore he compiled a valuable survey, officially published in 1874. He went to the Bengal secretariat in July 1869 as junior secretary. Of strong mathematical bent, he was soon transferred to the financial department of the government of India, being made under-secretary from June 1870. Here he revised the civil pension and leave codes, and examined actuarially the various presidency civil funds, embodying his results in a long series of notes and pamphlets. He was appointed officiating accountant-general of Bengal in March 1873, and in the following December went to the central provinces as substantive accountant-general, returning to Bengal at the end of 1876. After serving from November 1877 as inspector of local offices of account, he was appointed accountant and comptroller-general to the government of India in July 1878. In this capacity he reorganised and simplified Indian accountancy work, reducing to codified form the numerous departmental circulars, over which rules for account and treasury officers were dispersed.

After a few months in Egypt (March to June 1885) as head of the Egyptian accounts department in succession to (Sir) Gerald FitzGerald (LORD CROMER'S *Modern Egypt*, vol. i.), Westland returned to India; he was a member of Sir Charles Elliott's Indian expenditure commission in February 1886, acted as secretary of the financial department from September 1886, and was temporary finance member of government (August 1887 to November 1888). He was created C.S.I. in June 1888, and K.C.S.I. in January 1895, was elected a fellow of Calcutta University in January 1887, and was made honorary LL.D. Aberdeen in March 1890.

In July 1889 Westland went to Assam as chief commissioner; but in the following October, on grounds of health, he resigned the service, and turned to sheep-farming in New Zealand. On 27 Nov.

1893, however, he succeeded Sir David Barbour as finance member of the viceroy's council.

Indian finance was then in a critical condition, and Westland had to face a period of deficits. Preparatory to his first budget, he, in March 1894, renewed, at the general rate of 5 per cent., the import duties abandoned in 1882 by Sir Evelyn Baring (now Lord Cromer). But Henry Fowler, afterwards Viscount Wolverhampton [q. v. Suppl. II], secretary of state for India, owing to pressure from Lancashire manufacturers, declined to sanction the inclusion of cotton fabrics and yarns within Westland's schedule, as desired by Indian opinion, until the following December, when a countervailing excise was put on cotton fabrics manufactured at power mills in India. In February 1896 the duties were again revised. Imported yarns were then freed from duty, and cotton fabrics were charged 3½ instead of the general 5 per cent., with a corresponding excise on 'competing "counts"',—i.e. the finer fabrics—of Indian mills. Commercial opinion in India, with which Westland personally sympathised, remained dissatisfied, and Westland bore the brunt of the discontent.

Westland was more successful in converting the great bulk of the rupee debt, more than ninety crores, from 4 to 3½ per cent. in 1895-6, thereby saving the public exchequer nearly fifty lakhs of rupees in annual interest charges. A vigilant guardian of the public purse, he opposed the heavy additions to capital liabilities involved by the large programmes of railway construction which the viceroy, Lord Elgin, supported, although in respect to the great frontier campaigns of 1897-8 and other additions to military demands, Westland betrayed few economic scruples. In spite of the pressure of deficit at the time, he resisted proposals for a grant from the British exchequer towards the cost of the great 1897-8 famine, on the ground that the financial independence of the government of India would thereby be impaired.

The solution of the currency problem, which was the crucial point of the situation, had been prepared by his predecessor, Sir David Barbour, and Westland pursued the path marked out for him, if with less confidence than was desirable. He saw, however, the gold standard finally established during his rule and the sterling value of the rupee attain the fixed rate of 1s. 4d. In 1894-5 the rate averaged only 13½d.; but from 1895 it rose steadily each year.

Westland remained in office to introduce in March 1899 the first budget of Lord Curzon's government. The 1s. 4d. rate had then been reached, and a few months later the gold standard became a reality, sovereigns and half-sovereigns being made legal tender. Westland found the government poor and left it rich; the lean years of deficit, the strain of which he bore patiently, were followed by years of large surplus and expanding revenue.

On returning to England Westland was nominated to the India council on 2 Aug. 1899. An indefatigable worker, he rather chafed under the comparative leisure of a consultative post. He was not a good platform speaker, and his efforts to inform the public on Indian affairs were failures. He found recreation in the study of astronomy and in chess, and was a great reader of German and French.

He died at his home at Weybridge on 9 May 1903, and was buried at Brookwood cemetery. He married on 23 April 1874 Janet Mildred, daughter of Surgeon-major C. J. Jackson, of the Indian medical service, and was survived by two sons and two daughters.

WEYMOUTH, RICHARD FRANCIS (1822-1902), philologist, and New Testament scholar, born at Stoke Damerel, Devonport (then called Plymouth Dock), on 26 Oct. 1822, was the only son of Commander Richard Weymouth, R.N., by his wife Ann Sprague, also of a Devonshire family. After education at a private school he went to France for two years. He matriculated at University College, London, in 1843, and graduated in classics—B.A. in 1846, M.A. in 1849. After acting as an assistant to Joseph Payne [q. v.], the educational expert, at the Mansion House School, Leatherhead, he conducted a successful private school, Portland grammar school, at Plymouth. In 1868 Weymouth was the first to receive the degree of doctor of literature at London University, after a severe examination in Anglo-Saxon, Icelandic, and French and English language and literature. The degree was not conferred again till 1879.

In 1869 also, Weymouth, who was elected fellow of University College, London, was

appointed headmaster of Mill Hill School, which had been founded by nonconformists and was now first reorganised on the lines of a public school. A zealous baptist, Weymouth was long a deacon of the George St. baptist chapel, Plymouth, and subsequently a member of the committee of the Essex Baptist Union. At Mill Hill he proved a successful teacher and organiser and a strict disciplinarian, and the numbers increased. Among his assistants was (Sir) James A. H. Murray, editor of the 'New English Dictionary.' Weymouth retired with a pension in July 1886, when the school showed temporary signs of decline. Thenceforth he chiefly devoted himself to biblical study. As early as 1851 he had joined the Philological Society, and long sat on its council. He edited for the society in 1864 Bishop Grosseteste's 'Castell of Loue,' and contributed many papers to its 'Transactions,' one of which (on the Homeric epithet *ἑβριμος*) was commended by Gladstone in the 'Nineteenth Century.' Later contributions to philology comprised 'Early English Pronunciation, with Especial Reference to Chaucer' (1874), the views propounded being now generally accepted; a literal translation of Cynewulf's 'Elene' into modern English (1888); besides various papers in the 'Journal of Classical and Sacred Philology' and the 'Cambridge Journal of Philology.' In 1885, as president of the Devonshire Association, Weymouth read an address on 'The Devonshire Dialect: a Study in Comparative Grammar,' an early attempt to treat English dialect in the light of modern philology. In 1891 he was awarded a civil service pension of 100*l*.

On textual criticism of the Greek Testament Weymouth spent many years' study. The latest results of critical research he codified in 'Resultant Greek Testament, exhibiting the text in which the majority of modern editors are agreed,' 1886. Then followed a tract, 'The Rendering into English of the Greek Aorist and Perfect, with appendices on the New Testament Use of *ᾄδω* and *οἶν*' (1894; new edit. 1901).

Weymouth's last work, which was issued after his death and proved widely popular, was 'The New Testament in Modern Speech' (1903; 3rd edit. 1909). Based upon the text of 'The Resultant Greek Testament,' it was partly revised by Mr. Ernest Hampden-Cook.

Since 1892 Weymouth lived at Collaton House, Brentwood, where he died on 27 Dec. 1902, being buried in the new cemetery.

A portrait, an excellent likeness, by

Sidney Paget [q. v. Suppl. II], was hung in the hall of Mill Hill school; and a memorial window is in the chapel.

Weymouth was twice married: (1) in 1852 to Louisa Sarah (*d.* 1891), daughter of Robert Marten, sometime secretary of the Vauxhall Bridge Company, of Denmark Hill; and (2) on 26 Oct. 1892 to Louisa, daughter of Samuel Salter of Watford, who survived him with three sons and three daughters, children of the first marriage.

[Private information; London University Register; Norman Brett James's *History of Mill Hill School*; *The Times*, 30 Dec. 1902; *Weymouth's Works*.] G. LE G. N.

WHARTON, SIR WILLIAM JAMES LLOYD (1843-1905), rear-admiral and hydrographer of the navy, born in London on 2 March 1843, was second son in a family of three sons and four daughters of Robert Wharton, county court judge of York, by his wife Katherine Mary, third daughter of Robert Croft, canon residentiary of York. After receiving his early education at Woodcote, Gloucestershire, and at the Royal Naval Academy, Gosport, Wharton entered the navy in August 1857. On passing his examination in 1865 he was awarded the Beaufort prize for mathematics, astronomy, and navigation [see BEAUFORT, SIR FRANCIS]. As sub-lieutenant he served in the *Jason*, corvette, on the North America and West Indies station, and on 15 March 1865 he received his commission as lieutenant. In July 1865 he was appointed to the *Gannet*, surveying vessel, and in her served for another three years on the North America station. In February 1869 Sir James Hope [q. v.], commander-in-chief at Portsmouth, on the recommendation of Prof. Thomas John Main [q. v.] of the Royal Naval College there, offered Wharton the appointment as his flag-lieutenant. Wharton was inclined to refuse, wishing to enter the surveying branch of the service, but accepted on the advice of Main, who thought that the three years ashore would be to his advantage. On 2 March 1872 he received his promotion to commander, and in April was appointed to command the *Shearwater*, in which during the next four years he made surveys in the Mediterranean and on the east coast of Africa. 'In the Mediterranean his work was especially distinguished, and his examination of the surface and under-currents in the Bosphorus, the account of which was officially published, not only solved a curious problem in physical geography, but may be considered as prescribing the method for

similar inquiries.' In May 1876 he was appointed to the *Fawn*, and continued his surveys on the same stations till 1880. On 29 Jan. 1880 he was promoted to captain, and in February 1882 was appointed to the *Sylvia*, in which he conducted surveys on the coast of South America, and especially in the Straits of Magellan. In 1882 he published his 'Hydrographical Surveying: a Description of the Methods employed in constructing Marine Charts,' a work which at once took its place as the standard textbook of the subject. In August 1884 he was appointed hydrographer to the navy in succession to Sir Frederick Evans [q. v.], and continued to hold this post, with increasing credit, until August 1904, when the state of his health compelled him to resign it. Wharton was a fellow of the Royal Society and of the Royal Astronomical and Royal Geographical Societies. He was perhaps most devoted to the last-named of these, as a vice-president, and as a member of numerous committees on which he did much important work. He was retired for non-service on 2 Aug. 1891, and was promoted to rear-admiral on the retired list on 1 Jan. 1895. He was made a C.B., civil, in 1895, and was raised to the K.C.B., civil, at the jubilee of 1897. In 1899 he took a prominent part in the work of the joint Antarctic Committee of the Royal and Royal Geographical Societies.

The chief of Wharton's publications were his 'Hydrographical Surveying,' already mentioned, of which new editions continue to appear; 'A Short History of H.M.S. *Victory*,' written while he was flag-lieutenant at Portsmouth, and re-issued in 1888; 'Hints to Travellers,' an edition of which he edited for the Royal Geographical Society in 1893; and the 'Journal of Captain Cook's First Voyage,' which he edited with notes in 1893.

In July 1905 Wharton left England for Capetown to act as president of the geographical section of the British Association, which was holding its annual meeting in South Africa. He attended all the meetings of the association, and subsequently visited the Victoria Falls of the Zambesi. There he fell ill of enteric fever. He was removed to the Observatory, Capetown, where he was the guest of Sir David Gill. He died there on 29 Sept. 1905, and was buried with full naval honours in the naval cemetery at Simonstown. He married on 31 Jan. 1880 Lucy Georgina, daughter of Edward Holland of Dumbleton, Woodcote, Gloucestershire, by whom he had three sons and two daughters.

After his death 'The Wharton Testimonial Fund' was formed wherewith an addition was made to the value of the existing Beaufort prize for naval officers, the double award being entitled 'The Beaufort Testimonial and the Wharton Memorial,' and including a gold medal, bearing on its obverse Wharton's bust. Two posthumous portraits were also presented in 1908, one of which was accepted by the Trustees of the National Portrait Gallery and hung there immediately; and the other was placed in the Painted Hall at Greenwich.

[The Times, 30 Sept. 1905; R. N. List; Geog. Journal, xxvi. 684.] L. G. C. L.

WHEELHOUSE, CLAUDIUS GALEN (1826-1909), surgeon, born at Snaith in Yorkshire on 29 Dec. 1826, was second son of James Wheelhouse, surgeon. At seven he left the grammar school at Snaith for Christ's Hospital preparatory school at Hertford, and entered Christ's Hospital in London in 1836. He was apprenticed at sixteen to R. C. Ward of Ollerton, Newark, and always strongly advocated the system of apprenticeship. He entered the Leeds school of medicine in October 1846, and was admitted M.R.C.S.England on 25 March 1849, and a licentiate of the Society of Apothecaries in 1850. He then went to the Mediterranean on a yachting cruise as surgeon to Lord Lincoln, afterwards fifth duke of Newcastle and secretary of state for war. He took with him one of the first photographic cameras which left England, and obtained many good photographs in spite of the cumbrous processes.

Wheelhouse returned to England in 1851, and entered into partnership with Joseph Prince Garlick of Park Row, Leeds, the senior surgeon to the dispensary and lecturer on surgery at the Leeds school of medicine. In the same year he was elected surgeon to the public dispensary and demonstrator of anatomy in the medical school, where he was successively lecturer on anatomy, physiology, and surgery. He was twice president of the school, and when the new university of Leeds was inaugurated in October 1904 Wheelhouse was made hon. D.Sc. He was surgeon to the Leeds infirmary from March 1884.

Elected F.R.C.S.England on 9 June 1864, he served on the college council from 1876 to 1881. President of the council of the British Medical Association 1881-4, he presided at the Leeds meeting in 1889. In 1897, when the association held its annual meeting at

Montreal, McGill College made him hon. LL.D., and he received the gold medal of the association.

In 1886, when the Medical Act brought direct representatives of the profession on the general medical council, Wheelhouse headed the poll in England and Wales. Re-elected in 1891 at the end of his term, he did not seek re-election in 1897. From 1870 to 1895 he was first secretary and afterwards treasurer of the West Riding Medical Charity, and in 1902 he was presented by his fellow members with an address of thanks and testimonial.

On retiring from practice at Leeds in 1891 he settled at Filey, where he was active in local affairs. He died at Filey on 9 April 1909, and was buried there. He married in 1860 Agnes Caroline, daughter of Joseph Cowell, vicar of Todmorden, and had issue three daughters.

Wheelhouse filled the unusual position of a general practitioner who made a name in pure surgery. An admirable teacher, he did much to convert the Leeds medical school into a worthy integral part of the university. In 1876 he advocated that form of external urethrotomy for impermeable strictures to which his name is given; it has displaced all rival methods. The operation was first described in the 'British Medical Journal,' 1876, i. 779, in a paper entitled 'Perineal section as performed at Leeds.'

[Brit. Med. Journal, 1909, i. 983 (with portrait); Lancet, 1909, i. 1145.] D'A. P.

WHISTLER, JAMES ABBOTT McNEILL (1834-1903), painter, was eldest son (in a family of seven sons and one daughter) of George Washington Whistler, an American artillery officer whose life was mostly spent as a civil engineer, by his second wife, Anna Mathilda McNeill of Wilmington, North Carolina, who was connected with the Winans family of Baltimore. His half-sister, Dasha Delano; married in 1847 (Sir) Francis Seymour Haden [q. v. Suppl. II]. He was born on 10 July 1834 at Lowell, Massachusetts, in a house which is now a Whistler Memorial Museum. Christened James Abbott, he afterwards added to his Christian names his mother's maiden surname of 'McNeill,' and finally was in the habit of signing himself 'James McNeill Whistler,' or 'J. M. N. Whistler,' except in official documents. His paternal descent was from an old English family which had branches in Sussex, Oxfordshire, and Ireland. He sprang from the Irish branch. Maternally, he threw back to the

McNeills of Skye, many of whom emigrated to North Carolina after the Jacobite rising of 1745. In 1842 Major Whistler, the boy's father, was appointed engineer to the railway then about to be built from St. Petersburg to Moscow, and in the following year summoned his wife and family to Russia, where they settled in St. Petersburg. In 1846 Whistler was put to a school kept by one Jourdan, but in 1849 he left Russia for good. Major Whistler died in the spring of that year, and his widow, with her boys, returned to America. There she settled in Pomfret, Connecticut, and sent her son to a school kept by an alumnus of West Point who had turned parson. In 1851, after two years at this school, Whistler entered the Military Academy at West Point, where he remained for three years. He distinguished himself in drawing, but failed in other subjects and had to leave.

His next occupation was on the United States coast and geodetic survey, which gave him a useful training in accurate drawing and the technique of etching. After a year of the survey, he finally adopted art for his career. In the summer of 1855 he went to Paris, provided with a yearly income of 350 dollars. He entered the studio presided over by Charles Gleyre, to whom Paul Delaroche had bequeathed his pupils when he ceased to teach. In Paris he lived the regulation life of a student on a small income, living well one week, put to all sorts of shifts the next. To his companions, who included du Maurier, Poynter, Thomas Armstrong, and Val Prinsep, he appeared to be the reverse of industrious. He soaked in knowledge and skill, nevertheless, and became a fine draughtsman, a painter who could produce the results he aimed at, and a master of etching. His life in Paris was varied by excursions into other parts of France, during which he was never idle. In 1858 he published a set of thirteen etchings known as 'The French Set,' the material for which had been mostly gleaned in eastern France the year before, or in 1856. At this time he was influenced by the principles of Courbet and Lecoq de Boisbaudran, by the practice of Rembrandt, Hals, and Velazquez, and, no doubt, by the companionship of more young French painters whom he found sympathetic: Fantin-Latour and Legros chief among them. He copied many pictures in the Louvre, mostly in fulfilment of commissions from American friends. The first original picture done in Paris was 'Mère Gerard' (now owned by the execu-

tors of A. C. Swinburne), which was soon followed by 'The Piano Picture' or 'At the Piano.' The latter was rejected by the Salon jury of 1859, and this may have had something to do with the nibblings at London by which it was immediately followed. He spent some months in the English capital in 1859, renewing friendships made abroad and making new ones, and laying the foundations of a notoriety which was in time to blossom into fame. He stayed with his half-sister, Mrs. Francis Seymour Haden, and practised etching with his brother-in-law, the two exerting a mutual influence one upon the other. Whistler first exhibited at the Royal Academy in 1859, sending two 'etchings from nature.' In 1860 his 'At the Piano' was accepted at the Royal Academy and bought by an academician, John Phillip [q. v.]; it now belongs to Mr. Edmund Davis. In the same exhibitions were shown two dry-point portraits and three etchings. This modest success probably confirmed him in the intention to settle in London, which was practically his domicile from 1860 till his death.

During his first twelve months in London he was chiefly occupied with a series of sixteen etchings of the scenery and life of the Thames, including 'The Pool,' 'Thames Police,' and 'Black Lion Wharf.' He was much at Wapping, and etched the life of the neighbourhood and its framing. The chief pictures of the same period were 'The White Girl,' 'The Thames in Ice,' and 'The Music Room.' In 1861 he visited France again, painting on the coast of Brittany. A year later he travelled as far as Fuentarrabia on a journey to Madrid which was never completed. In 1863 he took his first London house, 7 Lindsey Row, now 101 Cheyne Walk, Chelsea. There he was joined by his mother, who had left America on the outbreak of the civil war. During these years he sent regularly to the Royal Academy, where his pictures met with quite as good a reception as a man of original genius, who was opening up a new walk in art, had any right to expect. Chief among them were 'On the Thames,' 'Alone with the Tide,' and 'The Last of Old Westminster.' During these years he also drew for some of the illustrated periodicals, contributing two drawings to 'Good Words' in 1862, and four to 'Once a Week' in the same year. It was about this time that Whistler became strongly affected by the example of the Japanese. For years his work bore much the same relation to Japanese art as all

fine painting does to nature. He took from Japanese ideals the beauties he admired, and re-created them as expressions of his own personality. The 'Lange Leizen,' 'The Gold Screen,' 'The Balcony,' the 'Princesse du Pays de la Porcelaine,' are in no sense Japanese pictures, but they are full of Japanese material. Probably the finest æsthetic spark struck out by his contact with Japan is the exquisite picture variously known as 'The Little White Girl' and 'Symphony in White, No. II.' It was at the Royal Academy in 1865, with 'The Gold Screen' and 'Old Battersea Bridge,' and is now the property of Mr. Arthur Studd. In this year Whistler revisited eastern France and western Germany, and spent part of the autumn at Trouville, with Courbet for companion. In 1866 he made a sudden expedition to Chili, where he seems to have been implicated in some rather absurd war making, but found time to paint five pictures of Valparaiso, some of which are among his greater successes. At the close of this year he moved to a new house, now 96 Cheyne Row, where he remained longer than in any other of his numerous domiciles.

The years between 1866 and 1872 were busy. He exhibited more often than before or after. The chief pictures of this period were a 'Valparaiso,' 'Sea and Rain,' 'The Balcony,' and the famous 'Portrait of my Mother.' Whistler's uncomfortable relations with the Royal Academy began with the exhibition of this last-named picture. Rejected at first, it was only hung through the insistence of one member of the council. After 1872 Whistler exhibited no picture at Burlington House. Nothing of his was thenceforth seen there save an etching of 'Old Putney Bridge' in 1879. No doubt Whistler's irritation was deepened by the fact that, although his name remained for years on the candidates' book, he never came near to being elected into the Academy. These years about 1870 saw the production of most of his 'Nocturnes,' studies of tone, colour, and atmosphere to which the history of art then afforded no parallel; also the portraits of Carlyle and the fine 'Miss Alexander' (now belonging to Mr. W. C. Alexander). In these pictures Whistler first worked his initials into a fantastic shape resembling a butterfly, which soon became his accustomed signature.

In 1874 Whistler opened a show of his own work at 48 Pall Mall, the first of those occasions on which he appealed to the public almost as much by the setting of his pictures as by the works themselves. At this time

he was also painting the famous peacock room, for Frederick Robert Leyland, in Prince's Gate: it is now at Mr. C. L. Freer's residence in Detroit. In 1877 he was represented by eight pictures, mostly loans, at the first exhibition of the Grosvenor Gallery. To the same gallery he sent in 1879 a portrait of Miss Connie Gilchrist [now Countess of Orkney], 'The Gold Girl: a Harmony in Yellow and Gold,' which was acquired by the Metropolitan Museum of New York in 1911.

One of his first exhibits at the Grosvenor Gallery, 'The Falling Rocket, a nocturne in Black and Gold,' was the nail on which Ruskin hung strong abuse of the artist in 'Fors Clavigera,' where Whistler was described as a 'coxcomb' asking 'two hundred guineas for throwing a pot of paint in the public's face.' Whistler brought an action for libel against the critic, which was heard before Baron Huddleston on 25 Nov. 1878. Burne-Jones and Frith were among Ruskin's witnesses. Whistler won his verdict, with a farthing damages, but had to pay his own costs. He set forth his view of the litigation in a shilling pamphlet, 'Whistler v. Ruskin: Art and Art Critics (1879, 12mo). For years before he had been ordering his life with extreme carelessness in financial matters, keeping open house, never hesitating over the cost of anything he thought necessary to his art or to his conception of his needs. All this, added to the costs of the trial and the loss of the money-making power which it involved, brought about his bankruptcy in 1879. He had left Cheyne Row at the end of 1878, and moved to the 'White House' in Tite Street, built for him by Edward William Godwin [q. v.], but this had to be sold with the rest of his effects in 1879. At the end of this year he went to Venice, where he spent the winter in producing a number of etchings and pastels on the commission of the Fine Art Society. They excited great interest and some controversy when shown on his return; and they sold well. From this time onward he worked much in pastel, producing those dainty notes from the model, nude and semi-nude, which were soon much sought after. He came back to London early in 1880. In 1881 his mother died at Hastings. In the same year he settled at No. 13 Tite Street, where he painted many of the best pictures of his later years. Among these were the portrait of Lady Meux, 'M. Duret,' 'The Blue Girl,' and the 'Yellow Buskin' (Lady Archibald Campbell), which is in the Memorial

Hall, Philadelphia. In 1884 Whistler sent twenty-five of his pictures to Ireland, where they were exhibited by the Dublin Sketching Club. In 1885 he moved from Tite Street to No. 454 Fulham Road; he made a tour in Belgium and Holland with Mr. W. M. Chase, the American painter; and he first gave the lecture which has become famous, the 'Ten o'clock.' In 1884 he had joined the Society of British Artists, which elected him its president in June 1886. His presidency was not of long duration, being determined in June 1888. His ways were too autocratic and his aims too free of the commercial spirit for the majority of his colleagues. In 1887 he travelled in Belgium with his brother, Dr. Whistler, and etched in Brussels. In 1888 Whistler married a pupil of his own, Beatrix Godwin, the widow of E. W. Godwin, and the daughter of John Burnie Philip [q. v.]. He had left Fulham Road for the Tower House, in Tite Street, but the early months after his marriage were spent in France, where he etched many plates in Touraine and its neighbourhood. The following year he worked in Holland, etching in the neighbourhood of Amsterdam and Dordrecht. In 1889 he exhibited at the Paris International Exhibition, in the British section. The next year saw yet another change of abode, to 21 Cheyne Walk, but its chief event was the publication of 'The Gentle Art of Making Enemies,' in which Whistler built up a sort of declaration of his artistic faith by reprinting, with comments, his letters to his 'enemies,' the Ruskin trial, his 'Ten o'clock,' &c. In 1891 his 'Carlyle' was bought for Glasgow and his 'Mother' for the Luxembourg, the former for 1000*l.*, the latter for 160*l.* The 'Luxembourg' also soon acquired his 'Old Man Smoking.' These purchases marked the beginning of the general acceptance of Whistler as a great painter, which was confirmed by the success of an exhibition held at Goupil's in Bond Street in the following year, and by that of his appearance at the Chicago Exhibition. In 1892 he moved to Paris, to a house in the Rue du Bac, where he painted several of the best portraits of his later years, and also busied himself much with lithography and a little with etching. In 1895 he was defendant in an action brought against him in the Paris court by Sir William Eden for refusing to deliver his portrait of Lady Eden, for which he had been paid. Whistler was allowed to keep the picture, but was amerced in costs, and the trial established, so far as France

was concerned, an artist's right in his own work. In 1899 he published 'The Baronet and the Butterfly' [i.e. Whistler's monogram], a report of the litigation.

During 1895 Whistler was for a time at Lyme Regis, and his picture 'The Master-Smith of Lyme Regis' is at the Boston Museum: he also had a studio at No. 8 Fitzroy Street, and afterwards a cottage at Hampstead. There Mrs. Whistler died on 10 May 1896. After her death, by which he was profoundly affected, he stayed with Mr. William Heinemann, in Whitehall Court, for nearly three years. In 1898 he was elected president of the newly founded International Society of Sculptors, Painters, and Engravers. It was a post for which he was peculiarly fitted in one way, at least, for he had excelled in all the forms of art practised by his colleagues, with the exception of sculpture. He had painted in water-colour as well as oil, he had mastered dry-point as well as etching, he had lithographed, and he had proved himself a decorator of genius. He held this dignity till his death, and to the society's affairs he devoted much of his energy during his last years. In the same year he had been concerned in founding an atelier for students in Paris, partly for the benefit of a former model, Madame Carmen Rossi, after whom it was subsequently called the 'Académie Carmen.' This he visited as master during the three years of its existence. In 1900 he received a grand prix for painting and another for engraving at the Paris Exhibition du Centenaire, exhibiting this time in the American section. In 1900 he made a short stay in Ireland, in a house called Craigie, at Sutton, near Dublin, and at the end of the same year made an expedition to Tangier, Algiers, the South of France, and Corsica, in search of health. In May 1901 he returned to England, which he never left again except for a short visit to Holland in 1902. He died on Friday, 17 July 1903, at 74 Cheyne Walk, and was buried in Chiswick churchyard, by the side of his wife and not far from the grave of Hogarth. An elaborately sculptured tomb by Mr. Edward Godwin was erected in 1912. Whistler had no issue.

Whistler was an officer of the Legion of Honour, a member of the Société Nationale des Artistes Français, commander of the Order of the Crown of Italy, chevalier of the Order of St. Michael, honorary member of the Academy of St. Luke, Rome, and of the Royal Academies of Bavaria and Dresden, and LL.D. of Glasgow University.

Few painters have exercised a deeper or wider influence over their contemporaries than Whistler. All that is good in real impressionism sprang originally from his teaching and example, and even now no one has equalled the unity and repose of his best works, 'The Little White Girl,' the 'Mother,' 'Miss Alexander,' 'Carlyle,' 'Duret,' 'Sarasate,' or even the little picture—nocturne blue and gold—'Old Battersea Bridge,' at the Tate Gallery, which, first exhibited in 1877, was presented by the National Art Collections Fund in 1905 and is, so far, his only representative in the London collections. The 'Sarasate' is at the Carnegie Institute, Pittsburgh. But a tragic element was brought into his life by the conflicting strains in his own character. A love of pose, which found vent in eccentricities of dress, in extravagant paradox and biting epigram, gave him social notoriety. More exclusively an artist, perhaps, in his work than any painter since the days of Rembrandt, he yet thirsted after the worldly honours and acclamations which are only to be won by men whose productions can appeal to those who are not artists. He was at once capable of the deepest affection and so thin-skinned that he would allow a slight to cancel a long-standing friendship. He had an abnormally keen eye for provocation. He was eager to propagate true ideas about art, but he resented their existence in anyone but himself. Speaking broadly, his ambition was to be acknowledged as a sort of æsthetic dictator. Nothing would have satisfied him short of being accepted as both the greatest painter and the official figurehead of art, in his time, while his character unfitted him to take even the initial steps towards such a consummation. As a painter, he lacked something on the sensuous side. He was fond of asserting the partial truth that art is science. In distilling from a natural scene such constituents as can be fused into a simple, sternly concentrated, æsthetic unity Whistler has never been surpassed. It is only when we seek the touch of excess, the hint at some personal, irresponsible preference, through which genius so often speaks, that we feel a slight stirring of disappointment. As an etcher he ranks with Rembrandt, in command of the *métier*, and in contentment with what it can do without any kind of forcing. As a man Whistler was one of the most remarkable social units of his time. His epigrammatic wit and power of repartee inspired a curious mixture of dread and admiration, which was deepened by the inability of the slower minds

about him to foresee when they would tread upon his toes and bring out his lightning.

A memorial exhibition of Whistler's work was held by the International Society at Knightsbridge in 1905, and a loan collection was brought together at the Tate Gallery in the summer of 1912. Six of his finest pictures are in the art collection of Mr. Charles Lang Freer, of Detroit, which has been presented to the Smithsonian Institution at Washington.

Portraits of Whistler are numerous, from an early miniature reproduced in Mrs. Pennell's 'Life,' and a head painted when the sitter was fourteen by Sir William Boxall, to the various portraits of himself drawn and painted throughout his active years. At one time he is said to have made some sort of a portrait of himself every day. Most of these were destroyed by himself. Self-portraits in oil survive in the McCulloch collection, in the possession of Mr. Douglas Freshfield, and in the Municipal Art Gallery at Dublin; a drawing in black chalk belongs to Mr. Thomas Way, and there are three etchings. The portrait known as 'Whistler with a large hat' belongs to Mr. Freer, who also owns a portrait by Fantin-Latour which was cut out from a large group, the rest of which was destroyed. He was also painted by Boldini and by W. M. Chase. There is a lithograph by Paul Rajon, dry-points by Helleu and Percy Thomas, a caricature in 'Vanity Fair' by 'Spy' in 1878, and a bust by Sir Edgar Boehm, R.A.

[E. R. and J. Pennell's *Life of James McNeill Whistler*, London, 2 vols. 1908, and revised edit. in 1 vol., 1911, is the indispensable authority. See also T. R. Way and G. R. Seitz, Edinburgh, 1910; private information and personal knowledge.] W. A.

WHITE, JOHN CAMPBELL, first BARON OVERTOUN (1843-1908), Scottish churchman and philanthropist, born at Hayfield, near Rutherglen, on 21 Nov. 1843, was only son in a family of seven children of James White of Overtoun (d. 1884), one of the partners of the extensive chemical manufacturing firm

of John and James White, Shawfield, near Rutherglen. His mother, Fanny (d. 1891), was a daughter of Alexander Campbell, sheriff of Renfrewshire. In 1851 he went to a preparatory school in Glasgow, and in 1859 he entered Glasgow University, where he took prizes in logic and natural philosophy. For a session he worked in the laboratory of Professor William Thomson, afterwards Lord Kelvin [q. v. Suppl. II], who was impressed by his abilities. He graduated M.A. in 1864, and after receiving a good business training joined in 1867 his father's firm, of which he ultimately became principal partner.

From an early period he devoted much time to religious and philanthropic work. Like his parents, he was a staunch supporter of the Free Church of Scotland, took a prominent part in its affairs, and was a munificent contributor to its funds. He supported the movement which in 1900 led to the union of the Free and United Presbyterian churches, and he was the principal defender in the consequent litigation, which temporarily deprived, by the judgment of the House of Lords of 1 Aug. 1904, the United Free Church of its property. White headed an emergency fund with a subscription of 10,000*l.*, and, later, gave a like sum to aid the dispossessed ministers and congregations in the Scottish highlands and islands.

From 1884 to his death he was in succession to his father convener of the Livingstonia Mission of the United Free Church of Scotland, which, with headquarters in Glasgow, supports missionaries in British Central Africa and Northern Rhodesia. He gave the mission no less than 50,000*l.* His zeal for home mission work was no less pronounced. Coming under the influence of the evangelical revival of 1859-60, he identified himself with the Scottish mission conducted by Moody and Sankey in 1874. Of the Glasgow United Evangelistic Association, an undenominational organisation carrying on extensive social and religious work in Glasgow, which was one of the outcomes of Moody and Sankey's visit, he was the energetic president, and the palatial buildings in Bothwell Street, Glasgow, where are housed the Christian Institute, the Bible Training Institute, and the Young Men's Christian Association (with all of which he was connected), bear witness to his liberality. He was himself a successful religious teacher. For thirty-seven years he conducted a Bible class at Dumbarton, which at his death numbered

about five hundred members. White supported the liberal party in Scotland, and in 1893, on Gladstone's recommendation, on account of his philanthropy and political services, was raised to the peerage of the United Kingdom as Baron Overtoun, his title being taken from the finely wooded estate in Dumbartonshire which his father purchased in 1859. He became lord-lieutenant of Dumbartonshire in 1907. He died at Overtoun House on 15 Feb. 1908, and was buried in the family vault in Dumbarton cemetery. He married in 1867 Grace, daughter of James H. McClure, solicitor, Glasgow, who survived him without issue. A presentation portrait by Mr. Fiddes Watt (1909) hangs in the assembly buildings in Edinburgh.

[Glasgow Herald, 17 Feb. 1908; British Monthly, May 1903; Scottish Review, February 1908; Life of Principal Rainy by P. C. Simpson (2 vols. 1909); Free Church of Scotland Appeals, 1903-4, edited by Robert L. Orr, 1904.] W. F. G.

WHITEHEAD, ROBERT (1823-1905), inventor, born at Mount Pleasant, Bolton-le-Moors, Lancashire, on 3 Jan. 1823, was one of a family of four sons and four daughters of James Whitehead (1788-1872), the owner of a cotton-bleaching business at Bolton-le-Moors, by his wife Ellen, daughter of William Swift of Bolton. Educated chiefly at the local grammar school, he was apprenticed, when fourteen, to Richard Ormond & Son, engineers, Aytoun Street, Manchester. His uncle, William Smith, was manager of the works, where Whitehead was thoroughly grounded in practical engineering. He also acquired unusual skill as a draughtsman by attendance at the evening classes of the Mechanics' Institute, Cooper Street, Manchester. Meanwhile his uncle became manager of the works of Philip Taylor & Sons, Marseilles, and in 1844 Whitehead, on the conclusion of his apprenticeship, joined him in that employ. Three years later he commenced business on his own account at Milan, where he effected improvements in silk-weaving machinery, and also designed machinery for the drainage of some of the Lombardy marshes. His patents, however, as granted by the Austrian government, were annulled by the Italian revolutionary government of 1848. Whitehead then went to Trieste, where he served the Austrian Lloyd Company for two years; from 1850 to 1856 he was manager there of the works of Messrs. Strudhoff. In 1856 he started for local capitalists, at the neighbouring naval

port of Fiume, the Stabilimento Tecnico Fiumano.

At Fiume, Whitehead designed and built engines for several Austrian warships, and the high quality of his work led to an invitation in 1864 to co-operate in perfecting a 'fireship' or floating torpedo designed by Captain Lupuis of the Austrian navy. The officer's proposals were dismissed by Whitehead as too crude for further development. At the same time he carried out with the utmost secrecy, in conjunction with his son John and one mechanic, a series of original experiments which culminated in 1866 in the invention of the Whitehead torpedo.

The superiority of the new torpedo over all predecessors was quickly established. But it lacked precision, its utmost speed and range were seven knots for seven hundred yards, and there was difficulty in maintaining it at a uniform depth when once in motion. The last defect Whitehead remedied in 1868 by an ingenious yet simple contrivance called the 'balance chamber,' the mechanism of which was long guarded as the 'torpedo's secret.' In the same year, after trials from the gunboat *Gemse*, the right, though not exclusive right, of construction was bought by the Austrian government, and a similar right, as the result of trials off Sheerness in 1870, was bought by the British government in 1871. France followed suit in 1872, Germany and Italy in 1873, and by 1900 the right of construction had been acquired by almost every country in Europe, the United States, China, Japan, and some South American republics. Meanwhile Whitehead in 1872 had in conjunction with his son-in-law, Count Georg Hoyos, bought the Stabilimento Tecnico Fiumano, devoting the works solely to the construction of torpedoes and accessory appliances. His son John subsequently became a third partner. In 1890 a branch was established at Portland Harbour, under Captain Payne-Gallwey, an ex-naval officer, and in 1898 the original works at Fiume were rebuilt on a larger scale.

Repeated improvements were made upon the original invention, many of them being by Whitehead and his son John. In 1876 by his invention of the 'servo-motor,' which was attached to the steering gear, a truer path through the water was obtained. In the same year he designed torpedoes with a speed of eighteen knots for six hundred yards, while further changes gave a speed in 1884 of twenty-four knots, and in 1889 of twenty-nine knots for one thousand yards. Means were also devised

by which the torpedo could be fired from either above or below the surface of the water and with accuracy from the fastest ships, no matter what the speed or bearing of the enemy. Each individual torpedo, however, continued to show idiosyncrasies which required constant watching and correction, and absolute confidence in the weapon was not established till the invention in 1896, by Mr. Obry, at one time of the Austrian navy, of a small weighted wheel, or gyroscope, which acted on the 'servo-motor' by means of a pair of vertical rudders and steered a deflected torpedo back to its original course. The invention, which disarmed the torpedo's severest critics, was acquired and considerably improved by Whitehead. In its present form the Whitehead torpedo is a weapon of precision, its capabilities entirely eclipsing those of the gun and ram. Any doubts as to its usefulness in war were definitely dispelled by the ease with which on 9 Feb. 1904 a few Japanese destroyers reduced the Russian fleet outside Port Arthur to impotence.

Whitehead received many marks of favour and decorations from various courts. He was presented by the Austrian Emperor with a diamond and enamel ring for having designed and built the engines of the ironclad *Ferdinand Max*, which rammed the *Re d'Italia* at the battle of Lissa. On 4 May 1868 he was decorated with the Austrian Order of Francis Joseph in recognition of the excellence of his engineering exhibits at the Paris Exhibition in 1867. He also received Orders from Prussia, Denmark, Portugal, Italy, Greece, France (Legion of Honour, 30 July 1884), and Turkey. Whitehead did not apply for Queen Victoria's permission to wear his foreign decorations.

Whitehead for some years owned a large estate at Worth, Sussex, where he farmed on a large scale. He died at Beckett, Shrovenham, Berkshire, on 14 Nov. 1905, and was buried at Worth, Sussex.

Whitehead married in 1845 Frances Maria (*d.* 1883), daughter of James Johnson of Darlington, by whom he had three sons and two daughters. His eldest son, John (*d.* 1902), assisted him at Fiume and made valuable improvements in the torpedo. The second daughter, Alice (*b.* 1851), married in 1869 Count Georg Hoyos. A portrait of Robert Whitehead by the Venetian artist, Cherubino Kirchmayr, belongs to his grandson, John Whitehead (son of John Whitehead). The original sketch in oils of a second portrait, by the same artist is owned by Sir James

Beethom Whitehead, K.C.M.G. (the second son), British minister at Belgrade since 1906; the finished portrait belongs to Robert Bovill Whitehead (the third son).

E. F.

WHITELEY, WILLIAM (1831-1907), 'universal provider,' a younger son of William Whiteley, a corn factor in a small way of business at Agbrigg near Wakefield, by his wife Elizabeth, daughter of Thomas Rowland, was born at Agbrigg on 29 Sept. 1831, and spent several years with his brothers on his uncle's farm near Wakefield. In June 1848, however, he was apprenticed as a draper's assistant to Messrs. Harnew and Glover, of Wakefield, and in 1851 he paid a visit to the Great Exhibition in London. The idea of London as the centre of the world's commerce stimulated him in a remarkable manner, and in 1852 he obtained a position in The Fore Street Warehouse Company, in the City of London. His capital then was 10*l.*; in ten years he had amassed 700*l.*, and with its aid he opened a small shop with two female assistants as a fancy draper at 31 Westbourne Grove (11 March 1863). His ideas were laughed at as extravagant and his choice of a site ridiculed. Westbourne Grove was then known in the drapery trade as 'Bankruptcy Row.' But the attention he paid to window dressing, to marking in plain figures, and to dealing with orders by post soon distinguished his business from its competitors. In 1870 and succeeding years he accumulated shops side by side; in 1876 he had fifteen shops and two thousand employees. At the time of his death he had twenty-one shops, fourteen in Westbourne Grove (which he had adapted from pre-existing buildings), and seven of spacious dimensions in the adjoining Queen's Road which were wholly new erections. Meanwhile six serious fires which gutted the premises on each occasion threatened the progress of the business. On 17 Nov. 1882 some thirteen shops, 43-55 Westbourne Grove, were burned down, of an estimated value of 100,000*l.*; on 26 Dec. 1882 some stabling and out-houses valued at 20,000*l.* were destroyed; on 26 April 1884 the new premises suffered to the extent of 150,000*l.*; on 17 June

1885 four large shops valued at 100,000*l.* were ruined, and on 6-9 Aug. 1887 damage was done to the extent of 500,000*l.*; three lives were lost. The hand of an incendiary was suspected, and on the last occasion a reward of 3000*l.* was offered for discovery of the criminal. But 'Whiteley's' rose each time more splendid from the flames.

The field of operations had been gradually extended; in 1866 the owner added general to fancy drapery, and within ten years he undertook to provide every kind of goods, including food, drink, and furniture. He adopted the insignia of the two hemispheres and the style of 'universal provider.' Stories were widely current of Whiteley supplying a white elephant and a second-hand (or misfit) coffin. He set the example of professing to sell any commodity that was procurable. Whiteley's method of taking and dismissing assistants without references was peculiar, but in other respects his mode of organisation was soon adopted or paralleled by many other firms in London and the provinces. Whiteley's success was effected without sensational cutting of prices or extravagant disbursement in advertising. In 1899 the turnover exceeded a million sterling and the business was converted into a limited company (2 June); but the bulk of the shares was held in the family, and it was not until 1909 that the shares were publicly subscribed. The share capital amounted to 900,000*l.* with four-per-cent. first mortgage irredeemable debenture stock of 900,000*l.* Whiteley continued to live unpretentiously in close proximity to his business at 31 Porchester Terrace. Every day to the last he was in the shop. There on 24 Jan. 1907 he was visited by Horace George Rayner, a young man who falsely claimed to be an illegitimate son. Whiteley treated him as a blackmailer, and was about to summon a constable when Rayner shot him dead. Whiteley was buried with an imposing ceremonial at Kensal Green on 30 Jan. 1907. His assailant, who tried and failed to commit suicide, was sentenced to death at the Central Criminal Court on 22 March 1907, but the home secretary (Mr. Herbert Gladstone), yielding to public opinion, which detected extenuating circumstances in the crime, commuted the sentence to imprisonment for life.

By his wife Harriet Sarah Hill, who survived him, Whiteley left two sons, William and Frank, and two daughters, Ada and Clara. His estate was valued at 1,452,829*l.* Apart from a generous

provision for his family by a will dated 20 May 1904, he left a million pounds in the hands of trustees to be devoted to the construction and maintenance of Whiteley Homes for the Aged Poor. For this purpose a garden city of over 200 acres, Whiteley Park, Burr Hill, Surrey, is in course of construction. The business was considerably enlarged by his sons in 1909-1910, and an immense building in the Queen's Road, costing over 250,000*l.* and covering nearly twenty acres, was opened in Oct. 1911.

A portrait in oils by Haymes Williams (1889) and a bust by Adams-Acton belong to his sons.

[Biograph, 1881, p. 421; *The Times*, Jan., Feb., March 1907, *passim*; *Annual Reg.* 1907; *Whiteley's Diary and Almanac*, 1877 and successive years; private information.]

T. S.

WHITEWAY, SIR WILLIAM VALLANCE (1828-1908), premier of Newfoundland, was younger son of Thomas Whiteway, a yeoman farmer of Buckett House at Little Hempston, a village near Totnes, where he was born on 1 April 1828. Perpetuating the old-time connection between Devonshire and Newfoundland, he was presented at the time of the diamond jubilee of 1897 with the freedom of the borough of Totnes. Educated at Totnes grammar school and at the school of Mr. Phillips, M.A., at Newton Abbot, he went out to Newfoundland to be articled to his brother-in-law, R. R. Wakeham, a prominent lawyer in the colony, in 1843, when he was only fifteen years old. He qualified as a solicitor in December 1849, was called to the Newfoundland bar in 1852, and became Q.C. in 1862. In 1858 he entered the legislature. From 1865 to 1869 he was speaker of the House of Assembly. In 1869 he went with Sir Frederick Carter, then premier of Newfoundland, and Sir Ambrose Shea to Ottawa to negotiate terms of confederation with the then newly formed dominion of Canada. The terms were decisively rejected in the same year by the Newfoundland electorate. When Sir Frederick Carter returned to power in 1873, Whiteway became solicitor-general in his administration, with a seat in the cabinet; and when Carter took a seat on the judges' bench, Whiteway succeeded him in 1878 as premier and attorney-general. In the previous year, 1877, he had been appointed counsel for Newfoundland at the Halifax fisheries commission. This commission met, under the terms of the treaty of

Washington of 1871, to assess the value of the difference between the privileges accorded to Great Britain and those acquired by the United States under the treaty. The commissioners awarded to Great Britain money compensation to the amount of 5½ million dollars, of which sum Newfoundland subsequently received one million dollars. For his services Whiteway received the thanks of both houses of the Newfoundland legislature. He was made K.C.M.G. in 1880. In 1885 his government made way for the Thorburn administration. He returned to power as premier and attorney-general in 1889, and held office till 1894. After the general election in 1893 petitions were filed in the supreme court against Whiteway and many of his colleagues and supporters on the ground of corrupt practices. As a result, Whiteway was, in 1894, unseated and disqualified under section 17 of the Elections Act of 1889. His government resigned on 11 April 1894; but critical times followed. In December a great bank crisis took place. On 27 Jan. 1895 an Act was passed by the legislature removing the disabilities of members who had been unseated by the decision of the supreme court. On 31 Jan. 1895 Whiteway again became premier, and held office until 1897, when he resigned, and practically ended his public career. He made an effort to re-enter public life in 1904, largely as a protest against the Reid contract of 1901 [see REID, SIR ROBERT GILLESPIE, Suppl. II], but was unsuccessful, partly because he was supposed to favour confederation with Canada. In 1897 he represented Newfoundland, as premier, at the diamond jubilee and the colonial conference of that year, and was made a privy councillor, being the first Newfoundland minister to attain that honour. He was also made a D.C.L. of Oxford.

Whiteway played a prominent part in the negotiations respecting the Newfoundland fisheries and French shore questions, and went to England four times as a delegate from the colony to the imperial government. In 1891 he was heard at the bar of the House of Lords, when the French fishery treaty bill was before that house. The net result was that, as an alternative to imperial legislation, the Newfoundland legislature passed temporary measures for the purpose of carrying out the treaty obligations of Great Britain to France in respect of Newfoundland. Whiteway, too, was premier when the abortive Bond-Blaine convention was, in 1890, negotiated with the United States.

It is as a promoter of railways in Newfoundland that his name will be principally remembered (Prowse's *History of Newfoundland*, 1895, p. 495 note). In 1880 he carried the first railway bill through the island legislature for the construction of a light railway from St. John's to Hall's Bay, and though he was personally in favour of construction by the government, the work was entrusted to an American syndicate with unsatisfactory results. When he returned to power in 1889 he took up again with vigour the policy of developing the colony by railways, and during his second administration he concluded the earlier contracts with Robert Gillespie Reid of Montreal under which the railway was subsequently constructed via the Exploits river to Port aux Basques in the south-west of the island, the nearest point to Cape Breton Island and Nova Scotia. The later Reid contracts of 1898 and 1901 were not in accordance with his views.

A leading member of the Church of England in Newfoundland, and district grand master of the Freemasons, White-way died at St. John's on 24 June 1908, the natal day of Newfoundland, and was buried in the Church of England cemetery at St. John's.

He married (1) in 1862 Mary (*d.* 1868), daughter of J. Lightbourne, rector of Trinity Church in Bermuda; (2) in 1872 Catherine Anne, daughter of W. H. Davies of Nova Scotia. One son and two daughters survived him.

[The Daily News, St. John's, Newfoundland, 25 June 1908; The Times, 26 June 1908; Blue Books; D. W. Prowse's *History of Newfoundland*, 1895; 2nd edit. 1896; Colonial Office List; Who's Who.] C. P. L.

WHITMAN, ALFRED CHARLES (1860-1910), writer on engravings, youngest son of Edwin Whitman, a grocer, by his wife Fanny, was born at Hammersmith on 12 October 1860, and was educated at St. Mark's College School, Chelsea. On leaving school he was employed by the firm of Henry Dawson & Sons, typographical company, of Farringdon Street and Chiswick, with whom he remained till he was appointed on 21 Dec. 1885 an attendant in the department of prints and drawings in the British Museum. For some years he served in his spare time as amanuensis to Lady Charlotte Schreiber [q. v.] and assisted her in the arrangement and cataloguing of her collections of fans and playing-cards. He was promoted to the office of departmental clerk in the print department on 20 May

1903. His tact, patience, and courtesy, combined with an exceptional knowledge of the English prints in the collection, made his aid invaluable to visitors who consulted it, and he acquired, in particular, a well-deserved reputation as an authority on British mezzotint engraving. His earlier books, 'The Masters of Mezzotint' (1898) and 'The Print Collector's Handbook' (1901; new and enlarged edit. 1912), were of a popular character, and have less permanent value than the catalogues of eminent engravers' works, which were the outcome of notes methodically compiled during many years, not only in the British Museum, but in private collections and sale-rooms. 'Valentine Green,' published in 1902 as part of a series, 'British Mezzotinters,' to which other writers contributed under his direction, is less satisfactory than 'Samuel William Reynolds,' published in 1903 as the first volume in a series of 'Nineteenth Century Mezzotinters.' It was followed by 'Samuel Cousins' (1904) and 'Charles Turner' (1907). These two books rank among the best catalogues of an engraver's work produced in England. Whitman's health began to fail in the autumn of 1908, and he died in London after a long illness, on 2 Feb. 1910. His annotated copy of J. Chaloner Smith's 'British Mezzotint Portraits' was sold at Christie's on 6 June 1910 for 430*l.* 10*s.* On 12 August 1885 he married, at Hammersmith, Helena Mary Bing.

[The Athenæum, 12 Feb. 1910; private information.] C. D.

WHITMORE, SIR GEORGE STODDART (1830-1903), major-general, commandant of forces in New Zealand, born at Malta on 1 May 1830, was son of Major George St. Vincent Whitmore, R.E., and grandson of General Sir George Whitmore (1775-1862), K.C.H., colonel-commandant R.E. His mother was Isabella, daughter of Sir John Stoddart [q. v.], chief justice of Malta. Educated at Edinburgh Academy and at the Staff College, he achieved some success, and entered the army in 1847 as ensign in the Cape mounted rifles. He became lieutenant in May 1850, captain in July 1854, and brevet-major in June 1856. He distinguished himself in the Kaffir wars of 1847 and 1851-3, and was present at the defeat of the Boers at Boom Plaats in 1848. In 1855-6 he served with distinction in the Crimea, receiving the fourth class of the Mejidie. In 1861 he went to New Zealand as military secretary to Sir Duncan Alexander Cameron

[q. v. Suppl. I], then in command of the English forces engaged in the Maori war. In the succeeding year he resigned his position in the army in order to buy and farm a run in Hawke's Bay. During 1865 the natives were in active revolt in this district. Whitmore, who complied with a request to take command of the Hawke's Bay militia on the east coast, decisively defeated the Maoris at Omaranui (October 1866), and thus secured peace for eighteen months. In June 1868 the war started again on the west coast, and in July Whitmore was sent in pursuit of an active minor chief called Te Kooti, at the head of the volunteers and a detachment of armed constabulary. He overtook the enemy at Ruakitire on 8 Aug., and an indecisive engagement followed. Te Kooti, although wounded in the foot, escaped, and Whitmore was obliged to fall back in order to procure supplies.

Shortly afterwards, on the west coast, Whitmore served under Colonel McDonnell, an officer who was his junior, in order to restore his prestige after defeat. On McDonnell's withdrawal on leave of absence, Whitmore assumed the command, and on 5 Nov. 1868 was defeated by Titokowaru at Moturoa. Summoned straightway to the east coast to oppose Te Kooti, who, after some fresh successes, had fortified himself in a pa on the crest of a hill called Ngatapa, Whitmore joined forces with the friendly natives and invested the pa, which after five days' siege fell on 3 January 1869; 136 Hau-Haus were killed, but Te Kooti escaped. This was the last important engagement fought in New Zealand. Whitmore left Ropata, the leader of the friendly Maoris, to deal with Te Kooti, and returned to Wanganui to pursue Titokowaru. He succeeded in chasing the enemy northwards out of the disputed territories until they took refuge in the interior, where, as they were now powerless, he left them alone. Then, sent against Te Kooti, who had started another insurrection in the Uriwera district, he seemed on the point of victory when the Stafford ministry fell, and the new premier, Fox, removed him from his command. Whitmore published an account of 'The Last Maori War in New Zealand' (1902); he stated that he retired through illness.

From 1863 Whitmore sat on the legislative council, where he supported Sir Edward William Stafford [q. v. Suppl. II] and the war policy. In 1870 he protested against the immigration and public works bill. From 18 October 1877 to October 1879 he was colonial secretary and

defence minister under Sir George Grey. In 1879 he went to Taranaki with Grey and the governor to deal with the disturbance created by Te Whiti. On 16 Aug. 1874 he became a member of the Stout-Vogel cabinet without a portfolio, but, owing to jealousy between the provinces of Auckland and Canterbury, the government was defeated at the end of a fortnight. On 5 Sept. Stout and Vogel returned to power and Whitmore was created commandant of the colonial forces and commissioner of the armed constabulary, with the rank of major-general. This was the first time the honour had been conferred in New Zealand on an officer of the colonial troops. He was created C.M.G. in 1869, K.C.M.G. in 1882. He visited England in 1902 in order to publish his book on the Maori war. He returned to New Zealand in February 1903. He died at The Blue Cottage, Napier, Hawke's Bay, New Zealand, on 16 March 1903, and was buried in Napier Cemetery. In 1865 he married Isabella, daughter of William Smith of Roxeth, near Rugby, England. He left no issue.

[W. Pember Reeves's *The Long White Cloud*; Rusden's *New Zealand*; Mennell's *Australas. Biog.*; Gisborne, *New Zealand Rulers*, 1887 (with portrait); Whitmore, *Last Maori War*; *New Zealand Times*, Wellington Evening Post, and *Christchurch Press*, 17 March 1903.] A. B. W.

WHITWORTH, WILLIAM ALLEN (1840-1905), mathematical and religious writer, born at Bank House, Runcorn, on 1 Feb. 1840, was the eldest son in the family of four sons and two daughters of William Whitworth, at one time schoolmaster at Runcorn and incumbent of Little Leigh, Cheshire, and of Widnes, Lancashire. His mother was Susanna, daughter of George Coyne of Kilbeggan, co. Westmeath, and first cousin to Joseph Stirling Coyne [q. v.].

After education at Sandicroft School, Northwich (1851-7), Whitworth proceeded to St. John's College, Cambridge, in October 1858, and in 1861 was elected a scholar. In 1862 he graduated B.A. as 16th wrangler, proceeding M.A. in 1865; he was fellow of his college from 1867 to 1882. He was successively chief mathematical master at Portarlington School and Rossall School and professor of mathematics at Queen's College, Liverpool (1862-4).

From early youth Whitworth showed a mathematical promise and originality to

which his place in the tripos scarcely did justice. While an undergraduate he was principal editor with Charles Taylor [q. v. Suppl. II] and others of the 'Oxford, Cambridge, and Dublin Messenger of Mathematics,' started at Cambridge in November 1861. The publication was continued as 'The Messenger of Mathematics'; Whitworth remained one of the editors till 1880, and was a frequent contributor. His earliest article on 'The Equiangular Spiral, its Chief Properties proved Geometrically' (i. 5-13), was translated into French in the 'Nouvelles Annales de Mathématiques' (1869). An important treatise on 'Trilinear Co-ordinates and other Methods of Modern Analytical Geometry of Two Dimensions' was issued at Cambridge in 1866. Whitworth's best-known mathematical work, entitled 'Choice and Chance, an Elementary Treatise on Permutations, Combinations and Probability' (Cambridge, 1867), was elaborated from lectures delivered to ladies at Queen's College, Liverpool, in 1866. A model of clear and simple exposition, it presents a very ample collection of problems on probability and kindred subjects, solutions to which were provided in 'DCC Exercises' (1897). Numerous additions to the problems were made in subsequent editions (5th edit. 1901).

Meanwhile Whitworth was ordained deacon in 1865 and priest in 1866, and won a high reputation in a clerical career. He was curate at St. Anne's, Birkenhead (1865), and of St. Luke's, Liverpool (1866-70), and perpetual curate of Christ Church, Liverpool (1870-5). His success with parochial missions in Liverpool led to preferments in London. He was vicar of St. John the Evangelist, Hammersmith (1875-86), and vicar of All Saints', Margaret Street, Marylebone, from November 1886 till his death. He also held from 1885 the sinecure college living of Aberdaron with Llanfaelrhys in the diocese of Bangor (1885), and was from 1891 to 1892 commissary of the South African diocese of Blomfontein. Whitworth was select preacher at Cambridge in 1872, 1878, 1884, 1894, and 1900, Hulsean lecturer there (1903-4), and was made a prebendary of St. Paul's Cathedral in 1900.

Whitworth, who had been brought up as an evangelical, was influenced at Cambridge by the scholarship of Lightfoot and Westcott, and he studied later the German rationalising school of theology. As a preacher he showed critical insight and learning. His sympathies lay mainly with the high church party, and in 1875 he joined the English Church Union. In the

ritual controversy of 1898-9 he showed moderation, and differed from the union in its opposition to the archbishops' condemnation of the use of incense. He contended that the obsolete canon law should not be allowed 'to supersede the canonical utterance of the living voice of the Church of England.' His ecclesiastical position may be deduced from his publications: 'Quam Dilecta,' a description of All Saints' Church, Margaret St., 1891; 'The Real Presence, with Other Essays,' 1893, and 'Worship in the Christian Church,' 1899. Two volumes of sermons were published posthumously: 'Christian Thought on Present Day Questions' (1906) and 'The Sanctuary of God' (1908). He also published 'The Churchman's Almanac for Eight Centuries,' a mathematical calculation of the date of every Sunday (1882).

Whitworth died on 12 March 1905 at Fitzroy House Nursing Home after a serious operation (28 February) and was buried at Brookwood in ground belonging to St. Alban's, Holborn. There is a slab to his memory in the floor of All Saints' Church, Margaret Street. He married on 10 June 1885 Sarah Louisa, only daughter of Timms Hervey Elwes, and had issue four sons, all graduates of Trinity College, Cambridge.

[Guardian, 15 and 22 March 1905; Church Times, 17 March 1905; The Times, 13 March 1905; Eagle, June 1905, xxvi. 396-9; information from brother, Mr. G. C. Whitworth, and Professor W. H. H. Hudson.] D. J. O.

WHYMPER, EDWARD (1840-1911), wood-engraver and mountain climber, born at Lambeth Terrace, Kennington Road, on 27 April 1840, was the second son of Josiah Wood Whympers [q. v. Suppl. II] by his first wife, Elizabeth Whitworth Claridge. He was privately educated. While still a youth he entered his father's business in Lambeth as a wood-engraver, and in time succeeded to its control. For many years he maintained its reputation for the production of the highest class of book illustration, until towards the close of the last century the improvement in cheap photographic processes destroyed the demand for such work. His woodcuts may be found in his own works, the 'Alpine Journal,' and many books of travel between 1865 and 1895; among his more important productions were Josef Wolf's 'Wild Animals' (1874) and Cassell's 'Picturesque Europe' (1876-1879).

Edward, though he seldom exhibited, was,

like his father, a water-colour artist of considerable ability, and it was to this gift that he owed a commission that proved a turning-point in his life. In 1860 William Longman, of the firm of publishers, an early president of the Alpine Club, needed illustrations of the then little known mountains of Dauphiné for the second series of 'Peaks, Passes, and Glaciers' (1862) and young Whymper was sent out to make the sketches. He states (*Alpine Journal*, v. 161) that he saw in the chance of going to the Alps a step towards training himself for employment in Arctic exploration, an object of his early ambition. In the following year he showed his ability as a mountaineer by climbing Mont Pelvoux (*Peaks, Passes, and Glaciers*, 2nd series). In the seasons of 1862-5, by a series of brilliant climbs on peaks and passes, he made himself one of the leading figures in the conquest of the Alps. In 1864 he took part in the first ascent of the highest mountain in Dauphiné, the Pointe des Écrins, and of several peaks in the chain of Mont Blanc. In 1865 he climbed the western peak of the Grandes Jorasses and the Aiguille Verte.

Whymper's fixed ambition, however, during this period was to conquer the reputedly inaccessible Matterhorn. In this he had formidable rivals in Prof. Tyndall and the famous Italian guides, the Carrels of Val Tournanche. He made no fewer than seven attempts on the mountain from the Italian side, which were all foiled by the continuous difficulties of the climb or by bad weather. In one of them, while climbing alone, he met with a serious accident. At last, in July 1865, the plan of trying the Zermatt ridge was adopted, and success was gained at the first attempt. But the sequel was a tragedy rarely paralleled in the history of mountaineering. The party, from no fault of Whymper's, was too large and was ill constituted for such an adventure. It consisted of seven persons, Lord Francis Douglas, Charles Hudson, vicar of Skillington, Lincolnshire, his young friend D. Hadow, and Whymper, with the experienced guides Michel Croz of Chamoinix and Peter Taugwalder of Zermatt, with the latter's son as porter. Hadow, the youngest member of the party, a lad inexperienced in rock-climbing, fell on the descent, and dragged down with him Douglas, Hudson, and the guide Croz. The rope broke, and Whymper was left, with the Zermatt men, clinging to the mountain side, while his companions disappeared over the precipice. Investigation showed that the rope that broke was a spare

piece of inferior quality, which had been improperly used.

This terrible catastrophe gave Whymper a European reputation in connection with the Matterhorn, which was extended and maintained by the volume 'Scrambles amongst the Alps' (1871; 2nd edit. same year; 3rd edit. condensed as 'Ascent of the Matterhorn,' 1879; 4th edit. 1893, reissued in Nelson's shilling library, 1905), in which he told the story with dramatic skill and emphasis. The Matterhorn disaster terminated Whymper's active career as an Alpine climber, though he often subsequently visited the Alps, and for literary purposes repeated his ascent of the Matterhorn. In 1867 he turned his attention to Greenland with the idea of ascertaining the nature of the interior, and if possible of crossing it. But a second preliminary trip in 1872 convinced him that the task was too great for his private resources. The literary and scientific results of these journeys were recorded in three entertaining papers in the 'Alpine Journal' (vols. v. and vi.), a lecture to the British Association (39th Report, 1869), and a paper by Prof. Heer (*Philosophical Transactions*, 1869, p. 445) on the fossils, trees, and shrubs collected. The chief practical result was to show that the interior of Greenland was a snowy plateau which could be traversed by sledges, provided the start was made sufficiently early in the year, and thus to pave the way for Nansen's success in 1888.

In 1888 Whymper turned his attention to the Andes of Ecuador. At that date the still unsettled problem of the power of resistance, or adaptation, of the human frame to the atmosphere of high altitudes was being vigorously discussed. Whymper proposed as his main object to make experiments at heights about and over 20,000 feet. The results he obtained, if they did not settle a question complicated by many physical, local, and personal variations, served to advance our knowledge, and have been in important respects confirmed by the experiences of Dr. Longstaff, the Duke of the Abruzzi, and others at still higher elevations between 20,000 and 25,000 feet. For example, it is now admitted that long sojourn under low pressures diminishes the climbers' physical powers rather than trains them, and it is also agreed that Whymper was right in contesting the conclusion of Paul Bert that inhalation of oxygen would prove a convenient remedy, or palliative, in cases of 'mountain sickness.'

From a climber's point of view the expedition was completely successful. The summits of Chimborazo (20,498 feet) and six other mountains of between 15,000 and 20,000 feet were reached for the first time. A night was spent on the top of Cotopaxi (19,613 feet), and the features of that great volcano were thoroughly studied. From the wider points of view of the geographer, the geologist and the general traveller, Whymper brought home much valuable material, which was carefully condensed and embodied in the volume 'Travels among the Great Andes of the Equator' (1892). Its value was recognised by the council of the Royal Geographical Society, which in 1892 conferred on Whymper one of their Royal Medals in recognition of the fact that, apart from his mountaineering exploits, 'he had largely corrected and added to our geographical and physical knowledge of the mountain systems of Ecuador, fixed the position of all the great Ecuadorian mountains, produced a map constructed from original theodolite observations extending over 250 miles, and ascertained seventy altitudes by means of three mercurial barometers.' The Society also made a grant to the family of his leading guide, J. A. Carrel of Val Tournanche. The collection of rock specimens and volcanic dusts brought home by Whymper from this journey was described by Dr. Bonney in five papers in the 'Proceedings of the Royal Society' (Nos. 229-234). He also collected many natural history specimens, which were described in the supplementary volume of his 'Travels' (1892). For these explorations Whymper devised a form of tent which bears his name and is still in general use with mountain explorers. He also suggested improvements in aneroid barometers.

In 1901 and several subsequent summers Whymper visited the Canadian Rocky Mountains, but did not publish any account of his wanderings.

Finding his craft of wood engraving practically brought to an end, Whymper employed his leisure in his later years mainly in compiling and keeping up to date two local handbooks to Chamonix (1896) and Zermatt (1897). Well illustrated, and not devoid of personal and picturesque touches, these attained high popularity and passed in his lifetime through fifteen editions.

He died at Chamonix on 16 Sept. 1911 while on a visit to the Alps, and was buried in the churchyard of the English church at Chamonix.

With strangers Whymper's manner was

apt to be reserved and at times self-assertive. But amongst acquaintances and persons interested in the same topics with himself his talk was shrewd, instructive, and entertaining. He was by instinct both a craftsman and an artist. With these gifts he coupled great physical endurance and intellectual patience and perseverance, qualities which he displayed both on the mountains and in his business. In everything he aimed at thoroughness. He would never if he could help it put up with inferior material or indifferent workmanship. To his own volumes he devoted years of careful preparation. 'Whymper,' writes Dr. Bonney, 'always laid hold of what was characteristic and useful, and his remarks upon what he had seen were shrewd and suggestive.' 'All his life long he was a modest, steady, and efficient worker in the things he undertook to do. He enjoyed the reputation of a serious writer, explorer, and a man of iron will and nerve, who has worthily accomplished not merely feats of valour, but explorations and studies which have yielded valuable additions to human knowledge' (SIR MARTIN CONWAY in *Fry's Mag.* June 1910).

Whymper served from 1872 to 1874 as a vice-president of the Alpine Club. In 1872 he was created a knight of the Italian order of St. Maurice and St. Lazarus. He was an honorary member of the French Geographical Society and of most of the principal mountaineering clubs of Europe and North America. He married in 1906 Edith Mary Lewin, and left by her one daughter, Ethel Rose. Photographs of him taken in 1865 and 1910 are given in the 'Alpine Journal' (vol. xxvi. pp. 55 and 58), Feb. 1912.

Besides the works cited Whymper published 'How to Use the Aneroid Barometer' (1891).

A portrait in oils by Lance Calkin was exhibited at the Royal Academy in 1894.

D. W. F.

WHYMPER, JOSIAH WOOD (1813-1903), wood-engraver, born in Ipswich on 24 April 1813, was second son of Nathaniel Whimper, a brewer, and for some time town councillor of Ipswich, by his wife Elizabeth Orris. The Whymper (or Whimper) family

has been honourably known in Suffolk since the seventeenth century, one branch (including J. W. Whymper's great grandfather, Thomas Thurston) having been owners of the Glevering Hall estate (near Wickham Market) for several generations. After 1840 J. W. Whymper adopted what he considered the original spelling of his family name, Whymper; many of his early woodcuts are signed Whimper. He received his early education in private schools in his native town, and wishing to become a sculptor was apprenticed at his own desire to a stone-mason, but an accident in the mason's yard terminated his apprenticeship, and all but ended his life before he was sixteen. On his mother's death in 1829 he went to London with the hope of finding entrance to some sculptor's studio, but he was dissuaded from taking up that branch of art by John C. F. Rossi, R.A., to whom he had an introduction. Determined not to ask support from home, he turned to wood-engraving, teaching himself, and beginning by executing orders for shop-bills and the like. This led to some commissions for the 'Penny Magazine.' His prosperity started with the successful sale of an etching of New London Bridge at the time of its opening (1831), which realised 30*l.* profit. He lived for many years in Lambeth (20 Canterbury Place), doing much wood-engraving for John Murray, the S.P.C.K., and the Religious Tract Society. Among his best engravings are those in Scott's 'Poetical Works' (Black, 1857); 'Picturesque Europe' (Cassell, 1876-9); Byron's 'Childe Harold' (Murray); E. Whymper's 'Scrambles in the Alps' (Murray); and in Murray's editions of Schliemann's works. He had many pupils, the most distinguished being Fred Walker and Charles Keene. He engraved a very large number of illustrations by Sir John Gilbert, who was his intimate friend and a constant travelling companion for water-colour sketching. He had taken up water-colour after 1840, having a few lessons from Collingwood Smith. He commenced to exhibit in 1844, and became a member of the New Water-colour Society (now the Royal Institute of Painters in Water-colours) in 1854. From 1859 he had a country house at Haslemere, but did not finally retire from his work in London until 1884. He died at Town House, Haslemere, on 7 April 1903, and was buried in Haslemere churchyard.

He married twice: (1) in 1837 Elizabeth Whitworth Claridge (1819-1859), by whom he had nine sons and two daughters, including Edward [q. v. Suppl. II], the Alpine

traveller and wood-engraver, and Charles, an animal painter; (2) in 1866 Emily Hepburn (*d.* 1886) (a talented water-colour painter, who exhibited at the Royal Academy 1877-8, and Royal Institute 1883-5).

A portrait by Lance Calkin was exhibited in the Royal Academy in 1889.

[D. E. Davy, *Pedigrees of the Families of Suffolk*, British Museum, MSS.; *The Times*, 8 April 1903; Catalogues of the New Water-colour Society (later the Royal Institute of Painters in Water-colours); information supplied by his daughter, Miss Annette Whymper.] A. M. H.

WICKHAM, EDWARD CHARLES (1834-1910), dean of Lincoln, eldest son of Edward Wickham, at one time vicar of Preston Candover, Hampshire, by his wife Christiana St. Barbe, daughter of C. H. White, rector of Shalden, Hampshire, was born on 7 Dec. 1834 at Eagle House, Brook Green, Hammersmith, where his father then kept a private school of high reputation. Here he received his early education, entering Winchester as a commoner in January 1848. On 8 July 1850 he was admitted to a place in college, was senior in school November 1851, and in January 1852 he succeeded to a fellowship at New College, Oxford, beginning his undergraduate career at the age of seventeen. In December 1854 he took a first class in classical moderations, and a second class in literæ humaniores in July 1856, winning the chancellor's prize for Latin verse in the same year, and the Latin essay in 1857. He graduated B.A. in 1857, and proceeded to the degrees of M.A. in 1859, and of B.D. and D.D. in 1894.

He was ordained deacon in 1857 and priest in 1858, and after a two years' experience in teaching Sixth Book at Winchester he was recalled to Oxford, where he still retained his fellowship, by the offer of a tutorship. Here he took a leading part in the series of reforms which threw New College open to scholars and commoners who had not been educated at Winchester, and he helped to amend the statutes so as to allow tutors and other college officers to retain their fellowships after marriage. In conjunction with his friend, Edwin Palmer of Balliol, he initiated the system of intercollegiate lectures. Wickham's fine scholarship, his influence with the undergraduates, and his power of preaching made him one of the most successful tutors of his time, and he gradually acquired an important position in the general management of

university affairs. In September 1873 he succeeded Edward White Benson [q. v. Suppl. I] as headmaster of Wellington College, a post which he filled for twenty years. Though he possessed many of the qualifications of a successful schoolmaster, and won the affection of those masters and boys who were brought in close contact with him, his cold manner and unimpressive physique stood in the way of anything like general popularity. In spite of vicissitudes, however, he guided the college safely through some perilous crises and left it better equipped and organised than he found it. His scanty leisure was devoted to an elaborate edition of 'Horace' (vol. i. 1874; vol. ii. 1893), which bore tribute to his fine scholarship. He resigned Wellington in the summer of 1893, and in January 1894 was appointed dean of Lincoln in succession to William John Butler [q. v. Suppl. I]. Here he did excellent work, both in his official capacity in the cathedral and in the city at large. His sermons, exquisitely delivered and given in fastidiously chosen language, had been widely appreciated both at New College and Wellington, and he was chosen select preacher before the University of Oxford for four different years. Wickham also took a prominent share in the debates of convocation and devoted himself to the better organisation both of primary and secondary education in the diocese of Lincoln. He was one of the leading spirits on the education settlement committee formed in 1907 to bring nonconformists and churchmen together. In general politics he was a strong liberal, and his marriage to the daughter of Gladstone placed him in close relations with the liberal party; he followed his father-in-law with absolute faith and devotion. He died on 18 Aug. 1910 at Sierre in Switzerland, whither he had gone with his family for a holiday, and there he was buried, Dr. Randall Davidson, archbishop of Canterbury, performing the service.

He was married on 27 Dec. 1873 to Agnes, eldest daughter of William Ewart Gladstone, by whom he had a family of two sons and three daughters; she survived him. An oil painting of Wickham by Sir William Richmond hangs in the hall at New College.

Besides the edition of 'Horace' already referred to, his published works include: 1. 'Notes and Questions on the Church Catechism,' 1892. 2. 'The Prayer-Book,' 1895, intended for the middle form in public schools. 3. 'Wellington College

Sermons,' 1897. 4. 'Horace for English Readers,' in the form of a prose translation, 1903. 5. 'The Epistle to the Hebrews,' in English, with introduction and notes, 1910. 6. 'Revision of Rubrics, its Purpose and Principles,' in the 'Prayer-Book Revision' series, 1910.

WIGGINS, JOSEPH (1832-1905), explorer of the sea-route to Siberia, born at Norwich on 3 Sept. 1832, was son of Joseph Wiggins (d. 1843) by his wife Anne Petty (d. 1847). The father, a driver and later proprietor of coaches serving the London-Bury-St. Edmunds-Norwich Road, established himself in 1838-9 at Bury, where he combined inn-keeping with his coaching business, then beginning to suffer from railway competition. At his death in 1843 his widow, left with small means, returned with her family of six sons and three daughters to Norwich, where Joseph was sent to Farnell's school. At the age of fourteen he went to Sunderland as an apprentice to his uncle, Joseph Potts, a shipowner. He rose rapidly, being master of a ship at twenty-one and subsequently owning cargo-vessels. In 1868 he temporarily left the sea and became a board of trade examiner in navigation and seamanship at Sunderland. He was now first attracted by the ruling interest of his life—the possibility of establishing a trade route between western Europe and Asiatic Russia (Siberia), by way of the Arctic seas and the great rivers which drain into them from the land. The overland route (by sledge and caravan) was slow, erratic, and expensive, and the resources of Siberia, largely on that account, were little developed. The sea route was held, as the result of a Russian survey, to be impracticable owing to ice and fog. Wiggins argued that a branch of the warm Atlantic drift ought for a certain period of the year to open up the western entrances to the Kara Sea and (in conjunction with the outflow of the great rivers) a route through the sea itself. After full inquiry he chartered and fitted at his own charges a steamer of 103 tons and sailed from Dundee on 3 June 1874. (Sir) Henry Morton Stanley [q. v. Suppl. II] was anxious but unable to accompany him. On June 28 his ship entered upon her struggle with the ice; it was not until 5 Aug. that he rounded

White Island off the Yalmal Peninsula, and after reaching the mouth of the Ob, he was compelled to return owing to lack of provisions, expense, and the attitude of most of his crew. He reached Hammerfest on 7 Sept. and Dundee on 25 Sept. Though his route was already used by Norwegian fishermen and had been followed by the boats of Russian traders as early as the sixteenth century, his voyage called general attention to the possibility of establishing a new commercial route with large vessels. Wiggins expounded his results and opinions in lectures which won him a wide fame and thenceforth occupied him when on shore.

In 1875 he received private financial support and fitted out a sloop of twenty-seven tons for his next voyage. In her he reached Vardö on 27 July 1875, where he met the Russian admiral, Glassenov, and others interested in his work. He accompanied Glassenov, who promised to use his interest with the Russian government and merchants, to Archangel, where he obtained maps, rejoined his sloop, and worked her nearly to Kolguev Island, but thence turned back, the season being spent. Private munificence, partly British and partly Russian, rendered possible his third Siberian journey, in a steamer of 120 tons carrying an auxiliary launch. Sailing in July 1876, Wiggins inspected the Kara river late in August, and by 26 Sept., having found the Ob inaccessible owing to winds and current, was in the estuary of the Yenisei. On 18 Oct. his ship reached the Kureika (a right-bank tributary of the Yenisei, which it joins close to the Arctic circle), and was there laid up for the winter. Wiggins came home by way of St. Petersburg, where he was received with honour without obtaining material help, went on to England, and next year started for Siberia (overland) accompanied by Henry Seebohm [q. v.] the ornithologist. At the Kureika his ship was with difficulty released from the ice, and sailed down stream on 30 June 1877; but she was in ill condition and was wrecked three days later. In 1878 O. J. Cattley, a merchant in St. Petersburg, sent Wiggins in command of a trading steamer to the Ob, whence a cargo of wheat and other produce was successfully brought back. Other vessels performed the like feat. But in 1879-80 the failure of some British and Russian trading expeditions, with which Wiggins declined to be connected, owing to the unsuitability of the vessels, checked public confidence in his design, and from 1880 to 1887 he carried on the ordinary

vocations of a master mariner in other seas. In 1887-8 a small company, named after its ship, the *Phoenix* (273 tons), and backed by Sir Robert Morier [q. v.], British ambassador at St. Petersburg, sent Wiggins in command of the vessel on perhaps his most brilliant voyage from the point of view of navigation. He took her up the river to Yeniseisk, far above what was supposed to be the head of navigation for so large a ship, and left his brother Robert, who was his chief officer, on the river as agent. Another ship followed in 1888, but this voyage and the company failed. In 1890 there was carried through, although Wiggins was not in command, the first successful trans-shipment of goods at the river mouth between a river steamer and a sea-going vessel. In 1893 Wiggins, by arrangement with the Russian government, took command of the *Orestes*, a larger vessel than any which had hitherto reached the mouth of the Yenisei, and safely delivered a cargo of rails for the Trans-Siberian railway. She convoyed at the same time the yacht *Blencathra*, belonging to Mr. F. W. Leybourne-Popham, who planned a voyage to the Kara sea to combine pleasure and trade. Acquiring an interest in the Siberian route, Mr. Leybourne-Popham helped in financing Wiggins's subsequent voyages. For this voyage of 1893 Wiggins was rewarded by the Russian government. Next year, after convoying two Russian steamers to the Yenisei, Wiggins was shipwrecked near Yngor Strait, and, with his companions, made a difficult land-journey home, when the Royal Geographical Society awarded him the Murchison medal. In 1895 he made his last voyage to Yeniseisk. Next year he failed to get beyond Vardö, and the failure involved him in some undeserved censure. In 1897-9 he was voyaging in other seas, and as late as 1903 he navigated a small yacht to Australia for the use of an expedition to New Guinea. In 1905 the Russo-Japanese war had begun and famine was rife in Siberia. The Russian government planned a large relief expedition by sea, and invited Wiggins to organise and lead it. In the organisation he took as active a part as failing health permitted, but when the ships sailed he was too ill to accompany them. He died at Harrogate on 13 Sept. 1905, and was buried at Bishopwearmouth. In 1868 he married his first cousin, Annie, daughter of Joseph Potts of Sunderland; she died without issue in 1904.

[Life and Voyages of Joseph Wiggins, by H. Johnson (London, 1907); private information. See also H. Seebohm's *The Birds of Siberia* for incidents of the journey on which he accompanied Wiggins, and Miss Peel's *Polar Gleams* (1894) for the voyage of the *Blencathra*. An interesting speech of Wiggins on Nansen's project for his drift across the polar area in the *Fram* is reported in the *Geographical Journal*, i. 26; See also *Journ. Soc. of Arts*, xliii. 499, and (for a report of one of Wiggins' lectures) *Journ. Tyneside Geog. Soc.* iii. 123.]

O. J. R. H.

WIGHAM, JOHN RICHARDSON (1829–1906), inventor, born at 5 South Gray Street, Edinburgh, on 15 Jan. 1829, was youngest son in the family of four sons and three daughters of John Wigham, shawl manufacturer, of Edinburgh, and member of the Society of Friends, by his wife Jane Richardson (*d.* 1830).

After slender schooling at Edinburgh, he removed at fourteen to Dublin, where he privately continued his studies, while serving as apprentice in the hardware and manufacturing business of his brother-in-law, Joshua Edmundson. The business, subsequently known as 'Joshua Edmundson & Co.', passed, on Edmundson's death, under Wigham's control. It grew rapidly, a branch being opened in London which was eventually taken over by a separate company as 'Edmundson's Electricity Corporation,' with Wigham as chairman. In Dublin the firm devoted itself largely to experiments in gas-lighting, Wigham being particularly successful in designing small gas-works suitable for private houses and public institutions. In addition to his private business he held various engineering posts, and as engineer to the Commercial Gas Company of Ireland designed the gas-works at Kingstown. In the commercial life of Dublin he soon played a prominent part. He was from 1866 till his death a director of the Alliance and Dublin Consumers' Gas Company, director and vice-chairman of the Dublin United Tramways Company from 1881 to his death, and member of council (1879), secretary (1881–93), and eventually president (1894–6) of the Dublin Chamber of Commerce.

Wigham is mainly memorable as the inventor of important applications of gas to lighthouse illumination. In 1863 he was granted a small sum for experiments by the board of Irish lights, and in 1865 a system invented by him was installed at the Howth lighthouse near Dublin, the

gas being manufactured on the spot. Its main advantages were that it dispensed with the lamp glass essential to the 4-wick Fresnel oil lamp of 240 candle-power then in universal use, while the power of the light could be increased or decreased at will, a 28-jet flame, which gave sufficient light for clear weather, being increased successively to a 48-jet, 68-jet, 88-jet, and 108-jet flame of 2923 candle-power on foggy nights. Though highly valued in Ireland, the system was condemned on trial by Thomas Stevenson [q. v.], engineer to the Scottish board of lights. It was made more effective, however, in 1868 by Wigham's invention of the powerful 'composite burner,' and in 1869 its further employment in Ireland was strongly advocated by John Tyndall [q. v.] in his capacity of scientific adviser to Trinity House and the board of trade. Wigham's ingenuity also acted as a powerful stimulant to rival patentees, leading to various improvements in oil apparatus by Sir James Nicholas Douglass [q. v. Suppl. I.] and others.

In 1871 Wigham invented the first of the many group-flashing arrangements since of service in enabling seamen to distinguish between different lighthouses. His arrangement was adopted at Galley Head, Mew Head, and Tory Island off the Irish coast. In 1872 a triform light of his invention was installed experimentally at the High Lighthouse, Haisbro', Norfolk; but its further adoption in English lighthouses was discouraged by a committee of Trinity House in 1874. The board of Irish lights, however, continued to favour Wigham's system, and in 1878 they installed at Galley Head a powerful quadriform light of his with four tiers of superposed lenses and a 68-jet burner in the focus of each tier. In 1883 the board of trade appointed a lighthouse illuminants committee to consider the relative merits of gas, oil, and electric light. For some years Tyndall had felt that Sir James Douglass had used his influence as engineer to Trinity House for the furtherance of his own patents and to the disadvantage of Wigham's system. He now protested that, as rival patentees, Douglass and Wigham ought both to be members of the lighthouse illuminants committee or ought both to be excluded. His objection was overruled, and consequently he resigned his position of scientific adviser to the board of trade in March 1883. A bitter controversy followed in the press between Tyndall and Mr. Joseph Chamberlain, president of the board of trade. On Tyndall's resignation

the lighthouse illuminants committee collapsed. A new committee, of which Douglass was a member, was appointed by Trinity House, and declared after extensive experiments at South Foreland for oil and electric light in preference to gas. Wigham protested against his lack of opportunity of demonstrating the advantages of his system, and claimed that his rival Douglass, who had condemned in official reports Wigham's invention of superposed lenses, afterwards employed them for the improvement of his own oil apparatus. Wigham eventually received 2500*l.* from the board of trade as compensation for the infringement of his patent. Among other of Wigham's inventions were fog-signals and gas-driven sirens, a 'sky-flashing arrangement,' and a 'continuous pulsating light' in connection with his system of gas-illumination for lighthouses, and a 'lighted buoy' or 'beacon' in which, using oil as the illuminant, he obtained, by imparting motion to the wick, a continuous light needing attention only once in thirty days.

Wigham was a member of the Dublin Society and of the Royal Irish Academy, an associate member of the Institute of Civil Engineers, and fellow of the Institution of Mechanical Engineers. He read papers on 'Gas as a Lighthouse Illuminant' and kindred subjects before the Society of Arts, the British Association, the Dublin Society, and the Shipmasters' Society. In politics he was a unionist and spoke at public meetings in opposition to home rule. He was also a zealous advocate of temperance. As a member of the Society of Friends he twice refused knighthood in 1887. He died on 16 Nov. 1906 after some four years' illness at his residence, Albany House, Monkstown, co. Dublin, and was buried in the Friends' burial ground, Temple Hill, Blackrock, co. Dublin. He married on 4 Aug. 1858 Mary, daughter of Jonathan Pim of Dublin, M.P. for Dublin city from 1865 to 1874, and had issue six sons and four daughters, of whom three sons and three daughters survived him. An enlarged photograph is in the council room of the Dublin Chamber of Commerce.

Jeans, *Lives of the Electricians*, 1887; Nineteenth Century, July 1888; Fortnightly Review, Dec. 1888 and Feb. 1889; Letters to The Times by Prof. Tyndall and others on lighthouse illuminants, 1885; paper by Wigham read before the Shipmasters' Society on 15 March 1895; T. Williams, *Life of Sir James N. Douglass*; Journal of Society of

Arts, 1885-6; The Nautical Magazine, 1883 and 1884; art. on Lighthouses in Encyc. Brit. 11th edit.] S. E. F.

WIGRAM, WOOLMORE (1831-1907), campanologist, the fifth son of ten children of Money Wigram (1790-1873), director of the Bank of England, of Manor Place, Much Hadham, Hertfordshire, and Mary, daughter of Charles Hampden Turner, of Rooks Nest, Godstone, Surrey, was born on 29 Oct. 1831 at Devonshire Place, London. His father was elder brother of Sir James Wigram [q. v.], of Joseph Cotton Wigram [q. v.], and of George Vicesimus Wigram [q. v.]. Of his brothers, Charles Hampden (1826-1903) was knighted in 1902, and Clifford (1828-1898) was director of the bank of England. Wigram entered Rugby school in August 1844, and matriculated at Trinity College, Cambridge, in 1850, graduating B.A. in 1854 and proceeding M.A. in 1858. Among his intimate friends at Cambridge was John Gott, afterwards bishop of Truro [q. v. Suppl. II]. Taking holy orders in 1855, he was curate of Hampstead (1855-64), vicar of Brent Pelham with Furneaux Pelham, Hertfordshire (1864-76), and rector of St. Andrew's with St. Nicholas and St. Mary's, Hertford (1876-97). From 1877 to 1897 he was rural dean of Hertford, and in 1886 was made hon. canon of St. Albans, where he lived from 1898 till his death, and was an active member of the chapter. A high churchman, Wigram was long a member of the English Church Union.

Wigram was an enthusiastic campanologist, and became an authority on the subject. A series of articles in 'Church Bells' were published collectively in 1871 under the title of 'Change-ringing Disentangled and Management of Towers' (2nd edit. 1880).

In his earlier days Wigram was an enthusiastic Alpine climber. He was a member of the Alpine Club from 1853 to 1868. His most memorable feat was the first successful ascent, in the company of Thomas Stewart Kennedy (with Jean Baptiste Croz and Josef Marie Krönig as guides), of La Dent Blanche on 18 July 1862 (see his own account in *Memoirs*, 1908, pp. 81-95; T. S. KENNEDY in *Alpine Journal*, 1864, i. 33-9: cf. WHYMPER's *Scrambles amongst the Alps*, chap. xiv.).

Wigram died from the effects of influenza at his residence in Watling Street, St. Albans, on 19 Jan. 1907, and was buried in St. Stephen's churchyard there. He married

on 23 July 1863 Harriet Mary, daughter of the Rev. Thomas Ainger of Hampstead, and had issue four sons and three daughters.

[The Times, 22 Jan. 1907; *Memoirs of Woolmore Wigram, 1831-1907*, by his wife (with portrait), 1908.] W. B. O.

WILBERFORCE, ERNEST ROLAND (1840-1907), bishop successively of Newcastle and Chichester, the third son of the Right Rev. Samuel Wilberforce [q. v.] by his wife Emily Sargent, was born on 22 Jan. 1840 at his father's rectory at Brighstone in the Isle of Wight. He was educated at Harrow and at Exeter College, Oxford, graduating B.A. in 1864 and proceeding M.A. in 1867 and B.D. and D.D. in 1882. In December 1864 he was ordained deacon by his father, and priest in the following year. After serving the curacy of Cuddesdon and for a short time that of Lea in Lincolnshire, he was presented in 1868 to the living of Middleton Stoney, near Bicester, which he resigned in 1870 on account of his wife's health. In the same year he became domestic chaplain to his father, now bishop of Winchester, and in 1871 was made sub-almoner to Queen Victoria by the dean of Windsor, Gerald Wellesley [q. v.]. On his father's death, 13 July 1873, he accepted from Gladstone the living of Seaforth, then a riverside suburb of Liverpool, but long since absorbed in the industrial quarter. Placed among a congregation of the old-fashioned evangelical type, he introduced a higher standard of churchmanship without causing offence, whilst making himself personally acceptable alike to the working classes and to the Liverpool merchants. Here he began that strong advocacy of temperance principles which henceforth became one of the main interests of his life. In October 1878 he was appointed by bishop Harold Browne [q. v. Suppl. I.], his father's successor in the see of Winchester, to a residentiary canonry in that city, together with the wardenship of the Wilberforce Mission, formed and endowed as a memorial to his father. Owing to a readjustment of the diocesan boundaries, the court of chancery decided that the funds raised for the Wilberforce Mission must be devoted to the diocese of Rochester. Wilberforce retained his canonry and devoted himself with conspicuous success to mission work in Portsmouth and Aldershot. In 1882 he was appointed, on the recommendation of Gladstone, to the newly created see of Newcastle, of which he was consecrated

the first bishop on 25 July in Durham cathedral. The occasion required exceptional energy and physical vigour, and Wilberforce, then in his forty-third year, devoted his great powers of work and organisation to recovering to the Church of England a territory which had been well-nigh lost to it. He made his way into the most remote Northumbrian parishes, confirming or otherwise officiating in every parish in his diocese, and inspiring with his own zeal a clergy by whom, in the past, the presence and authority of a bishop had been little felt. The 'Bishop of Newcastle's Fund,' inaugurated by him in 1882 was the means of raising, in a very short space of time, upwards of a quarter of a million of money for church purposes in the diocese. Though meeting at first with opposition from the more militant nonconformists, he gradually won the confidence of all classes, and found generous support from the wealthy laymen of the north, irrespective of creed. In November 1895 he was translated by Lord Salisbury to the see of Chichester, vacant by the death of Richard Durnford [q. v. Suppl. I.], and he was enthroned in the cathedral on 28 Jan. 1896. The population of his new diocese was mainly agricultural, but the watering places on the south coast contained several churches in which the ritual was of a very 'advanced' description. Wilberforce was by temperament and conviction a high churchman of the old school, uniting a dislike for ritual with pronounced sacramentarian views. A vehement agitation against the excesses of some of his clergy was on foot, while the Lambeth 'opinions' of archbishops Temple and MacLagan had comprehensively condemned the use of incense and portable lights and the reservation of the sacrament. Wilberforce strove hard to bring the whole body of his clergy into acceptance of these decisions, endorsed as they were by the entire English episcopate, and he was successful in all but a handful of churches. He steadily refused to institute prosecutions against recalcitrant incumbents, but he declined to exercise his veto in their favour; and he refused to avail himself of the right, which he retained owing to the peculiar form of the patent to his chancellor, of personally hearing ritual cases in his own consistorial court. At the same time he deeply resented any interference with his episcopal authority, and he was brought into sharp contact with the Church Association.

His evidence before the royal commission appointed in 1905 to inquire into ecclesiastical disorders contained a vigorous defence of the clergy in his diocese. The success which crowned his policy was largely due to the exercise of what was practically a dispensing power.

These troubles were not allowed to interfere with the general administration of his diocese, and his exertions in setting on foot a regular system of Easter offerings as a means of increasing the stipends of the parochial clergy resulted in the annual collection of a sum which in the last year of his episcopate only just fell short of 10,000*l*. In 1896 he was elected chairman of the Church of England Temperance Society, and in 1904 he made one of a party of English clergy who visited South Africa on 'a mission of help.' Rhodesia and the northern Transvaal were allotted to him, and there his unaffected manners and downright speech proved highly attractive. He died after a short illness on 9 Sept. 1907 at Bembridge in the Isle of Wight, and he was buried at West Hampnett, near Chichester.

In many respects, and especially in speech and intonation, Ernest Wilberforce bore a marked resemblance to his father, from whom he inherited an eloquence which found a freer vent on the platform than in the pulpit. A somewhat chilling manner rendered him a formidable personality to those who had not the opportunity of penetrating beneath the reserve which covered a highly sympathetic and affectionate nature. Devoted to every form of exercise and sport, he spent part of his annual holidays on a salmon river in Norway. Endowed with extraordinary physical strength, he was a type of the muscular Christianity celebrated by Charles Kingsley and Tom Hughes. An oil painting by S. Goldsborough Anderson is in the possession of Mrs. Wilberforce; a replica hangs in the Palace at Chichester.

Wilberforce was twice married: (1) in 1863 to Frances Mary, third daughter of Sir Charles Anderson, Bart., who died in October 1870 at San Remo without issue; (2) on 14 Oct. 1874 to Emily, only daughter of George Connor, afterwards dean of Windsor [q. v.], who survived him, together with a family of three sons and three daughters.

[Ernest Roland Wilberforce, a Memoir by J. B. Atlay, 1912; Life of Samuel Wilberforce, by Canon Ashwell and Reginald Wilberforce; Chronicle of Convocation, Feb. 1908; Church Times, 13 Sept. 1907; Guardian, 11 Sept.

WILKINS, AUGUSTUS SAMUEL (1843-1905), classical scholar, born in Enfield Road, Kingsland, London, N., on 20 Aug. 1843, was son of Samuel J. Wilkins, schoolmaster in Brixton, by his wife Mary Haslam of Thaxted, Essex. His parents were congregationalists. Educated at Bishop Stortford collegiate school, he then attended the lectures of Henry Malden [q. v.], professor of Greek, and of F. W. Newman [q. v. Suppl. I], professor of Latin, at University College, London. Entering St. John's College, Cambridge, with an open exhibition in October 1864, he became a foundation scholar in 1866, and won college prizes for English essays in 1865 and 1866, and the moral philosophy prize in 1868. He distinguished himself as a fluent speaker at the Union, and was president for Lent term, 1868. In the same year he graduated B.A. as fifth in the first class of the classical tripos. Both as an undergraduate and as a bachelor of arts he won the members' prize for the Latin essay, while his skill as a writer of English was attested by his three university prize essays—the Hulsean for 1868, the Burney for 1870, and the Hare for 1873, the respective subjects being 'Christian and Pagan Ethics,' 'Phœnicia and Israel,' and 'National Education in Greece.' All three were published: the first, which appeared in 1869 under the title of 'The Light of the World,' and quickly reached a second edition, was dedicated to James Baldwin Brown the younger [q. v.], congregational minister. The second prize essay (1871) was dedicated to James Fraser, bishop of Manchester, and the third (1873) to Connop Thirlwall, bishop of St. David's.

As a nonconformist, Wilkins was legally disqualified for a fellowship. When the religious disability was cancelled by the Tests Act of 1871, Wilkins was disqualified by marriage, nor was he helped by the removal of the second disability under the statutes of 1882, which rendered no one eligible who had taken his first degree more than ten years before.

In 1868 he took the M.A. degree in the University of London, receiving the gold medal for classics, and in the same year was appointed Latin lecturer at Owens College, Manchester, where he was promoted in the following year to the Latin professorship. For eight years he also lectured on comparative philology, and

for many more he undertook the classes in Greek Testament criticism. In the University of London he was examiner in classics in 1884-6, and in Latin in 1887-90, and in 1894-9. He was highly successful as a popular lecturer on literary subjects in Manchester and in other large towns of Lancashire. He was of much service to education in Manchester outside Owens College, particularly as chairman of the Manchester Independent College, and of the council of the High School for Girls.

As professor, Wilkins proved a highly effective teacher and a valuable and stimulating member of the staff. 'Within the college he was the unwearied champion of the claims of women to equal educational rights with men,' and 'an even more vigorous champion of the establishment of a theological department in the university,' both of which causes were crowned with success. In 1903, after thirty-four years' tenure of the Latin professorship in Manchester, a weakness of the heart compelled him to resign, but he was appointed to the new and lighter office of professor of classical literature.

On 26 July 1905 he died at the seaside village of Llandrillo-yn-Rhos, in North Wales, and was buried in the cemetery of Colwyn Bay. In 1870 he married Charlotte, the second daughter of W. Field of Bishop Stortford; she survived him with a daughter and three sons. His portrait, painted by the Hon. John Collier, was presented to the University of Manchester by his friends in 1904.

As a writer Wilkins did good service by editing Cicero's rhetorical works and by introducing to English readers the results of German investigations in scholarship, philology, and ancient history. In 1868 he translated Piderit's German notes on 'Cicero De Oratore,' lib. i., and with E. B. England, G. Curtius's 'Principles of Greek Etymology' and his 'Greek Verb.' Wilkins's chief independent work was his full edition of 'Cicero De Oratore,' lib. i.-iii. (Oxford, 1879-1892). A critical edition of the text of the whole of Cicero's rhetorical works followed in 1903. He also issued compact and lucid commentaries on Cicero's 'Speeches against Catiline' (1871), and the speech 'De Imperio Gnaei Pompeii' (1879), and on Horace's 'Epistles' (1885); he contributed to Postgate's 'Corpus Poëtarum Latinorum' a critical text of the 'Thebais' and 'Achilleis' of Statius (1904); and he produced compendious primers of 'Roman Antiquities' (1877) and 'Roman Literature' (1890), the first of which was translated

into French, as well as a book on Roman education (Cambridge, 1905). In the 'Encyclopædia Britannica,' 9th edit., he wrote on the Greek and Latin languages; in Smith's 'Dictionary of Antiquities,' 3rd edit., on Roman antiquities, and in 'Companion to Greek Studies' (Cambridge, 1904) on Greek education. He joined H. J. Roby in preparing an Elementary Latin Grammar in 1893.

Wilkins dedicated his edition of the 'De Oratore' to the University of St. Andrews, which conferred on him an honorary degree in 1882; he received the same distinction at Dublin in 1892, and took the degree of Litt.D. at Cambridge in 1885.

[Obituary notice (with complete bibliography) by the present writer, with full extracts from other notices, in *The Eagle*, xxvii. (1905), 69-84; see also Miss Sara A. Burstall's *The Story of the Manchester High School for Girls, 1871-1911* (1911), pp. 148 seq.] J. E. S.

WILKINS, WILLIAM HENRY (1860-1905), biographer, born at Compton Martin, Somerset, on 23 Dec. 1860, was son of Charles Wilkins, farmer, of Gurney Court, Somerset, and afterwards of Mann's farm, Mortimer, Berkshire, where Wilkins passed much of his youth. His mother was Mary Ann Keel. After private education, he was employed in a bank at Brighton; entering Clare College, Cambridge, in 1884 with a view to taking holy orders, he graduated B.A. in 1887, and proceeded M.A. in 1899. At the university he developed literary tastes and interested himself in politics. An ardent conservative, he spoke frequently at the Union, of which he was vice-president in 1886. After leaving Cambridge he settled down to a literary career in London. For a time he acted as private secretary to the earl of Dunraven, whose proposals for restricting the immigration of undesirable foreigners Wilkins embodied in 'The Alien Invasion' (1892), with introduction by Dr. R. C. Billing, Bishop of Bedford. The Aliens Act of 1905 followed many recommendations of Wilkins's book. In the same year (1892) he edited, in conjunction with Hubert Crackanthorpe, whose acquaintance he had made at Cambridge, a shortlived monthly periodical called the 'Albemarle' (9 nos.). He next published four novels (two alone and two in collaboration) under the pseudonym of De Winton. 'St. Michael's Eve' (1892; 2nd edit. 1894) was a serious society novel. Then followed 'The Forbidden Sacrifice' (1893); 'John Ellicombe's Temptation,' 1894 (with the Hon. Julia Chetwynd),

and 'The Holy Estate: a study in morals' (with Capt. Francis Alexander Thatcher). With another Cambridge friend, Mr. Herbert Vivian, he wrote under his own name 'The Green Bay Tree' (1894), which boldly satirised current Cambridge and political life and passed through five editions.

Wilkins's best literary work was done in biography. He came to know intimately the widow of Sir Richard Burton [q. v. Suppl. I], and after her death wrote 'The Romance of Isabel, Lady Burton' (1897), a sympathetic memoir founded mainly upon Lady Burton's letters and autobiography. Wilkins also edited in 1898, by Lady Burton's direction, a revised and abbreviated version of Lady Burton's 'Life of Sir Richard Burton,' and her 'The Passion Play at Ober-Ammergau' (1900), as well as Burton's unpublished 'The Jew, the Gypsy, and El Islam' (with preface and brief notes) (1898), and 'Wanderings in Three Continents' (1901).

Ill-health did not deter Wilkins from original work in historical biography which involved foreign travel. Patient industry, an easy style, and good judgment atoned for a limited range of historical knowledge. At Lund university in Sweden he discovered in 1897 the unpublished correspondence between Sophie Dorothea, the consort of George I, and her lover, Count Philip Christopher Königsmark, and on that foundation, supported by research in the archives of Hanover and elsewhere he based 'The Love of an Uncrowned Queen, Queen Sophie Dorothea, Consort of George I,' which appeared in 2 vols. in 1900 and was well received (revised edit. 1903). Wilkins's 'Caroline the Illustrious, Queen Consort of George II' (2 vols. 1901; new edit. 1904), had little claim to originality. 'A Queen of Tears' (2 vols. 1904), a biography of Caroline Matilda, Queen of Denmark and sister of George III of England, embodied researches at Copenhagen and superseded the previous biography by Sir Frederic Charles Lascelles Wrexall [q. v.]. For his last work, 'Mrs. Fitzherbert and George IV' (1905, 2 vols.), Wilkins had access, by King Edward VII's permission, for the first time to the Fitzherbert papers at Windsor Castle, besides papers belonging to Mrs. Fitzherbert's family. Wilkins conclusively proved the marriage with George IV. In 1901 he edited 'South Africa a Century ago,' valuable letters of Lady Anne Barnard [q. v.], written (1797-1801) whilst with her husband at the Cape of Good Hope. Wilkins also published 'Our King and Queen [Edward VII and

Queen Alexandra], the Story of their Life,' (1903, 2 vols.), a popular book, copiously illustrated, and he wrote occasionally for periodicals. He died unmarried on 22 Dec. 1905 at 3 Queen Street, Mayfair, and was buried in Kensal Green cemetery.

[Private information; personal knowledge; The Times, 23 Dec. 1905; Brit. Mus. Cat. and Engl. Cat.; Edinb. Rev. Jan. 1901, and supplement to Allgemeine Zeitung, 1902, N. 77 (by Dr. Robert Gerdts).] G. L. G. N.

WILKINSON, GEORGE HOWARD (1833-1907), successively bishop of Truro and of St. Andrews, born at Durham on 12 May 1833, was eldest son of George Wilkinson, of Oswald House, Durham, by his wife Mary, youngest child of John Howard of Ripon. The father's family had long held an honourable position in Durham and Northumberland (cf. pedigree; SURTEES, *History and Antiquities of the County of Durham*, i. 81). Educated at Durham grammar school, he went into residence at Brasenose College, Oxford, in Oct. 1851, and in November was elected to a scholarship at Oriel. He graduated B.A. with a second class in the final classical school in 1854, proceeded M.A. in 1859 and D.D. in 1883. After a year spent in travel, he was ordained deacon (1857) and priest (1858) and licensed to the curacy of St. Mary Abbots, Kensington. His fervour and industry gave him wide influence from the first. In 1859 Lady Londonderry, widow of the third marquess, presented him to the living of Seaham Harbour, co. Durham; and in 1863 the bishop of Durham, C. T. Baring [q. v.], collated him to the vicarage of Bishop Auckland. Wilkinson, although he was untouched at Oxford by the Tractarian movement, had been drawn towards it through the influence of Thomas Thellusson Carter [q. v. Suppl. II]. Difficulties followed with the bishop, who was an evangelical. Wilkinson's health suffered from the strain, and in 1867 he accepted the incumbency of St. Peter's, Great Windmill Street, London. In this poor parish he instituted open-air preaching, then a novelty. One of the earliest to take up parochial missions, he helped to organise the first general mission in London in 1869. During its progress he accepted the offer by the bishop of London, John Jackson, of St. Peter's, Eaton Square, and in January 1870 began there an incumbency of rare distinction.

Active in church affairs generally, he spoke at church congresses; sought in the years of ritual trouble, 1870-80, to

act as an interpreter between the bishops and the ritualists; and zealously advocated foreign missions, the day of intercession for which owed its establishment to him. In 1877 the bishop of Truro, E. W. Benson [q. v. Suppl. I], made him an examining chaplain. In 1878 he declined an invitation to be nominated suffragan bishop for London. He was select preacher at Oxford 1879-81. In 1880 he was elected a proctor in convocation, and gave evidence before the royal commission of 1881 on ecclesiastical courts. In 1882 he declined an invitation from the bishop of Durham, J. B. Lightfoot, to become canon missioner.

In 1883, on the translation of Dr. Benson to Canterbury, Wilkinson succeeded him at Truro. He was consecrated at St. Paul's on 25 April 1883. At Truro he pressed forward the building of the cathedral; saw it consecrated on 3 Nov. 1887; founded a sisterhood, the community of the Epiphany; and did much for the clergy of poorer benefices. In 1885 he declined the see of Manchester; in 1888 he took part in the Lambeth conference; and in April 1891, after nearly two years of failing health, announced his resignation. Restored by a visit to South Africa, Wilkinson was on 9 Feb. 1893 elected to succeed Charles Wordsworth [q. v.] as bishop of St. Andrews, Dunkeld, and Dunblane, and was enthroned in St. Ninian's Cathedral, Perth, on 27 April. In 1904 the bishops of the Scottish episcopal church elected him primus. He created a bishop of St. Andrews fund for church extension; raised 14,000*l.* for building a chapter-house for St. Ninian's Cathedral, Perth; fostered interest in foreign missions, more especially in South Africa, which he again visited; and sought to promote closer relations between the episcopal and the presbyterian churches. He died suddenly at Edinburgh, on 11 Dec. 1907, and was buried in Brompton cemetery, London. There is a memorial (the bishop's figure by Sir George Frampton, R.A.) in St. Ninian's Cathedral. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1885.

Wilkinson combined deep spirituality with practical sagacity, courage in dealing with others and intense humility. He exercised his ministry through conversation as seriously as in pulpit work (cf. How's *Walsham How: a Memoir*, pp. 178-9). He abandoned his early evangelicalism, and his anglicanism grew more definite with years. He married on 14 July 1857 Caroline Charlotte, daughter of lieutenant-colonel Benfield Des Vœux, fourth son of

Charles Des Vœux, first baronet; she died on 6 Sept. 1877; by her he had three sons and five daughters.

Wilkinson published many minor devotional works, of which the most widely circulated were: 1. 'Instructions in the Devotional Life,' 1871. 2. 'Instructions in the Way of Salvation,' 1872. 3. 'Lent Lectures,' 1873.

[A. J. Mason, *Memoir of George Howard Wilkinson*, 1909; A. C. Benson's *Leaves of the Tree* (character sketch of Wilkinson), 1911, and his *The Life of Edward White Benson*, 1899, 2 vols.; H. S. Holland, *George Howard Wilkinson*, 1909; *Guardian*, 18 Dec. 1907; *Record*, 8 July 1904; *Daily Telegraph*, 3 May 1911.] A. R. B.

WILKS, SIR SAMUEL, baronet (1824-1911), physician, born at Camberwell, on 2 June 1824, was second son of Joseph Barber Wilks, treasurer at the East India House, by his wife Susannah Edwards, daughter of William Bennett of Southborough, Kent. He went to Aldenham grammar school in 1836, and spent three years there, followed by a year at University College school in London. He was then apprenticed to Richard Prior, a general practitioner in Newington, and in 1842 entered as a student at Guy's Hospital; in 1847 he became a member of the Royal College of Surgeons. His natural turn was for medicine, and he graduated M.B. at the University of London in 1848 and M.D. in 1850, and was admitted a member of the Royal College of Physicians in 1851 and elected a fellow of that college in 1856, in which year he was appointed assistant physician to Guy's Hospital. He became physician in 1866, and held office till 1885. He was also successively curator of the museum, lecturer on pathology, and lecturer on medicine there, and attained a great reputation by his researches and teaching in the post mortem room and the wards. He published in 1859 'Lectures on Pathological Anatomy,' one of the most important works on the anatomy of disease since the appearance of the 'Morbidity Anatomy' of Dr. Matthew Baillie [q. v.] in 1795. A second edition in which Dr. Walter Moxon [q. v.] took part appeared in 1875, and a third thoroughly revised by Wilks in 1887. The fame of Guy's Hospital from 1836 to the present day has been largely increased by its annual volumes of 'Reports,' and Wilks from 1854 to 1865 became editor and contributed numerous important papers to them. In 1874 he published 'Lectures on the Specific Fevers and on Diseases of

the Chest,' and in 1878 'Lectures on Diseases of the Nervous System,' of which a second edition appeared in 1883. He was always anxious to increase the fame of other discoverers, and this quality appears in his edition of the works of Thomas Addison [q.v.], published in 1868, and in his insistence on the use of the term 'Hodgkin's disease' for a glandular enlargement to the knowledge of which he himself contributed, though its original description was found in the observations of Thomas Hodgkin [q.v.], a fact first demonstrated by Wilks. He was an accurate student of the history of medicine, and in 1892 wrote with G. T. Bettany 'A Biographical History of Guy's Hospital.' In this, as in his obituary notices of deceased fellows at the College of Physicians, Wilks, while never unkind, showed a rigid respect for truth, resembling that of Johnson's 'Life of Savage,' and never gave way to the adulatory style of biography applied equally to the just and the unjust. Wilks's last work was a memoir on the new discoveries or new observations made during the time he was a teacher at Guy's Hospital, published in 1911. It contains *inter alia* a bibliography of his writings.

He delivered the Harveian oration at the College of Physicians on 29 June 1879, and was elected president from 1896 to 1899. In 1897 he was created a baronet and appointed physician extraordinary to Queen Victoria. He was president of the Pathological Society 1881-3, was a member of the senate of the University of London in 1885, and sat on the general medical council as representative of that university from 29 Oct. 1887 to 22 April 1896.

He first lived at 11 St. Thomas's Street, near Guy's Hospital, and later in Grosvenor Street till 1901, when he retired to Hampstead. Severe illnesses in 1904 and 1907 and two consequent operations did not cloud his understanding, and he continued to take active interest in science and literature to the end of his life. He died at Hampstead on 8 Nov. 1911, and his body, after cremation, was buried there. He married on 25 July 1854 Elizabeth Ann, daughter of Henry Mockett, of Seaford, Sussex, widow of Richard Prior, M.R.C.S., of Newington, Surrey; she predeceased Wilks without issue.

Wilks was profoundly respected by the physicians of his time. His pupils were struck by the vast amount of information on morbid anatomy and clinical medicine which he could at any moment pour out. His conversation was delightful and filled

with acute remarks on men as well as with learning of many kinds. His portrait by Percy Ryland hangs in the dining-room of the Royal College of Physicians.

[Works; The Times, 9 Nov. 1911; obituary notice in British Medical Journal, 18 Nov. 1911, with additional notes by his friends Dr. Frederick Taylor, Sir George Savage, Sir Bryan Donkin, and Dr. Jessop of Hampstead; personal knowledge.] N. M.

WILL, JOHN SHIRESS (1840-1910), legal writer, born in Dundee in 1840, only son of John Will, merchant, of Dundee, but described at the date of his son's admission to the Middle Temple—30 Oct. 1861—as 'of the parish of Hanover, co. Cornwall, Jamaica,' by his wife Mary, daughter of John Chambers. Educated first at Brechin grammar school, and afterwards at University College and King's College, London, Will was called to the bar by the Middle Temple on 6 June 1864, and obtained a large parliamentary practice, taking silk in 1883 and being made a bencher of his inn on 24 Jan. 1888. He discontinued his parliamentary practice in 1885 upon his election as liberal member for Montrose burghs, for which he was re-elected in 1886, in 1892, and in August 1895. He resigned the seat early in 1896, when Mr. John (afterwards Viscount) Morley, who had been recently defeated at Newcastle, was elected in his stead. Will then resumed his practice, becoming the principal authority on the law relating to lighting either by gas or electricity. He received tardy recognition of his ability and services by appointment in September 1906 as judge of the county court district (No. 7) of Liverpool. He died at Liverpool on 24 May 1910. He married in 1873 Mary Anne (*d.* 1912), daughter of William Shiress, solicitor, of Brechin, Forfarshire.

Will was author of: 1. 'The Practice of the Referees Courts in Parliament in regard to Engineering Details . . . and Estimates and Water and Gas Bills,' 1866. 2. 'Changes in the Jurisdiction and Practice of the County Courts and Superior Courts effected by the County Courts Act, 1867, with notes,' 1868. 3. 'The Law relating to Electric Lighting,' 1898; 3rd edit. 1903. He was joint author with W. H. Michael, a brother bencher of the Middle Temple, of a treatise on the law relating to gas and water, 1872, 5th edit. 1901, and was solely responsible for the later editions. He was also responsible for the fifth and sixth editions of 'Wharton's Law Lexicon' (1872, 1876).

[The Times, 25 May 1910, 16 Feb. 1912; Who's Who, 1909; Foster, Men at the Bar; Dod's Parl. Companion, 1895, N.P.; Law List, 1908; Brit. Mus. Cat.] C. E. A. B.

WILLES, SIR GEORGE OMMANNEY (1823-1901), admiral, son of Capt. George Wickes Willes, R.N., by Anne Elizabeth, second daughter of Sir Edmund Lacon, first baronet, M.P., was born at Hythe, Hampshire, on 19 June 1823, was entered at the R.N. College, Portsmouth, in Feb. 1836, and went to sea in 1838. He passed his examination in Sept. 1842, and as mate served first in the Cornwallis, flagship of Sir William Parker [q. v.], and afterwards in the Childers, brig, on the East Indies and China station. He received his commission as lieutenant on 11 Dec. 1844, and in March following was appointed to the Hibernia, again with Sir William Parker, then commander-in-chief in the Mediterranean. Three years later he was given the command of the Spitfire, steamer, on the same station. In August 1850 he was appointed first lieutenant of the Retribution, paddle frigate, in the Mediterranean, and was still in her at the bombardment of Odessa on 22 April 1854. Shortly afterwards he received his promotion to commander, dated 17 April, and on 1 June was moved into the flagship Britannia, in which he served during the remainder of the campaign, and especially at the bombardment of Fort Constantine, Sevastopol, on 17 Oct. He received the Crimean and Turkish medals, the clasp for Sevastopol, and the 5th class of the Mejidie, and was made a knight of the Legion of Honour. In the Baltic campaign of 1855 he served on board the flagship Duke of Wellington, and received the medal. He was promoted to captain on 10 May 1856.

In Feb. 1859 he was appointed to the Chesapeake as flag-captain to Rear-admiral James Hope [q. v.], commander-in-chief on the East Indies and China station, and in May 1861 followed his chief into the Impérieuse. Willes saw much active service during this commission. On 24 June 1859 he was in charge of the party sent to cut the boom across the Peiho river at the time of the unsuccessful attack, and in August 1860 he was in command of the rocket boats at the attack on the Peiho forts. For these services he received the China medal with the Taku clasp, and in July 1861 was awarded the C.B. In 1862 he was employed in investigating the creeks preliminary to operations against the Taiping, near Shanghai, and in July of that year

was relieved and came home. He was next appointed, in Jan. 1864, to command the Prince Consort, ironclad, in the Channel squadron, and on leaving her in April 1866 became captain of the reserve at Devonport, where he remained until called to the Admiralty in Jan. 1869. The duties there assigned to him were similar to those afterwards discharged by the admiral superintendent of naval reserves, and he was confirmed in his appointment in Oct. 1870 with the title of chief of the staff. There was at this date no second sea lord, and the duties of the chief of the staff included a large share in the business of manning the fleet; he also commanded the reserve squadron on its annual cruise (see SIR VESSEY HAMILTON, *Naval Administration*, pp. 102-3). Willes remained at Whitehall for three years, and on 11 June 1874 reached flag rank. From April 1870 until his promotion he was an aide-de-camp to Queen Victoria.

In May 1876 he became admiral superintendent at Devonport, and on 1 Feb. 1879 was advanced to vice-admiral. For three years from Jan. 1881 he was commander-in-chief in China with his flag in the Iron Duke, and in May 1884 was awarded the K.C.B. He was promoted to admiral on 27 March 1885, and in November following was appointed commander-in-chief at Portsmouth, and was thus in command of the fleet at Spithead on the occasion of the Jubilee review of 1887. He struck his flag on retirement on 19 June 1888. In 1892 he was raised to the G.C.B. He was nominated a J.P. for Middlesex in 1884, and for many years, as a member of its council, took an active part in the affairs of the Royal United Service Institution. He died in Cadogan Square, London, on 18 Feb. 1901.

Willes married, on 16 May 1855, Matilda Georgiana Josephine, daughter of William Joseph Lockwood of Dews Hall, Essex. Admiral Sir George Lambart Atkinson, his nephew, took the additional surname of Willes in 1901 under the terms of his will.

[The Times, 19 Feb. 1901; R.N. List; an engraved portrait was published by Messrs. Walton of Shaftesbury Avenue.]

L. G. C. L.

WILLIAMS, ALFRED (1832-1905), Alpine painter, born at Newark-on-Trent on 4 May 1832, was youngest of the three sons of Charles Williams [q. v.], a congregational minister, by his wife Mary Smeeton. Frederick Smeeton Williams [q. v.] was a brother. Alfred was educated

firstly at a private school and subsequently at University College School, London. He learnt drawing at a private academy and landscape painting of William Bennett (1811-1871), water-colour artist. As a young man he supported himself by drawing on wood for book illustrations. From 1849 to 1856 he illustrated publications of the Religious Tract Society and of Messrs. Cassell & Company, as well as his brother Frederick's 'Our Iron Roads' (1852); he also for a time was assistant to Sir John Gilbert [q. v. Suppl. I].

From 1854, when he made an extended walking tour in Northern Italy and Switzerland, his interest in painting centred in mountain scenery. In 1861 he settled at Salisbury, and founding there the maltster's business afterwards known as Williams Brothers, was engaged in trade until his retirement in 1886. Meanwhile, during the summer months he travelled, chiefly in Switzerland, pursuing his art, which occupied him wholly after his retirement. In 1878 he was elected a member of the Alpine Club. His subjects were chiefly drawn from the Alps and the mountains of Scotland, but in 1900-1 he spent twelve months in India. At the Alpine Club, exhibitions of his water-colour drawings were held in March 1889, of his Indian paintings in 1902, and again of water-colours from 5 to 23 Dec. 1905. Between 1880 and 1890 he exhibited four works at the Royal Academy, one at the Royal Society of British Artists, and one at the New Gallery. He was skilful in rendering the effect of sunlight on distant snow and in giving an impression of the size of great mountains. One of his water-colour drawings, 'Monte Rosa at Sunrise from above Alagna,' is in the Victoria and Albert Museum; another belongs to the corporation of Salisbury, and two to the Alpine Club.

He died at the Grand Hôtel, Ste. Maxime-sur-Mer, Var, France, on 19 March 1905, and was buried at Ste. Maxime. He married twice: (1) in 1863 Sarah, daughter of George Gregory of Salisbury, by whom he had no issue; and (2) in 1866 Eliza (d. 1892), daughter of William Walker of Northampton, by whom he had one son and one daughter.

[Information from Mr. Sidney S. Williams; pref. to cat. of Exhibition at Alpine Club in 1905; Graves, Dict. of Artists; Cat. of Water-colours, Victoria and Albert Museum.]

B. S. L.

WILLIAMS, CHARLES (1838-1904), war correspondent, was born at Coleraine on 4 May 1838. On his father's side

he was descended from Worcestershire yeomen (of Tenbury and Mable), on his mother's from Scottish settlers in Ulster. Educated at Belfast Academy under Reuben Bryce and at a private school in Greenwich, he went for his health to the southern states of America, where he took part in a filibustering expedition to Nicaragua, saw some hard fighting, and won the reputation of a daring blockade-runner. On his return to England he became a zealous volunteer, and was engaged as leader-writer for the London 'Evening Herald.' In October 1859 he began a connection with the 'Standard,' which lasted till 1884. He conducted the 'Evening Standard' as its first editor for three years, and he was first editor of the 'Evening News' from 1881 to 1884.

Williams did his best work as war correspondent. For the 'Standard' he accompanied the headquarters of the French army of the Loire at the beginning of the second phase of the Franco-German war (1870), and was one of the first two correspondents in Strasburg after its fall. In the summer and autumn of 1877 he was correspondent on the staff of Ahmed Mukhtar Pasha, commanding the Turkish forces in Armenia. Williams remained almost constantly at the front, and his letters were the only continuous series which reached England. He published them in a revised and somewhat extended form in 1878 as 'The Armenian Campaign.' Though written from a pro-Turkish standpoint, the narrative was a faithful record of events. Williams followed Mukhtar to European Turkey, and described his defence of the lines of Constantinople against the Russians. He was with the headquarters of Skobelev when the treaty of San Stefano was signed; and he subsequently recorded the phases of the Berlin Congress of 1878. At the end of that year he was in Afghanistan, and in 1879 published 'Notes on the Operations in Lower Afghanistan, 1878-9, with Special Reference to Transport.' Williams accompanied the Nile expedition for the relief of General Gordon [q. v.] in the autumn of 1884. In an article in the 'Fortnightly Review,' May 1885 ('How we lost Gordon'), he ascribed to Sir Charles Wilson's delay and want of nerve the failure to relieve Gordon.

After leaving the 'Standard' in 1884, Williams was for some time connected with the 'Morning Advertiser,' but soon became war correspondent of the 'Daily Chronicle.' He was the only English correspondent with the Bulgarian army in the brief war

with Servia in 1885. In the Greco-Turkish war of 1897 he was attached to the Greek army in Thessaly. In a contribution to the 'Fortnightly,' June 1897, he attributed the defeat of the Greeks to the disastrous influence of politics. Williams's last service in the field was in Kitchener's Soudanese campaign of 1898. He accompanied General Gatacre [q. v. Suppl. II] up the Nile on his way to join the British brigade in January, and supplied the 'Daily Chronicle' with a vivid account of the battle of Omdurman and the recapture of Khartoum in Sept. 1898. The state of his health did not permit of his going to South Africa, but he wrote in London a diary of the Boer War for the 'Morning Leader.' He published in 1902 a vigorous pamphlet entitled 'Hushed Up,' protesting against the limited scope of the official inquiry into the management of the Boer war.

Williams was a strong adherent of Lord Wolseley's military views and policy, and had an intimate knowledge of military detail. On these subjects he wrote much in the 'United Service Magazine,' the 'National Review,' and other periodicals. In 1892 he published a somewhat controversial 'Life of Sir H. Evelyn Wood,' independently vindicating Sir Evelyn's action after Majuba Hill in 1881 (cf. Sir H. E. Wood, *From Midshipman to Field-Marshal*, ch. 37). Williams also tried his hand at fiction, and wrote some 'Songs for Soldiers.' He was a zealous churchman, and presented to Bishop Creighton [q. v. Suppl. I] as a thank-offering for his safe return from Khartoum an ivory and gold mitre designed by himself. Williams vainly contested West Leeds in the conservative interest in 1886, against Mr. Herbert (now Viscount) Gladstone. Although of irascible temper, he was chairman of the London district of the Institute of Journalists in 1893-4, and was president in 1896-7 of the Press Club, of which he was founder. He died at lodgings in Brixton on 9 Feb. 1904.

[Men of the Time, 1899; Daily Chronicle, 10 Feb. 1904 (with portrait and memoir by Mr. H. W. Nevinson); The Times, and Standard, 10 Feb.; United Service Gazette, and Athenæum, 13 Feb.; Brit. Mus. Cat.; Allibone's Dict. Suppl.] G. LE G. N.

WILLIAMS, CHARLES HANSON GREVILLE (1829-1910), chemist, born at Cheltenham on 22 Sept. 1829, was only son of S. Hanson Williams, solicitor, of Cheltenham.

His mother was Sophia, daughter of Thomas Billings, solicitor, of Cheltenham. After private education he obtained his first scientific employment as a consulting and analytical chemist (1852-3) in Oxford Court, Cannon Street, London, E.C. He then spent three years as assistant to Prof. Thomas Anderson at Glasgow University, and left to undertake work at Edinburgh University under Lyon (afterwards Lord) Playfair [q. v. Suppl. I]. Subsequently he was successively lecturer on chemistry in the Normal College, Swansea (1857-8); chemist to George Miller & Co., manufacturing chemists, at Glasgow; assistant to (Sir) William Henry Perkin [q. v. Suppl. II] at Greenford Green (1863-8); partner with Edward Thomas and John Dower at the Star Chemical Works, Brentford (1868-77); and chemist and photometric supervisor to the Gas Light and Coke Company, London (1877-1901).

Greville Williams's special studies were the volatile bases produced by the destructive distillation of certain shales, cinchonine, and one or two groups of hydrocarbons. He discovered cyanine or quinoline-blue (*Trans. Roy. Soc. Edin.* 1857), the first of the quinoline dye-stuffs. To him is due the isolation of the hydrocarbon isoprene (*Phil. Trans.* 1860).

To the 'Journal of Gas Lighting' he contributed many papers on the chemistry of coal-gas. In 1890 that journal described a method he had devised for producing artificial emeralds from the refuse of gas-retorts. To the Royal Society he sent in 1873 and 1877 two papers: 'Researches on Emeralds and Beryls'; part i.: 'On the Colouring-matter of the Emerald' (*Roy. Soc. Proc.* vol. xxi.); and (part ii.) 'On some of the Processes employed in the Analysis of Emeralds and Beryls' (*ib.* vol. xxvi.). He showed that emeralds lost about 9 per cent. of their weight on fusion, the specific gravity being reduced to about 2.4. At a meeting of the British Association of Gas Managers (1890) he delivered a lecture on 'The Past, Present, and Future of Coal Tar.' Two years later he contributed to the Gas Institute a paper on 'The Determination of the Specific Gravity of Gas.'

Greville Williams's independent publications were: 'A Handbook of Chemical Manipulation' (1857; Supplement, 1879) and 'Manual of Chemical Analysis for Schools' (1858). For King's 'Treatise on Coal Gas' he wrote the article 'Tar and Tar Products,' and he was a contributor to Watts' 'Dictionary of Chemistry' and other technical compilations.

Williams was admitted to the Chemical Society on 16 Jan. 1862, and was made F.R.S. on 5 June 1862. A versatile conversationalist, he possessed literary and artistic tastes, and in the intervals of chemical research gave much attention to Egyptian hieroglyphics.

He died at his home, Bay Cottage, Smallfields, Horley, on 15 June 1910, and was buried at Streatham. He married on 25 Nov. 1852 Henrietta, daughter of Henry Bosher of Taunton (she predeceased him), and had issue four sons and four daughters.

[Proc. Roy. Soc. vol. lxxv. A; Journ. of Gas Lighting, cx., cxi.; Journ. Soc. Chem. Industry, vol. xxix.; Athenæum, 25 June 1910; Poggendorff's Handwörterbuch, Bd. iii. (1898); Roy. Soc. Catal. Sci. Papers; Nature, 7 July 1910.] T. E. J.

WILLIAMS, SIR EDWARD LEADER (1828–1910), engineer of the Manchester Ship Canal, born at Worcester on 28 April 1828, was eldest of the eleven children of Edward Leader Williams. Benjamin Williams Leader, R.A., is a brother. In 1842 his father was appointed chief engineer to the Severn navigation commissioners, and his improvements transformed that river into an important waterway for many years. Williams was educated privately, and being apprenticed at sixteen to his father, worked until 1846 on the Severn between Stourport and Gloucester. During the next three years he was engaged as assistant engineer under Joseph Cubitt [q. v.] in Lincolnshire on the Great Northern railway. He was resident engineer on the extensive works of Shoreham harbour from 1849 to 1852, and engineer to the contractors for the Admiralty pier at Dover from 1852 to 1855. In 1856 he became engineer to the River Weaver Trust, and thenceforth devoted himself entirely to works for inland navigation. He placed the river Weaver in the front rank of English waterways, deepening and widening it, enlarging the locks, and introducing steam traction; thus practically the whole of the salt traffic from Northwich and Winsford to Liverpool was secured. In order to establish through traffic with the Trent and Mersey canal, which the Weaver crosses at Anderton, Leader Williams designed, with Edwin Clark, an hydraulic lift for raising or lowering canal-boats from one to the other (see *Proc. Inst. of Civil Eng.* xlv. 107). In 1872, before the lift was completed, Williams became engineer to the Bridgewater Navigation Company. Here he enlarged the locks at Runcorn, deepened the canal from 4 ft. 6 ins. to 6 ft., and introduced steam

propulsion, which he facilitated by building an almost vertical wall on one side of the canal for about thirty miles.

In 1882 Leader Williams became, jointly with Hamilton N. Fulton, engineer to the provisional committee which was considering the formation of a ship canal to Manchester. Fulton had previously put forward a project for a tidal canal. Each engineer submitted a proposal. The committee adopted Williams's proposal to use the tidal channel of the Mersey as far as practicable, and then to cut a canal with four huge locks for raising ships gradually to the level of Manchester. He was thereupon appointed chief engineer. Parliament refused the necessary powers in 1883 and 1884, but granted them in 1885. The three years' contest occupied 175 days, and cost 250,000*l.* The failure of the first two applications was due largely to the opposition of the Mersey docks and harbour board, who feared that the proposed training and deepening of the tidal channel through the Mersey would affect the navigation of the estuary. Leader Williams thereupon modified his proposals in regard to the lower portion of the projected waterway. In 1887 a contract for the construction of the canal was entered into with T. A. Walker, at a cost of 5,750,000*l.*, and the first sod was cut at Eastham by Lord Egerton of Tatton on 11 Nov. 1887. In 1889, however, Walker died, and the work was ultimately let in sections to several contractors. The lower portion of the canal was first used for traffic in Sept. 1891, and the whole canal on 1 Jan. 1894; the canal was formally opened by Queen Victoria on 21 May 1894 (for technical description of the work see four papers in the *Proc. Inst. Civil Eng.* cxxxi., two by Williams, 'The Manchester Ship-Canal' and 'The Manchester Ship-Canal: Mersey Estuary Embankments and other Works—Runcorn Division,' and two by (Sir) Whately Eliot and Mr. Meade-King, on the Eastham and Irlam divisions respectively; *Engineering*, 26 Jan. 1894, with illustrations; SIR BOSDIN LEECH, *History of the Manchester Ship Canal, &c.*, 2 vols. 1907). The canal is 35½ miles in length from the entrance locks at Eastham to the Manchester docks, and has a minimum width of 120 feet at the bottom. It crosses five lines of railway and the Bridgewater canal at Barton, where Williams employed a device suggested by the Anderton canal lift. The docks at Manchester and Salford have an area of 104 acres and five miles of quay frontage. The total

expenditure of the Canal Company, up to 1 Jan. 1897, was about 15,170,000*l.*, in which are included, however, nearly three millions for the purchase of the Bridgewater canals and the Mersey and Irwell navigation and for interest on capital during construction. Leader Williams, who was knighted on 2 July 1894, took charge of the canal until 1905; he then became its consulting engineer, and practised privately until a few years before his death.

He was elected a member of the Institution of Civil Engineers on 7 Feb. 1860, and served on the council from 1895 until his retirement in 1907—the last two years as a vice-president. He became a member of the Institution of Mechanical Engineers in 1883. In 1895 he was president of the Manchester Association of Engineers. He died at Altrincham on 1 Jan. 1910.

Leader Williams, who was of commanding presence, with a genial manner and abundant energy, courage, and patience, married (1) in 1852 Ellen Maria (*d.* 1860), daughter of Thomas Popplewell of Gainsborough, and (2) in 1862 Catherine Louisa, daughter of Richard Clinch of Northwich, who survived him. He had five sons and five daughters.

In addition to the two papers already mentioned, Leader Williams contributed to the 'Proceedings of the Institution of Civil Engineers' (lxx. 378) in 1882 a paper 'On the Recent Landslips in the Salt Districts of Cheshire,' and he wrote the larger portion of the article on 'Canals and Inland Navigation' in the supplement to the ninth edition of the 'Encyclopædia Britannica.'

[Engineering, 7 Jan. 1910; Minutes of Proc. Inst. Civ. Eng. clxxx. 341; The Times, and Manchester Guardian, 3 Jan. 1910; Altrincham Guardian, 8 Jan. 1910.]

W. F. S.

WILLIAMS, SIR GEORGE (1821–1905), founder of the Young Men's Christian Association, born at Ashway Farm, Dulverton, on 11 Oct. 1821, was youngest of the seven sons of Amos Williams, farmer, by his wife, Elizabeth. After being educated at a dame's school in Dulverton and then at Gloy's grammar school, Tiverton, he was apprenticed in 1836 to one Holmes, a draper at Bridgwater. His parents were church people, but he came under religious impressions at the congregational chapel in Bridgwater, of which he became a member on 14 Feb. 1838. He took the 'teetotal pledge' in the Friends' meeting-house

at Bridgwater in 1839, and was thenceforth an earnest temperance advocate, and a vigorous opponent of gambling and tobacco.

In 1841 he entered the employ of Messrs. Hitchcock & Rogers, drapers, then of Ludgate Hill, and afterwards of St. Paul's Churchyard, and was subsequently made 'buyer' in the drapery department. He soon became the most prominent employé in the house and was made a partner—the firm being thenceforth known as Hitchcock, Williams & Co. In 1853 he married Helen, daughter of the head of the firm, George Hitchcock.

From his arrival in London he devoted his leisure to evangelistic and temperance work. He was influenced by the severely puritanical preaching of an American evangelist, Charles G. Finney, but his views were soon modified by the more generous teaching of Thomas Binney (1798–1874) [q. v.], of the old Weigh House chapel in the City of London, where he became Sunday school secretary. He took part, too, in ragged-school work and open-air preaching. A small prayer-meeting which he early formed among his fellow-employés developed into a great organisation. At the end of 1842, when the members numbered nearly thirty, his master George Hitchcock joined Williams in establishing in the house a mutual improvement society and a young men's missionary society (1842). On 6 June 1844 twelve men, all but one being employés of Hitchcock, met in Williams's bedroom and established the Young Men's Christian Association, with the idea of extending the work to drapery houses throughout the metropolis. In October a room was taken at Radley's Hotel, Bridge Street, for the weekly meetings. Early in 1845 the first paid secretary, T. H. Tarlton, was appointed, and by Hitchcock's help premises were taken in Serjeant's Inn.

A similar institution had been started by David Nasmith [q. v.] in Glasgow as early as 1824, and branches had been opened in London, France, and America. But Williams worked independently of his predecessor's example, and his association grew on a wholly unprecedented scale. It attracted, at an early stage, men ready to work on inter-denominational lines, such as Thomas Binney [q. v.], Baptist W. Noel [q. v.], and Samuel Morley [q. v.]. In order to emphasise the 'mutual improvement' side of the work, popular lectures (1845), which afterwards became known from their place of delivery as the 'Exeter Hall lectures,' were arranged. They were published and had an annual

sale of 36,000 copies. Lord Shaftesbury [see COOPER, ANTHONY ASHLEY, seventh EARL OF SHAFTESBURY], with whom Williams became closely associated, accepted the presidency in 1851. The work spread to the continent and the colonies, and in 1855 Williams was present at the first international conference of Young Men's Christian Associations held in Paris, where representatives of similar organisations in Europe and America agreed on the terms of the 'Paris basis,' on which a world-wide society was built up.

Up to 1864 its undenominational constitution and its sometimes narrow views about recreation and amusements hampered the association's development. But Williams's directness of purpose gradually overcame all difficulties. In 1880 he contrived the purchase of the lease of Exeter Hall, where the Association had often met, for the headquarters of the association, when there was danger of the hall becoming a place of amusement. Within forty-eight hours he raised 25,000*l.* giving 5000*l.* himself and securing four other gifts of like amount; he afterwards raised a further 20,000*l.* for the equipment of the building. Exeter Hall remained the association's headquarters till its demolition in 1907. During 1909-11 an enormous block of buildings was erected as a memorial to Williams for the offices of the association in Tottenham Court Road; the edifice was opened in 1912.

On Lord Shaftesbury's death, Williams was elected president (18 April 1886). In June 1894 the jubilee of the Y.M.C.A. institution was celebrated in London, when Queen Victoria knighted Williams on the recommendation of the prime minister, Lord Rosebery, and the freedom of the City of London was conferred on him. By that period there were some four hundred branches of the association in England, Ireland, and Wales, and over two hundred in Scotland, with a total membership of nearly 150,000. In America the institution struck even deeper roots. There the association had nearly 2000 branches with a membership exceeding 450,000. In Germany there were over 2000 branches with a membership of 120,000. Apart from the association's flourishing development in all the British dominions and in almost all the countries of Europe, branches had been formed in Japan, China, and Korea.

In April 1905 Williams was present at the jubilee of the world's alliance of Y.M.C.A.s in Paris. He died at Torquay, on 6 Nov. 1905, being buried in the crypt of St. Paul's, where there is a memorial.

Among numerous societies in which Williams was interested and which he generously aided with money were, apart from the Young Men's Christian Association, the Bible Society, the London City Mission, the Religious Tract Society, the Early Closing Association, and the Commercial Travellers' Christian Association.

By his marriage on 9 June 1853, with Helen Hitchcock, who survived him, he had five sons, and one daughter, who died aged nineteen. His son Mr. Howard Williams inherited his father's philanthropic and religious interests, and is treasurer of Dr. Barnardo's Homes.

A portrait of Williams by the Hon. John Collier was presented to Mrs. Williams in 1887 by the staff of Hitchcock, Williams & Co., to commemorate the firm's jubilee

[J. E. Hodder Williams, *The Life of Sir George Williams, 1906* (several good portraits); *The Times*, 7 Nov. 1905; private information.]

E. H. P.

WILLIAMS, HUGH (1843-1911), ecclesiastical historian, son of Hugh Williams (*d.* 1905, aged ninety-two), carrier and small freeholder, of Menai Bridge, Anglesey, by his wife Jane, was born at Porthaethwy in Anglesey on 17 Sept. 1843. He got his schooling in his native village and at Bangor, and for some years worked as a mason, at the same time continuing his studies. In 1864 he entered at the Calvinistic Methodist College, Bala, where he acted (1867-9) as one of the tutors. He graduated B.A. London in 1870 (first in second class honours in classics); M.A. London in 1871 (second in philosophy honours). He then conducted a grammar school at Menai Bridge, at the same time ministering to calvinistic methodists in Anglesey, and was ordained without charge (1873) in the presbyterian church of Wales. Appointed professor of Greek and mathematics at Bala in August 1873, he entered on his duties in the following year. In the vacation of 1874 he visited Germany for the study of the language. When the Bala College became purely theological (1891), he was appointed professor of church history. In 1903 he was moderator of the North Wales assembly of the presbyterian church. On 19 April 1904 he received the degree of D.D. in Glasgow University. His 'high-pitched industry' told upon his health; he was for some time troubled with a form of laryngitis. In addition to his other work he preached every Sunday, though not reckoned a popular preacher, and conducted a weekly

bible class. He was a member of the theological board and court of the University of Wales; also of the council of the Bangor College. After suffering for nearly two years from arterial disease, he died at Bala on 11 May 1911, and was buried in the churchyard of Llanyceil, Merionethshire, the parish in which Bala is situated. On 31 Dec. 1884 he married Mary, eldest daughter of Urias Bromley, Old Hall, Chester, who survives him without issue.

Williams made his mark by his edition of 'Gildas, with English translation and notes,' pt. i. 1899; pt. ii. 1901 (*Cymrodorion Record* series). Various magazine articles and separate papers, e.g. 'Some Aspects of the Christian Church in Wales in the Fifth and Sixth Centuries' (1895); 'The Four Disciples of Illtud' (1897); the article on the Welsh church in the new edition (1889-96) of the 'Encyclopædia Cambrensis' ('Gwyddoniadur Cymreig'); a review of Heinrich Zimmer's 'Keltische Kirche' (1901) and 'Pelagius in Ireland' (1901) in the 'Zeitschrift für Celtische Philologie' (1903); the article 'Church (British)' in Hastings's 'Encyclopædia of Religion and Ethics' (1910) prepared the way for his magnum opus, 'Christianity in Early Britain,' which was issued by the Clarendon press in February 1912. He had generally indicated his results in the Davies lecture, delivered at Birkenhead on 8 June 1905. During his last illness, Williams was engaged on a second revision of the proofs of his work, and left it to his colleagues, the Revs. D. Phillips and J. O. Thomas, to see through the press. As an historian of Celtic Christendom, Williams easily took first rank, not merely by his new and careful research into primary sources, but by his absolute freedom from sectarian bias, his excellent judgment, and his application to history, despite the Germans, of the Newtonian principle *hypotheses non fingo*; his work forms a basis on which all later research must build.

In addition to the above, he published, *inter alia*, in Welsh: 1. 'Yr Epistol at y Colossiaid,' &c., Bala, 1886. 2. 'Yr Epistol at y Galatiaid: cyfethiad newydd [together with that of 1620] . . . a nodiadau. Gyda map,' Bala, 1892 (this and the preceding were new and annotated versions for Sunday school use). 3. 'Y Sacramentau: anerchiad agoriadol,' &c., Bala, 1894. 4. 'De Imitatione Christi . . . Rhag-draeth,' &c., Bala, 1907 (the introduction by Williams, the translation by another hand). He also edited Lewis Edwards's 'Holiadau Athrawiaethol,' Bala, 1897.

[Who's Who, 1911; The Times, 13 May 1911; Univ. of London, Gen. Register, 1872; Cylchgrawn Myfyrwyr y Bala (Bala Students' Mag.), 1911, pp. 148 sq.; Blwyddiadur y Methodistiaid Calfnaid (Calvinistic Methodist Year Book), 1912; information from Mrs. Williams; Mr. W. I. Addison, Registrar, Glasgow University; Principal Edwards, Bala; and the Rev. Rees Jenkin Jones, Aberdare.] A. G.

WILLIAMS, JOHN CARVELL (1821-1907), nonconformist politician, born at Stepney on 20 Sept. 1821, was the son of John Allen Williams by his wife Mary, daughter of John Carvell of Lambeth, and was brought up in connection with the old Stepney meeting, though his first membership was at Claremont chapel, Pentonville. From a private school he entered the office of a firm of proctors in Doctors' Commons. His life-work began on his appointment in 1847 as secretary to the British Anti-State Church Association, founded in 1844 by Edward Miall [q. v.]. Its change of name to the Society for the Liberation of Religion from State Patronage and Control was due to a suggestion by Williams. He remained secretary till 1877, when he was made chairman of the society's parliamentary committee, a post which he held till 1898, when he was made chairman of the executive committee; resigning this post in 1903 through failing eyesight, he was made vice-president. For over half a century Williams proved himself 'the chief strategist of the nonconformist force, in its steady advance upon the privileged position of the Church of England.' Williams occasionally preached, and to him was largely due the formation of a congregational church and the erection of its building in 1887 at Stroud Green. In 1900 he was chairman of the Congregational Union of England and Wales.

He entered parliament as liberal member for South Nottinghamshire in 1885, when his friends presented him with 1000*l*. In 1886 he was defeated, but he was returned in 1892 for the Mansfield division of Nottinghamshire, and retained that seat till 1900, retiring then on account of growing deafness. He was a chief promoter of the Burials Act in 1880 and of the Marriage Acts of 1886 (extending the hours for marriage from twelve to three o'clock; of this Act he was sole author) and 1898 (allowing nonconformist congregations to appoint their own registrars). In 1897 his friends presented him with 1000*l*. to mark the jubilee of his connection with the Liberation Society.

On this occasion Gladstone credited him with 'consistency, devotion, unselfishness, ability,' qualities not rendered less effective by his suave demeanour, his practical judgment of men, and his imperturbable temper. He was an effective speaker and in private life a genial companion. On his retirement from active work he was entertained at a public dinner (16 July 1906). He died at 26 Crouch Hall Road, Crouch End, on 8 Oct. 1907, and was buried in Abney Park cemetery. He married on 14 Aug. 1849 Anne, daughter of Richard Goodman of Hornsey, who predeceased him; of their five children, a son, Sidney Williams, alone survived him.

Williams, an admirable draughtsman of circulars and appeals, wielded also a busy pen, both on Miall's paper, the weekly 'Nonconformist' (started 1841), and on the 'Liberator,' a monthly founded by himself in 1853, and still in progress. His separate publications include the following: 1. 'A Plea for a Free Churchyard,' 1870. 2. 'The New Position of the Burials Question,' 1878; 2nd edit. 1879 (with 'Present' for 'New' in title). 3. 'Dis-establishment' (in S. C. Buxton's 'The Imperial Parliament'), 1885. 4. 'Progress from Toleration to Religious Equality,' 1889 (Congregational Union bicentenary lecture). 5. 'Nonconformity in the Nineteenth Century,' 1900 (address as chairman of the Congregational Union).

[The Times, 9 and 14 Oct. 1907; Evangelical Magazine, January 1900 (portrait); Liberator, August and September 1906; November 1907; private information personal recollection.] A. G.

WILLIAMS, ROWLAND, 'HWFA MÔN' (1823-1905), archdruid of Wales, was born in March 1823, at Penygraig, near Pentraeth, Anglesey. In 1828 his parents moved to Rhos Trehwfa, near Llangefni, and it was from this place he took his bardic name of 'Hwfa Môn.' At an early age he was apprenticed to a carpenter and worked at Llangefni, Bangor, Ebenezer, and Port Dinorwic. He commenced to preach as a member of the independent church at Llangefni and in 1847 entered Bala Congregational College. In 1851 he was ordained minister of the Flint and Bagillt churches; on 12 May 1853 he married his predecessor's widow, Mary Evans. His next pastorate was at Brymbo (1855-62), and for a time he took charge of the Welsh church at Wrexham also. After a short but strenuous ministry at Bethesda, Carnarvonshire, he accepted a call in 1867 to

the Welsh church meeting in Fetter Lane, London, where he remained until 1881. Two country pastorates, viz. Llanerchymedd (1881-7) and Llangollen (1887-93), closed his ministerial career; from 1893 he lived in retirement at Rhyl until his death on 10 Nov. 1905. He was buried in Rhyl new cemetery on the 14th. He left no issue.

Hwfa Môn was throughout his career a preacher of great descriptive and dramatic power. He was known to his countrymen as a poet rich in language and with much feeling for natural beauty. But his widest repute was won as the picturesque and arresting central figure in the annual pageant of the national eisteddfod. The first eisteddfod he attended was that of Aberffraw in 1849, when he was admitted to the 'gorsedd,' or bardic guild, and won a minor poetic prize. He won his first bardic chair in 1855 at Llanfair Talhaiarn, Denbighshire, for an ode on 'The Exit of Israel from Egypt,' and in the same year carried off a second chair at Llanfachreth, Anglesey, for an ode on 'The Poet.' The highest bardic distinction, the chair of the national eisteddfod, first fell to him in 1862, when his ode on 'The Year' was successful at Carnarvon. It was reckoned a special distinction that he defeated on this occasion the veteran Ebenezer Thomas (Eben Fardd). He was a competitor for this honour on several later occasions and was twice successful, winning the Mold chair in 1873 ('Caractacus in Rome') and the Birkenhead chair in 1878 ('Providence'). In 1867 he had won the eisteddfodic crown (given for verse in the 'free' metres) at Carmarthen, his subject being Owen Glendower. Henceforward, his part in these competitions was more often that of judge than competitor; from 1875 to 1892 he was constantly employed as chief bardic adjudicator in the great national festival.

As leader of the movement which gave the bardic Gorsedd its prominent and dignified position in the modern eisteddfod, he, on the death of Clwydfardd in 1894, naturally stepped into his place as archdruid. His personality and faith in the institution gave the Gorsedd and its ceremonies an entirely new importance, which was heightened by the artistic reforms introduced by Sir Hubert von Herkomer.

Collected editions of the works of Hwfa Môn are: 1. 'Gwaith Barddonol Hwfa Môn' (with portrait), Llanerchymedd, 1883. 2. 'Gwaith Barddonol Hwfa Môn, Ail Gyfrol' (with photograph), Bala, 1903.

Some of his poems have been separately printed, and there is much of his work in Parry's memoir (see below). Paintings of him in his official robes by Sir Hubert von Herkomer and by Christopher Williams are the property of the artists.

[Cofiant Hwfa Môn, ed. W. J. Parry, Manchester, 1907 (illustrated), is a memorial volume, biographical and critical, with some of the later pieces; see also *The Times*, 11 Nov. 1905, and T. R. Roberts, *Eminent Welshmen*.] J. E. L.

WILLIAMS, WATKIN HEZEKIAH (1844-1905), Welsh schoolmaster and poet, born on 7 March 1844 at his mother's home at Ddolgarn, in the Llynfell valley, Carmarthenshire, was son of Hezekiah and Ann Williams his wife. He was brought up, the second of a family of ten, on his father's farm of Cwmgarw Ganol, near Brynaman. At an early age he found employment in the coal mines then being opened up in the district, and he worked, chiefly as a collier, with occasional periods of attendance at various local schools, until the age of twenty-seven. In 1870 he married Mary Jones of Trap, Carreg Cennen; the death of his wife in less than a year led him to quit his home and occupation, and in Jan. 1872 he entered the school of his relative, Evan Williams of Merthyr. His progress was rapid, and he was soon able to give assistance in teaching to Evan Williams and his successor, J. J. Copeland. In 1874 he resolved to qualify for the independent ministry; he returned home, began to preach at Gibeau Chapel, and, after a little preliminary training, was admitted to the Presbyterian College at Carmarthen in 1875. On the conclusion of his course in 1879 he married Anne Davies of Carmarthen and accepted, instead of a pastorate, a post as teacher of a private school at Llangadock. Differences among the staff led to his moving, with the Rev. D. E. Williams, to Amanford in 1880, where the two friends founded the 'Hope Academy.' In 1884 Watkin took sole charge, and in 1888 he adapted for school purposes a building to which he gave the name of 'Gwynfryn.' Thenceforth until his death he conducted the institution as a preparatory school for those about to enter the dissenting ministry or other professions. He was ordained an independent minister in 1894, but held no pastoral charge. He died on 19 Nov. 1905, and was buried at Amanford.

'Wateyn Wyn,' as he was generally known, was an inspiring and original

teacher, whose vivacity and wit endeared him to his pupils and whose early struggles made him a sympathetic guide of young men athirst for learning. He had also a wide reputation as a Welsh poet, dating from 1875, when he divided a prize with Islwyn [see THOMAS, WILLIAM, 1832-1878] at Pwllheli. Both the silver crown and the bardic chair, the two chief poetic prizes of the eisteddfod, were won by him, the former at Merthyr in 1881 for a poem in free metre on 'Life,' and the latter at Aberdare in 1885 for an ode in the strict metres on the subject 'The Truth against the World.' He was also the winner of the crown at the World's Fair eisteddfod of 1893 at Chicago, the subject being 'George Washington.' These longer productions are not so likely, however, to preserve his memory as the lyrical and humorous poems which came so easily from his pen. He published: 1. 'Caneuon Wateyn Wyn,' Wrexham, n.d.; second edit. 1873. 2. 'Hwyr Ddifyrion,' Swansea, 1883. 3. 'Llenyddiaeth Gymreig' (a survey of Welsh literature), Wrexham, 1900. 4. 'Storiau Cymru' (versified folk-tales), Wrexham, 1907, and other minor works. His autobiography ('Adgofion Wateyn Wyn'), edited by J. Jenkins ('Gwili'), appeared (with portrait) in 1907 (Merthyr).

[Album Caerfyrddin, 1909; Congregational Year Book for 1907; Adgofion Wateyn Wyn; Geninen, April 1906; information supplied by Mr. G. O. Williams, B.A.] J. E. L.

WILLIAMSON, ALEXANDER WILLIAM (1824-1904), chemist, born at Wandsworth on 1 May 1824, was second of three children of Alexander Williamson, originally of Elgin, who settled in London, and became a clerk in the East India House. His mother, Antonia (married 1820), was daughter of William McAndrew, merchant, of London. About 1830 the elder Williamson removed from Camberwell to Wright's Lane, Kensington, hard by the home of James Mill (father of John Stuart Mill), and Williamson's colleague in official work. The two families were on terms of friendship.

In early life young Williamson had delicate health, and took no part in the usual games of boyhood. A low vitality led, from various causes, to loss of sight in his right eye, and to chronic, though partial, disablement of the left arm. Though thus handicapped, he became eventually of robust constitution. After education at home and at Kensington grammar school Williamson went abroad with his parents,

on his father's retirement from the India House. For some time he had private tuition at Dijon with his sister Antonia (b. 1822). In 1840 he entered Heidelberg University with a view to a medical career. He attended Friedrich Tiedemann's lectures in physiology and those of Leopold Gmelin in chemistry. Finally he decided to give up medicine for chemical research. Four years later he left to study chemistry under Liebig at Giessen University, going into residence with Prof. Hillebrand. He also joined Bischoff's classes in physiology. Williamson was of the opinion that the Giessen laboratory was the most efficient organisation for the promotion of chemistry that had ever existed (see *Brit. Assoc. address*, 1873). He graduated Ph.D. in 1846.

Williamson spent the next three years in Paris, studying mathematics with Auguste Comte. To his father he wrote, 'If my experience of Comte's superior powers were insufficient to convince you that his lessons were worth their price, John Stuart Mill's saying that he "would prefer him to any man in Europe to finish a scientific education," ought to carry the point and to induce you to consent to my continuing as I have begun.'

In 1849 he was appointed professor of practical chemistry in University College, London, succeeding George Fownes [q. v.]. In 1855 this post was joined with the professorship of general chemistry, vacant by the resignation of his friend Thomas Graham [q. v.]. Williamson occupied the chair for thirty-eight years, earning distinction as a teacher and instigator of research. In 1887 he retired and was made emeritus professor of chemistry (see *Life and Experiences of Sir H. E. Roscoe*, 1906; portrait of Williamson, and reminiscences). He delivered a farewell address on 14 June 1887, when Sir William Ramsay presided (*Chemical News*, 8 July 1887).

Owing to Williamson's scientific influence, force of character, and cosmopolitan outlook, he was chosen guardian of a small group of young Japanese noblemen, who came to England in 1863 with a view to familiarising themselves and their countrymen with European culture. Of five who first reached London three took up residence in Williamson's own house. Subsequently the Prince of Satsuma sent over sixteen more youths. The Marquis Ito, Count Inouye, and Viscount Yamao were among those who owed their early training to Williamson.

Williamson's published researches were

comparatively few in number, but some of them were of such a character that they influenced profoundly the progress of chemical knowledge and philosophy. His chief chemical investigations were made between 1844 and 1859. While at Giessen he published three papers, which, though written for Liebig's 'Annalen,' appeared originally in the 'Memoirs of the Chemical Society of London' (1844-6). They were: 'On the Decomposition of Oxides and Salts by Chlorine'; 'Some Experiments on Ozone'; and 'On the Blue Compounds of Cyanogen and Iron.'

About 1849 he began his classical research on the theory of etherification, in which he laid the foundations of chemical dynamics, of the theory of ionisation, and of the theory of catalytic action. Embodied firstly in a communication to the British Association (Edinburgh meeting), 3 Aug. 1850, 'Results of a Research on Etherification,' the extended paper appeared in the 'Philosophical Magazine' for Nov. 1850 (see, in reference to priority, *Chemical News*, 8 July 1904). A chief ultimate fruit of the research was Williamson's theory of the constitution of salts, from which emerged the doctrine of valency and the linkage of radicles (see obit. notice by Sir T. E. Thorpe, *Proc. Roy. Soc.*). He cleared up, wrote Sir James Dewar, one of the most intricate and recondite of chemical reactions, and in so doing struck at the very root of the chemical problems connected with atomic and molecular weights. The subject was further elucidated in the memoirs 'On the Constitution of Salts' (*Journ. Chem. Soc.* vol. iv. 1852); 'On Gerhardt's Discovery of Anhydrous Organic Acids' (*Proc. Roy. Inst.* vol. i.); and 'Note on the Decomposition of Sulphuric Acid by Pentachloride of Phosphorus' (*Proc. Roy. Soc.* vol. vii.). His papers on Etherification and on the Constitution of Salts were issued as an Alembic Club reprint (Edinburgh, 1902). At the Royal Institution he delivered a lecture, 6 June 1851, 'Suggestions for the Dynamics of Chemistry, derived from the Theory of Etherification.'

Subsequent papers by Williamson of a miscellaneous nature comprised 'On the Dynamics of the Galvanic Battery' (*Phil. Mag.* 1863-4); 'On the Composition of the Gases evolved by the Bath Spring called King's Bath' (*Rept. Brit. Assoc.* 1865; see paper by Hon. R. J. Strutt, *Proc. Roy. Soc.* vol. lxxiii. (1904), p. 191); and 'On Fermentation' (*Pharmaceut. Journ.* 1871). Jointly with Dr. W. J. Russell

[q. v. Suppl. II] he published 'Note on the Measurement of Gases in Analysis' (*Proc. Roy. Soc.* vol. ix. 1857-9); and 'On a New Method of Gas Analysis' (*Jour. Chem. Soc.* vol. ii. 1864).

Williamson was admitted into the Chemical Society on 15 May 1848, served on the council (1850-3, 1858-60), and was president (1863-5, and 1869-71). He was responsible for the introduction into the society's 'Journal' of abstracts of chemical memoirs of British and foreign authorship (see *Journal*, vol. xxiii. p. 290). He was president of the British Association in 1873 at the Bradford meeting, when he gave an address on the intellectual value of chemical studies and the duties of the government in relation to education; he presided over section B in 1863 (Newcastle) and in 1881 (York). At the latter, the jubilee meeting, he gave an address on 'The Growth of the Atomic Theory.' He succeeded William Spottiswoode as general treasurer in 1874, holding office until 1891.

Elected a fellow of the Royal Society on 7 June 1855, he served on the council (1859-61, 1869-71); from 1873 to 1889 he was foreign secretary. He received a royal medal in 1862 for his researches on the compound ethers and subsequent communications in organic chemistry (see *Proc. Roy. Soc.* xii. 279).

Many foreign bodies conferred distinctions on him; he became a corresponding member of the French Academy of Sciences, the Berlin Academy, and R. Accademia dei Lincei, Rome, respectively in 1873, 1875 and 1883. The Royal Society of Edinburgh made him an honorary fellow (1883); he was an honorary member of the Royal Irish Academy (1885), of the Manchester Literary and Philosophical Society (1889), and of the Society of Public Analysts (1875). He was also a foundation member (1872) of the Society of Telegraph Engineers (afterwards Institution of Electrical Engineers), and of the Society of Chemical Industry (1881). From Dublin and Edinburgh Universities he received the honorary degree of LL.D. respectively in 1878 and 1881; from Durham University that of D.C.L. in 1889.

Williamson was for some years examiner in chemistry in the University of London, and from 1874 a member of the senate. He took a prominent part in the introduction there of degrees of science, and was deeply interested in the formation of a teaching university for London. He was a member of the first electrical standards committee, inaugurated by the association in 1861. From 1876 to 1901 he was chief

gas examiner under the board of trade, having succeeded Henry Letheby [q. v.].

Williamson, who wrote articles for Watts's 'Dictionary of Chemistry' (1863-6), was author of a text-book, 'Chemistry for Students' (1865; 3rd edit. 1873). Conjointly with T. H. Key he published the pamphlet 'Invasion invited by the Defenceless State of England' (1858). On 11 Nov. 1898 Williamson was one of six guests at a banquet given in London by the Chemical Society to those of its past presidents who had been fellows for half a century (see *Proc. Chem. Soc.* no. 199, speech by Williamson).

Williamson died on 6 May 1904 at his home, High Pitfold, Shottermill, Haslemere, and was buried at Brookwood cemetery, Surrey. He married in 1855 Emma Catherine, third daughter of Thomas Hewitt Key, F.R.S., headmaster of University College School, and had issue a son and a daughter, who, with his wife, survived him.

A subscription portrait of Williamson, painted by the Hon. John Collier, hangs in the council room of University College (see *Nature*, 20 Dec. 1888, speeches by Sir H. E. Roscoe and Williamson at presentation ceremony); another, executed in 1894-5 by Mr. W. Biscoombe Gardner, was presented to the chemical department. An autotype portrait hangs in the council room of the Chemical Society in the series of past presidents.

WILLIS, HENRY (1821-1901), organ-builder, born in London on 27 April 1821, was eldest of four sons of Henry Willis, a builder, who was a member of the choir of the old Surrey Chapel, Blackfriars Road, and of the Cecilian Society, where he played tympani and bass-drum. Of the organ builder's brothers, George became a celebrated voicer of organ reeds and Edwin was employed in organ building.

As a boy Henry taught himself to play

the organ, practising it in rivalry with a playmate, George Cooper [q. v.], and from a very early age began experimenting on the mechanism of the instrument. In 1835 he was articled for seven years to John Gray (afterwards Gray & Davison), organ builders, of London, and soon afterwards became organist of Christ Church, Hoxton, where Clement William Scott [q. v. Suppl. II], son of the vicar, was his solo-boy.

Subsequently he filled similar posts at Hampstead parish church, and was for some thirty years (c. 1860-1891) organist of Islington chapel-of-ease. He was an apt extemporiser in a diatonic and classic manner. He also was an efficient player on the double-bass, performing at many festivals, including the Gloucester festival of 1847 and the Handel festivals of 1871 and 1874.

Willis spent three years (1842-5) as assistant to W. E. Evans, a music-warehouseman, at Cheltenham, where he assisted in the construction of a new instrument of the 'Seraphina' class. In 1845 he started organ building in Manchester Street, Gray's Inn Road, London, W.C., removing in 1851 to Albany Street, Regent's Park, and in 1865 to King Street, Camden Town, finally settling in 1866 at Rotunda Works, Rochester Place, Camden Town. In 1847 he achieved his first success by rebuilding Gloucester Cathedral organ, which brought him 400*l*.

In 1851 he built the great organ in the west end gallery of the Great Exhibition, which he claimed to be entirely his own in conception, design and 'every detail.' It was afterwards erected in Winchester Cathedral, and, renovated in 1891, is still in use. In 1855 Willis won the competition for building the organ at St. George's Hall, Liverpool (rebuilt 1898). Another organ built for the exhibition of 1862 was equally notable; it was transferred to the Alexandra Palace, and when that building was burned in 1873 Willis replaced the destroyed organ by another instrument. His largest organ was that in the Albert Hall, London (opened 1871). Willis contracted to have a new organ ready at St. Paul's Cathedral by April 1872, but he was warned before that date that the instrument was required for the thanksgiving service (on 27 Feb.) on the recovery of Edward VII, then Prince of Wales, from serious illness. The pneumatic action for the pedals was not ready, but Willis made a temporary pedal-board and music desk by the pedal pipes,

on which he played, while George Cooper played on the manuals. No discrepancy was noticeable. Willis was directly concerned in the building, or rebuilding, of over a thousand organs, including those, in addition to the places named, at the cathedrals of Canterbury, Carlisle, Durham, Hereford, Oxford, Salisbury, Truro, Wells, St. David's, Edinburgh, and Glasgow, at Windsor Castle and the Dome, Brighton. In 1878 Willis took his two sons into partnership—the firm assuming the style of Henry Willis & Sons, but he remained in active superintendence till his death. A special gold medal was awarded the firm at the Inventions Exhibition of 1885.

Willis took out numerous patents for important inventions in organ building. He practically extended the range of the pedal-board from G to C. He insisted on a high pitch. In 1877 he began with Alexander John Ellis [q. v. Suppl. I] some interesting experiments at the Rotunda Works, with reference to the temperament question; but Ellis and Willis disagreed in their conclusions.

Some critics have occasionally complained that Willis voiced the reed stops on so heavy a wind pressure that the flue stops could not contend with them, so that the full power appeared to consist of reed stops only. But Willis's work was always marked by scrupulous conscientiousness and artistic insight. He could make every part of an organ from his own drawings. The workmanship and material of his instruments were admirable, down to the smallest detail, and he may justly be regarded as the greatest organ-builder of his time.

His rectitude, enthusiasm, and artistic spirit won him the regard of many well-known musicians, including Best, Costa, Elvey, Goss, Hopkins, Monk, Ouseley, Henry Smart, Stainer, Walmisley, and S. S. Wesley, with whom he came into professional relations.

Of small physique, 'Father' Willis, as he came to be known, abounded in breezy energy. His chief recreation was yachting, to constant indulgence in which he attributed his excellent health. In his yacht *Opal* he circumnavigated Great Britain.

Busy to the end, he died in Bartholomew Road, Camden Town, London, on 11 Feb. 1901, and was buried at Highgate cemetery, where there is a monument to his memory.

In 1847 he married Esther Maria, daughter of Randall Chatterton, a London silversmith, by whom he had two sons, Vincent

and Henry (his partners from 1878), and three daughters. After his death his firm removed in 1905 to High Street, Hemerton.

[Notes supplied by Mr. Henry Davey; Grove's Dict. of Music; Musical Times, 1 May 1898 (personal interview, with two portraits), March 1901 (with portrait as skipper of yacht Opal); Musical Herald, March 1901; information from Sir George C. Martin, St. Paul's Cathedral, Henry Willis (son) and Henry Willis (grandson).] C. M.

WILLIS, WILLIAM (1835-1911), lawyer, born at Dunstable, Bedfordshire, on 29 April 1835, was eldest son and third child in the family of eight sons and six daughters of William Willis, a straw-hat manufacturer at Luton, by his wife Esther Kentish, daughter of Johnson Masters, of a Norfolk family, who carried on a straw-hat business at Dunstable. He received his early education at the free grammar school, Dunstable, then at schools at Hockcliffe, Bedfordshire, and at Hatfield, and lastly at Huddersfield College. He subsequently matriculated at London University, graduating B.A. in 1859, and LL.D., with gold medal, in 1865. After a short experience of business life in a drapery establishment in St. Paul's Churchyard Willis entered as a student at the Inner Temple on 21 April 1868, winning the studentship given by the Inns of Court; he was called to the bar on 6 June 1861. His success from the first was rapid; he had a sound and complete knowledge of the common law in all its branches, and he was endowed with a style of advocacy which rendered him singularly effective with juries. He took silk on 13 Feb. 1877, and was made a bencher of his Inn, 28 Jan. 1880. For the next twenty years he was one of the most conspicuous figures and determined fighters in the courts of law at Westminster and in the Strand. Of a fervid temperament and very voluble in speech, he would identify himself absolutely with the interests of his client, and assail his opponents with as much zeal and indignation as if his own honour and property were at stake. He came into frequent collision with both the bar and the bench, but nothing could daunt him. His services were greatly in demand in cases which required violent appeals to sentiment and emotion, and he could be forcible and convincing where the issue turned on points of law. Out of court his flow of conversation and his fondness for improving the occasion were the source of endless amusement to his brethren at the bar. A baptist by religion and a radical in politics,

he advocated his principles in all companies. In 1903 he was chosen president of the baptist conference, a distinction rarely conferred upon a layman. In the general election of 1880 he was returned second on the poll as liberal member for Colchester, defeating the conservative candidate by a single vote. He took frequent part in the proceedings of the house, and on 31 March 1884 he succeeded in carrying a motion for the exclusion of the bishops from the House of Lords by a majority of eleven votes in spite of the opposition of Sir William Harcourt [q. v. Suppl. II] on behalf of the government. In the general election of Nov. 1885, Colchester having been deprived of its second member, he stood for Peckham, but was defeated, and had no better success there in July of the following year. In March 1897 he was given a county court judgeship by Lord Halsbury; in the discharge of his judicial duties he was easily led away by his feelings, which inclined towards the servant as against the mistress, the employee against the employer. He was at constant war with counsel, and the 'scenes' which were chronicled in the press left a poor impression of his sense of official decorum.

Though largely a self-educated man, Willis had a wide knowledge of English literature and especially of the classic writers of the sixteenth and seventeenth centuries. He lectured on Milton and Bunyan with real eloquence. On 29 May 1902 he read publicly in the hall of the Inner Temple an imaginary 'report of the trial of an issue in Westminster Hall, 20 June 1627,' dealing with the Shakespeare-Bacon controversy; here he ably exposed the fallacies to which several learned lawyers had lent themselves on the Baconian side. In spite of his peculiarities Willis enjoyed much popularity at the bar; his closest friend being Sir John Day [q. v. Suppl. II], as much his opposite in character and manner as he was in personal appearance.

Willis died at his residence at Blackheath on 22 Aug. 1911, after a prolonged illness, and was buried in Lee cemetery. He was twice married: (1) on 21 March 1866 to Annie, eldest daughter of John Outhwaite of Clapham, by whom he had issue four sons and five daughters; and (2) on 2 Sept. 1897 to Marie Elizabeth, daughter of Thomas Moody, of Lewisham, who survived him.

Willis's works included: 1. 'Milton's Sonnets,' a lecture, privately printed, 1887. 2. 'Sir George Jessel,' a lecture, 1893.

3. 'The Law of Negotiable Securities,' six lectures delivered at the request of the Council of Legal Education, 1896. 4. 'The Society and Fellowship of the Inner Temple,' an address delivered in the Inner Temple Hall, 1897. 5. 'Law relating to Contract of Sale of Goods,' six lectures, 1902. 6. 'The Shakespeare-Bacon Controversy: a report of the trial of an issue in Westminster Hall, 20 June 1627,' read in the Inner Temple Hall, 29 May 1902. 7. 'The Baconian Mint: its Claims examined,' 1903. 8. 'The Baconian Mint: a Further Examination of its Claims,' 1908. 9. 'Recollections of Sir John C. F. Day, for Nineteen Years a Judge of the High Court,' 1908. 10. 'Cowper and his Connection with the Law,' privately printed, Norwich, 1910.

[The Times, 23 Aug. 1911; Hansard, 3rd series, cclxxxvi. 502; personal knowledge and private information.] J. B. A.

WILLOCK, HENRY DAVIS (1830-1903), Indian civilian, born on Christmas Day 1830, at Oujoun, Persia, was one of four sons of Sir Henry Willock (1790-1858), Madras cavalry, who accompanied Sir Harford Jones-Brydges [q. v.] on his mission to Persia as interpreter, was afterwards resident at the court of Teheran (1815-26), and later director of the East India Company, and in 1846-7 chairman. His mother was Eliza, eighth child of Samuel Davis, F.R.S., Bengal civil service, celebrated for his heroic defence of his house in Benares on 14 Jan. 1799, against the attack of Wazir Ali, the deposed Nawab of Oudh; she was sister to Sir John Francis Davis [q. v. Suppl. I], British plenipotentiary in China.

Willock was educated at Kensington and at the East India College, Haileybury (March 1850-December 1851). Appointed to the civil service, he arrived in India in 1852, and was posted to the North-West Provinces. Joint magistrate of Allahabad on the outbreak of the Mutiny, he commanded a company of volunteers, and served under General James G. S. Neill [q. v.] at the storming and capture of Kydgunj. As civil officer he volunteered with Major Renan's force for the relief of the Cawnpore garrison (which fell before its arrival), and served with the force subsequently commanded by Havelock. He was in the actions of Fatehpur, Pandu Nudi, Maharajpur, and Cawnpore, being one of the first persons to enter the Beebeegarh in which the British women and children had been slaughtered by order of the Nana Sahib.

Willock accompanied Havelock on his two unsuccessful advances to Lucknow; was with Outram and Havelock in their subsequent relief of the residency, and served as a member of the garrison until the final relief by Sir Colin Campbell (Lord Clyde) in November 1857 (cf. his letter to his parents, in *The Times* of 1 Feb. 1858, headed 'Lucknow Garrison, 19 Oct. 1857 to 18 Dec. at Allahabad'). Returning to Cawnpore, then besieged by the Gwalior contingent, he was appointed civil officer of Maxwell's movable column watching the banks of the Jumna in the Cawnpore and Etawah districts. He was at the capture of Kalpi by Sir Hugh Rose's central India force in May 1858, and at many minor engagements. In June he was appointed civil officer with the field force watching the southern borders of Oudh, being present at the capture of the Tirhol and Dehaen forts. General Sir Mowbray Thomson, the last survivor of the Cawnpore entrenchment, wrote that Willock's 'feats of arms were patent to all the force, who asserted that he had mistaken his profession and ought without doubt to have been a soldier' (*The Story of Cawnpore*, 1859, p. 253). He thus participated in the suppression of the Mutiny from first to last, and he was the only civilian to receive the medal with the three clasps for relief of Lucknow, Lucknow 1858, and Central India. Queen Victoria sent him a letter of thanks.

He subsequently served at Shahjehanpur, Bareilly, and Bulundshahr as magistrate and collector, and as judge of Benares, and finally, from 1876 to his retirement in April 1884, as judge of Azimgarh. He was for some years a major in the Ghazipore volunteer rifles, raised by Colonel J. H. Rivett-Carnac, C.I.E. (cf. his *Many Memories*, Edin. and Lond. 1910).

After his retirement Willock lived at Brighton and subsequently in London. He died on 26 April 1903 at Tunbridge Wells, and was buried at Little Bookham, Surrey. He married on 27 Oct. 1859, at Barnes, Surrey, his cousin Mary Elizabeth, only child of Major Charles L. Boileau, late rifle brigade, brother of Sir John Peter Boileau [q. v.]. He had two sons and two daughters. The elder son, Henry Court, took in 1906 the additional surname of Pollen on succeeding to the manor of Little Bookham.

[Homeward Mail, 4 May 1903; Dict. of Ind. Biog. 1906; Memorials of Old Haileybury College, 1894; J. W. Shorer's *Daily Life during the Indian Mutiny*, 1898 (later

edit., Havelock's March on Cawnpore, 1910); information kindly supplied by Mr. H. C. Willock-Pollen.] F. H. B.

WILLOUGHBY, DIGBY (1845-1901), soldier adventurer, born in 1845, left England for South Africa in 1871 to seek his fortune. In the Zulu campaign of 1879 Willoughby was with the Natal native contingent, and was in command of the native mounted corps. He then for a time acted as auctioneer's assistant, subsequently becoming partner in the firm of Willoughby & Scoones at Maritzburg, where he resided. After a brief period with a theatrical company, he raised and commanded a troop of irregular horse, 'Willoughby's Horse,' which saw service in the Basuto war in 1880. In January 1884 he went to Madagascar, where, gaining the confidence of the Queen of Madagascar and her husband, who was prime minister, he was appointed general commander of the Hovas or Madagascar forces (18 May). On the outbreak of the Franco-Malagasy war next year he got together a well-drilled army of 20,000 soldiers. The Hovas, however, suffered from want of serviceable ammunition, and were severely defeated. At the close of the war in December 1885 he helped in negotiations with the French government, and went to London charged as minister plenipotentiary with a special mission on behalf of the Malagasy government. Although he was cordially received in England, the imperial authorities found it impossible to recognise him as an envoy, as he was still a British subject.

Wearing the uniform of a British field-marshal, he conducted a military spectacle at the Chicago Exhibition of 1893. In Oct. of the same year, after the outbreak of the first Matabele war, he proceeded to Rhodesia. The war was almost over, but he went up country by way of Kimberley, Vryburg and Palapye. On the journey he conferred with Cecil Rhodes, and reached Bulawayo just before the end of the campaign. On the declaration of peace he helped in the administration of Rhodesia. Next year (1894) he was again in London, lecturing on the Matabele war. On the outbreak of the second Matabele war in March 1896, he formed one of a council of defence at Bulawayo, under the acting administrator of Rhodesia. He revisited South Africa on the outbreak of the war there in 1899, but took no part in the fighting, and soon returned to England. Willoughby, who had made a wealthy second marriage, was then ruined in health, and had lost an eye.

He died at Goring-on-Thames on 3 June 1901. His courage and soldiership were unquestioned, but love of spectacular adventure was his most salient characteristic. He was a vivid raconteur of his varied experiences.

[The Times, 5 June 1901; South Africa, 8 June 1901; see also issue of 14 July 1894 (interview); S. P. Oliver, Madagascar, 1886, vol. ii.; Howard Hensman, History of Rhodesia, 1900, p. 171.]

WILLS, SIR WILLIAM HENRY, first baronet, and first **BARON WINTERSTOKE (1830-1911)**, benefactor to Bristol, born at Bristol on 1 Sept. 1830, was second son and only surviving child of William Day Wills, a manufacturer of tobacco and snuff (b. 6 June 1797, d. 13 May 1865), by his wife Mary, third daughter of Robert Steven of Glasgow, and Camberwell, Surrey.

His grandfather, the first Henry Overton Wills (1761-1826), who was the earliest of the family to settle in Bristol, married Anne, eldest daughter of William Day of that place, on 24 June 1790; he joined his father-in-law in the tobacco trade and obtained a predominant interest in the firm, which his sons and grandsons greatly developed, all making immense fortunes. His second son, also Henry Overton Wills (1800-1871), Lord Winterstoke's uncle, was father, with other issue, of the third Henry Overton Wills (d. 1911), who left a fortune exceeding 2,000,000*l.*, having in 1909 bestowed 100,000*l.* on the projected Bristol University; of Sir Edward Payson Wills (1834-1910) of Hazelwood, Stoke Bishop, who gave the Jubilee Convalescent Home to Bristol and was created a baronet on 19 Aug. 1904; and of Sir Frederick Wills (1838-1909) of Northmoor, near Dulverton, who was unionist M.P. for North Bristol from 1900 to 1906, and was likewise created a baronet on 15 Feb. 1897.

The Wills family were congregationalists, and young Wills, after early training at home, went to the nonconformist public school at Mill Hill, which he left as head of the sixth form and captain. Illness prevented him from completing his studies for a London university degree, or going to the bar. When about eighteen he entered the family tobacco and snuff business at Bristol, then known as Wills, Ditchett, Day & Wills, his father being the junior partner. Acquiring a thorough knowledge of the trade, and of the growth and treatment of tobacco, he, with his first cousins Henry Overton Wills, jun., and Edward Payson Wills, was in 1858 taken into partnership,

and the firm was styled W. D. and H. O. Wills. The concern was afterwards converted into a limited liability company and William Henry became chairman of the board of directors.

Wills's technical knowledge and sagacity largely promoted the success of the firm, and helped to meet such difficulties as the failures of the tobacco-leaf crop and the stoppage of supplies during the American war. He became the recognised head of the tobacco trade in Great Britain. In 1878 he was unanimously elected chairman of the committee organised to resist a threatened increase of duty on tobacco. In 1900-1 Wills took a leading part in the 'combine' promoted by British tobacco manufacturers to combat the contemplated American 'trust,' serving as chairman until his death of the Imperial Tobacco Company, which acquired in 1901 at a cost of 11,957,000*l.* the business of thirteen tobacco manufacturing concerns in the United Kingdom.

Wills was a prominent member of the liberal party in Bristol and was president of the Anchor Society in 1866. He entered parliament in 1880 as a member for Coventry, representing that borough until 1885, when it lost one of its members. After contesting South-East Essex twice unsuccessfully, first in 1885 and then as an advocate of home rule in 1886, he also failed in South Bristol in 1892, but he was returned at a bye-election in March 1895 for East Bristol, and he represented that constituency until his retirement in 1900. He was created a baronet on 12 Aug. 1893, being the first of his family to receive a titular honour, although baronetcies were also soon bestowed on two first cousins and business colleagues.

Closely identifying himself with local interests, Wills was for some years on the council of the Bristol Chamber of Commerce and in 1863 became its chairman. From 1862 to 1880 he served on the municipal council, was chosen one of the charity trustees in 1865, and was high sheriff of the city in 1877-8. To the public institutions of Bristol he was a notable benefactor. He provided organs for Colston Hall and Bristol grammar school. The Bristol Art Gallery and the St. George branch of the Bristol public libraries were built at his expense; and he erected on St. Augustine's Parade a statue of Burke, which was unveiled by Lord Rosebery on 30 Oct. 1894. Like other members of his family he was interested in the university of Bristol, which was incorporated in 1909, and his gifts to it amounted

to 35,000*l.* He was appointed pro-chancellor. On 5 July 1904 he was made an honorary freeman of Bristol. In London, where he had a residence in Hyde Park Gardens, he was well known as a director of the Great Western railway and of the Phoenix Assurance companies and was chairman of the Provincial Companies Association.

A zealous nonconformist by personal conviction as well as by family tradition, he actively engaged in the affairs of the free churches. He joined the board of the dissenting deputies, was a trustee of the Memorial Hall in London, and took a practical interest in the refoundation of Mansfield College at Oxford in 1886. To the new chapel of Mill Hill School, opened in June 1898, he gave an organ and other substantial help; his portrait, subscribed for by the governors, is at the school.

On 1 Feb. 1906 Wills was raised to the peerage on Campbell-Bannerman's nomination as Baron Winterstoke of Blagdon, co. Somerset. His country seat Coombe Lodge was at Blagdon. There he took a deep interest in agriculture and was a well-known exhibitor of shire horses and shorthorn cattle. He was D.L. of Somerset, and high sheriff of the county in 1905-6.

Winterstoke died suddenly at his residence at Blagdon on 29 Jan. 1911, and was buried in the churchyard there. He married on 11 Jan. 1853 Elizabeth (*d.* 10 Feb. 1896), daughter of John Stancombe of Trowbridge, Wiltshire. Leaving no issue, the peerage became extinct at his death. He left a fortune exceeding 1,000,000*l.* Two adopted daughters, Miss Janet Stancombe Wilson and Mrs. Richardson, largely benefited under his will. The former presented 10,000*l.* to Bristol grammar school in Winterstoke's memory. Among the other property which he bequeathed to her was his collection of pictures, and he expressed a wish that she should leave twenty-four of these at her death to the Bristol Art Gallery which he had built.

A portrait by Mr. Hugh Riviere was presented to Winterstoke by his fellow-citizens of Bristol in October 1907, and was placed at his request in the Bristol Art Gallery.

[Lodge's *Peerage*, 1912; *The Times*, 30 Jan., 18 and 25 Feb. 1911; *Western Daily Press*, 30 Jan. 1911.] C. W.

WILSON, CHARLES HENRY, first BARON NUNBURNHOLME (1833-1907), shipowner, born at Hull on 22 April 1833, was eldest son of Thomas Wilson (*d.* 1869) of

Hull and Cottingham by his wife Susannah, daughter of John West of Hull. In 1835 the father joined others in forming at Hull a ship-owning firm, of which he soon acquired the chief control. A regular line of sailing boats to Swedish ports was established; the importation of iron from Russia and Sweden was developed; a service to Dunkirk was added; and with the substitution of steamships for sailing ships Thomas Wilson's firm was assured a permanent place in the shipping world.

Charles, who was educated at Kingston College, Hull, early joined with his brothers his father's firm, which was re-christened Thomas Wilson, Sons and Company. Charles and his brother Arthur [see below] became in 1867 joint managers, and to their energy the firm's rapid development was mainly due. The Norwegian and Baltic service for cargo and passengers was greatly extended; Adriatic and Sicilian, Indian and American and home coasting services were inaugurated from time to time after 1870. In 1891 the concern was turned into a private limited company, with a capital of two and a half millions and a fleet of over 100 vessels, and it is now the largest private ship-owning firm in the world. In 1903 the fleet of Messrs. Bailey and Leatham of Hull was absorbed, and in 1908 that of the North Eastern Railway Company. Charles was also chairman of Earle's Shipbuilding and Engineering Company, Limited, and of the United Shipping Company, and vice-chairman of the Hull Steam Fishing and Ice Company, Limited.

Wilson played a prominent part in public affairs outside his business. He was sheriff of Hull. In 1873 he actively promoted the Hull and South Western Junction Railway bill. In 1874 he entered Parliament for Hull as a liberal, and sat continuously till 1905, representing West Hull from 1885. As an ardent liberal he was a pronounced free-trader and an advocate of temperance reform. An opponent of the South African war of 1899-1901, he yet showed public spirit by placing at the disposal of the government the Ariosto, one of his firm's vessels, for the purpose of transporting the newly raised City Imperial Volunteers to the Cape.

In 1899 he received the freedom of his native town, and in 1905 he was made a peer under the title of Lord Nunburnholme.

He died at his residence, Warter Priory, Pocklington, Yorkshire, on 27 Oct. 1907. On 5 Oct. 1871 he married Florence Jane

Helen, the eldest daughter of Colonel William Henry Charles Wellesley, nephew of the first Duke of Wellington. He had issue three sons and four daughters; the eldest son, Charles Henry Wellesley Wilson (*b.* 1875), succeeded to the peerage.

The first Lord Nunburnholme's youngest brother, ARTHUR WILSON (1836-1909), born on 14 Dec. 1836 at Hull, was educated like him at Kingston College; he was associated with him in the ship-owning firm, and on the death of Lord Nunburnholme became its head. To his foresight was largely due the firm's development of the Norwegian timber trade and the foundation of the Baltic Exchange. A director of the North Eastern Railway Company and chairman of the shipping committee of the Hull chamber of commerce, he served in 1891 as high sheriff of Yorkshire. For many years a warm supporter of the liberal interest in Yorkshire, he objected to Gladstone's home rule proposal of 1886, joined the liberal unionists, and finally in 1909 supported tariff reform. He was a generous benefactor to Hull, and among the institutions in which he was specially interested was the Victoria Children's Hospital, of which he was chairman. Arthur Wilson was an ardent sportsman, and was for twenty-five years master of the Holderness hunt, the members of which in January 1904 presented him with his portrait by A. S. Cope, R.A.; it is now at his home at Tranby Croft. Of genial disposition, he dispensed a lavish hospitality. While Edward VII (when Prince of Wales) was his guest at Tranby Croft, in Sept. 1890, an allegation of cheating at baccarat was made against Sir William Gordon-Cumming, Bart., who was also staying at the house. In the prolonged trial of an unsuccessful action of libel which Sir William brought against Wilson's son-in-law and daughter Mr. and Mrs. Lyce Green, the Prince of Wales was a witness. The affair attracted worldwide attention and involved Wilson in undeserved obloquy which clouded the remaining years of his life. He died on 21 Oct. 1909 at Tranby Croft, after a long illness, and was buried at Kirkella. He married on 1 July 1862 Mary Emma, daughter of Mr. E. J. Smith, postmaster of Leeds, and had three sons and three daughters. The eldest son, Arthur Stanley, has been unionist M.P. for the Holderness division of Yorkshire since 1900.

1907; private information; Handbook of Thomas Wilson, Sons & Co., Ltd.]

L. P. S.

WILSON, CHARLES ROBERT (1863–1904), historian of British India, born at Old Charlton, Kent, on 27 March 1863, was only son of Charles Wilson, army tutor, by his wife Charlotte Woodthorpe Childs. Educated at the City of London School, where he gained the Carpenter scholarship on leaving, he was elected to a scholarship at Wadham College, Oxford, in 1881. He graduated B.A. in 1887, having been placed in the first class in mathematical moderations in 1883 and in the final classical school in 1886. On leaving Oxford he entered the Indian educational service in Bengal, being successively professor at Dacca and at the Presidency College, Calcutta, principal of the Bankipur College, Patna, and inspector of schools. In 1900 he was appointed officer in charge of the records of the government of India, an appointment which carries with it that of assistant secretary in the home department. Soon afterwards his health broke down, and he died unmarried at Clapham on 24 July 1904 and was buried in Streatham cemetery.

Wilson was a devoted student of the early history of the English in Bengal, ransacking the documentary evidence in India, at the India Office, at the British Museum, and wherever else it might be found. He was admitted to the degree of D.Litt. at Oxford in 1902. Apart from several articles in the 'Journal' of the Asiatic Society of Bengal, dealing chiefly with the tragedy of the Black Hole, his published works are: 1. 'List of Inscriptions on Tombs or Monuments in Bengal possessing Historical Interest,' Calcutta, 1896. 2. 'Descriptive Catalogue of the Paintings, etc., in the Rooms of the Asiatic Society of Bengal,' Calcutta, 1897. 3. 'The Early Annals of the English in Bengal,' being the Bengal public consultations for the first half of the eighteenth century, vol. i. 1895; vol. ii. pt. i. 1900, and pt. ii. 1911, posthumous. 4. 'Old Fort William in Bengal,' a selection of official documents dealing with its history, 2 vols. 1906, posthumous.

[Memoir by W. Irvine prefixed to vol. ii. pt. ii. of *Early Annals*.] J. S. C.

WILSON, SIR CHARLES WILLIAM (1836–1905), major-general royal engineers, born at Liverpool on 14 March 1836, was second son of Edward Wilson by his wife Frances, daughter of Thomas Stokes,

of Hean Castle, Pembrokeshire, a property which Edward Wilson bought from his wife's brother. Sir Charles's grandfather, also Edward Wilson (d. 1843), of a West Yorkshire family, owned property in America, where one of his sons, Thomas Bellerby Wilson, Sir Charles's uncle and godfather, lived, devoting himself to science; he founded the Entomological Society of Philadelphia and proved a munificent benefactor to that society and to the Academy of Natural Science in the same city.

Charles spent seven years at Liverpool College, and two years at Cheltenham College, which he left head of the modern side in June 1854. He then passed a year at Bonn University. In a special open competitive army examination held in Aug. 1855, Wilson, youngest of forty-six candidates, passed second, (Sir) Robert Murdoch Smith [q. v. Suppl. I] gaining the first place. The two obtained the only commissions given in the royal engineers, Wilson becoming lieutenant on 24 Sept. 1855.

After instruction at Chatham Wilson was posted to a company at Shorncliffe Camp in April 1857, and soon after was employed on the defences at Gosport. In February 1858 he was made secretary of the commission to delimitate the boundary between British Columbia and the United States of America, from the Lake of the Woods westward to the Pacific Ocean. With Captain (afterwards General Sir) J. S. Hawkins, R.E., the British commissioner, Wilson arrived at Esquimalt, by way of Colon and Panama, on 12 July. For the next four years Wilson was engaged in marking a straight boundary from the Pacific, through prairie and primeval forests, over mountains 7000 feet high, and in a climate of extreme temperatures, almost uninhabited and unknown. Astronomical stations were formed at suitable points. The outdoor work was finished at the end of 1861 in the hardest winter known, the thermometer down to 30° below zero at night. The commission returned to England on 14 July 1862 to draw up the report.

After eighteen months' employment on the defences of the Thames and Medway, and being promoted captain on 20 June 1864, Wilson volunteered for the duty of surveying Jerusalem. The secretary for war had agreed to appoint an engineer officer for the service, without paying his expenses. Wilson reached Jerusalem with a few sappers from the ordnance survey early in October 1864, and the work progressed steadily. At the

request of Colonel Sir Henry James [q. v.], director of the ordnance survey, he ran a line of levels by way of Jericho to Jerusalem and thence by El Jeb and Lydda to Jaffa to ascertain the difference of level between the Mediterranean and the Dead Sea, and showed that in the month of March the Dead Sea was 1292 feet below the Mediterranean Sea, and in summer about six feet more. Wilson returned home in July 1865. The results of the survey were published, and included plans with photographs of Jerusalem and the vicinity. This survey led to the formation of the Palestine Exploration Fund, and Wilson undertook the preliminary work, starting for Palestine on 5 Nov. 1865. A general reconnaissance which he made of the country between Beirut and Hebron showed how little was known of the antiquities of Palestine, and the need of a thorough investigation. Elected a member of the executive committee of the fund on his return in June 1866, Wilson was one of its most energetic supporters for life, becoming chairman in 1901.

From October 1866 to October 1868 Wilson was at Inverness in charge of the ordnance survey in Scotland, being also employed, in the summer of 1867, as an assistant commissioner under the parliamentary boundary commission for part of the west midland districts of England. Between October 1868 and May 1869 he was surveying the Sinaitic peninsula, with, among others, Professor E. H. Palmer [q. v.]. Appointed on 16 May 1869 executive officer of the topographical branch of the ordnance survey in London under Sir Henry James, Wilson became on 1 April 1870 first director of the topographical department at the war office, when the other departments of the ordnance survey were transferred to the office of works; at his suggestion this department was reconstructed in 1873 as a branch of an intelligence department for war, and his title was changed to that of an assistant quartermaster general in the intelligence department. From 1876 Wilson was in charge of the ordnance survey in Ireland. Promoted major on 23 May 1873, he was created C.B., civil division, in 1877. In 1874 he was elected F.R.S.

The autumn of 1878 Wilson spent in Serbia as British commissioner of the international commission for the demarcation of the new frontier under the treaty of Berlin, and in February 1879 he was appointed British military consul-general in Anatolia, Asia Minor. Wilson was pro-

moted brevet lieutenant-colonel for his services in Serbia (19 April 1879). Fixing his headquarters at Siras, Wilson divided Anatolia into four consulates, with a British military vice-consul in each. One of the vice-consuls was Lieutenant (now Field-marshal Viscount) Kitchener. Wilson travelled much about Anatolia, learning the ways of the people and of the Turkish authorities, exerting a highly humane influence, and reporting to the foreign office through the British ambassador at Constantinople. Many of his notes on the geography, history, and archaeology of the country he embodied in 'Handbooks for Asia Minor and Constantinople,' which he edited for John Murray in 1892 and 1895. In the summer of 1880, by direction of G. J. (afterwards Viscount) Goschen [q. v. Suppl. II], then special ambassador to the Porte, Wilson inquired into the state of affairs in Eastern Roumelia, Bulgaria, and Macedonia (see *Parl. Paper, Turkey*, No. 19, 1880). He returned to his duties in Anatolia in November. In 1881 he was created a K.C.M.G.

In Oct. 1882 Wilson was summoned to Egypt to serve under Sir Edward Malet, the British consul-general. He arrived at Alexandria on 3 Sept. 1882, when an English army was in the field against Arabi Pasha. Nominated British commissioner with an expected Turkish force, which, owing to the prompt success of the British arms, was not sent, he was next appointed military attaché to the British agency in Egypt, and took charge of the Egyptian prisoners of war, including Arabi and Toulba Pashas. Sir Charles watched for the British government the trial of Arabi and his companions, and later arranged for sending the exiles and their families to Ceylon. Resuming his duties on 1 April 1883 at the head of the ordnance survey in Ireland, Wilson was promoted brevet colonel on the 19th, and was made hon. D.C.L. of Oxford in June.

Appointed chief of the intelligence department (with the grade of deputy adjutant-general) in Lord Wolseley's Nile expedition to Khartoum for the rescue of Gordon in September 1884, Wilson reached Dongola on 11 Oct. and on 15 Dec. accompanied Lord Wolseley and the rest of the staff to Korti, going on with Sir Herbert Stewart across the desert on 30 Dec. He left Korti the second time on 8 Jan. 1885, and failing to reach Khartoum by steamer in time to save Gordon, he returned to Korti a month later. He published his journal of the experience in 'From Korti to Khar

toum' (1885; 4th edit. 1886). An attempt was made to saddle Wilson with the responsibility for the failure of the expedition. Charles Williams [q. v. Suppl. II] and other critics urged that he might have been in time to save Gordon, had he not lost three days at Gubat on his way. A complete justification of the delay is given in an anonymous publication, 'Why Gordon Perished' (1896), by a war correspondent. Sir Lintorn Simmons [q. v. Suppl. II], governor of Malta, wrote on 18 June 1885: 'The true fault lies with those who planned the expedition and started it too late, and, when they did start it, did not take proper measures to facilitate its operations and ensure its success.' For his services Wilson was created K.C.B., military division, and when a vote of thanks was passed to the officers and men of the Nile expedition, in the House of Commons on 12 Aug. 1885, Lord Hartington refuted the charge against Wilson of unnecessary delay. Afterwards Queen Victoria summoned him to tell her his story. In the spring of 1886 he was made hon. LL.D. of Edinburgh University, and in the autumn addressed the British Association at Birmingham on the 'History and Anthropology of the Tribes of the Soudan.'

Wilson resumed his ordnance survey work in Ireland on 1 July 1885. In November 1886 he was appointed director-general of the ordnance survey in the United Kingdom, and until 1893 was on that service at Southampton. He was president of the geographical section of the British Association at Bath in 1888. The survey was transferred from the office of works to the board of agriculture in 1890, and in 1891 Wilson received the silver medal from the Society of Arts after an address on the survey's methods and needs. In 1893 he was awarded by Dublin University the honorary degree of master in engineering, and was given the temporary rank, receiving next year the permanent rank, of major-general. From the end of 1892 to 14 March 1898 Sir Charles was director-general of military education at the war office.

In 1899, and again in 1903, Wilson revisited Palestine and devoted much time to the controversy over the sites of Golgotha and the Holy Sepulchre. He rather inclined to conservative tradition. His arguments appeared in the 'Quarterly Statements of the Palestine Exploration Fund' (1902 to 1904), and were collected in 1906 as 'Golgotha and the Holy Sepulchre.' He died after an operation at Tunbridge

Wells, on 25 Oct. 1905, and was buried there.

In addition to works already cited Wilson was author of: 1. 'Report on the Survey of Jerusalem,' 1866. 2. 'Report on the Survey of Sinai,' 1869. 3. 'Lord Clive,' 1890, in the 'Men of Action' series. He also contributed to the 'Encyclopædia Britannica,' 9th edit., to 'Smith's Dictionary of the Bible,' to the Palestine Pilgrims Text Society, to the 'Quarterly Review,' and to 'Blackwood's Magazine.'

Wilson married in London on 22 Jan. 1867, Olivia, daughter of Colonel Adam Duffin of the 2nd Bengal cavalry. She was granted a civil list pension of 100l. in 1905, and died on 19 May 1911. By her he had four sons and a daughter.

[War Office Records; Royal Engineers Records; Porter's History of the Royal Engineers; Life (1909) by Colonel Sir C. M. Watson; Proc. Roy. Soc., 78 A.] R. H. V.

WILSON, GEORGE FERGUSON (1822-1902), inventor, born at Wandsworth Common on 25 March 1822, was the sixth son in a family of thirteen children of William Wilson, at one time a merchant in Russia and subsequently founder at Battersea of the candle-making firm known as 'E. Price & Son.' His mother was Margaret Nimmo Dickson of Kilbucko and Cultar in Scotland.

After education at Wandsworth, and a short time in a solicitor's office, Wilson in 1840 entered his father's business. Though without training as a chemist, he showed keen interest in the firm's experimental work, and in 1842 patented, in conjunction with W. C. Jones, a process by which cheap malodorous fats could be utilised in the place of tallow for candle-making. The original features of the process were the use of sulphuric acid as a decoloriser and deodoriser of strongly-smelling fats, and their subsequent distillation, when acidified, by the aid of super-heated steam. The invention added materially to the firm's profits, and in 1847, in the midst of a commercial panic, the business was sold for 250,000l.

A new concern, called Price's Patent Candle Company, with a capital of 500,000l., was then formed, George Wilson and an elder brother, James, being appointed managing directors. Both engaged continually in research work which effected repeated changes in the firm's processes of manufacture. George in 1853 introduced moulded coco-stearin lights as 'New Patent Night Lights,' and the two together made improvements on a French patent which

led to the wide adoption by English manufacturers of the company's 'oleine' or 'cloth oil.' In 1854 George made a discovery of first-class importance, namely a process of manufacturing pure glycerine, the glycerine being first separated from fats and oils at high temperature and then purified in an atmosphere of steam. Previously even glycerine sold at a high price was so impure as to be comparatively useless for most purposes. He retired from the position of managing director in 1863.

In 1845 Wilson was made a member of the Society of Arts. He contributed frequently to its 'Journal,' read a paper before it in 1852 on 'Stearic Candle Manufacture,' was a member of its council from 1854 to 1859 and again from 1864 to 1867, and its treasurer from 1861 to 1863. In 1854 he read before the Royal Society a paper on 'The Value of Steam in the Decomposition of Neutral Fatty Bodies,' and was elected a fellow in 1855. In that year, too, he was elected a fellow of the Chemical Society, and read at the meeting of the British Association at Glasgow a paper on 'A New Mode of obtaining Pure Glycerine.'

In later life Wilson lived at Wisley, Surrey, where he devoted himself to experimental gardening on a wide scale. The garden formed by him at Wisley now belongs to the Royal Horticultural Society. He was particularly successful as a cultivator of lilies, gaining between 1867 and 1883 twenty-five first-class certificates for species exhibited. Elected a fellow of the Horticultural Society, he served on various of its committees, and was at one time vice-president. At his suggestion the society introduced guinea subscriptions, and in 1876 he published a pamphlet entitled 'The Royal Horticultural Society: as it is and as it might be.' He was Victorian Medallist of Horticulture in 1897. In 1875 he was elected a fellow of the Linnean Society. He died at Weybridge Heath on 28 March 1902.

Wilson married on 13 Aug. 1862 Ellen, eldest daughter of R. W. Barchard, of East Hill, Wandsworth, who survived him with two sons and a daughter. The elder son, Scott Barchard, was author of 'Aves Hawaiienses: the Birds of the Sandwich Islands,' a handsomely illustrated work, which was issued in eight parts (large 4to, 1890-9).

WILSON, HENRY SCHÜTZ (1824-1902), author, born in London on 15 Sept. 1824, was son of Effingham Wilson (1783-1868) by his wife, a daughter of Thomas James of The Brownings, Chigwell, Essex. The father, a native of Kirby Ravensworth, Yorkshire, after serving an apprenticeship to his uncle, Dr. Hutchinson, a medical practitioner of Knaresborough, founded at the Royal Exchange, London, a publishing business chiefly of commercial manuals, which is still continued; a zealous politician of radical views, he died in London in July 1868.

After education at a private school at Highgate, Schütz Wilson was for ten years in a commercial house in London and thoroughly mastered French, German, and Italian. Subsequently assistant secretary of the electric telegraph company, he retired on a pension when the business was taken over by the post office in 1870. He edited the 'Journal of the Society of Telegraph Engineers' from 1872.

Wilson divided his leisure between foreign travel or mountaineering and study or criticism of foreign literature and history. A profound admirer of Goethe's work, he published 'Count Egmont as depicted in Fancy, Poetry, and History' in 1863. In later years he wrote frequently in London magazines, and reissued his articles in 'Studies and Romances' (1873), 'Studies in History, Legend, and Literature' (1884), and 'History and Criticism' (1886). He was an early admirer of Edward FitzGerald's long-neglected translations from the Persian, and FitzGerald welcomed Wilson's encouragement (*Letters*, ed. Aldis Wright, 1859, i. 481).

Wilson, who was a member of the Alpine Club from 1871 to 1898, ascended the Matterhorn on 26-7 Aug. 1875 with Frederic Morshead and A. D. Prickard, and on 15 Aug. 1876 with Morshead. Melchior Anderegg was one of Wilson's guides, and he wrote on 'Anderegg as a Sculptor' in the 'Alpine Journal' (November 1873). He collected pleasant descriptions of his experiences in 'Alpine Ascents and Adventures' (1878).

Interested in both the English and the German stage, he was popular in literary and artistic society. He was a capable fencer and a zealous volunteer, becoming

captain in the artists' corps. He died unmarried at the house of his nephew, Dr. J. Schütz Sharman, 2 Avenue Gate, Norwood, on 7 May 1902. His body was cremated, and the ashes placed in the Sharman vault in Norwood cemetery. His portrait by James Archer, R.S.A., was exhibited at the Royal Academy in 1898.

Wilson's three novels, 'The Three Paths,' 'The Voyage of the Lady' (1860), and 'Philip Mannington' (1874), were translated into German.

[Private information; The Times, 19 May 1902; Ann. Register, 1902; Morning Post, 9 May; Works; Brit. Mus. Cat. (Wilson's works incomplete); Allibone's Dict. Engl. Lit. vol. iii. and Suppl.] G. LE G. N.

WILSON, SIR JACOB (1836-1905), agriculturist, born at Crackenthorpe Hall, Westmorland, on 16 Nov. 1836, was the elder son in a family of two sons and three daughters of Joseph Wilson, farmer, by Ann, daughter of Joseph Bowstead, of Beck Bank, Cumberland. He was educated at Long Marton, Westmorland, under the Rev. W. Shepherd, and was afterwards in London for a short time studying land agency under T. Walton. In 1854 he went to the Royal Agricultural College at Cirencester, and after eighteen months' tuition there obtained its diploma. He remained at Cirencester six months longer as honorary farm bailiff, and then went to Switzerland to assist in laying out on the English system an estate in that country. He returned home in 1857 to help his father in the management of a large farm at Woodhorn Manor, near Newbiggin, Northumberland, devoting much time to the study of agricultural mechanics, especially steam cultivation. In 1859 he won the first agricultural diploma awarded by the Highland and Agricultural Society of Scotland.

Adopting the profession of land agent, he in 1866 was appointed by the earl of Tankerville agent for his Chillingham estates. Subsequently he undertook the management of other estates and properties in different parts of England, and also took pupils in farming and land agency. His services were much in request as witness or arbitrator in valuation cases, and he was long an official umpire for the board of trade.

On 5 Dec. 1860 Wilson was elected an ordinary member of the Royal Agricultural Society of England. In the administration of the society he speedily made his mark after his election as a member of council on 22 May 1865—at a far earlier age than

precedent sanctioned. As steward he was prominent in the management of the large annual provincial shows of the society from 1869 to 1874, and from 1875 to 1892 he was hon. director in succession to Sir Brandreth Gibbs. At the conclusion of the society's fiftieth show, held in Windsor Great Park under the presidency of Queen Victoria, Wilson was knighted by the Queen after dinner at the Castle on 29 June 1889. Until his death he remained a member of the society's council, and he resumed the honorary directorship, to the injury of his health, for the last show held in London in June 1905 on the society's showyard at Park Royal.

Wilson actively urged legislation for repressing the contagious diseases of animals, and the passing of the Animals Acts of 1878 and 1884 owed much to his energy. These services were acknowledged by a gift of silver plate and a purse of 3000 guineas (given by 1300 subscribers) at a public dinner on 8 Dec. 1884, with Charles Henry Gordon-Lennox, sixth duke of Richmond and Gordon [q. v. Suppl. II], in the chair. In April 1888 he presided over a departmental committee appointed to inquire into pleuro-pneumonia, and an Act of 1890 carried out most of its recommendations.

In 1881 he removed from Woodhorn Manor to a farm at Chillingham Barns, Northumberland, on the estate of Lord Tankerville. Here he maintained a herd of shorthorns of the 'Booth' blood, and as a county councillor and magistrate for Northumberland was active in county matters. From 1892 to 1902 he was agricultural adviser to the board of agriculture in succession to Sir James Caird [q. v. Suppl. I].

At the conclusion of the Royal Agricultural Society's show of 1905, of which Wilson was honorary director, King Edward VII conferred on him the distinction of K.C.V.O. A few days later he was seized with illness which terminated fatally from heart failure on 11 July 1905. He was buried at Chillingham. A memorial service was held at St. George's, Hanover Square.

Wilson was tall and handsome, with ingratiating manners. His skill in administration and tactful dealing with men made him a power in the agricultural world.

He married in 1874 Margaret, daughter of Thomas Hedley of Cox Lodge Hall, Newcastle-on-Tyne, by whom he had two sons, Albert Edward Jacob (godchild of King Edward VII) and Gordon Jacob

(godechild of the duke of Richmond and Gordon), and two daughters, Beatrice and Mildred. His wife and all his children survived him.

[Memoir (by G. G. Rea) in *Journ. Roy. Agric. Soc.*, vol. 66, 1905 (with engr. portrait from photograph); *The Times*, 30 June, 12 and 15 July 1905; *Field*, 15 July 1905; *Trans. Surveyors' Inst.*, vol. xxxviii. 578; *Estates Gaz.*, 15 July 1905, p. 117; private information; personal knowledge.] E. C.

WILSON, JOHN DOVE (1833–1908), Scottish legal writer, born at Linton, Roxburghshire, on 21 July 1833, was son of Charles Wilson, M.D., of Kelso (afterwards of Edinburgh). Educated at the grammar school, Kelso, and Edinburgh University, he studied law at Edinburgh, and spent a session at Berlin University. Called to the Scottish bar in 1857, he in 1861, through the influence of George (afterwards Lord) Young [q. v. Suppl. II], was appointed sheriff-substitute of Kincardineshire, taking up his residence at Stonehaven. In 1870 he was transferred to Aberdeen as colleague to Sheriff Comrie Thomson. This position he held with distinction for twenty years, establishing his reputation as an able lawyer and a conscientious judge.

Wilson, who wrote much in legal periodicals, had a profound knowledge of jurisprudence, and was an enthusiastic advocate of legal reform, especially in the matter of codification and the simplification of procedure. In 1865 he issued a new annotated edition of Robert Thomson's 'Treatise on the Law of Bills of Exchange' (1865). The work soon acquired standard rank. A 'Handbook of Practice in Civil Causes in the Sheriff Courts of Scotland' (Edinburgh, 1869; 2nd edit. 1883) constituted him the chief authority on sheriff court practice. On his handbook was based 'The Practice of the Sheriff Courts of Scotland in Civil Causes' (1875; 4th edit. 1891), which was characterised as 'one of the most accurate books in existence,' and remained the chief authority until superseded by later legislation in 1907, as well as 'The Law of Process under the Sheriff Courts (Scotland) Act, 1876, with Notes on Proposed Extensions of Jurisdiction' (Edinburgh, 1876). Some of the reforms proposed by Wilson were realised at a later date.

Wilson gave evidence before parliamentary committees on bills of sale and civil imprisonment, and aided various lord-advocates in the drafting of bills, particularly the Sheriff Court Act of 1876 and the Bills of Exchange Act of 1882. He took

a prominent part in the movement for the codification of commercial law which began in April 1884 (see his address to the Aberdeen Chamber of Commerce in *Journal of Jurisprudence*, July 1884). A report by him of the proceedings of the congress on commercial law at Antwerp in 1885, where he represented the Aberdeen Chamber of Commerce, was translated into Italian. In 1884 Wilson received the degree of LL.D. from Aberdeen University.

On resigning his office as sheriff-substitute in Feb. 1890 Wilson was from the autumn of 1891 to 1901 professor of law at Aberdeen. After studying Roman law for a season at Leipzig he revived the study at Aberdeen. He induced the university to institute the B.L. degree; and he helped to found a lectureship on conveyancing, and to form a law library. In 1895–6 he served as Storr's lecturer on municipal law at Yale University, Newhaven, U.S.A., and published one of his lectures there, 'On the Reception of Roman Law in Scotland.'

Wilson had a wide acquaintance with French, German, and Italian, and published some graceful verse translations. He was active in philanthropic work at Aberdeen, was president of the Aberdeen Philosophical Society, and became D.L. of Aberdeenshire in 1886. Wilson died at San Remo on 24 Jan. 1908, and was buried at Allenvale cemetery, Aberdeen. An enlarged photograph is in the Advocates' Library, Aberdeen.

In 1863 Wilson married Anna (d. 1901), daughter of John Carnegie of Redhall, and left two sons and one daughter.

[Aberdeen Journal, 25 Jan. 1908; Scotsman, same date; Scottish Law Review and Sheriff Court Reporter, xxiv. 44 (1908); private information.] A. H. M.

WILSON, WILLIAM EDWARD (1851–1908), astronomer and physicist, born at Belfast on 19 July 1851, was only son of John Wilson, of Daramona, Streete, co. Westmeath, by his wife Frances Patience, daughter of the Rev. Edward Nangle. He was educated privately, and showed great interest in astronomy while still a boy. In 1870 he joined the British party under Huggins which went to Oran in Algeria to observe the total eclipse of the sun in that year, and on his return he set up a private observatory on his father's estate at Daramona, equipped with a twelve-inch refractor by Grubb. In 1881 he built a new observatory with a twenty-four inch silver on glass reflector, also by Grubb, and soon after added a physical laboratory.

Thus equipped, he began in 1886 the investigations on the temperature of the sun and the radiation from sunspots, which were remarkable pioneer work. In 1894 he published, with Philip Leman Gray, his 'Experimental Investigation on the Effective Temperature of the Sun' (*Phil. Trans.* 185A, p. 361), in which he arrived at the result 6590° C. This, with other important papers, published in the *Phil. Trans.* and *Monthly Notices* of the Royal Astronomical Society, and a selection of his admirable celestial photographs were collected in a volume, 'Astronomical and Physical Researches made at Mr. Wilson's Observatory, Daramona, Westmeath,' printed privately in 1900. Subsequent work included an examination of the effect of pressure on radio-activity, and an expedition to Plasencia to observe the solar eclipse of 1900. He was elected F.R.S. in 1896, and was made hon. D.S. of Dublin University in 1901.

Wilson, who mainly lived on his estate, was high sheriff of co. Westmeath in 1901.

He died at Daramona on 6 March 1908, and was buried in the family burying ground attached to the parish church of Streete, the village adjoining his demesne. There is a portrait in oils at Daramona, painted in 1886 by E. Marshall.

He married on 10 Nov. 1886, Caroline Ada, third daughter of Captain R. C. Granville of Grand Pré, Biarritz, and left one son, John Granville, and two daughters.

[*Royal Soc. Proc.*, 83 A., 1910; *Monthly Notices Roy. Astron. Soc.*, lxi, Feb. 1909.]
A. R. H.

WIMSHURST, JAMES (1832-1903), engineer, born at Poplar on 13 April 1832, was the second son of Henry Wimshurst, designer and builder of the Archimedes and Iris, the first two screw-propelled ships. After education at Steabonheath House, a private school in London, he was apprenticed at the Thames Ironworks to James Mare. In 1853, on the completion of his apprenticeship, he obtained an appointment in London as a surveyor of Lloyds. He was subsequently transferred to Liverpool, where in 1865 he was made chief of the Liverpool Underwriters' Registry, then a rival establishment to Lloyds, but since incorporated with it. In 1874 he joined the board of trade as chief shipwright surveyor in the consultative department. He attended as its representative the international conference at Washington in 1890, and retired on reaching the age limit in 1899.

Through life Wimshurst devoted his

leisure to experimental work, erecting at his house in Clapham large workshops, which he fitted up with various engineering appliances and where he also built electric-lighting machinery. About 1880 he became interested in electrical-influence machines, and built several of the then current types, including machines of the Holtz and Carré patterns. In the former he made many modifications, the result being a plate machine remarkably independent of atmospheric conditions. This was followed by a compound machine of the same type in which there were twelve plates revolving between twenty-four rectangular glass inductor plates, and which had a miniature friction plate machine for producing the initial charge. The result, however, did not satisfy Wimshurst, and shortly afterwards he invented what he called the 'duplex machine,' but what is generally known simply as the 'Wimshurst machine.' It had two circular plates rotating in opposite directions with metallic sectors on the outer surface of each. This machine displaced all previous generators of static electricity, being self-exciting under any atmospheric condition. It has never been improved upon. In all Wimshurst constructed more than ninety electrical-influence machines, including the gigantic two-plate machine in the Science Collection at South Kensington. Many of his machines he presented to scientific friends. Some had cylindrical plates, and one was designed with two ribbons which travelled past each other in opposite directions. He took out no patents for his improvements, and was consequently precluded from exercising control over the design or construction of inferior machines put upon the market in his name.

In 1896 Wimshurst found his machines to be an admirable means of exciting the 'Röntgen rays,' and showed that for screen observation, where a steady illumination is desired, the steady discharge from one of his eight-plate influence machines was preferable to the intermittent discharge of the usual induction coil. His machines are also used in hospitals for the production of powerful brush discharges, efficacious in the treatment of lupus and cancer.

Wimshurst also invented an improved vacuum pump, an improved method for electrically connecting light-ships with the shore station, and an instrument for ascertaining the stability of vessels. He was elected F.R.S. in 1898. He was also a member of the Institute of Electrical Engineers, the Physical Society, the

Röntgen Society, and the Institute of Naval Architects. He was a member of the board of managers of the Royal Institution. He died at Clapham on 3 Jan. 1903.

Wimshurst married in 1864 Clara Tubbs, and had issue two sons and one daughter.

Besides descriptions of his electrical machines, he published 'A Book of Rules for the Construction of Steam Vessels' (1898).

S. E. F.

WINDUS, WILLIAM LINDSAY (1822-1907), artist, born in Liverpool on 8 July 1822, was grandson of William Windus, curate-in-charge of Halsall near Ormskirk from 1765 to 1785, and son of John Windus by his wife Agnes Meek, a Scotswoman. He received his early education at Mr. MacMorran's private school in Liverpool. At the age of sixteen he first showed an artistic bent while watching William Daniels, the Liverpool portrait painter, paint a portrait of his stepfather. A chalk drawing which he then made of another member of the family arrested the attention of Daniels, who gave him some instruction. He next studied at the Liverpool Academy, and attended a life class kept by a brother of J. R. Herbert, R.A. This was all his art training. His earliest picture appears to have been 'The Black Boy,' painted in 1844. His first exhibited work, 'Falstaff acting King Henry IV,' was shown at the Liverpool Academy in 1845. In 1847 at the same place there appeared 'Cranmer endeavouring to obtain a Confession from Queen Catherine' (now the property of Mr. Andrew Bain of Hunter's Quay). In the same year he was elected an associate of the Liverpool Academy, and in 1848 a full member. At the suggestion of John Miller, an art patron, he visited London in 1850, and was deeply influenced by Millais's 'Christ at the Home of His Parents' in the Royal Academy. Accepting Pre-Raphaelite principles, he painted in 1852 'Darnley signing the Bond before the Murder of Rizzio.' In 1856 he exhibited at the Royal Academy 'Burd Helen.' The work, though badly hung, attracted the attention of Dante Rossetti, who instantly took Ruskin to see it. Ruskin had overlooked it, but in a postscript to his academy notes of 1856 he wrote of 'Burd Helen' that

its aim was higher, and its reserve strength greater, than any other work in the exhibition except the 'Autumn Leaves' by Millais. A photogravure of the picture, now belonging to Mr. Frederic Dawson Leyland, The Vyne, Basingstoke, is in Ruskin's works, library edit. xiv. p. 83. There followed in 1859 Windus's 'Too Late,' now the property of Mr. Andrew Bain, by which he is best known, and which he himself regarded as his masterpiece; but Ruskin condemned it 'as the product of sickness, temper, and dimmed sight,' a criticism which so pained Windus that he never sent to the Academy again. In 1861 he sent 'The Outlaw' to the Liverpool Academy.

Windus married in 1858 a sister of Robert Tonge, a fellow artist; she died on 2 Aug. 1862, after a long illness, leaving a fifteen months' daughter, and her death so shook Windus's health and nerves that he gave up the serious pursuit of painting. Possessed of a competence, he resided quietly at Walton-le-Dale near Preston, and although he often painted he generally destroyed in the evening what he had accomplished in the daytime. In 1880 he left Lancashire for London, and then destroyed most of his sketches and studies.

In London he first lived in a pleasant old house at Highgate and then at Denmark Hill, where he died on 9 Oct. 1907. Of self-portraits in oils, one at the age of twenty-two belongs to his daughter, Mrs. Teed; another belongs to the Rev. James Hamilton of Liverpool. Millais, whom he somewhat resembled, also painted a portrait.

After his retirement in 1862, Windus, an artist of extreme enthusiasm and sensitiveness, was practically forgotten until the spring exhibition of the New English Art Club of 1896, when three water-colours by him entitled 'The Flight of Henry VI from Towton,' 'The Second Duchess,' and 'A Patrician, Anno Domini 60,' were lent by their owners. They excited great interest amongst artists and connoisseurs. His work, which is scarce in quantity, is greatly valued as that of the most poetical and imaginative figure painter whom Liverpool has produced. In the early part of his career amateurs both in London and Liverpool eagerly bought anything he produced. Forty-five of his pictures were exhibited at the Historical Exhibition of Liverpool Art, in the Walker Art Gallery, Liverpool, May-July 1908.

Painters, by Percy Bate; art. on Windus by E. R. Dibdin in *Mag. of Art*, 1900; *Art Journal*, 1907; *The Times*, 11 Oct. 1907; *Ruskin's Works*, libr. edit. xiv. (*Academy Notes*), 85, 233, 330-1; *Harry Quilter's Preferences in Art*, p. 72; information kindly supplied by Mr. E. Rimbault Dibdin.]

F. W. G-N.

WINTER, SIR JAMES SPEARMAN (1845-1911), premier of Newfoundland, born at Lamaline, Newfoundland, on 1 Jan. 1845, was son of James Winter, of the customs service at St. John's, Newfoundland. Educated at St. John's at the General Protestant and Church of England Academies, James went at the age of fourteen into a merchant's office, where he remained for two years, and at the age of sixteen was articled to (Sir) Hugh Hoyles, afterwards chief justice of Newfoundland. He was enrolled as a solicitor in 1866, was called to the bar in 1867, became Q.C. in 1880, and at his death was the senior member of the Newfoundland bar and president of the Newfoundland Law Society.

He entered the legislature as member for the Burin district in 1874, when he was twenty-nine years of age. In 1877-8 he was speaker of the House of Assembly. He was solicitor-general from 1882 to 1885 in Sir William Whiteway's first administration and attorney-general from 1885 to 1889 in the Thorburn administration. In 1893 he was appointed a judge of the supreme court of Newfoundland, but resigned the office in 1896, returned to politics as leader of the opposition, and in 1897 became premier of Newfoundland. He held the premiership, combining with it the post of attorney-general and later that of minister of justice, till 1900, when he practically retired from political life. His term of office as premier is chiefly noteworthy for the conclusion of the warmly discussed Reid contract of 1898 [see REID, SIR ROBERT GILLESPIE, Suppl. II.]

Winter represented Newfoundland at the fisheries conference at Washington in 1887-8, when Mr. Chamberlain and Mr. Boyard negotiated a treaty which the senate of the United States failed to ratify; for his services he was made a K.C.M.G. In 1890 he went to London as one of the unofficial representatives of the Patriotic Association in connection with the French fishery question; in 1898, when premier, he visited London again on the same errand, and in the same year represented Newfoundland at the Anglo-American conference at Quebec. In 1910 he was one of the counsel

on the British side before the Hague tribunal on the occasion of the North Atlantic fisheries arbitration between Great Britain and the United States.

He died at Toronto, while on a visit to a married daughter, at midnight on 6-7 Oct. 1911. Winter married in 1881 Emily Julia, daughter of Captain William J. Coen, governor of the Newfoundland penitentiary. She predeceased him in 1908, leaving four sons and four daughters.

WINTER, JOHN STRANGE (pseudonym). [See STANNARD, MRS. HENRIETTA ELIZA VAUGHAN (1856-1911), novelist.]

WINTERSTOKE, first BARON. [See WILLS, SIR WILLIAM HENRY (1830-1911), benefactor.]

WINTON, SIR FRANCIS WALTER DE (1835-1901), major-general. [See DE WINTON.]

WITTEWRONGE, SIR CHARLES BENNET LAWES (1843-1911), sculptor and athlete. [See LAWES-WITTEWRONGE.]

WODEHOUSE, JOHN, first EARL of KIMBERLEY (1826-1902), secretary of state for foreign affairs, born at Wymondham, Norfolk, on 29 May 1826, was eldest son of the Hon. Henry Wodehouse (1799-1834) by his wife Anne, only daughter of Theophilus Thornhagh Gurdon of Letton, Norfolk. The father, eldest surviving son of John Wodehouse, second Baron Wodehouse, died in his own father's lifetime. Educated at Eton, where he was 'one of the cleverest boys' (SIR A. LYALL's *Dufferin*, i. 22), and at Christ Church, Oxford, John Wodehouse took a first class in the final classical school and graduated B.A. in 1847. Meanwhile he succeeded to the barony on the death of his grandfather on 29 May 1846. Showing political aptitude and adopting the whig politics of his family, Lord Wodehouse served as under-secretary of state for foreign affairs in the coalition government of Lord Aberdeen and afterwards in Lord Palmerston's first government (1852-1856). On 4 May 1856 he was appointed British minister at St. Petersburg, shortly after the close of the war with Russia. He accepted the post with some hesitation, telling Lord Clarendon that the foreign office was his object in life (FITZMAURICE's *Granville* i. 180), but he

'held his own with them all, including the Emperor.' He resisted attempts to play him off against Lord Granville, who had been sent over as ambassador extraordinary to the Tsar Alexander II on his coronation (*ibid.* 186-216). Gortschakoff complained however of his want of experience (*Letters of Sir Robert Morier*, i. 399). Wodehouse left St. Petersburg on 31 March 1858, and in the following year returned to the foreign office as under-secretary (June 1859 to Aug. 1861) in Lord Palmerston's second administration. On 9 Dec. 1863 he was sent on a special mission, nominally to congratulate King Christian IX of Denmark on his accession to the throne, but really to settle the Schleswig-Holstein dispute in concert with the representatives of Russia and France. He failed where success was probably impossible, but his knowledge of the questions at issue seems to have been limited (SPENCER WALFOLB's *Lord John Russell*, ii. 386-387; *Letters of Sir Robert Morier*, i. 399).

After serving as under-secretary for India for a few months in 1864, while Palmerston was still prime minister, Wodehouse, on 1 Nov. became lord lieutenant of Ireland in succession to Lord Carlisle [see HOWARD, GEORGE WILLIAM FREDERICK]; he held the appointment until the fall of the liberal government in June 1866. He found the Fenian movement, an agitation partly agrarian and partly revolutionary, in full activity. Wodehouse displayed resolution in dealing with his difficulties. On 14 Sept. 1865 the office of the 'Irish People' was raided and the paper suppressed; and though James Stephens [q. v. Suppl. II], the 'head centre,' escaped from Rutland prison, the other leaders were sentenced to various terms of imprisonment (JOHN O'LEARY's *Recollections of Fenians and Fenianism*, esp. vol. ii. chs. 28 and 29). Wodehouse, however, was under no illusions, and on 27 Nov. wrote to Lord Clarendon: 'The heart of the people is against us, and I see no prospect of any improvement within any time that can be calculated' (FITZMAURICE's *Granville*, ii. 515). Still the country became quieter, and before his retirement from office, Wodehouse was created Earl of Kimberley, Norfolk, by letters patent (1 June 1866).

In Dec. 1868 Kimberley became lord privy seal in Gladstone's first administration and entered the cabinet for the first time, but in July 1870, when Granville became foreign secretary, Kimberley suc-

ceeded Granville at the colonial office. His administration witnessed the annexation of Griqualand West (27 Oct. 1871), after the energy of the high commissioner, Sir Henry Barkly [q. v. Suppl. I] had thwarted the Free State Boers. On 17 Nov. the British flag was hoisted in the diamond fields, and the township was called Kimberley, after the colonial secretary. In the following year, full responsible government was granted to Cape Colony. On 8 March, on a motion for the production of papers, Kimberley made an explanatory statement in which he declared that the colony could not advance unless it had free institutions, and hinted that ultimately 'he would not be astonished if the Orange Free State and Transvaal Republic found it more to their advantage to unite with those already under the British crown' (*Hansard*, vol. ccix., cols. 1626-1631; see also vol. ccxiii., cols. 29-33). Trouble having arisen on the Gold Coast owing to the bellicose temper of the Ashantis, Kimberley authorised an expedition which, commanded by Sir Garnet (afterwards Viscount) Wolseley, captured Kumassi (4 Feb. 1874) and imposed peace (SIR R. BIDDLEPH'S *Lord Cardwell at the War Office*, 221-225). In Canada Rupert's Land was formed into a province named Manitoba (August 1870), after an amnesty had been granted at the instigation of the Canadian government for all offences committed during the Riel rebellion, excepting the murder of Thomas Scott; and British Columbia after some demur joined the dominion (June 1872). During the session of 1872 Kimberley introduced into the House of Lords and carried the government's much controverted licensing bill. Of his introductory speech, Henry Bruce (afterwards Lord Aberdare), the home secretary and author of the measure, wrote that it was 'a good and clear statement' prepared at brief notice, 'but,' Bruce added, 'Kimberley is not impressive, although extremely able and efficient.' On the defeat of his party at the polls in Feb. 1874 Kimberley resigned office.

Kimberley, in whom the Palmerstonian tradition was strong, dissented from the anti-Turkish attitude assumed by Gladstone and the duke of Argyll on the outbreak of the Russo-Turkish war in 1877, but he remained loyal to his party. When Gladstone formed his second administration, Kimberley again became colonial secretary on 28 April 1880. His tenure of the office proved in many ways unfortunate. Contrary to expectation, Sir Bartle Frere

[q. v.] was at first retained at the Cape as High Commissioner, but, in obedience to liberal remonstrances, Kimberley abruptly recalled him by telegram (1 Aug.) on the plea that South African federation was no longer possible (JOHN MARTINEAU'S *Frere*, ii. 390-395). Irresolution also marked his treatment of the Transvaal Boers, who, encouraged by liberal election declarations, were chafing against annexation. The Queen's speech pronounced that British supremacy must be maintained in the Transvaal, and Kimberley defended that resolve on the ground that 'it was impossible to say what calamities our receding might not cause to the native population.' In his subsequent attitude to the crisis, Kimberley was freely credited with want of resolution and of clear purpose. The Boers took up arms; on 16 Dec. the South African Republic was proclaimed, and on 27 Feb. 1881 Sir George Colley [q. v.] was defeated and slain on Majuba Hill. Kimberley, meanwhile, had opposed in the cabinet on 30 Dec. the suggestion made by members of the Cape legislature that a special commissioner should be sent out (MORLEY'S *Gladstone*, iii. 33). But, early in January, on the prompting of President Brand of the Orange Free State, he set on foot three different sets of negotiations, while stipulating that armed resistance must cease before terms of peace could be discussed. Through the Free State agent in London he placed himself in communication with President Brand, who handed on his views to the Boer leaders, President Kruger and General Joubert; he also communicated with President Brand through Sir Hercules Robinson [q. v. Suppl. I], the new governor of Cape Colony, and with President Kruger through Sir George Colley (SIR WILLIAM BUTLER'S *Colley*, 322-352) and, after Colley's death, through Sir Evelyn Wood. Despite Colley's fatal reverse (27 Feb.), an eight days' armistice was arranged on 16 March; it was extended, and on the 22nd Gladstone announced the terms of peace, viz. the grant of complete self-government to the Boers on the acceptance of British suzerainty, native interests and questions of frontier to be settled by a royal commission. Kimberley had written to Colley on 24 Feb.: 'My great fear has been lest the Free State should take part against us, or even some movement take place in the Cape Colony' (MORLEY'S *Gladstone*, iii. 40). On 31 March Kimberley in the House of Lords defended the ministerial policy against the trenchant attacks of Lords Cairns and Salisbury. He maintained that if we conquered

the Transvaal we could not hold it, and—taking up a phrase of Cairns's—that the real humiliation would have been if, 'for a mere point of honour,' we had stood in the way of practical terms (*Hansard*, vol. cclx. cols. 278 to 292). Kimberley tried to get the district of Zoutpansberg set aside as a native reserve, but the commissioners were unable to accept the suggestion, and the plan formed no part of the convention of Pretoria (8 Aug. 1881). [For Kimberley's despatches see *Parl. Papers*, vols. l. and li., and 1881, vols. lxvi. and lxvii.; for an apology for the government, MORLEY'S *Gladstone*, iii. 27-46.] In May 1881 Kimberley directed Sir Robert Morier, British minister at Lisbon, to drop the treaty he was negotiating with the Portuguese government, by which a passage was to be granted both to the Boers and to the British troops through Lourenço Marques; such an arrangement might have prevented the South African war of 1899-1902 (*Letters of Sir Robert Morier*, i. 400).

On 16 Dec. 1882 Kimberley was transferred to the India office in place of Lord Hartington, and held the appointment until the fall of the liberal government in June 1885. He cordially supported the viceroy, Lord Dufferin, in coming to an understanding with Abdur Rahman, Amir of Afghanistan, at the Rawal Pindi durbar (LYALL'S *Dufferin*, ii. 96); and on 21 May 1885 made a declaration in the House of Lords to the effect that Afghanistan must be regarded as outside the Russian sphere of influence, and inside the British (*Hansard*, vol. ccxcviii. cols. 1009-1011). During those years he was generally active in debate; he took charge of the franchise bill of 1884 and the redistribution bill of 1885 in the House of Lords, and spoke frequently on Egyptian and Soudanese affairs. He believed that if he had been in London he could have stopped the mission of Gordon to Khartoum, as he could have shown him to be unfit for the work (FITZMAURICE'S *Granville*, ii. 401). On 27 Feb. 1885 he defended the government against the vote of censure moved by Lord Salisbury, but was defeated by 159 votes to 68. He was made K.G. and retired with the fall of the administration in June.

Kimberley found no difficulty in supporting Gladstone's policy of home rule, which was announced in the winter of 1885-6, and returned to the India office during Gladstone's short-lived home rule administration of 1886 (February to August). In April 1891 he succeeded

Granville as leader of the liberal party in the House of Lords, after he had lamented his old associate in feeling terms (*Hansard*, vol. cclii. cols. 464-5). He became secretary for India once more in Gladstone's fourth administration, formed in 1892, serving at the same time as lord president of the council. Kimberley reluctantly accepted the policy of the Indian government in closing the mints and restricting the sale of council bills with the object of checking the depreciation of silver. At the last cabinet council which Gladstone attended (1 March 1894), Kimberley and Harcourt spoke on the ministers' behalf words 'of acknowledgment and farewell.' In Lord Rosebery's ministry (3 March 1894) he realised his early ambition, and became foreign secretary, while surrendering the leadership in the House of Lords to the new prime minister. Kimberley's tenure of the foreign office was undistinguished. He was unable to prevent the revision of the treaty of peace between China and Japan under pressure of Russia, Germany, and France, by which the Japanese, in consideration of an addition to their indemnity, evacuated the Liaotung peninsula. On 3 May 1894 he concluded an unhappy agreement with the Congo Free State, which met with strong opposition from Germany; and on 22 June the third article, which granted to Great Britain on lease a strip of Congolese territory along the frontier of German East Africa, had to be withdrawn (*Parl. Papers*, 1894, vols. lxii. and xvi.). But he refused to be hurried into diplomatic crusades by emotional outbursts against the iniquities of Abdul Hamid, Sultan of Turkey.

Relegated to opposition by the general election, Kimberley resumed the leadership of the liberals in the upper house, after Lord Rosebery's abandonment of party politics in October 1896. Though his following was small, he led it with spirit, and was a sober and effective critic of unionist measures. On 8 June 1899 he seconded the resolution for making a provision for Lord Kitchener after the overthrow of the Khalifa at Omdurman. During the South African war, unlike some of his party, he never swerved from support of the military operations; he declined to take any advantage of the ignorance of ministers as to the Boer preparations; and while justly dwelling on the miscalculations involved in the recrudescence of the war after it had been declared to be at an end, he urged that no means or money should be spared in sending out adequate reinforcements. His

last appearance was on 14 Feb. 1901, when, though ill and distressed, he spoke on the address to King Edward VII, after the death of Queen Victoria. During the rest of his life Lord Spencer acted as deputy-leader of the liberals in the lords.

Kimberley died at his London residence, 35 Lowndes Square, on 8 April 1902, and was buried at Wymondham, Norfolk. When the lords reassembled, effective tributes were paid to his memory (*Hansard*, vol. cvi. cols. 259-266). Lord Salisbury eulogising his freedom from party bias, Lord Spencer his grasp of detail, and Lord Ripon his private worth. He earned the reputation of thoroughness in administration if he sometimes showed lack of foresight and resolve in dealing with large questions of policy. The House of Lords generally held him in high esteem, but he was little known to the general public and was unrecognised by popular opinion. 'He is,' wrote Lord Dufferin, 'one of the ablest of our public men, but being utterly destitute of vanity, he has never cared to captivate public attention, and consequently has been never duly appreciated' (LYALL'S *Dufferin*, i. 22). He spoke fluently but not eloquently, and never used notes. Though he generally kept his temper under strict control, he was naturally impulsive, and to that failing, apart from the vacillation of his colleagues, may possibly be traced his nervous handling of affairs during the first Boer war. He took much interest in local business; was a deputy-lieutenant, county councillor and J.P. of Norfolk, and high steward of Norwich cathedral in succession to his father. He was a generous but critical landlord; and while in his youth a vigorous rider to hounds, he remained until late in life a capital shot. Kimberley was made hon. D.C.L., Oxford, in 1894, and chancellor of the University of London in 1899.

He married, on 16 Aug. 1847, Lady Florence (d. 4 May 1895), eldest daughter of Richard Fitzgibbon, third and last earl of Clare, and had three sons and two daughters. His successor, John, Baron Wodehouse, was born on 10 Dec. 1848; the third son, Armine (1860-1901), married in 1889 Eleanor Mary Caroline, daughter of Matthew Arnold; she re-married in 1909 the second Baron Sandhurst.

An excellent drawing by George Richmond was executed for Grillon's Club, and an oil painting (1866) by S. Catterson Smith is at Dublin Castle; replicas of both are at Kimberley. A cartoon portrait by 'Ape' appeared in 'Vanity Fair' in 1869.

[The Times, 9 April 1902; authorities cited; Paul's History of Modern England, 5 vols. 1904-6; J. Martineau, Life of Sir Bartle Frere, 2 vols. 1895; Lucy's Balfourian Parliament, 1906; Grant Duff, Notes from a Diary, 1888-91.]

L. C. S.

WOLFF, SIR HENRY DRUMMOND CHARLES (1830-1908), politician and diplomatist, born in Malta 12 Oct. 1830, was only child of the rev. Joseph Wolff [q. v.] by his wife Lady Georgiana, daughter of Horatio Walpole, second earl of Orford. He was named Drummond after Henry Drummond [q. v.], a founder, with his father, of the Irvingite church. After education at Rugby, under Tait, he spent some time abroad in the study of foreign languages. At the age of sixteen he entered the foreign office as a supernumerary clerk, and became a member of the permanent staff in 1849. In June 1852 he was attached to the British legation at Florence, and was left in charge during the autumn of 1852 in the absence of the minister, Sir Henry Bulwer (afterwards Lord Dalling). He returned to the foreign office in 1853, and in 1856 he was attached to Lord Westmoreland's special mission to congratulate Leopold I, King of the Belgians, on the twenty-fifth anniversary of his accession. When the conservatives took office in February 1858, Wolff became assistant private secretary to the foreign secretary the earl of Malmesbury, and in October private secretary to the secretary for the colonies, Sir Edward Bulwer Lytton (afterwards Lord Lytton). Having been made C.M.G. and king of arms of the order in April 1859, he was secretary to Sir Henry Storks [q. v.], high commissioner of the Ionian Islands, from June 1859 till the transfer of the islands to Greece in June 1864. Throughout this period Wolff took an active part in various commissions of inquiry set on foot to redress grievances and to promote the material welfare of the islanders. In 1860 he acted as delegate for the islands to the international statistical congress in London; in 1861 he was vice-president of a commission to arrange for Ionian exhibits in the London international exhibition of 1862, and helped in the establishment of an Ionian Institute for the promotion of trade and education. In Oct. 1862 he became K.C.M.G., and subsequently arranged the details of the transfer of the islands to Greece, which was effected in June 1864. On relinquishing his office he received a pension from the Greek government.

For the next few years he travelled much, and was mainly engaged in promoting various financial undertakings, a kind of work for which his wide popularity and his astuteness and fertility of resource gave him great advantages. In 1864 he assisted at Constantinople in arranging for the conversion of the internal debt of Turkey into a foreign loan. In 1866 he laid a project for a ferry across the English Channel before the emperor of the French. Subsequently he aided in the liquidation of a large undertaking entitled the International Land Credit Company, which had come to disaster. In 1870, during the war between France and Germany, he made three expeditions from Spa, where he was staying, into the theatre of the campaign. At the beginning of September, with two English companions, he visited the battlefield of Sedan a day or two after the surrender of the French army, meeting on his return journey the emperor of the French on his way to Germany. A fortnight later Wolff and Henry James (afterwards Lord James of Hereford) visited the battlefields of Gravelotte and Saarbrücken and the environs of Strasburg while invested by the German forces, and came under the fire of the French artillery. Early in Oct. 1870 he proceeded from Spa to Baden, and thence to Strasburg, which had then surrendered, and on to Nancy and Toul. He narrated his experiences in the 'Morning Post,' and the narrative was privately printed in 1892 as 'Some Notes of the Past.'

Meanwhile he was actively interested in party politics. He was one of the select company of contributors to 'The Owl,' a short-lived but popular satirical journal, which was started in 1864 by Algernon Borthwick (afterwards Lord Glenesk [q. v. Suppl. II]) but abandoned in 1870 in consequence of the pressure of other work. In 1865 he stood as a conservative for Dorchester, with 'the most disastrous results.' Afterwards he purchased from Lord Malmesbury a small building property at Boscombe, near Bournemouth, which he set to work to develop, and at the general election in 1874 he was elected conservative M.P. for Christchurch. He took at once an active part in the House of Commons. He spoke often on foreign policy, especially in connection with the Eastern question. He was prominent in defending the purchase by the British government of the Khedive's shares in the Suez Canal Company. In 1875 he was appointed a member of the copyright commission, and signed the

Report presented in 1878, only dissenting on some points of detail. In 1876 he accompanied George Joachim (afterwards Lord) Goschen [q. v. Suppl. II] on a mission of inquiry into Egyptian finance to Egypt, in behalf of the Egyptian bondholders. During the Easter recess in 1878, when the revision of the treaty of San Stefano by a European congress was still in suspense. Wolff visited Paris, Vienna, and Berlin to ascertain the general feeling of European statesmen. In August 1878 he returned to employment under the foreign office, and was made G.C.M.G. Lord Salisbury selected him to be the British member of the international commission for the organisation of the province of Eastern Roumelia. After a preliminary discussion at Constantinople the commission established itself at Philippopolis in October. The Russian and British delegates were often at diplomatic odds, the former being openly hostile to the separation of the newly formed province from Bulgaria and seeking to give to it a fuller freedom from Turkish sovereignty than the treaty of Berlin sanctioned. Wolff appealed to the higher Russian authorities with considerable success. In April 1879 the organic statute was settled and signed. After assisting at the installation of the new governor-general, Aleko Pasha, Wolff returned to his parliamentary duties in England, and in September was created K.C.B. The Eastern Roumelian commission was further directed to draw up schemes for the administration of other European provinces of the Turkish empire, but before this task was approached, Gladstone's second administration began in England, and Wolff resigned (April 1880), being succeeded by Lord Edmond (now Lord) Fitzmaurice.

At the general election in the spring of 1880 Wolff was elected for Portsmouth. At the opening of the new parliament he took a leading part in opposing the claim of Charles Bradlaugh [q. v. Suppl. I] to take the oath, receiving the active support of Lord Randolph Churchill and Mr. (afterwards Sir John) Gorst. In the result these three members formed the combination, subsequently joined by Mr. Arthur Balfour and known under the title of the Fourth Party, which, during the next five years, did much to enliven the proceedings of the House of Commons and to make uneasy the positions both of the prime minister, Mr. Gladstone, and of the leader of the opposition, Sir Stafford Northcote, afterwards earl of Iddesleigh [see CHURCHILL,

LORD RANDOLPH, Suppl. I]. Wolff was an active and efficient colleague, taking his full share in parliamentary discussions and being especially useful in reconciling his companions' differences. He was personally responsible for the passing of a bill, which he had introduced in the previous parliament, enabling the inhabitants of seaside resorts to let their houses for short periods without losing their qualification to vote at elections. But his attention was mainly devoted to party warfare. On 19 April 1883, after the unveiling of the statue of Lord Beaconsfield in Parliament Square, he first suggested to Lord Randolph Churchill the formation of a 'Primrose League,' to be so named after what was reputed to be the deceased statesman's favourite flower. In the course of the following autumn the league was set on foot. The statutes of the new association were drawn up by Wolff and revised by a small committee. They prescribed a form of declaration by which members undertook 'to devote their best ability to the maintenance of religion, of the estates of the realm, and of the imperial ascendancy of the British empire,' and they ministered to the weaker side of human nature by providing a regular gradation of rank with quaint titles and picturesque badges. The league, though at first somewhat scoffed at by the conservative leaders, was soon found to be a most efficient party instrument. In the dissension caused in the conservative party by Lord Randolph Churchill's advocacy of a frankly democratic policy, Wolff sided with his colleague, but he was too astute a politician to favour internal divisions, and was instrumental in procuring the reconciliation, which was effected in the summer of 1884. On Lord Salisbury's return to office in June 1885 Wolff was made a privy councillor, and in August was despatched on a special mission to Constantinople to discuss with the Turkish government the future of Egypt, which since 1882 had been in the military occupation of Great Britain. The British occupation, though accepted as a practical necessity, had not received formal recognition or sanction either from the Sultan or any of the powers. Wolff was instructed to arrange with the Porte the conditions on which the Sultan's authority should in future be exercised in Egypt and the methods for assuring the stability of the Khedive's government. After some months Wolff concluded with the Turkish government in Oct. 1885 a convention providing that the two govern-

ments should each send a special commissioner to Egypt who should in concert with the Khedive reorganise the Egyptian army, examine and reform all branches of the Egyptian administration, and consider the best means for tranquillising the Soudan by pacific methods. When these ends were accomplished, the two governments would consider terms for the withdrawal of the British troops from Egypt within a convenient period. Wolff went to Egypt as British commissioner under this convention. Moukhtar Pasha was the Turkish commissioner. At the end of twelve months Wolff returned to England in order to discuss the terms of a further arrangement with Turkey. In Jan. 1887 he proceeded to Constantinople, and there negotiated a second convention, signed on 22 May, which stipulated for the withdrawal of the British forces from Egypt at the end of three years, with the proviso that the evacuation should be postponed in the event of any external or internal danger at that time; that for two years after the evacuation Great Britain was to watch exclusively over the safety of the country; and that subsequently both the Sultan and the British government were each to have the right, if necessary, of sending a force to Egypt either for its defence or for the maintenance of order. In a separate note it was stated that the refusal of one of the Mediterranean great powers to accept the convention would be regarded by the British government as an external danger justifying the postponement of the evacuation. The governments of Austria, Germany, and Italy were favourably inclined to this arrangement, but the French government, which determinedly opposed it, intimated together with the Russian government that if it were ratified they would feel justified in occupying other portions of Turkish territory. The Sultan consequently refused to ratify it.

Wolff returned to England in July 1887. Lord Salisbury in a final despatch observed that the negotiations had defined formally the character of the English occupation and the conditions necessary to bring it to a close. The convention of Oct. 1885 remained in force as a recognition by the Porte of the occupation, and the continued presence of the Turkish commissioner in Egypt, though possibly not in all respects convenient, implied acquiescence in the situation.

Wolff's parliamentary career had been brought to a close by his defeat at Portsmouth in the general election of November

1885, while he was absent in Egypt. For the future his work was entirely in the diplomatic profession. In Dec. 1887 he was appointed British envoy in Persia, and proceeded to Teheran early in the following year. Here his versatile energy found ample occupation in watching the progress and development of Russian policy on the northern frontier, in devising plans for harmonious action by the two powers in lieu of the traditional rivalry between their legations, in promoting schemes for the development of British commercial enterprise, and in encouraging the Persian government in efforts for administrative and financial reform. Among the measures, which he was instrumental in promoting were the issue of a decree in May 1888 for the protection of property from arbitrary acts of the executive and the opening of the Karun river to steam navigation in October following. A concession obtained by Baron Reuter on the occasion of the Shah's visit to England in 1872, which was worded in such vague and comprehensive terms as to seem incapable of practical development, took, under Wolff's guidance, a business-like and beneficial shape in the establishment of the Imperial Bank of Persia. Some other schemes were less successful. A carefully considered project for the construction of a railway from Ahwaz on the Karun river in the direction of Ispahan failed to obtain sufficient financial support, and the concession of the tobacco *régie* to a group of English financiers, which seemed to promise considerable advantages to the Persian exchequer, excited such fanatical opposition that it was in the end abandoned some time after Wolff's departure from Persia. Wolff received the grand cross of the Bath in Jan. 1889, and was summoned home later in the year to attend the Shah on his visit to England. He accompanied the Persian sovereign during his tour in England and Scotland. On his way back to Teheran in Aug. 1889 Wolff passed through St. Petersburg, where he had an audience of the Emperor of Russia, and urged the importance of an agreement between the two countries on the policy to be pursued in Persia, obtaining an assurance that the new Russian minister at Teheran would be authorised to discuss any proposals, which he might be empowered to put forward for this object. He had intended in 1890 to visit India, but before his departure from Teheran he was struck down by a serious illness, during which his life was at one

time despaired of. He recovered sufficiently to be brought to England, where he gradually regained strength, but his health was clearly unequal to a return to the arduous duties and trying climate of Teheran. In July 1891, somewhat against his will, he was transferred to Bucharest, and six months afterwards was appointed ambassador at Madrid. That post he held for eight years, till his retirement on pension in Oct. 1900. In June 1893 he effected a provisional commercial agreement with the Spanish government, pending the conclusion of a permanent treaty, and this arrangement was further confirmed by an exchange of notes in Dec. 1894. British relations with Spain gave no cause for anxiety, and Wolff's natural geniality and hospitable instincts secured him a general popularity, which was unimpaired by the war between Spain and the United States, when English public opinion pronounced itself somewhat clearly on the American side. After his retirement he lived for reasons of health quietly in England. He retained, however, his keen, restless interest in public affairs, his gift of amusing conversation, and his apparently inexhaustible fund of anecdote. Through life his good temper was imperturbable, and he delighted in mischievous humour, which was free from malice or vindictiveness. He professed in casual conversation a lower standard of conduct than he really acted upon, and despite his avowed cynicism he was by nature and instinct kind-hearted and always ready to assist distress. He became very infirm in the last few months of his life, and died at Brighton on 11 Oct. 1908.

He married at the British Consulate, Leghorn, on 22 Jan. 1853, Adeline, daughter of Walter Sholto Douglas, by whom he had two sons and a daughter. His widow was awarded a civil list pension of 100*l.* in 1909. His daughter, Adeline Georgiana Isabel, wife of Col. Howard Kingscote, was a prolific novelist, writing under the pseudonym of 'Lucas Clevee.' Her chief works, which show an easy style and vivid imagination, include 'The Real Christian' (1901), 'Blue Lilies' (1902), 'Eileen' (1903), 'The Secret Church' (1906), 'Her Father's Soul' (1907). She was a great traveller and an accomplished linguist. She predeceased her father on 13 Sept. 1908 at Château d'Ex, Switzerland. A cartoon portrait of Wolff by 'Spy' appeared in 'Vanity Fair' in 1881.

[Sir H. D. Wolff published in 1908 two volumes, entitled *Rambling Recollections*, which give a very entertaining though somewhat discursive account of his varied experiences. Other authorities are *The Times*, 12 Oct. 1908; *Foreign Office List*, 1909, p. 405; *Winston Churchill's Life* of Lord Randolph Churchill, 2 vols. 1906; *Harold Gorst's The Fourth Party*; art. on the *Primrose League* in *Encycl. Brit.* 11th ed.] S.

WOLVERHAMPTON, first VISCOUNT. [See FOWLER, SIR HENRY HARTLEY (1830-1911), statesman.]

WOODALL, WILLIAM (1832-1901), politician, elder son of William Woodall of Shrewsbury, by his wife Martha Basson, was born there on 15 March 1832 and educated at the Crescent Schools, Liverpool. He entered the business at Burslem of James Macintyre, china manufacturer whose daughter Evelyn, he married in 1862, and at Macintyre's death in 1870 became senior partner. He was also chairman of the Sneddy Colliery Co.

Woodall was active in local affairs, devoting himself especially to the cause of technical education. He was chairman of the Burslem school board (1870-80), of the Wedgwood Institute there, and of the North Staffordshire Society for Promotion of the Welfare of the Deaf and Dumb. He sat on royal commissions on technical education (1881-4) and the care of the blind and deaf mutes (1886-9). In September 1897 he accompanied Sir Philip Magnus and others to Germany to study technical instruction methods there (MAGNUS, *Educational Aims and Efforts*, 1910, pp. 92, 94, 120).

Woodall was liberal M.P. for the borough of Stoke-on-Trent 1880-6, and was first representative of Hanley from 1885 to 1900. He was a warm supporter of home rule, disestablishment, and local veto, as well as of the extension of the franchise.

In 1884 he succeeded Hugh Mason (M.P. for Ashton-under-Lyne) in the leadership of the woman suffrage party in the house, and introduced (10 June) an amendment to the Representation of the People Act then before the house, providing that 'words having reference to the right of voting at parliamentary elections, importing the masculine gender, include women.' As chairman of the Central Committee for Women's Suffrage (established in 1872), he headed a memorial from 110 members to Gladstone but the prime minister resisted the amendment as likely to imperil the bill. The division was taken on 12 June, when

135 voted with Woodall and 271 against. In obedience to a strong party whip, 104 liberal supporters of the women's cause voted with the majority: had they voted according to their convictions the amendment would have been carried by 72 votes instead of being lost by 136. On 19 Nov. Woodall brought in a bill granting the vote to single women on the same terms as men, but the second reading was four times adjourned and never reached a division. Under Gladstone's short third administration of 1886 Woodall became surveyor-general of ordnance Feb. to June. He resumed charge of the women's suffrage bill in July 1887, and after further delays he reintroduced it in April 1889 and again in 1891. He accepted office as financial secretary to the war office (August 1892–June 1895) under Gladstone's fourth government.

To Burslem he presented a large wing to the Wedgwood institute and free library, besides founding the Woodall liberal club there and bequeathing a collection of valuable pictures to the art gallery. He died at the house of his nephew-in-law, Dr. Woodhouse of Llandudno, on 8 April 1901. The Woodall memorial congregational chapel at Burslem was built in 1906. There is a portrait in oils by W. M. Palin at the Wedgwood institute. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1896.

Woodall devoted some of his leisure to writing for magazines and reviews, and republished from 'Once a Week' in 1872 'Paris after Two Sieges, Notes of Visits during the Armistice and immediately after the Suppression of the Commune.' He was a chevalier of the Légion d'Honneur.

By his wife Evelyn Macintyre, who died in 1870, he had no children.

[The Times, 9 April 1901; Who's Who, 1900; Dod's Parl. Companion, 1899; Hansard's Parl. Debates; Helen Blackburn's Women's Suffrage, 1902, passim; Women's Suffrage Journal, 1880–1890; private information.] C. F. S.

WOODS, SIR ALBERT WILLIAM (1816–1904), Garter King of arms, born at Hampstead on 16 April 1816, was son of Sir William Woods, Garter King of arms from 1838 till his death in 1842. After private education he was appointed Fitzalan pursuivant of arms extraordinary in 1837, and entered the College of Arms as Portcullis Pursuivant in ordinary, on 3 Aug. 1838. On 28 Oct. 1841 he was appointed Norfolk Herald extraordinary, and was advanced on 9 Nov. following

to the office of Lancaster Herald. In that capacity he was attached to the Garter missions for investing the Kings of Denmark (1865) and Belgium (1866) and the Emperor of Austria (1867). On 25 Oct. 1869 he succeeded Sir Charles George Young [q. v.] as Garter Principal King of arms, and was knighted on 11 Nov. in the same year. He retained that office until his death, and filled it with tact and rare courtliness of manner. As Garter he was joint plenipotentiary for investing respectively the Kings of Italy (1878), Spain (1881), and Saxony (1882) with the ensigns of the order of the Garter. He was appointed C.B. (civil division) in 1887, K.C.M.G. (1890), and K.C.B. (civil division) (1897), and was created G.C.V.O. on the occasion of King Edward VII's coronation in 1902. He was also a knight of grace and director-general of ceremonies of the order of St. John of Jerusalem in England. Woods held many other offices connected with various orders of knighthood. Appointed first, in 1841, Usher of the Scarlet Rod and Brunswick Herald, he eventually became registrar and secretary of the order of the Bath, registrar of the order of the Star of India on its establishment in 1861, registrar of the order of the Indian Empire on its foundation in 1878, King of arms of the order of St. Michael and St. George, registrar of the order of Victoria and Albert, and inspector of regimental colours. All these appointments he held at his death. He died at 69 St. George's Road, S.W., on 7 Jan. 1904, and was buried at Norwood cemetery.

Woods became a freemason in 1849, and held for an exceptionally long period high office in the craft. He was advanced to the position of a grand officer and assistant grand director of ceremonies in 1858, and was from 1860 to his death grand director of ceremonies, an office in grand lodge which his father had held before him. He received in 1875 the dignity of past grand warden. On 25 March 1847 he was elected F.S.A.

On 1 Dec. 1838 he married Caroline, eldest daughter of Robert Cole of Rotherfield, Sussex (a lady of grace of the order of St. John of Jerusalem in England), who died at 69 St. George's Road, on 19 Nov. 1911, at the age of ninety-five, and was buried with her husband. Woods had two children, a son and a daughter. The former, William Woods, died in 1869, leaving two children, an only son, Albert William Woods, who was appointed Rouge Dragon Pursuivant of arms in 1886, and died in

1893 without issue, and a surviving daughter, Frances. Sir Albert's only daughter, Caroline Marianne, married on 6 Sept. 1873 the present writer, and the only child of this marriage, Mr. Gerald Woods Wollaston (b. 2 June 1874), maintains the long connection of the family with the College of Arms, being (1912) Bluemantle Pursuivant of arms.

[The Times, 8 Jan. 1904; private information.]

A. N. W.

WOODS, EDWARD (1814-1903), civil engineer, born in London on 28 April 1814, was son of Samuel Woods, a merchant. After education at private schools, and some training at Bristol, he became in 1834 an assistant to John Dixon, recently appointed chief engineer of the Liverpool and Manchester railway. Woods was placed in charge of the section, 15 miles in length, between Liverpool and Newton-le-Willows, including the tunnel, then under construction, between Lime Street and Edge Hill stations; and in 1836 he succeeded Dixon as chief engineer, taking also charge of the mechanical department. The Liverpool and Manchester railway was amalgamated with the Grand Junction railway in 1845. Woods remained until the end of 1852 in charge of the works appertaining to the Liverpool and Manchester section, including the construction of the Victoria tunnel (completed 1848) between Edge Hill station and the docks, a large goods station adjoining the Waterloo dock, and a line between Patricroft and Clifton, opened in 1850. In 1853 he established himself in London as a consulting engineer.

During his eighteen years' work on the Liverpool and Manchester line Woods took a prominent part in various early experimental investigations into the working of railways. In 1836 he made observations on the waste of fuel due to condensation in the long pipes conveying steam about $\frac{1}{2}$ mile to the winding-engines used for hauling trains through the Edge Hill tunnel, the gradient of which was then considered too steep for locomotives. He was a member of a committee appointed by the British Association in 1837 to report on the resistance of railway trains, and presented a separate report (*British Assoc. Report*, 1841, p. 247) apart from two reports made by Dr. Dionysius Lardner [q. v.]. In 1838 he presented to the Institution of Civil Engineers a paper (*Transactions*, ii. 137), 'On Certain Forms of Locomotive Engines,' which contains some of the earliest accurate details of the working of locomotives, and for which he was

awarded a Telford medal. The consumption of fuel in locomotives was the subject of a paper presented by him to the Liverpool Polytechnic Society in 1843 (published in 1844), and of a contribution to a new edition of Tredgold's 'Steam Engine' in 1850.

In 1853 Woods carried out, with W. P. Marshall, some experiments on the locomotives of the London and North Western railway, between London and Rugby, and three joint reports were made to the general locomotive committee of the railway, recommending certain weights and dimensions for various classes of engines. These were followed, in 1854, by a joint report on the use of coal as a substitute for coke, which had been used hitherto.

From that date onwards his practice was chiefly connected with the railways of South America, including the Central Argentine railway, the Copiapo extension, Santiago and Valparaiso, and Coquimbo railways in Chile, and the Mollenda-Arequipa and Callao-Oroya lines in Peru. He was responsible not only for surveys and construction, but also for the design of rolling stock to meet the somewhat special conditions. Other engineering work included a wrought-iron pier, 2400 feet long, built in 1851 on screw piles at Pisco on the coast of Peru, and a quay-wall built at Bilbao in 1877.

In the 'battle of the gauges' he favoured the Irish gauge (5 feet 3 inches) or the Indian gauge (5 feet 6 inches). He regarded break of gauge as a mistake.

In 1877, as president of the mechanical science section of the British Association, he delivered an address on 'Adequate Brake Power for Railway Trains.' Elected a member of the Institution of Civil Engineers on 7 April 1846, he became a member of its council in December 1869, and was president in 1886-7. His presidential address (*Proc. Inst. Civ. Eng.* lxxxvii. 1) contains much information as to the early history of railways. In 1884 he was president of the Smeatonian Society of Civil Engineers.

He died at his residence, 45 Onslow Gardens, London, on 14 June 1903, and was buried at Chenies, Buckinghamshire. His portrait in oils, by Miss Porter, is in the possession of the Institution of Civil Engineers.

He married in 1840 Mary, daughter of Thomas Goodman of Birmingham, by whom he had three sons and two daughters.

WOODWARD, HERBERT HALL (1847–1909), musical composer, born 13 Jan. 1847, near Liverpool, was fifth and youngest son of Robert Woodward (1801–1882), by his wife Mary, youngest daughter of William Hall, of Ryall's Court, Ripple, Worcestershire. The father, a Liverpool merchant, purchased, in 1852, the Arley Castle estate, near Bewdley. Both the father's and mother's families had been long settled in Worcestershire. Herbert, after being educated at Radley College, matriculated at Corpus Christi College, Oxford, in 1862. At Radley he chiefly studied music under Dr. E. G. Monk and at Oxford under Dr. Leighton Hayne, and graduated Mus.B. in 1866 and B.A. in 1867. He spent eighteen months at Cuddesdon Theological College, and, being ordained deacon in 1870 and priest in 1871 in the diocese of Oxford, became curate and precentor of Wantage. There he remained for eleven years, working as assistant priest under William John Butler [q. v. Suppl. I], afterwards Dean of Lincoln. In 1881 he was appointed a minor canon of Worcester Cathedral, and became precentor in 1890. Here he formed a successful preparatory boarding school for the choir boys, of which he was warden for twenty-eight years (1881–1909). His devotional character had a great influence on the services at the cathedral, where he raised the standard of worship to a high level. A bachelor, and possessed of private means, he was widely known for his generous philanthropy. He died in London, after an operation, on 25 May 1909. At Worcester he is commemorated by the 'Woodward Memorial Wing' of the choir school buildings. As a composer he is best known by his church music. His anthem 'The Radiant Morn,' written in 1881, is probably the most generally popular of its kind; and 'The Souls of the Righteous,' 'Behold the days come,' 'Crossing the Bar,' 'Comes at times a Stillness as of Even,' and the Communion Service in E flat are also familiar.

WOOLGAR, SARAH JANE (1824–1909), actress. [See MELLON, MRS.]

WORDSWORTH, JOHN (1843–1911), bishop of Salisbury, was elder son of Christopher Wordsworth [q. v.], bishop of Lincoln, by his wife Susanna Hatley,

daughter of George Frere. His brother is Christopher Wordsworth, master of St. Nicholas' Hospital, Salisbury, and formerly fellow of Peterhouse, Cambridge. Among his five sisters were Elizabeth, first principal of Lady Margaret Hall, Oxford, and Susan (*d.* 1912), first head of the Southwark Diocesan Society of Grey Ladies. He was born on 21 Sept. 1843 at Harrow, his father being headmaster of the school, and was educated as a pensioner at Winchester and as a scholar at New College, Oxford, from which he matriculated in 1861. In 1863 he was placed in the first class in classical moderations, and in 1865 in the second class in *literæ humaniores*. He graduated B.A. in 1865, proceeding M.A. in 1868. He won the Latin essay prize in 1866, and the Craven scholarship in 1867. After a year as assistant master at Wellington College under Edward White Benson, afterwards archbishop of Canterbury, he was elected in 1867 to a fellowship at Brasenose, and was ordained deacon and priest by Bishop Wilberforce of Oxford in 1867 and 1869. He served Brasenose College as chaplain. In 1870 he was appointed examining chaplain and was collated to a prebend in Lincoln Cathedral by his father, just consecrated to that see. Though he was from the first interested in divinity, his college work and his studies were chiefly classical. Beside writings of less importance, he published in 1874 'Fragments and Specimens of Early Latin,' still a standard work, though its philology is that of its date. It gave an ample and judicious collection of examples, with a sound and learned commentary, and proved Wordsworth to be one of the best Latin scholars in Oxford. Thenceforth he applied his Latin scholarship to biblical study. In 1878 the University Press accepted a proposal from him for the publication of a critical edition of the Vulgate text of the New Testament, which should reproduce, so far as possible, the exact words of St. Jerome. The enterprise was in progress the rest of his life. Wordsworth at once began to collect his material. MSS. were collated, principally by himself, in all the countries of Western Europe; earlier collations, such as those of Bentley and John Walker [q. v.] were examined; unused material of Tischendorf was purchased; the patristic writers were searched for quotations; readings of importance from one or another point of view were brought together from a multitude of printed editions. Fully a hundred sources

were drawn upon for the text of the Gospels. Wordsworth met satisfactorily all the requirements of palæographical, grammatical, historical, and exegetical knowledge, and his notes and indices became mines of varied erudition. As a preliminary to the substantive publication, certain important MSS. were from 1883 onwards printed in full in 'Old Latin Biblical Texts'; in this task Wordsworth enlisted the aid of Dr. Sanday and other scholars. Subsequently he associated with himself in his work the Rev. Henry Julian White, now professor of New Testament exegesis in King's College, London. At length in 1889 St. Matthew was published, in 1891 St. Mark, in 1892 St. Luke, in 1895 St. John. An 'Epilogus' of discussions and results followed in 1898, the whole forming a quarto volume of over 800 pages. The Acts appeared in 1905; the work is still in progress under the care of Dr. White with the assistance of the Rev. George Mallows Youngman. Before his death the bishop passed through the press a minor edition of the whole Vulgate New Testament, which appeared in 1912. Owing to other occupations Wordsworth in his later years took no large share in the actual shaping of the work, but the materials were mostly of his collection, and he retained a full knowledge of every detail, and in doubtful questions gave the final decision.

Meanwhile Wordsworth had gained high office at Oxford and in the church. In 1877 J. B. Mozley [q. v.], regius professor of divinity, chose him as his deputy, and he served that office for two years. On his lectures as deputy professor he based the Bampton lectures of 1881. Entitled 'The One Religion,' they were a development of the 'testimonium animæ naturaliter Christianæ,' and a comparison of Christianity with other great religions. Wordsworth was no orientalist, and this is the only book in which he used second-hand knowledge. Nor did Wordsworth venture elsewhere upon the field of philosophy, which as in the case of his uncle Charles was alien to his mode of thought. At the same time the Bampton lectures illustrate his strong interest in missions. He was among the founders of the Oxford Missionary Association of Graduates, and of St. Stephen's House, which was designed to prepare members of the university for mission life. In 1883 Wordsworth's theological learning was recognised by his election to the Oriel professorship of the interpretation of scripture. The Oriel professorship was newly founded, and he was the first occupant; it carried

with it a canonry of Rochester, where Wordsworth threw himself heartily into the work of church and cathedral. Two years later Wordsworth was nominated to the see of Salisbury in succession to George Moberly [q. v.]. He was consecrated on 28 Oct. 1885, and was made D.D. at Oxford. Thenceforth his literary work, apart from the Vulgate, was incidental to his new duties. Succeeding to a well-administered diocese, without the problem of an increasing population, he was able to devote much of his time to the general policy of the church. Possessed of a strong will and unfailing memory, combined with a genuine interest in the work of his clergy and an ample generosity, he fully exerted his authority. He made himself an efficient ecclesiastical lawyer, and was fearless in risking litigation, from which in fact his boldness protected him. He was the first to exercise the power under the Pluralities Act Amendment Act (1898), by which a bishop can appoint a curate, at the expense of an incompetent incumbent, to a neglected parish. He also revived the canonical right of examining and rejecting, on the score of insufficient learning, the presentee to a benefice. The diocesan work for which he found widest scope was that of education. Not only did he make great, and often successful, efforts to maintain elementary church schools, but he also concerned himself with higher instruction. He founded and endowed the Bishop's School at Salisbury for the secondary co-education of boys and girls.

In the central counsels of his church, Wordsworth's influence was especially powerful. He was on terms of close intimacy with Archbishop Benson, and his assistance proved indispensable to Benson's successors. He was one of the assessors in the bishop of Lincoln's case in 1889-90, and laboriously studied the relevant law and history.

Wordsworth cherished hopes of reunion of Christendom, and the aspiration stirred his best energies. But he inherited much of his father's strong feeling against Rome; and though he frankly expressed his admiration for its more scholarly representatives, he was always ready to state, in Latin or English, the points of difference and the claims of his own church to antiquity or authority. He was always interested in symptoms of internal revolt in the Roman communion, and watched such growth as might be found among the Old Catholics, especially of Austria. In fact, his range of interest covered the whole area of Christendom

where bishops existed. In the general recognition of episcopacy he saw the one hope of unity. The common feature of episcopacy drew Wordsworth to remote Eastern churches of whose orthodoxy he was willing to take the most favourable view, and towards Swedes and Moravians, episcopal brethren, though other sides of their system might seem to rank them with those who care little for the historic ministry, and though their link with the past might, as in the last case, be very dubious. He grudged no effort to remove obstacles and in the negotiation of terms of possible association. His last work, the Hale lectures, delivered at Chicago in 1910, and published in England in 1911, on the national church of Sweden, was inspired by this motive. It was composed in ill-health, but is a substantial and original contribution to history. It has been translated into Swedish, and is a recognised text-book in the Swedish colleges. In his 'De successione Episcoporum in Ecclesia Anglicana' (1890) and 'De validitate ordinum Anglicanorum' (1894) he laboriously attempted to refute the scruples of the so-called Jansenist Church of Holland. The correspondence was kept up through his life, though his hopes were never fully realised. He also made some efforts to continue the attempts of his uncle Charles to draw together the episcopal and Presbyterian churches of Scotland. His elaborate history of the episcopate of Charles Wordsworth (1899), like his later researches, as in his 'Ordination Problems' (1909) and 'Unity and Fellowship' (1910), was largely devoted to precedents for the absorption of religious societies with some defect in their title into others whose pedigree was unblemished.

Wordsworth found in history an authoritative clue to present duty. His two most important practical works, 'Holy Communion,' originally a series of visitation addresses in 1891 (3rd edit. 1910), and his 'Ministry of Grace,' charges of 1901 (2nd edit. 1902) are laboriously historical in method. The last is a history of the Christian ministry which contains substantial additions to knowledge. If history revealed institutions to be accepted as authoritative, scripture was equally a succession of oracles to be interpreted, not to be criticised. Though in his later years Wordsworth ceased to share such fears as Liddon's, he was to the last very conservative in regard to criticism of the Bible.

In his preaching Wordsworth showed himself equally sure of his ground, scrip-

tural and historical, and spoke impressively and often with originality, although he sometimes forgot that his audience did not share his interests and his knowledge. Outside his own lines of reading, the literature that interested him was such as dealt with practical questions. His appetite for information was keen; the local and natural history of his diocese, for instance, became thoroughly familiar to him, and on most concrete topics he had something to impart. Though he was an accomplished critic and writer of Latin, style in English literature did not greatly interest him; in poetry he was chiefly attracted by the grave morality of his great-uncle, William Wordsworth. He is memorable chiefly for his efforts for the reunion of Christendom, which compare with those of Archbishop Wake, and for the scholarly work which places him among the masters in historical theology. He was made hon. LL.D. of Dublin in 1890, of Cambridge in 1908, and hon. D.D. of Berne in 1892. In 1905 he was chosen a fellow of the British Academy. He wrote in this Dictionary on Charles Wordsworth [q. v.] and on John Walker [q. v. Suppl. I].

The bishop died suddenly at his palace at Salisbury on 16 Aug. 1911, and was buried at Britford, near Salisbury. He married (1) in 1870, Susan Esther (*d.* 1894), daughter of Henry Octavius Coxo [q. v.]; (2) in 1896, Mary, daughter of Colonel Robert Williams, M.P., of Bridehead, Dorset, by whom he left four sons and two daughters.

His portrait was painted in duplicate in 1905 by Sir George Reid and presented to him by the diocese. One picture is in the Palace, Salisbury, the other belongs to Mrs. Wordsworth. It has been engraved. He is to be commemorated by a recumbent statue and by the erection of choir-stalls in Salisbury cathedral.

[Personal knowledge; The Times, 17 and 21 Aug. 1911; Salisbury Diocesan Gazette, Sept. to Dec. 1911 (articles by the Archbishop of Canterbury, the Principal of Brasenose, Miss E. Wordsworth, and others); Dr. H. J. White in Journal of Theolog. Studies, Jan. 1912, xiii. 201; Dr. W. Sanday in Proc. Brit. Academy, 1912; a biography by the present writer is in preparation.] E. W. W.

WORMS, HENRY DE, first BARON PIRBRIGHT (1840-1903), politician. [See DE WORMS.]

WRIGHT, CHARLES HENRY HAMILTON (1836-1909), Hebraist and theologian, born at Dublin on 9 March 1836, was second son in a family of ten children of Edward Wright, LL.D., barrister, of Floraville,

Donnybrook, co. Dublin, by his wife Charlotte, daughter of Joseph Wright of Beech Hill, Donnybrook. Edward Perceval Wright [q. v. Suppl. II] was his eldest brother. Charles was privately educated, and entered Trinity College, Dublin, on 1 July 1852. While still an undergraduate he actively engaged in religious controversy and propaganda on the protestant side, and in 1853 he wrote his first work, 'Coming Events; or, Glimpses of the Future,' as well as an anonymous attack on Roman catholicism, 'The Pope the Antichrist.' For a time Celtic philology occupied his attention. His early work in a field which was then little explored was seen to advantage in 'A Grammar of the Modern Irish Language' (1855; 2nd ed. 1860). But he soon turned to theology and oriental languages, which formed his main study through life. In 1856 he won the primate's Hebrew premium, graduating B.A. with a first class in the examination for the divinity testimonium in 1857. He was awarded the Arabic prize in 1859, proceeding M.A. in the same year, B.D. in 1873, and D.D. in 1879. He also took the degree of Ph.D. at Leipzig in 1875.

Meanwhile Wright had been ordained in 1859 to the curacy of Middleton-Tyas, Yorkshire; but though an earnest preacher he was unsuited to ordinary parochial work. Appointed in 1863 to the English chaplaincy at Dresden, he made the acquaintance of the leading German theologians, such as Delitzsch and Lechler. His protestant zeal gained him many adherents among the English residents, but offended the high church party, who successfully petitioned A. C. Tait, bishop of London, to appoint an additional chaplain. In 1868 Wright undertook the chaplaincy at Boulogne-sur-mer, where he ministered not only to British seamen but to the German prisoners during the Franco-Prussian war of 1870-1. Thanks to his efforts the English church was repaired, and a house was erected, which combined a sailors' institute with a chaplain's residence. Returning to Ireland, Wright served successively as incumbent of St. Mary's, Belfast (1874-85), and of Bethesda Church, Dublin (1885-91). In 1891 he accepted the benefice of St. John's, Liverpool, retiring in 1898, when the church was pulled down to make way for city improvements.

Meanwhile Wright's activities were by no means limited to clerical duty. Incorporated M.A. at Exeter College, Oxford, on 5 July 1862, he was elected Bampton lecturer for 1878, and chose as his subject

'Zechariah and his Prophecies' (published in 1879). At Dublin he delivered the Donellan lectures (1880-1), in which he expounded 'The Book of Ecclesiastes in Relation to Modern Criticism' (1883). In 1893 he renewed his connection with Oxford on his appointment as Grinfield lecturer on the Septuagint, and was re-elected to that office in 1895 for a further term of two years. He also frequently acted as examiner in Hebrew in the Universities of Oxford, London, Manchester, and Wales.

One of the last great militant protestants, Wright devoted himself with conspicuous ability to the cause of the Protestant Reformation Society, of which he was clerical superintendent (1898-1907). From his prolific pen there flowed a steady stream of pamphlets denunciatory of Roman catholicism; these included 'The Church of Rome and Mariolatry' (1893), 'Roman Catholicism' (1896; 4th edit. 1909), and some trenchant articles in 'A Protestant Dictionary' (1904), of which he was joint editor. Wright's scholarship and acumen as a controversialist were acknowledged even by his opponents. But he lacked the gifts that make for popularity and public recognition. He died at his house on Wandsworth Common on 22 March 1909. He married on 23 June 1859 Ebba, daughter of Professor Nils Wilhelm Almroth, governor of the Royal Mint, Stockholm. He left five sons, of whom Sir Almroth, the pathologist, Charles Theodore Hagberg, LL.D., the librarian of the London Library, and Eric Blackwood, chief justice of the Seychelles since 1905, have attained distinction.

Wright's numerous theological works, though never enjoying a wide circulation, were valued by conservative critics. At the same time he reserved his independence of judgment as to the historical value of certain portions of the Old Testament, including 'Jonah,' which he regarded as allegorical. He published, with critical notes, the Hebrew text of the books of Genesis (1859) and Ruth (1864), and translations of 'The Pentateuch' (1869). Other exegetical works were 'Biblical Essays . . . Studies on the Books of Job and Jonah' (1886); 'An Introduction to the Old Testament' (Theological Educator, 1890; 4th edit. 1898); 'Daniel and his Prophecies' (1906), and 'Light from Egyptian Papyri on Jewish History before Christ' (1908). He also translated 'The Writings of St. Patrick' (1887), in collaboration with George Thomas Stokes [q. v. Suppl. I].

[The Times, 24 March 1909; Guardian, 31 March 1909; Mrs. C. H. H. [Ebba] Wright, *Sunbeams on my Path*, 2nd edit. 1900; private information from Dr. Hagberg Wright.]

G. S. W.

WRIGHT, EDWARD PERCEVAL (1834-1910), naturalist, born in Dublin on 27 Dec. 1834, was eldest son of Edward Wright, LL.D., barrister, of Floraville, Donnybrook, by his wife Charlotte, daughter of Joseph Wright of Beech Hill, Donnybrook. Charles Henry Hamilton Wright [q. v. Suppl. II] was a younger brother. Edward was educated at home, and began the study of natural history under Prof. George James Allman [q. v. Suppl. I] before he entered Trinity College, Dublin, at the end of 1852. In 1854 he commenced the publication of the quarterly 'Natural History Review,' which he continued to edit until 1866. His earliest papers contributed to this journal are of a varied character, dealing with rare Irish birds, fungi parasitic upon insects, the collecting of mollusca, and a disease of the minnow. Between 1856 and 1859 he also contributed a series of papers to the Dublin Natural History Society on the British filmy ferns. In 1857 he visited the Mitchelstown caves, where his discovery of blind springtails first showed the interest attaching to the living cave-fauna of Ireland. In the same year he graduated B.A., was made director of the university museum, and became a member of the Royal Irish Academy. In 1858 he was appointed lecturer in zoology in Trinity College, a post which he held for ten years, and was made lecturer in botany in the medical school of Dr. Steevens's Hospital. He was also elected secretary to the Royal Geological Society of Ireland. Wright had taken part in the meeting of the British Association in Dublin in 1857, and at the association's next meeting, at Leeds in 1858, he, in conjunction with Joseph Reay Greene, presented a 'Report on the Marine Fauna of the Irish coast'; he acted as secretary to Section D for that and succeeding years. To the 'Proceedings' of the Dublin University Zoological and Botanical Association, of which he was secretary, he contributed in 1859 papers on Irish Actinidæ and Irish Nudibranchs.

Meanwhile Wright, who had proceeded M.A. in 1859, taking an *ad eundem* at Oxford, continued his medical studies, and graduated M.D. in 1862. Determining to practise as an oculist, he visited for special study the medical schools of Berlin, Vienna, and Paris, publishing in 1864, from

the German of F. C. Donders, 'The Pathogeny of Squint,' and a paper in 1865 on 'A Modification of Liebreich's Ophthalmoscope.' On his appointment as locum tenens for William Henry Harvey [q. v.], professor of botany at Trinity College (1865), he abandoned ophthalmic surgery for science (1866). He described the flora of the Aran Islands in Galway Bay after a visit in 1865 (see *Journ. Bot.* 1867; *Proc. Dublin Nat. Hist. Soc.* 1869), and in conjunction with Huxley the fossils of the Barrow colliery in Kilkenny (*Geol. Mag.* vol. iii. 1865; *Trans. Royal Irish Acad.* vol. xxiv. 1871).

In 1867 Wright paid a six months' visit to the Seychelles; and, although his collecting apparatus was lost by shipwreck on the way out, he brought back an important collection of plants and animals (see *Annals and Mag. Nat. Hist.; Trans. Roy. Irish Acad.*). He spent the spring of 1868 in Sicily and the autumn of the same year in dredging off the coast of Portugal, describing his results in attractive papers.

In 1869 Wright was appointed professor of botany and keeper of the herbarium at Trinity College. As a teacher he was fluent, energetic, and thorough; but he bestowed his chief care upon the arrangement of the herbarium. His continued interest in zoology was shown by his 'Notes on Sponges,' especially those of Ireland (*Proc. Roy. Irish Acad.; Quarterly Journal of Microscop. Science*); in his revision of Figuier's 'Ocean World' for Messrs. Cassell in 1872; in his adaptation of the same author's 'Mammalia' in 1875; in the 'Concise Natural History' of 1885; and, above all, in his report, in conjunction with Dr. T. L. Studer, on the Alcyonaria of the Challenger expedition (vol. xxxi. 1880).

Elected to the council of the Royal Irish Academy in 1870, he acted as secretary from 1874 to 1877, and from 1883 to 1899, carefully supervising the publications. In 1883 he was awarded the Cunningham gold medal [see CUNNINGHAM, TIMOTHY].

Besides his professional studies Wright took a keen interest in archæology, and from 1900 to 1902 he was president of the Royal Society of Antiquaries of Ireland. He spent many vacations on the continent of Europe, and was lamed for life in a carriage accident in Switzerland. In politics he was a strong radical. Owing to heart weakness, he resigned his chair in 1904, but continued to superintend the herbarium, living in his rooms in Trinity

College and maintaining his interest in his varied studies. He died of bronchitis at Trinity College, Dublin, on 2 March 1910, and was buried at Mount Jerome, Dublin. He married in 1872 Emily, second daughter of Colonel Ponsonby Shaw; she died without issue in 1886.

G. S. B.

WRIGHT, SIR ROBERT SAMUEL (1839-1904), judge, born at Litton rectory on 20 Jan. 1839, was eldest son of Henry Edward Wright, rector of Litton, Somerset, by his wife, a daughter of the Rev. Edward Edgell. Educated at King's School, Bruton, Somerset, he matriculated as a commoner at Balliol College, Oxford, on 6 June 1856, at the early age of seventeen, and in 1857 was elected a scholar. Benjamin Jowett was his tutor, and he became one of Jowett's favourite pupils, continuing his intimate friend until Jowett's death, which took place at Wright's house, Hadley Park, in 1893. In the Easter term, 1859, Wright was placed in the first class in classical moderations, and in Michaelmas term, 1860, in the first class in the final classical school. He obtained university prizes for Latin verse in 1859 and for the English essay in 1861, and the Arnold essay, his subject being 'The Danube as connected with the Civilisation of Central Europe,' in 1862. He was Craven scholar in 1861, and in the same year was elected to a fellowship at Oriel College. This he held until 1880. He graduated B.A. in 1861, proceeding B.C.L. in 1863, and M.A. in 1864. He remained at Oxford until 1865, occupying himself in private tuition and classical studies. During this period he published the 'Golden Treasury of Ancient Greek Poetry' (1866), subsequently revised (in 1889) by Evelyn Abbott [q. v. Suppl. II], and in collaboration with J. E. L. Shadwell, Christ Church, the 'Golden Treasury of Ancient Greek Prose' (1870). In 1882 he was elected honorary fellow of Oriel. Wright had become a student of the Inner Temple on 20 Nov. 1861, and was called to the bar on 9 June 1865. Removing to London, he speedily obtained a considerable junior practice both in London and on the northern circuit. In 1873 he published a short volume on the 'Law of Conspiracies and Agreements,' and in 1884, together with Henry Hobhouse, an 'Outline of Local Government and Taxation in England.' Subsequently he had occasion to study the thorny subject of

possession in connection with the criminal law, and as Sir Frederick Pollock, then Corpus professor at Oxford, was doing the same thing in preparation for his standard work on the law of tort, they jointly produced a volume entitled 'An Essay on Possession in the Common Law' (Oxford, 1888). It is 'a composite not a joint work.' Wright's share, part iii., which is nearly half of the whole, relates to possession in respect of criminal offences against property. The subject is one of extreme complexity and much difficulty. Wright treats it with abundant learning and ingenuity, and though his essay is not sufficiently lucid or complete to take a place among the greatest legal treatises of the century, it may be said that there was not previously, and has not been since, any work containing a fuller or more accurate statement of this particular part of the law. In 1883 the attorney-general Henry (afterwards Lord) James [q. v. Suppl. II] appointed Wright junior counsel to the treasury ('attorney-general's devil') in succession to (Sir) Archibald Levin Smith [q. v. Suppl. II]. In that capacity he appeared as one of the counsel for the crown in some of the prosecutions of Fenian conspirators for treason-felony in connection with the dynamite explosions of 1883 and 1884, but the bulk of his labours was little known to the general public. Wright stood without success as a liberal candidate for parliament in 1884 for Norwich and in 1886 for Stepney. In Dec. 1890 Lord Halsbury appointed him a judge of the queen's bench division in succession to Baron Huddleston. His simple tastes and radical opinions made him unwilling to accept the honour of knighthood, but it was conferred in April 1891. In June 1891 Wright became a bencher of the Inner Temple.

Wright's great learning and his swift and keen intelligence were well fitted for a court of appeal. For real success in a court of first instance he lacked patience, stolidity, and willingness to listen without open disagreement to contentions which appeared to him to be groundless. He always thought quickly and often spoke hastily, not infrequently committing himself thereby to blunders which a man of less ability but more equable temper would easily have avoided. Both in criminal work and at *nisi prius* these weaknesses considerably impaired his efficiency. On the other hand he had not many superiors in the decision of a difficult question of law involving the examination and com-

parison of a great mass of authorities. His judgment in *The British South Africa Company v. Companhia de Moçambique*, which was reversed by the court of appeal, and restored, with strong expressions of approval, by the House of Lords, is an example of his judicial power at its best. He was one of the judges requested by the House of Lords to give their opinions in the great case of *Allen v. Flood* in 1897. He and Mr. Justice Mathew differed from their brethren in holding that the trade combination in question was not made unlawful by the fact that it was intended to injure and did injure another person for the benefit of those who combined. The House of Lords upheld this view.

Wright's ability and possibly his limitations led to his frequent selection to sit as an extra chancery judge, as judge in bankruptcy, and as the judicial member of the railway commission. It was in the first-named of these capacities that he decided in Jan. 1893 the important case of *Samuel Hope and Arnold Morley v. William H. Loughnan and his brothers*, in which, with the approval of the profession and the public, he set aside gifts amounting to nearly 150,000*l.*

During the later years of his life Wright lived at Hadley Park, Hampshire, where he carried on the affairs of his home farm in the form of a small republic with himself as permanent president. Seated under a tree, he would invite the opinions of his labourers, and decide upon the course to be pursued in greater or less accordance with the sentiments of the meeting. He had the tastes of a sportsman, and being fond of shooting it was his habit to sue poachers in the county court for nominal damages and an injunction—the breach of which would lead to the imprisonment which he considered too harsh a penalty to be indiscriminately enforced.

After an operation in May 1904 Wright sent his resignation to the lord chancellor, but in the hope of his recovery it was not accepted. He was not, however, able to resume his labours, and died at Hadley on 13 Aug. 1904, and was buried there. He married in 1891 Merriel Mabel Emily, daughter of the Rev. Richard Seymour Chermiside, prebendary of Salisbury, and had two sons, of whom the younger, Michael Robert (b. 1901), survives.

A caricature appeared in 'Vanity Fair' in 1891.

Abbott and Campbell's Life of Jowett; personal knowledge.] H. S.

WRIGHT, WHITAKER (1845-1904), company promoter, was born in the north of England on 9 Feb. 1845, and at the age of twenty-one, equipped with some knowledge of inorganic chemistry and assaying, started as an assayer in the United States, and invested in a few mining shares in the west. He next bought a claim for 500 dollars, and by the sale of a half share in it covered all his outlay and provided working capital. The mine proved successful, and was the foundation of his fortune; to use his own words, 'after the first 10,000 dollars was made, the rest was easy.' He was one of the pioneers of the mining boom in 1879 at Leadville, where he made and lost two fortunes. Leaving Leadville, he acquired the Lake Valley mine in New Mexico, and built a branch railway to it. After these western adventures he came east and settled in Philadelphia, was for many years a member of the American Institute of Mining Engineers, and became chairman of the Philadelphia Mining Exchange; he was also a member of the Consolidated Stock Exchange of New York. At the age of thirty-one he was more than a millionaire. He had now resolved to retire from business, but his American career ended disastrously, owing to the failure of the Gunnison Iron and Coal Company, in which he was largely involved, and the great depreciation in other securities.

Returning to England in 1889, he brought out the Abaris Mining Corporation in 1891, but this enterprise gained little market or public attention, and was wound up in 1899. He became better known as a company promoter in 1894, when he floated the West Australian Exploring and Finance Corporation, a promoting concern. Next year he brought out a like venture, the London and Globe Finance Corporation. Both companies had for a time very prosperous careers. Wright's profits from these two undertakings were 238,436*l.* The times were favourable to Wright's special qualifications. He had personal knowledge of mining camps, could talk of them plausibly, and from his experience in Philadelphia knew the weak points of the average speculator. During 1896 the Lake View Consols was floated by the London and Globe with a capital of 250,000*l.* Other companies were formed for opening up mines in Western Australia, the most notable being Mainland Consols, Paddington Consols, and Wealth of Nations.

Early in 1897 he acquired the assets of the two companies, the London and Globe and the West Australian, and floated a new combination as the London and Globe Finance Corporation, of which he became the managing director. The new company had a capital of 2,000,000*l.* in 1*l.* shares, of which Wright received 605,000*l.* The names of the Marquis of Dufferin as chairman and of Lord Loch as a director were substantial assets; the shares went up to 2*l.*, and the promotion work of the new company was very profitable. It acquired the Ivanhoe mine at Kalgoorlie from a small colonial company with a capital of 50,000*l.* and refloated it in London with a capital of 1,000,000*l.* in 5*l.* shares, the issue being a great success. Meanwhile (in October 1897) Wright started the British America Corporation with a capital of 1,500,000*l.* to acquire mining interests in British Columbia and the Yukon region. This company and the Globe became jointly interested in floating the East and West Le Roy companies, the Rossland Great Western, Kootenay, Caledonia Copper, Nickel Corporation, Loddon Valley, and other companies, the shares of each reaching substantial premiums. Wright's personal gain from these operations was 50,000*l.*, apart from the profit obtained by his companies. In Feb. 1898 he started the Standard Exploration Company to take over the Paddington Consols, Wealth of Nations, and several other companies floated by the original undertakings, which had become unsuccessful.

Nearly all these undertakings were worked by one office (43 Lothbury), with a single staff of clerks, and were under Wright's direct control. The shares of the new London and Globe proved a popular instrument of speculation. The company constantly engaged in large market operations in shares of the companies under Wright's control, particularly the Lake View Consols. Alarming reports were occasionally spread as to the company's financial position; the Baker Street and Waterloo Railway Company, which was one of its promotions, was known to be a severe drag upon its resources. In spite, however, of evil reports, the Globe continued to pay small dividends at intervals until October 1899. During that year Lake View shares rose from 9*l.* to 28*l.* through the discovery of a rich patch of ore, the Globe making large profits in the shares. A sharp reaction soon set in, based on the knowledge that the rich find was exhausted. Wright, apparently misled as to the condi-

tion of the mine, made strenuous efforts to support the market. The results were disastrous to himself and to the company, which lost three-quarters of a million in Lake View shares in 1899. The crisis was reached on 28 Dec. 1900, when the Globe company announced its insolvency, and the Standard Exploration Company which was involved in the commitments of the Globe went also into liquidation. The disaster involved the failure of many members of the Stock Exchange, the liquidation of many subsidiary companies, including the British America Corporation, and the ruin of numerous small investors. The reports of the official receiver showed that the companies had long been on a false financial basis, the accounts having been manipulated in such a way as to conceal deficits, and the dividends paid by the Globe not having been earned but provided by means of loans from Wright and the other companies. The resources of practically all the undertakings under his control had been employed in his recent Stock Exchange operations.

In 1902 his fellow directors of the London and Globe Finance Corporation brought an action against the promoters of the Lake View syndicate for the recovery of 1,000,000*l.*, of which they had been deprived by misrepresentation. The case was heard before Lord Alverstone, lord chief justice, in June 1902. Wright was a chief witness for the plaintiffs. After a nine days' trial, a verdict was given for the defendants.

Meanwhile Wright had been examined before the official receiver in the London and Globe liquidation, but the public prosecutor refused to institute criminal proceedings. Public indignation was aroused, and on 19 Feb. 1902 an amendment to the address was moved in the House of Commons by Mr. George Lambert expressing regret that no prosecution had been instituted against the directors. The law officers stated that in the present state of the law a prosecution could not be confidently undertaken, but Sir Edward Carson, the solicitor-general, expressed his belief that a false balance-sheet had been issued. Mr. Balfour, the leader of the House of Commons, admitted the existence of 'deep and profound indignation' among the public, and promised that the law should be amended. Finally, Mr. John Flower, a creditor, obtained from Mr. Justice Buckley on 11 March 1903 an order for the official receiver to prosecute, and a warrant for the arrest of Wright was issued. Wright had sailed four days before from Havre to New York, where he was arrested by warrant on

15 March and imprisoned. After resisting extradition for some months by every legal artifice, he suddenly resolved on 6 July voluntarily to return to England, where he arrived on 5 August.

Protracted proceedings at the Guildhall ended in his committal for trial. The trial, which began on 11 Jan. 1904, was held for greater convenience at the law courts instead of at the Old Bailey. The prosecution was not under any of the Joint Stock Companies Acts, but under the Larceny Act of 1861. The issues were directed to the questions whether the balance-sheets and reports of the London and Globe Company for the years 1899 and 1900 were false in material particulars; whether they were false to the knowledge of Whitaker Wright; and if so, whether these false accounts and false reports were published for the purpose of deceiving shareholders or defrauding creditors or inducing other persons to become shareholders. The judge was Mr. Justice Bigham, afterwards Baron Mersey. (Sir) Rufus Isaacs, K.C., conducted the prosecution, and Wright was brilliantly defended by (Sir) John Lawson Walton [q. v. Suppl. II]. The prosecuting counsel alleged that 5,000,000*l.* capital had been lost in two years, not a penny of which had been returned to the shareholders, whilst debts of about 3,000,000*l.* had been contracted besides. On 26 Jan. Wright was convicted on all counts and sentenced to the maximum penalty of seven years' penal servitude. After receiving sentence he was talking with his legal adviser Sir George Henry Lewis [q. v. Suppl. II] in the consultation room, when he suddenly died. At the inquest on 28 Jan. it was shown that he poisoned himself with cyanide of potassium. He was buried at Witley, and left a widow, a son, and two daughters.

Wright acquired for his country residence a large estate at Lea Park, Witley, Surrey, four miles from Godalming. There he surrounded himself with extravagant luxuries, erecting a well-equipped observatory and a private theatre. He constantly devised new effects in architecture and landscape gardening; hills which obstructed views were levelled, and armies of labourers employed to fill up old lakes and dig new ones. He was fond of billiards, which he played in a saloon constructed of glass beneath one of the wide sheets of water in his grounds. After Wright's death the property was acquired by Lord Pirrie. Wright had also a palatial residence in Park Lane, filled with art treasures. As a yachtsman he gained great notoriety by

his yawl *Sybarita*. Wright's persuasive manners and his abilities as a public speaker were turned to good account at shareholders' meetings, and inspired confidence in his most disastrous undertakings. He bequeathed his estate valued at 148,200*l.* to his wife Anna Edith, whom he made sole executrix.

[Annual Register, 1903, p. 24; 1904, p. 17; Saturday Review, xcvii. 133; Illustr. London News, 30 Jan. 1904; The Times, 20-27 Jan. 1904; Financial Times, 27 Jan. 1904; Star, 27 Jan. 1904; Blackwood's Magazine, clxxv, 397.]

WROTH, WARWICK WILLIAM (1858-1911), numismatist, born at Clerkenwell, London, on 24 Aug. 1858, was eldest son in the family of four sons and four daughters of Warwick Reed Wroth (1824-1869), vicar from 1854 to his death of St. Philip's, Clerkenwell (see preface to WROTH'S *Sermons, chiefly Mystical*, edited by J. E. Vaux, 1869). His mother was Sophia, youngest daughter of Thomas Brooks, of Ealing, Middlesex.

After education at the King's School, Canterbury, where he had a sound classical training, Wroth joined the staff of the British Museum as an assistant in the medal room on 22 July 1878, and held the post for life. He mainly devoted his energies to a study of Greek coins, and made a high reputation by his continuation of the catalogues of Greek coins at the museum which his predecessors, S. L. Poole, Mr. Barclay Head, and Mr. Percy Gardner, had begun. Wroth's catalogues, in six volumes all illustrated with many plates, dealt with coins of Eastern Greece beginning with those of 'Crete and the Aegean Islands' (1886), and proceeding with those of 'Pontus, Paphlagonia, Bithynia and the Kingdom of Bosphorus' (1889); of 'Mysia' (1892); of 'Galatia, Cappadocia and Syria' (1899); of 'Troas, Aeolis and Lesbos' (1894); and finally of 'Parthia' (1903). Subsequently he prepared catalogues, which also took standard rank, of 'Imperial Byzantine Coins' (2 vols. 1908) and of the coins of the 'Vandals, Ostrogoths and Lombards' (1911). Before his death he returned to Greek coinage, and was preparing to catalogue that of Philip II and Alexander III, and the later kings of Macedon.

Outside his numismatic work at the museum, Wroth made between 1882 and 1907 valuable contributions to the 'Journal of Hellenic Studies' and the 'Numismatic Chronicle.' To the 'Journal' he contributed in 1882 'A Statue of the Youthful

Asklepios' (pp. 46-52) and 'Telesphoros at Dionysopolis' (pp. 282-300). For the 'Numismatic Chronicle' he wrote also in 1882 on 'Asklepios and the Coins of Pergamon' (pp. 1-51); on 'Cretan Coins' in 1884 (pp. 1-58), and several papers on 'Greek Coins acquired by the British Museum, 1887-1902' (1888-1904). He also co-operated with Mr. Barclay Head in 1911 in a new edition of Head's 'Historia Numorum' (1887). Wroth was a regular contributor of memoirs, chiefly of medallists, to this Dictionary from its inception in 1885 until his death.

Wroth's interests were not confined to numismatics. He was an eager student of English literature, especially of the eighteenth century; he had a wide knowledge of the history of London, of which he owned a good collection of prints. With his brother, Arthur Edgar Wroth, he published in 1896 'The London Pleasure Gardens of the Eighteenth Century,' a scholarly and pleasantly written embodiment of many years' research. This was supplemented by a paper on 'Tickets of Vauxhall Gardens' (*Numismatic Chron.* 1898, pp. 73-92) and by 'Cremorne and the Later London Gardens' (1907). He was elected F.S.A. on 7 March 1889.

Wroth died unmarried at his residence at West Kensington after an operation for peritonitis on 26 Sept. 1911.

[The Times, 28 and 29 Sept. 1911; Brit. Mus. Cat.; private information; Athenæum, 30 Sept. 1911; Numismatic Chron. 1912, 107 seq. (memoir by G. F. Hill with bibliography by J. Allan).] W. B. O.

WROTTESELEY, GEORGE (1827-1909), soldier and antiquary, born at 5 Powys Place, London, on 15 June 1827, was third son of John, second baron Wrottesley [q. v.], by Sophia Elizabeth, third daughter of Thomas Giffard of Chillington. He was educated at the Blackheath Proprietary School. Entering the Royal Military Academy, Woolwich, in 1842, he obtained a commission in the royal engineers in 1845. He was ordered almost immediately to Ireland in connection with the famine relief works, and thence in 1847 to Gibraltar, where he remained till 1849. In 1852 he joined the ordnance survey. He took part in the Crimean war, sailing for the Dardanelles on survey work in January 1854. With Sir John Fox Burgoyne [q. v.] he went on the mission to Omar Pascha at Shumla. He afterwards became A.D.C. to General Tylden, officer commanding royal engineers in Turkey, and in this capacity he accom-

panied Lord Raglan to Varna. He was engaged at Varna on plans and reports on the Turkish lines of retreat from the Danube, when he was struck down by dysentery, which ultimately caused complete deafness. In October 1854 he was invalided home and promoted to captain. On Sir John Burgoyne's return from the Crimea to the war office in 1855 as inspector-general of fortifications, Captain Wrottesley was appointed his A.D.C., and he stayed with the field marshal, acting continually as his secretary on commissions and confidential adviser till Burgoyne's retirement in 1868. Wrottesley accompanied Burgoyne to Paris in 1855, when he presented to Napoleon III the funeral car of Napoleon I from St. Helena. He was secretary of the defence committee of the war office, 1856-60; of the committee on the influence of rifled artillery on works of defence, 1859; and of the committee on the storage of powder in magazines, 1865. In 1863, being then a major, he presided over the committee on army signalling which introduced the use of the Morse system. He was made lieutenant-colonel in 1868, and on Burgoyne's retirement took over the command of the engineers at Shorncliffe. In 1872 he commanded at Greenwich, and in 1875 became officer commanding R.E. at Woolwich, retiring from the army in 1881 with the rank of major-general.

Wrottesley collected and edited 'The Military Opinions of Gen. Sir J. F. Burgoyne' in 1859; and published 'Life and Correspondence of Field Marshal Sir J. F. Burgoyne' (2 vols.) in 1873. But his principal literary interest lay in genealogy. In 1879 he founded with Robert William Eytton [q. v.] the William Salt Society, of which he was honorary secretary from 1879 till his death. His abundant genealogical labour is embodied in the thirty-four volumes of the 'Staffordshire Collections' of the society. His most important contributions were those on the 'Liber Niger' (1880), his 'Pleas of the Forest' (1884), the 'Military Service of Knights in the 13th and 14th centuries, Creçy and Calais' (1897). The last, together with 'Pedigrees from the Plea Rolls,' 'The Giffards from the Conquest' (1902), 'The Wrottesleys of Wrottesley' (1903), 'The Okeovers of Okeover' (1904), and 'The Bagots of Bagots Bromley' (1908), were republished separately. These four family histories are so contrived as to form national histories in miniature. Wrottesley shares with Eytton the credit of initiating the modern method of genealogy. In com-

paring the two Mr. J. Horace Round says: 'Wrottesley's own critical sense was, I think, more developed . . . for no genealogist, perhaps, could claim with better reason that he placed truth foremost.' He had, too, that other virtue of the new school, the power of tacking on private history to public events in such a way as to give to the narration its reality and significance. He died on 4 March 1909, and is buried in the Wrottesley vault in Tottenhall church. He married (1) on 7 Jan. 1854 Margaret Anne, daughter of Sir John Fox Burgoyne; she died on 3 May 1883; and (2) on 21 Feb. 1889 Nina Margaret, daughter of John William Philips of Heybridge, Staffordshire, who survived him. He had no issue by either marriage.

[Salt Society, vols. i.-xviii. and i.-xii. n.s.; Genealogist, n.s. xxvi. 1909; Burgoyne's Life, 1873; J. H. Round, Staff. Cols. vol. 1910.]

J. C. W.

WYLLIE, SIR WILLIAM HUTT CURZON (1848-1909), lieutenant-colonel in the Indian army and of the government of India foreign department, born at Cheltenham on 5 Oct. 1848, was third and youngest son of the five children of General Sir William Wyllie, G.C.B. [q. v.], by Amelia, daughter of Richards Hutt of Appley, Isle of Wight, and niece of Captain John Hutt, R.N. [q. v.]. Both his brothers served in India—John William Shaw Wyllie [q. v.] and Francis Robert Shaw Wyllie, some time under-secretary to the government of Bombay.

Educated at Marlborough and Sandhurst, he entered the army in Oct. 1866 as ensign 106th foot (the Durham light infantry). Arriving in India Feb. 1867, he joined the Indian staff corps in 1869, and was posted to the 2nd Gurkha regt. (the Sirmoor rifles), now the 2nd King Edward's own Gurkhas. He was specially selected for civil and political employment in 1870, when he was appointed to the Oudh commission and served under General Barrow and Sir George Couper [q. v. Suppl. II].

In Jan. 1879 he was transferred to the foreign department, serving successively as cantonment magistrate of Nasirabad, assistant-commissioner in Ajmer-Merwara, and assistant to the governor-general's agent in Baluchistan, Sir Robert Groves Sandeman [q. v.]. He went through the Afghan campaign of 1878-80, including the march on Kandahar, with Major-general Sir Robert Phayre. He received the medal and was mentioned in the viceroy's despatches. After the war he was military secretary to his brother-in-law, William

Patrick Adam, governor of Madras [q. v.], from Dec. 1880 until Adam's death in the following May, and until Nov. 1881 he was private secretary to Mr. William Hudleston (acting governor).

He married on 29 December 1881 Katharine Georgiana, second daughter of David Fremantle Carmichael, I.C.S., then member of the council, Madras, who survives him.

Wyllie had charge of Mulhar Rao, the ex-Gaekwar of Baroda, from Dec. 1881 to Nov. 1882. He then became assistant resident at Haiderabad. Subsequently he was assistant commissioner, Ajmer-Merwara, 1883; first assistant in Rajputana, 1884; additional political agent, Kotah, April 1885; boundary settlement officer, Meywar-Marwar border, Nov. 1886; political agent, Kotah, Jan. 1889; officiating commissioner of Ajmer, July 1891; officiating political agent, Jhallawar, in addition to Kotah, 1891-2; resident western states of Rajputana (Jodhpur), 1892-3; resident in Meywar (Udaipur), Nov. 1893 to Feb. 1898, when he officiated as resident in Nepal. Later in 1898 he attained one of the highest appointments in the service, viz. that of agent to the governor-general in central India. In May 1900 he was transferred in the same capacity to Rajputana, where he remained during the rest of his service in India. He was made C.I.E. in 1881, and he attained his lieutenant-colonelcy in 1892.

Throughout his long and varied services in the native states of India, and more especially in Rajputana, where seventeen of the most strenuous years of his life were spent, he gained by his unfailing courtesy, his charm of manner, and above all by his high character and strength of purpose, the most remarkable influence over the chiefs and officials of the principalities under his administrative charge. In addition Wyllie had the reputation, so dear to all Rajputs, of a keen sportsman and a skilful and daring rider, who held as a trophy the blue riband of Indian sportsmen, the Hog-hunters' Ganges cup, which he won in Oudh in April 1875.

His example stimulated all who served under him, and it was owing to his energy and to the confidence placed in him by the princes and people of Rajputana that the calamity of famine during the years 1899-1900 was successfully overcome by the measures of relief which he organised.

In March 1901 he came home on being selected by Lord George Hamilton for the post of political aide-de-camp to the secretary of state for India. His knowledge of India and long association with

the ruling chiefs and their courts admirably fitted him for the important and often delicate duties of the office, which included that of advising the secretary of state for India on political questions relating to the native states. Arrangements for the reception of Indian magnates at the English court were in his charge, and heavy work devolved upon him at King Edward VII's coronation in 1902, in which year he received the decorations of K.C.I.E. and M.V.O. He became C.V.O. in June 1907.

His official position brought him into close contact with Indian students, in whose welfare he was always deeply interested. He also took an active part in the work of associations and charities for the benefit of Indians. To these objects he devoted himself unsparingly.

It was while attending, with Lady Wyllie, an entertainment given to Indians by the National Indian Association at the Imperial Institute, London, on the night of 1 July 1909, that Wyllie was assassinated, almost under the eyes of his wife, by Madho Lal Dhingra, a Punjabi student, who suddenly fired at him with a revolver, killing him instantly. This insane outrage upon an innocent and true friend of Indians was the precursor of similar crimes committed in India. Dr. Cawas Lalca, a Parsi physician of Shanghai, who bravely interposed to save Wyllie, was also mortally wounded. Dhingra was convicted of the double crime at the Central Criminal Court on 23 July, and was hanged at Pentonville prison on 17 August.

Wyllie's tragic death was felt as deeply in India as at home. Flags were put at half-mast, and public offices were closed throughout Rajputana and central India on reception of the news; and on the day of Wyllie's funeral (in Richmond cemetery) a salute of thirteen guns was fired from the palace fortresses of Rajputana. Viscount Morley, the secretary of state in council, recorded 'his high appreciation of Wyllie's admirable services,' and his 'profound sense of the personal loss' sustained by himself and his colleagues 'by the blind, atrocious crime.' He also granted a special pension of 500*l.* to Lady Wyllie 'in recognition of her husband's long and excellent service to the state, and in view of the circumstances in which he met his death.' Memorial funds were raised both in England and in India. From the English fund a marble tablet erected in the crypt of St. Paul's Cathedral was unveiled by Earl Roberts on 19 Oct. 1910, in the presence, among others, of the three

successive secretaries of state (Lord George Hamilton, Viscounts Midleton and Morley) whom Wyllie had served at the India office. An inscription beneath a portrait medallion was written by Lord Curzon of Kedleston. The balance, 2551*l.*, the 'Curzon Wyllie memorial fund,' was entrusted to the Strangers' Home for Asiatics, Limehouse, on the governing body of which he had served. A brass tablet was also placed in the central hall of the home. At Marlborough College there was founded a Curzon Wyllie memorial medal to be given annually to the most efficient member of the officers' training corps. In India the Curzon Wyllie Central Memorial Fund committee have erected at a cost of 2000*l.* a marble *aramgarh* (place of rest) in Ajmer, Rajputana, to provide shade and rest and water for men and animals. A portrait by Mr. Herbert A. Olivier, exhibited at the Royal Academy of 1910, was presented to Lady Wyllie by the same committee; a replica has been placed in the Mayo college for chiefs at Ajmer. Local memorials have also been instituted in many of the states of Rajputana and central India.

WYON, ALLAN (1843-1907), medallist and seal-engraver, born in 1843, was the son of Benjamin Wyon [q. v.], chief engraver of the royal seals, and the younger brother of Joseph Shepherd Wyon [q. v.] and Alfred Benjamin Wyon [q. v.]. He was early taught the arts hereditary in his family, and for a time aided his brother Joseph in his medal-work. From 1884 till his death he carried on in London the business of the Wyon firm of medallists and engravers founded by his grandfather, Thomas Wyon the elder [q. v.]. From 1884 to 1901 he held the post of engraver of the royal seals, a post that had been successively held by his father and his two elder brothers. He made the episcopal seals for the archbishops of Canterbury and York; the seal for the secretary of Scotland in 1889, and the great seal of Ireland in 1890. The great seal of Queen Victoria of 1899 was the work of George William De Saulles [q. v. Suppl. II]. Among Wyon's medals may be mentioned: Sir Joseph Whitworth (commemorating the Whitworth scholarships founded 1868); the Royal Jubilee medal of 1887; Charles Darwin (Royal

Society medal, first awarded 1890); Professor Max Müller, *circ.* 1902. He signed in full 'Allan Wyon.'

Wyon was a fellow of the Society of Antiquaries (elected 1889) and of the Numismatic Society of London (elected 1885), and was at one time treasurer and vice-president of the British Archaeological Association. He compiled and published 'The Great Seals of England' (1887, with 55 plates), a work begun by his brother

Alfred. Wyon died at Hampstead on 25 Jan. 1907. He married in 1880 Harriet, daughter of G. W. Gairdner of Hampstead, and had three daughters and two sons; the elder son is Mr. Allan G. Wyon, the medallist, seal-engraver, and sculptor.

[Numismatic Chronicle, 1907, p. 32; Proc. Soc. Antiquaries, April 1907, p. 439; Manchester Courier, 26 Jan. 1907; Hocking, Catalogue of Coins, etc., in Royal Mint, vol. ii.; information from Mr. Allan G. Wyon.] W. W.

Y

YEO, GERALD FRANCIS (1845-1909), physiologist, born in Dublin on 19 January 1845, was second son of Henry Yeo of Ceanchor, Howth, J.P., clerk of the rules, court of exchequer, by his wife Jane, daughter of Captain Ferns. Yeo was educated at the royal school, Dungannon, and at Trinity College, Dublin, where he graduated moderator in natural science in 1866, proceeding M.B. and M.Ch. in 1867. In 1868 he gained the gold medal of the Dublin Pathological Society for an essay on renal disease. After studying abroad for three years, a year each in Paris, Berlin, and Vienna, he proceeded M.D. at Dublin in 1871, and became next year M.R.C.P. and M.R.C.S.Ireland. For two years he taught physiology in the Carmichael school of medicine in Dublin. He was appointed professor of physiology in King's College, London, in 1875, and in 1877 assistant surgeon to King's College Hospital, becoming F.R.C.S.England in 1878. He delivered for the College of Surgeons the Arris and Gale lectures on anatomy and physiology in 1880-2. Yeo did much good work with (Sir) David Ferrier, a fellow professor of neuro-pathology at King's College, on the cerebral localisation in monkeys, but he was best known from 1875 as the first secretary of the Physiological Society, which was originally a dining club of the working physiologists of Great Britain. Yeo conducted the society's affairs with tact and energy until his resignation in 1889, when he was presented with a valuable souvenir of plate. In conjunction with Professor Kröneckner of Berne, Yeo inaugurated the international physiological congresses which are held triennially; the first met at Basle in 1891.

Yeo was elected F.R.S. in 1889. He resigned his chair of physiology at King's College in 1890 and received the title of

emeritus professor. He then retired to Totnes, Devonshire, and later to Fowey, where he devoted himself to yachting, fishing, and gardening. He died at Austin's Close, Harbertonford, Devonshire, on 1 May 1909. Yeo married (1) in 1873 Charlotte, only daughter of Isaac Kitchin of Rockferry, Cheshire (she died without issue in 1884); (2) in 1886 Augusta Frances, second daughter of Edward Hunt of Thomastown, co. Kilkenny, by whom he had one son.

Yeo, who was a fluent speaker with a rich brogue, was good-natured, generous, and full of common sense.

His 'Manual of Physiology for the Use of Students of Medicine' (1884; 6th edit. 1894) was a useful and popular textbook. He contributed numerous scientific papers to the 'Proceedings and Transactions of the Royal Society' and to the 'Journal of Physiology.'

[Cameron's History of the Royal College of Surgeons of Ireland, Dublin, 1886, p. 682; Brit. Med. Journal, 1909, i. 1158; Dublin Journal of Medical Science, vol. cxxvii. 1909 ad fin.; personal knowledge.]

D'A. P.

YONGE, CHARLOTTE MARY (1823-1901), novelist, and story-teller for children, born at Otterbourne, near Winchester, on 11 Aug. 1823, was daughter of William Crawley Yonge, J.P. (1795-1854), by his wife Frances Mary (*d.* 1868), daughter of Thomas Bargus, vicar of Barkway, Hertfordshire. The only other child was a son, Julian Bargus (*b.* 31 Jan. 1831). Her father's family was of old standing in Devonshire, and through an intermarriage in 1746 with Elizabeth, daughter of George Duke of Otterton, was allied with the large families of Coleridge and Patteson, both of whom descended from Frances (*d.* 1831), wife of James Coleridge and daughter and co-heiress of Robert Duke, of Otterton.

The father was fifth son of Duke Yonge, vicar of Cornwood, near Dartmoor; he left the army (52nd regt.) at twenty-seven, after serving in the Peninsular war and at Waterloo, in order to marry Miss Bargas, whose mother refused to allow her daughter to be the wife of a soldier. Charlotte was brought up on her parents' little estate at Otterbourne, where her father, an earnest churchman and a magistrate, interested himself in the church and the parochial schools, then a new feature in English villages. An only girl, she paid yearly visits to her many Yonge cousins in Devonshire. According to her own account, she was born clumsy, inaccurate, inattentive, and at no time of her life could she keep accounts. Most of her education was derived from her father, who believed in higher education for women but deprecated any liberty for them. He instructed her in mathematics, Latin, and Greek, while tutors taught her modern languages, including Spanish. She was also well versed in conchology and botany. Following her father's example of devotion to the church, she began at seven to teach in the village Sunday school, and continued the practice without intermission for seventy-one years. The earliest of her stories, 'The Château de Melville,' originally written as an exercise in French and printed when she was fifteen, was sold for the benefit of the village school.

In 1835, Keble's appointment to the living of Hursley (to which the parish of Otterbourne was then joined) brought into Charlotte's life a dominant influence. Keble imbued her with his enthusiasm for the Oxford movement. During 1837-9 she saw much of him and his wife, while her father was in constant communication with him over the building of Otterbourne church. Keble quickly discovered Miss Yonge's gifts and urged her to bring home to the uneducated, no less than to the educated, the tenets of his faith in the form of fiction. An older friend, Marianne Dyson, aided her in her first experiments, the manuscripts of which were rigorously revised by Keble. He allowed no allusion to drunkenness or insanity, and when a character in Miss Yonge's story of 'Heartsease' referred to the heart as 'a machine for pumping blood' he erased it as 'coarse'; while Mrs. Keble substituted 'jackanapes' for 'coxcomb,' as a fitter term of insult in the 'Heir of Redclyffe.' Before the publication of her first book, a family conclave decided that it would be wrong for her, a woman, to become a professed author, unless her earnings were devoted to the support of some good object.

The first of the tales which, in such conditions, was issued to the public was 'Abbey Church, or Self-Control and Self-Conceit' (1844), but 'Henrietta's Wish, or Domineering,' and 'Kenneth, or the Rear-guard of the Grand Army' (both 1850) secured a wider public, although the three volumes appeared anonymously. It was in 1853 that the appearance of 'The Heir of Redclyffe' brought her a genuine popular success; she gave her profits to Bishop Selwyn to provide a schooner, The Southern Cross, for the Melanesian mission. 'The fear that the book should be felt to be too daring' was not realised; it perfectly satisfied the religious fervour of the period, and its tendency to self-analysis. A twenty-second edition was reached in 1876, and it was reprinted numberless times. Thenceforth she described herself on her title-pages as 'author of "The Heir of Redclyffe."' There followed 'Heartsease' (1854) and 'The Daisy Chain' (1856), which were welcomed with especial warmth; 2000*l.* of the profits of 'The Daisy Chain' were devoted to a missionary college at Auckland, in New Zealand. Stories cast in the like mould were 'Dynevor Terrace' (1857); 'The Trial; more Links of the Daisy Chain' (1864); 'The Clever Woman of the Family' (1865); 'The Pillars of the House' (1873); 'Magnum Bonum' (1879). From an early date she wove historic legends into many of her stories, and her earliest historical romances included 'The Little Duke, or Richard the Fearless' (1854); 'The Lances of Lynwood' (1855); 'The Pigeon Pie: a Tale of Roundhead Times' (1860); 'The Prince and the Page: a Story of the Last Crusade' (1865); 'The Dove in the Eagle's Nest' (1866); and 'The Caged Lion' (1870). Through her sure command of character and her grasp of the details of domestic life Miss Yonge's fiction appealed to varied circles of readers. 'The Heir of Redclyffe' was eagerly read by officers in the Crimea. Charles Kingsley wept over 'Heartsease'; Lord Raglan, Guizot, Ampère, William Morris, D. G. Rossetti, were among her earlier, and Henry Sidgwick among her later admirers.

In 1851 Miss Yonge became the editor of a new periodical, the 'Monthly Packet,' which was designed to imbue young people, especially young women, with the principles of the Oxford movement. She edited the periodical without assistance for over thirty-eight years, and for nine years longer in partnership with Miss Christabel Coleridge. Later she also became the editor of 'Mothers in Council.' With fiction she

soon combined serious work in history; and many novels, often in historical settings, as well as a long series of historical essays, appeared in the 'Monthly Packet.' Some among the eight series of her 'Cameos from English History' were collected respectively in 1868, 1871, 1876, 1879, 1883, 1887, 1890, 1896, and brought English history from the time of Rollo down to the end of the Stuarts. She provided serial lessons in history for younger students in 'Aunt Charlotte's Stories' of Bible, Greek, Roman, English, French, and German history, which came out between 1873 and 1878. To her interest in missions, which never diminished, she bore witness in 'Pioneers and Founders' (1871), and in a full life of Bishop Patteson in 1873.

Miss Yonge's literary work and religious worship formed her life. She taught Scripture daily in the village school, and attended service morning and evening in Otterbourne Church. She lived and died untroubled by religious doubts and ignored books of sceptical tendency. Workmen's institutes she condemned in one of her stories because the geological lectures given there imperilled religion. She only once travelled out of England, in 1869, when she visited Guizot and his daughter Madame de Witt, at Val Richer, near Lisieux in Normandy. Besides her kinsfolk, her dearest and lifelong friends were the members of the family of George Moberly [q. v.], headmaster of Winchester until 1866, and subsequently bishop of Salisbury; and in later days she became intimate with Miss Wordsworth, the Principal of Lady Margaret Hall, Oxford, and with some among the members of a little circle of young women which she had formed as early as 1859 for purposes of self-cultivation. This circle included Miss Christabel Coleridge, Miss Peard, and, for a short time, Mrs. Humphry Ward.

In 1854 her father had died, and in 1858, when her brother married, she and her mother moved from the larger house, which was his property, to a smaller home in the village of Elderfield. The death of her mother in 1868 and of her brother in 1892 deprived her of her nearest relatives. She lived much alone. Always very shy, she paid few visits and seldom called upon the villagers. But she overcame this timidity sufficiently to entertain occasional guests and to become a member of the diocesan council at Winchester. On her seventieth birthday, in 1893, subscribers to the 'Monthly Packet' presented her with 200*l.*, which she

spent upon a lych-gate for the church at Otterbourne, and in 1899 a subscription was raised at Winchester High School to found in her honour a scholarship at Oxford or Cambridge. In her last and weakest story, 'Modern Broods' (1900), she tried to mirror the newer generation, with which she felt herself to be out of sympathy. Early in 1901 she contracted pleurisy, and died on 24 March. She was buried in Otterbourne churchyard at the foot of the memorial cross to Keble.

The many editions of Miss Yonge's historical tales, as well as of 'The Heir of Redclyffe' and 'The Daisy Chain,' testify to her permanence as a schoolroom classic. She published 160 separate books. Besides those works cited, mention may be made of: 1. 'Kings of England: a History for Young Children,' 1848. 2. 'Landmarks of History, Ancient, Medieval and Modern,' 3 pts. 1852-3-7. 3. 'History of Christian Names,' 2 vols. 1863. 4. 'The Book of Golden Deeds' ('Golden Treasury' series), 1864. 5. 'Eighteen Centuries of Beginnings of Church History,' 2 vols. 1876. 6. 'History of France' (in E. A. Freeman's 'Historical Course'), 1879. 7. 'Hannah More' ('Eminent Women' series), 1888. Miss Yonge also edited numerous translations from the French.

A portrait of Miss Yonge at the age of 20, by George Richmond, is in the possession of her niece, Miss Helen Yonge, at Eastleigh.

[Christabel Coleridge, Charlotte Mary Yonge, her Life and Letters (including a few chapters of Miss Yonge's Autobiography), 1903; Ethel Romanes, Charlotte Mary Yonge, an Appreciation; John Taylor Coleridge, Life of Keble; C. A. E. Moberly, Dulce Domum, 1911; Burke's Landed Gentry; articles in Church Quarterly, lvii. 1903-4, 337, and in National Review, Jan. and April 1861, p. 211; obituary notices in The Times, 26 March 1901, in Monthly Review, May 1901, and in Monthly Packet, May 1901.]

E. S.

YORKE, ALBERT EDWARD PHILIP HENRY, sixth EARL OF HARDWICKE (1867-1904), under-secretary of state for war, the only son of Charles Philip, fifth earl, by his wife Lady Sophia Wellesley, daughter of the first Earl Cowley, was born on 14 March 1867. The Prince of Wales, afterwards King Edward VII, was his godfather. Educated at Eton, he served as hon. attaché to the British embassy at Vienna from 1886 to 1891. In the following year he became a member of the London Stock Exchange, and, in 1897, a partner in the firm of Basil Montgomery & Co. In the same year he succeeded his father in the earldom. On

8 Feb. 1898 Hardwicke moved the address in the House of Lords, and his graceful speech favourably impressed Lord Salisbury. In that year he became an active member of the London County Council, representing West Marylebone as a moderate. In June 1900 he carried a motion condemning the erection of the statue of Cromwell in the precincts of the house (Lucy, *Diary of the Unionist Parliament*, pp. 366, seq.). In November 1900 he was offered by Lord Salisbury the under-secretaryship for India. Hardwicke accepted the appointment on condition that he should not take up his duties until the following year, by which time arrangements could be made for his becoming a sleeping partner in his firm. In the debate on the address, however, Lord Rosebery, wishing to assert a public principle, while styling Hardwicke 'the most promising member for his age in the House of Lords,' animadverted on his connection with the Stock Exchange (4 Dec.). Eight days afterwards Hardwicke gave a manly and spirited explanation, setting forth the facts of the case and stating that immediately after Lord Rosebery's attack he had placed his resignation in Lord Salisbury's hands, who declined to accept it (*Hansard*, 4th series, vol. lxxxviii. cols. 804-806). From the India office he was transferred to the war office as under-secretary in August 1902, and he moved the second reading of the militia and yeomanry bill for creating reserves for those forces. Returning to the India office, again as under-secretary, in the following year, he moved in a lucid speech in 1904 the second reading of the Indian councils bill, setting up a department of commerce and industry (*ibid.* vol. cxi. cols. 498-502). Those best qualified to form an opinion thought highly of his abilities.

In early life he was a bold rider in steeplechases. In 1898 he became principal proprietor of the 'Saturday Review.'

Hardwicke, who was a man of much personal charm, died suddenly at his house, 8 York Terrace, Regent's Park, on 29 Nov. 1904. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1901. He was unmarried, and was succeeded as seventh earl by his uncle, John Manners Yorke, formerly captain R.N., who had served in the Baltic and Crimean expeditions, and who died on 13 March 1909. The present and eighth earl is the eldest son of the seventh earl.

[The Times, 30 Nov. 1904; private information.]

L. C. S.

YOUL, SIR JAMES ARNDELL (1811-1904), Tasmanian colonist, born at Cadi, New South Wales, on 28 Dec. 1811, was the son of John Youl, a Church of England clergyman, by his wife Jane Loder. As a child he accompanied his parents to Van Diemen's Land (now Tasmania), his father having been appointed in 1819 military chaplain at Port Dalrymple and first incumbent of St. John's, Launceston, in that colony. James Youl was sent to England to be educated at a private school near Romford, Essex, and returning to Van Diemen's Land took up his residence at Symmons Plains, a property he inherited on the death of his father in March 1827. There he became a successful agriculturist and county magistrate.

In 1854 he returned to England to reside permanently, and interested himself in Tasmanian and Australian affairs. From 1861 to 1863 he was agent in London for Tasmania, and for seven years was honorary secretary and treasurer of the Australian Association. In that capacity he was instrumental in inducing the imperial government to establish a mail service to Australia via the Red Sea, and in getting the Australian sovereign made legal tender throughout the British Dominions. He was acting agent-general for Tasmania from Feb. to Oct. 1888, and was one of the founders in 1868 of the Royal Colonial Institute, taking an active part in its management until his death.

But it is with the introduction of salmon and trout into the rivers of Tasmania and New Zealand that Youl's name is mainly associated. After patient and prolonged experiments and many failures he at length discovered the proper method of packing the ova for transmission on a long sea voyage, by placing them on charcoal and living moss with the roots attached, in perforated wooden boxes under blocks of ice, thus preserving the ova in a state of healthy vitality for more than 100 days.

In 1864 the first successful shipment to Tasmania was made. After some difficulty in obtaining ova and proper accommodation in a suitable vessel Messrs. Money Wigram & Sons placed 50 tons of space on the clipper ship Norfolk at Youl's disposal, and he was enabled to ship 100,000 salmon and 3000 trout ova in that vessel. The Norfolk arrived at Melbourne after a favourable voyage of 84 days. Some 4000 salmon ova were retained there, the remainder being transhipped to the government sloop Victoria and taken to Hobart. They were placed in the breeding ponds in

the river Plenty on the ninety-first day after embarkation, and a fair proportion hatched out satisfactorily.

For several years afterwards Youl was engaged with others in sending out successful shipments of ova to Tasmania. He was also responsible for the first shipment of ova to Otago, New Zealand, in Jan. 1868, for which he received the thanks of the government of that colony and the special thanks and a piece of plate from the provincial council of Otago. In 1866 he was awarded the gold medal of the Société d'Acclimatation and in 1868 the medal of the Acclimatisation Society of Victoria.

In 1874 he was made C.M.G. and K.C.M.G. in 1891. He died on 5 June 1904 at his residence, Waratah House, Clapham Park, and was buried in Norwood cemetery.

Youl married twice: (1) on 9 July 1839, at Clarendon, Tasmania, Eliza, daughter of William Cox, who served in the Peninsular war and went afterwards with the 46th regiment to Australia and settled at Hobartville, New South Wales; she died on 4 Jan. 1881, leaving four sons and eight daughters; (2) on 30 Sept. 1882, Charlotte, widow of William Robinson of Caldecott House, Clapham Park, and younger daughter of Richard Williams of Philipville, Belgium.

[Burke's Colonial Gentry, vol. ii. 1895; The Times, 7 and 9 June 1904; Launceston (Tasmania) Examiner, 8 June 1904; Proceedings of the Royal Colonial Institute, vol. 35, 1903-4; Fenton's History of Tasmania, 1884; Nicols's Acclimatisation of the Salmonidae at the Antipodes, 1882; Sir S. Wilson's Salmon at the Antipodes, 1879; Cannon's Historical Record of the Forti-sixth Regiment, 1851; information supplied by his daughter, Miss A. Youl.] C. A.

YOUNG, MRS. CHARLES. [See VEZIN, MRS. JANE ELIZABETH (1827-1902), actress.]

YOUNG, GEORGE, LORD YOUNG (1819-1907), Scottish judge, born at Dumfries on 2 July 1819, was son of Alexander Young of Rosefield, Kirkcudbrightshire, procurator fiscal of Dumfriesshire, by his wife Marian, daughter of William Corsan of Dalwhat, Kirkcudbrightshire. After education at Dumfries Academy, he studied at Edinburgh University (where he was made LL.D. in 1871), joined the Scots Law Society on 21 Nov. 1838 (president 1842-3), and passed to the Scottish bar on 2 Dec. 1840. Successful from the first, he was soon one of the busiest juniors in the Parliament House. Appointed advocate depute in 1849, he became sheriff of

Inverness in 1853. At the celebrated trial of Madeleine Smith for the murder of Emile L'Angelier (30 June-8 July 1857) he was junior counsel to John Inglis [q. v.], afterwards lord president, and the accused is said to have owed her acquittal largely to his skill in preparing the defence. In 1860 he was made sheriff of Haddington and Berwick, and in 1862 he succeeded Edward Maitland (raised to the bench as Lord Barcapple) as solicitor-general for Scotland in Lord Palmerston's government. His practice had now become enormous. He was retained as senior in almost every important case, frequently with James Moncreiff, first Baron Moncreiff [q. v. Suppl. I], as his opponent. He particularly excelled in the severe cross-examination of hostile witnesses, and in addressing juries his cool logic was often more than a match for the eloquence of Moncreiff.

In politics Young was a liberal, and continued solicitor-general in Lord Russell's government which came in after the death of Palmerston (October 1865). At the general election of 1865 he was returned for the Wigtown district. Out of office in 1867 and 1868, during the governments of Lord Derby and Disraeli, he became again solicitor-general on the formation of the Gladstone administration of December 1868. In the following year he succeeded James Moncreiff (when he was made lord justice clerk) as lord advocate. He was called to the English bar on 24 Nov. 1869 by special resolution of the Middle Temple, of which he was elected an honorary bencher on 17 Nov. 1871. In 1872 he was sworn of the privy council.

Young's management, as lord advocate, of Scottish business in parliament has been described as 'autocratic and masterful' (*Scotsman*, 23 May 1907). He was as severe with depositions as with witnesses in cross-examination, and alarmed the legal profession in Scotland by far-reaching schemes of law reform. He prepared a bill for the abolition of feudal tenure, and it was rumoured that he contemplated the abolition of the Court of Session. Nevertheless his legislative work was useful. He was the author of a Public Health Act for Scotland passed in 1871 (34 & 35 Vict. c. 38). He carried through parliament, in spite of considerable opposition from a party in Scotland which accused him of wishing to destroy religious teaching in elementary schools, the Scottish Education Act of 1872, which closed a long controversy by establishing elected school boards, and leaving it to each board to

settle the religious question according to the wishes of the electors (35 & 36 Vict. c. 62). In 1873 his Law Agents Act set up a uniform standard of training for law agents in Scotland, and abolished exclusive privileges of practising in particular courts (36 & 37 Vict. c. 63).

At the general election of 1874, owing, it was thought, to resentment at his treatment of Henry Glassford Bell, sheriff of Lanarkshire [q. v.], over differences which had arisen between them, Young lost his election for the Wigtown district by two votes. Mark John Stewart (afterwards Sir M. J. Mactaggart Stewart) was declared successful. A scrutiny was demanded, and the election judges awarded the seat to Young, by one vote, on 29 May 1874. But he had already accepted a judgeship, and taken his seat with the title of Lord Young on the bench of the Court of Session (3 March 1874). On the return of the liberals to power in 1880 it was understood that he had offered to resign his judgeship, and become again lord advocate. John McLaren, Lord McLaren [q. v. Suppl. II], was appointed, and Young remained on the bench. Having been a judge for thirty-one years, he retired owing to failing health in April 1905. After a short illness, caused by a fall while walking in the Temple, he died in London on 21 May 1907, and was buried in St. John's episcopal churchyard at Edinburgh.

In his old age Lord Young was almost the last survivor of a generation which had walked the floor of the Parliament House when Alison was consulting authorities for

his 'History of Europe' in the Advocates' Library below, and when Jeffrey and Cockburn were on the bench. He had come to the bar in the days of Lord Melbourne and Sir Robert Peel, and held office under Lord Russell and Lord Palmerston. It is believed that at the time of his death he was the oldest bencher of the Middle Temple. For many years he was a prominent figure in the social life of Edinburgh. He told good stories, and was famous for witty sayings. As a judge his powers were great; but his quickness of apprehension often made him impatient both with counsel and with his colleagues. He was too fond of taking the management of a case into his own hands; and it was largely owing to this defect that he was not conspicuously successful on the bench, though he fully retained his high reputation as a lawyer.

Young, who married in 1847 Janet (*d.* 1901), daughter of George Graham Bell of Crurie, Dumfriesshire, had a large family, of whom four sons, all in the legal profession, and six daughters survived him. Two portraits of him, by Sir George Reid and Lutyens respectively, are in the possession of his daughters, and a bust by Mrs. Wallace is in the Parliament House.
